GEORGE R.

GEORGE the Second, by the Grace of God, King of *Great-Britain, France, and Ireland*, Defender of the Faith, &c. To all to whom these Presents shall come, Greeting: Whereas our Trusty and Well-beloved *Thomas Longman, John Shuckburgh, Thomas Osborne, Charles Hitch, and Stephen Austen*, Citizens and Bookfellers of *London*, have by their Petition humbly represented unto Us, that they have been at very great Expence and Labour in procuring and purchasing Books for the compiling and improving a Work, Entitled, *Modern History: Or, The Present State of all Nations*; describing their respective Situations, Persons, Habits, Buildings, Manners, Laws and Customs, Religion, Policy, Arts and Sciences, Trades, Manufactures and Husbandry, Plants, Animals, and Minerals, by *Thomas Salmon*: In which are comprehended not only such Voyages and Travels, as have been published already, but the Accounts and Observations of several judicious Travellers, who have lately visited the remotest Parts of the Globe, and had great Opportunities of informing themselves of the present State of the respective Nations they describe: The Third Edition, with considerable Additions and Improvements, and an Abstract of the antient History of most of the Countries described, brought down to the present Time. The whole adorned with Cuts of the various Inhabitants, and Maps of the several Countries, projected by *Herman Moll*, the most accurate and correct Geographer of this Age, in Three Volumes in Folio. Which Work, the Petitioners, with the utmost Submission, apprehend may be of great Service not only to the Publick in general, but to all Persons concerned in Trade and Navigation; and being desirous of reaping the Fruits of their very great Expence and Labour, and of enjoying the full Profit and Benefit that may arise from printing and vending the same, without any other Person interfering in their just Property, which they cannot prevent without Our Licence and Protection; they have therefore most humbly prayed Us to grant them Our Royal Licence and Protection for the sole Printing, Publishing, and Vending the said Work, in as ample Manner and Form as has been done in Cases of the like Nature. We taking the Premises into Our Princely Consideration, and being graciously inclined to give Encouragement to all Works that may be of publick Use and Benefit, are pleased to condescend to their Request; and do, by these Presents (as far as may be agreeable to the Statute in that Case made and provided) grant to the said *Thomas Longman, John Shuckburgh, Thomas Osborne, Charles Hitch, and Stephen Austen*, their Heirs, Executors, Administrators, and Assigns, Our Royal Privilege and Licence for the sole Printing, Publishing, and Vending the said Work, during the Term of Fourteen Years, to be computed from the Date hereof; strictly forbidding and prohibiting all Our Subjects, within Our Kingdoms and Dominions, to reprint or abridge the same, either in the like, or any other Volume or Volumes whatsoever, or to import, buy, vend, utter, or distribute, any Copies thereof reprinted beyond the Seas, during the aforesaid Term of Fourteen Years, without the Consent or Approbation of the said *Thomas Longman, John Shuckburgh, Thomas Osborne, Charles Hitch, and Stephen Austen*, their Heirs, Executors, Administrators, or Assigns, by Writing under their Hands and Seals first had and obtained, as they will answer the contrary at their Peril: Whereof the Commissioners, and other Officers of our Customs, the Master, Wardens, and Company of *Stationers of London*, and all other Officers and Ministers, whom it may concern, are to take Notice, that strict Obedience be given to Our Pleasure herein signified.

Given at our Court at St. James's the Thirteenth Day of December 1743, in the Seventeenth Year of Our Reign.

By His Majesty's Command,

CARTERET.

MODERN HISTORY: OR, THE PRESENT STATE OF ALL NATIONS.

Describing their respective
SITUATIONS, PERSONS, HABITS,
AND BUILDINGS;
MANNERS, LAWS AND CUSTOMS, RELIGION,
AND POLICY;
Arts and Sciences, Trades, Manufactures and
Husbandry;
PLANTS, ANIMALS, AND MINERALS.

By Mr. *SALMON.*

Illustrated with CUTS and MAPS, accurately drawn according to the Geographical
Part of this Work,
By *HERMAN MOLL.*

THE THIRD EDITION.

With considerable Additions and Improvements, interspersed in the Body of the Work: Also the
History and Revolutions of each Country, brought down to the present Time.

IN THREE VOLUMES.

THE

P R E F A C E.

THE ancients were not very consistent with themselves, when they related that the Torrid Zone was not habitable, and at the same time affirmed that *Africa* had been surrounded several times by ships, which must have passed the Torrid Zone twice in every such voyage.

That they were deceived in their notion, *That the Torrid Zone was not habitable*, is now sufficiently evident ; and I am apt to think they were in an error also, as to the circumnavigation of *Africa* in those early ages.

It is true, some of the moderns as well as the ancients are of this opinion ; to support which they quote the following passages out of HERODOTUS.

HEROD. lib. 4. cap. 41, 42. *Africa maria est manifestè circumflua, exceptò duntaxat ubi Africa contermina est ; NECO Ægyptorum Rege hoc primo demonstrante, is enim misit navibus Phœnicis quosdam, præcipiens ut transvecti columnas Herculeas penetrarent ad septentrionale usque mare atque ita ad Ægyptum remearent.*

Phœnices igitur à rubro mari solventes abierunt in mare australe, qui cum autumnus advenisset, applicatis ad terram navibus, sementem faciebant in quamcunque Africæ partem navigantes pervenissent ac messem expectabant.----Deinde messio frumento navigabant. Ita biennio consumpto anno tertio ad Herculeas columnas declinantes in Ægyptum remeant, referentes quæ apud me fidem non habent, sed fortè apud alios : In prætereundo Africam se habuisse solem ad dextram.

“ This is the fact, as related by HERODOTUS (say these gentlemen) and the question is, “ How these men, thus sent out by NECUS, should really know that *Africa* was surrounded by water ; that it might be sailed round within the space of three years ; that in autumn they must be obliged to go on shore, and stay there long enough to sow corn and reap it ; and in the voyage, * *all along have the sun to the right hand*, unless they had really performed this voyage.----It will not be enough to say, that you can't see how such a voyage could be performed, or to tell us of high seas, cross winds, or to argue from consequences, viz. How came it about that the King of *Ægypt* planted no colonies in those new discovered countries ? When a fact is so well circumstantiated as this before us ; and when modern experience shews those circumstances to be exactly true, nothing but showing a downright impossibility for such a fact being performed, can any way invalidate it. 'Tis plain from HERODOTUS, that from the testimony of these men, he believed that *Africa* was surrounded southward by water.---All that seemed to him incredible in their narrative was,---That the land of *Africa* should run out so far to the south, as † *that these men should see the sun in the greatest part of their voyage to the north of them*. You must not think that this story was slighted, and looked upon as a fable in those days.

“ A thousand causes, difficulty of the voyage, a small prospect of advantage.---Troubles that immediately succeeded in Egypt, might hinder its being further prosecuted.---However we find, that about 115 years after NECUS, the matter was disputed in XERXES's court.---For HERODOTUS tells us in the same book, chap. 43.---That when one of XERXES's great men had offended him, instead of putting him to death, he ordered him, by way of punishment, to endeavour to make this same voyage, viz. ‡ *To set out to Egypt, and to sail by the Straights round Africa into the Red-sea*.---This great man accordingly undertook the voyage ; and after he had sailed some months beyond the Straights, probably discouraged by the difficulties from wind, sea, &c. he returned, telling XERXES that the voyage could not be performed.---But this answer was so far from satisfying that monarch, that he put him to death for his former crime.---From whence it is further evident, that the ancients, at least some of them, believed that *Africa* was *Mari Circumflua*.”

There are others that mention three voyages round *Africa* performed by the ancients, and relate, that HANNO, the Carthaginian and Persian Nobleman abovementioned, wrote particu-

* This is impossible.

† The passage in Herodotus does not say so.

‡ Directly contrary to the Phœnician voyage.

lar histories of their respective voyages; but had these voyages been really performed, would not the ancients have given us some account of the countries south of the Equator? Would not they have taken notice of the southern hemisphere, and of the stars and constellations they observed there? which were such remarkable discoveries, that if they had they been once made could never have been forgotten. But there are these further objections against the circumnavigation of *Africa* by the ancients, viz.

1. That it was impossible to discover and navigate an unknown coast for fifteen or twenty thousand miles extent, in the space of two or three years without a compass, when the mariners were neither acquainted with the rocks and sands upon that coast, or with the winds, currents, or seasons they were to meet with in any part of it, and wanted the stars that used to guide them on this side the Equator.

2. It is strange no nation should make a second attempt, or even settle one colony in *Africa*, south of the Equator, or even near it, if the Phenicians made such an expeditious and successful voyage round it.

3. It is a further objection to this voyage, that the ancients knew nothing of the annual periodical winds or storms between the Tropics, and of their shifting regularly every half year to the opposite points: that the winter or stormy season always advanced with the sun, and they had the fairest weather when it was at the greatest distance from them, contrary to what happens in countries without the Tropics.

4. The galleys of the ancients could never pass the *Cape of Good Hope*, without many miraculous incidents, if the winds and seas there were what we find them at this day.

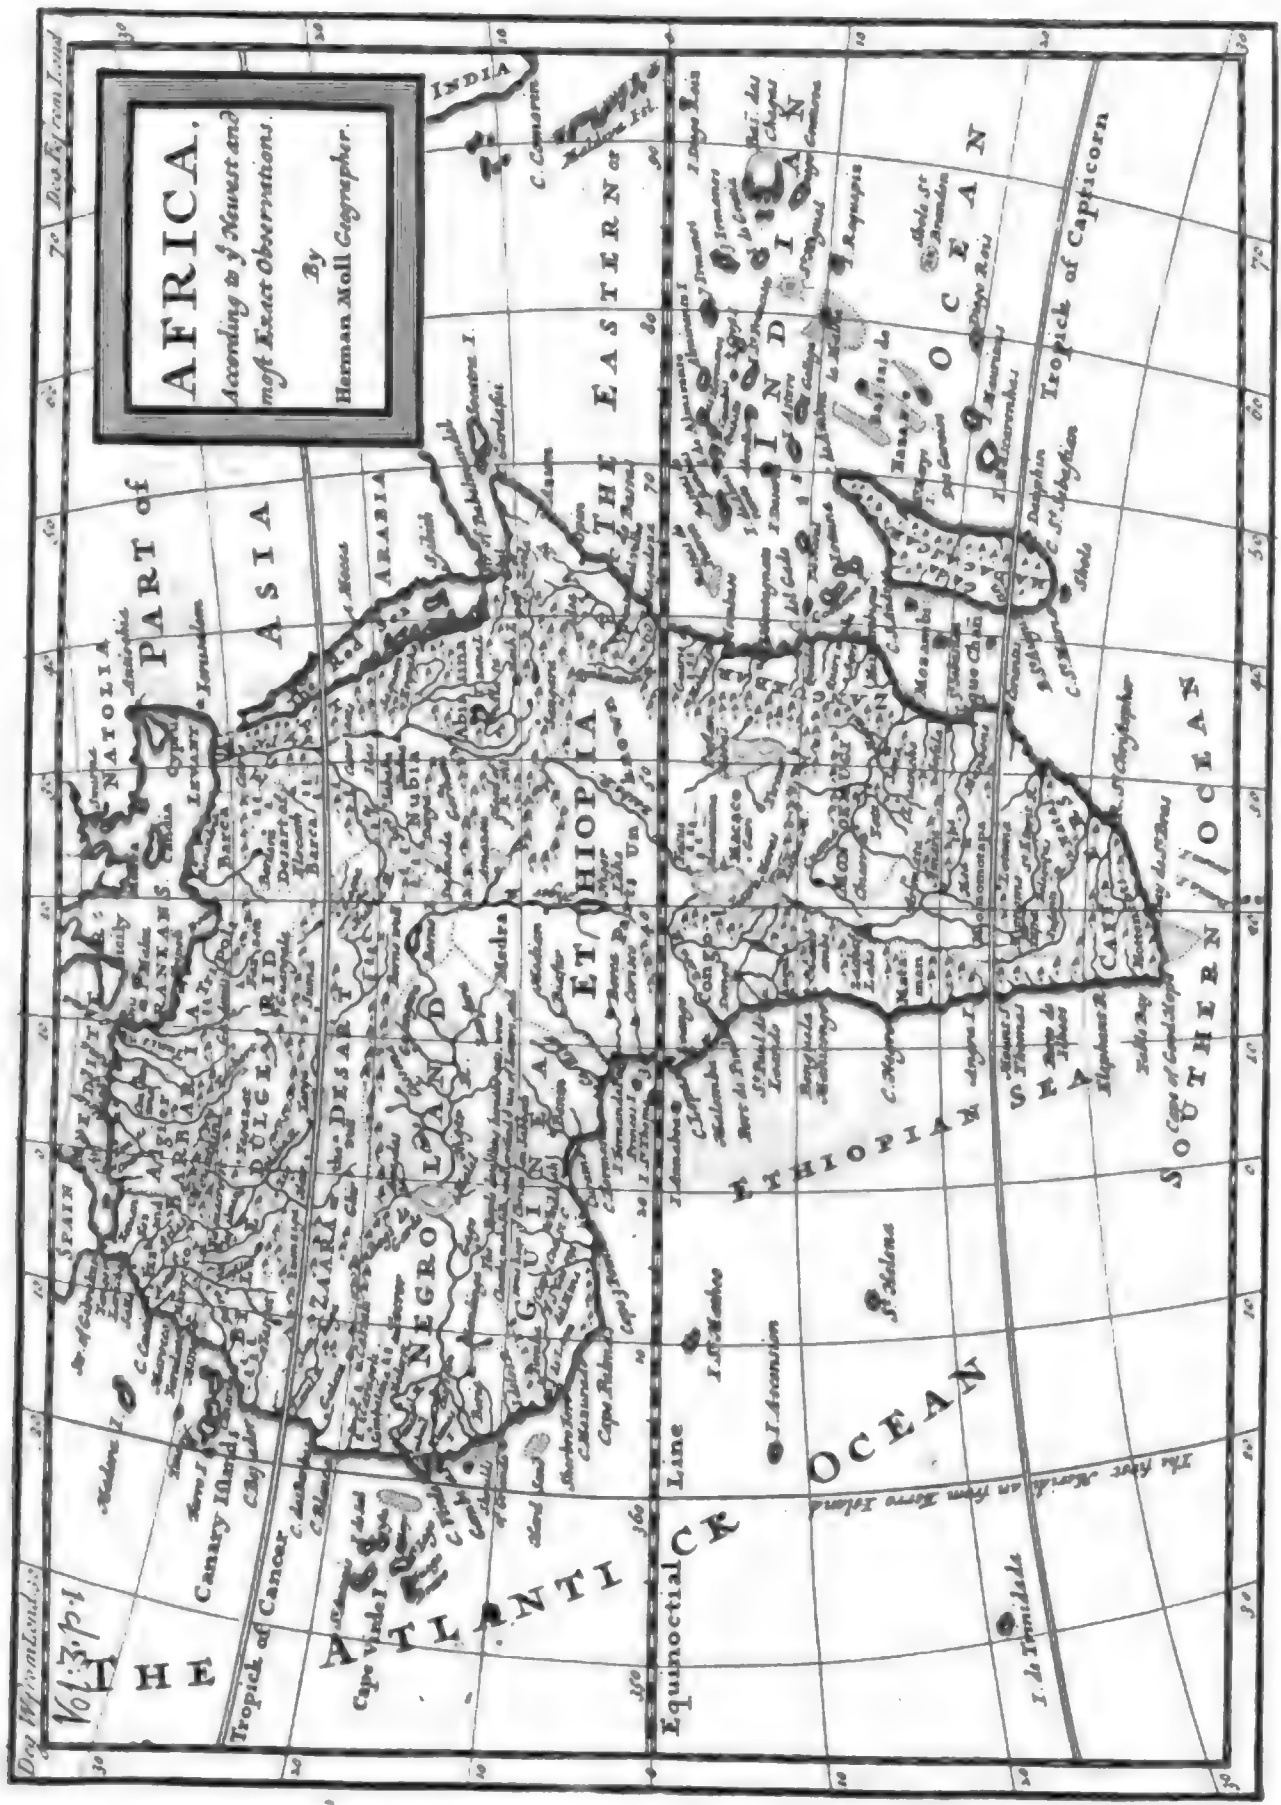

5. In such low-built galleys they could neither lay in provisions sufficient for the voyage, nor could they stay to procure them by the way, if it was performed within the space of two or three years: And if they would have gone on shore from time to time for them, it would have been impracticable on many parts of the coast of *Africa*, because of the surf or swelling of the sea in some places; and in others there are neither wood, water, or provisions of any kind to be met with for some hundreds of miles.

6. They must have had extreme good fortune not to have been destroyed by diseases, enemies, or other accidents on shore, if they had escaped the danger of the sea.

7. They must have remained in harbour near one half the time, on account of the never-failing tempestuous seasons and contrary winds, and must have lain by still longer on account of dark nights and foggy weather, which reduces the time of their sailing to a very few months, much too small a space of time to encompass *Africa* even with all the advantages we are masters of; which consideration alone is sufficient to overthrow the credit of these voyagers of the ancients round *Africa*.

But all these objections united and duly weighed, I persuade myself amount to a demonstration, that this voyage could never be performed by the ancients within the space of three years at least, in the opinion of any seamen who are acquainted with the coast of *Africa* and the winds and seasons upon that coast, and sensible of the hazard and difficulty of sailing upon an unknown shore without a compass; though speculative men, unacquainted with maritime affairs, may possibly be of another opinion.

AFRICA.
According to the Newest and
most Exact Observations.
By
Herman Moll Geographer.

Vol. 3. p. 1

THE PRESENT STATE OF AFRICA in general.

CHAP. I.

Of AFRICA in general.

CHAP.
I.
The situ-
ation.

AFRICA is bounded by the Mediterranean sea, which separates it from Europe, on the north; by the isthmus of Suez, the Red sea and the Eastern ocean, which separate it from Asia, on the east; by the Southern ocean on the south; and by the Atlantick, or great Western ocean, which divides it from America, on the west.

The figure
of it.

It is of a pyramidal or triangular figure, the base whereof is the northern part of it, which runs along the shores of the Mediterranean, and the point or top of the pyramid the Cape of Good-Hope.

The lati-
tude, lon-
gitude and
extent.

Africa is a peninsula join'd by the narrow isthmus of Suez to Asia, and situated between the 37th degree of north latitude, and the 35th of south latitude, the most western part of it lying 18 degrees west of London, and the most easterly 51 degrees to the eastward of London: so that it takes up 72 degrees of latitude, and consequently is 4320 miles in length from north to south, if we reckon 60 miles to a degree as usual; and 5040 miles in length, if we reckon 70 miles to a degree, which comes much nearer the truth; and, as it extends 69 degrees in breadth, viz. from Cape Verd in the west to Cape Gardefoy in the east, we may reckon the breadth of it to be about 4830 miles, computing 70 miles to a degree.

Africa an-
ciently
contain'd
several ce-
lebrated
kingdoms
and states.

This quarter of the world once contain'd several kingdoms and states, eminent for the liberal arts, for wealth and power, and the most extensive commerce; tho', at this day, there is scarce one single nation left upon that continent that deserves our notice. There were situated the celebrated kingdoms of Egypt and Ethiopia, with the rich and powerful state of Carthage, to which the kingdoms of Numidia and Mauritania were subject.

Then almost all the northern parts of Africa were full of people, from the Red sea to the Atlantick ocean, and Carthage extended her commerce to every part of the then known world; even the British shores were visited by her fleets, 'till

JUBA, King of Mauritania and tributary to Carthage, unhappily call'd in the Romans, who, by the assistance of the Mauritanians, subdued Carthage, and made all the kingdoms and states in Africa subject to them; after which, the natives neglected their trade, and even the cultivation of the soil; they were become provinces of Rome, liable to be plunder'd and impoverish'd by rapacious Viceroyes and Governors sent from that capital: whereupon their traffick, in a short time, dwindled to nothing, and they cultivated no more of their lands, than what might serve for their subsistence. Upon the decline of the Roman empire, in the fifth century, the north of Africa was overrun by the Vandals, a barbarous northern people, who contributed still more to the destruction of arts and sciences there; and, to add to their misfortune, the Saracens made a sudden conquest of all the coasts of Egypt and Barbary in the seventh century: These were afterwards succeeded by the Turks; and both being of the Mahometan religion, whose disciples carry ruin and devastation along with them where-ever they come, the ruin of that once flourishing part of the world was thereby completed.

CHAP.
I.

The soil of the northern shore of Africa is still the same, capable of producing almost every thing desirable in life, but possess'd by a wretched abandon'd people, that have given themselves up to robbery and rapine; who, neglecting to cultivate their soil, or make any improvements, subsist chiefly by their piracies at sea, and what they can ravish from the honest and industrious part of mankind, who, being obliged to sail by their coast, are so unhappy as to fall sometimes into their hands.

From the discoveries that have been made in Africa of late years, we find, that it is not that barren desert country it has been represented; for not only the north part of it is generally fruitful where it is cultivated, but the south also produces corn and wine. And here we meet with herds of the finest cattle in the world; and even between the

The soil
and pro-
duce of
Africa in
general.

C H A P. I. Tropics there are multitudes of people, fine rivers, and a rich soil capable of the greatest improvements. The cinamon tree actually grows there; and it is thought, that the rest of the fine spices might be raised in those latitudes, which would make those spices more plentiful, and we should no longer be obliged to purchase them of the Dutch (who barbarously dispossest'd us of them in the Indies) with treasure. However, here it is that we meet with plenty of the best gold and ivory; and from hence the Europeans export two hundred thousand Negroe slaves, and upwards, annually to America; which shews, that Africa, between the Tropics, must be vastly populous, tho' the ancients held, that the Torrid Zone was not habitable.

The different people who inhabit Africa.

Three different people inhabit this continent, viz. Pagans, Mahometans, and Christians: the first are the most numerous, possessing the greatest part of the country from the Tropic of Cancer to the Cape of Good Hope, and these are generally black: the Mahometans, who are of a tawny complexion, possess almost all the northern shores of Africa. The people of Abyssinia, or the upper Ethiopia, are denominat'd Christians, but retain abundance of Pagan and Jewish rites; and there are some Christians upon the sea-coasts on almost every side of Africa; but these are a small number, compared either with the Pagans or Mahometans. There are also some Jews in the north of Africa, who manage all the little trade that part of the country is yet possess'd of: but it is remarkable, that tho' the Carthaginians, who inhabited this very country of Barbary, had greater fleets, and a more extended commerce, than any other nation, or than all the people upon the face of the earth, when that state flourish'd; and that Africa is better seated for a foreign trade, than any other quarter of the world; the natives have scarce a single merchant-ship belonging to them, and no other ships of force, than what Sallee, Algiers, Tunis and Tripoli, set out for piracy; and these are but very few and small, their whole strength not being able to resist a squadron of five European men of war. But it is time now to descend to particulars, and describe the respective countries contained in Africa.

The several grand divisions of Africa at this day, are these ten:

The grand divisions of Africa.

1. Egypt.
2. Ethiopia superior; and 3. Zanzibar, all which lie on the east of Africa.
4. Monomotapa, Monomotapa and Caffaria, called by some the lower Ethiopia, which lie on the south.
5. Congo and Guinea on the south-west.
6. Nigritia or Negroeland in the middle of Africa, extending almost quite through the country from east to west, on both sides the great river Niger.
7. Zaara, or the desert to the northward of Nigritia.
8. Biledulgerid, the ancient Numidia to the northward of Zaara.
9. The empire of Fez and Morocco, containing the north-west part of Africa.
10. and lastly, The coast of Barbary on the north, containing the countries of Algiers, Tunis, Tripoli and Barca.

Great disagreement about the division of Africa.

There are scarce any two nations, or indeed any two of the learned, that agree in the modern division of Africa; for this very good reason, that scarce any traveller has penetrated into the heart of the country, and consequently we must be content to acknowledge our ignorance of the bounds, and even the names of several of the midland nations. These may well be reckon'd still among the unknown and undiscover'd parts of the world;

but the best accounts and conjectures that have been made concerning them, I shall endeavour to present the reader with. Egypt has been already fully describ'd, with the rest of the Turkish dominions, in the first volume of Modern History; I proceed, therefore, in the next place, to give the present state of Ethiopia, which lies contiguous to it, comprehending under that name Abyssinia, Nubia, Abex and Aian.

C H A P. II.

The present state of ETHIOPIA Superior.

THE ancients, it is pretty evident, called all that they knew of Africa, to the southward of Egypt, Ethiopia, and the people Ethiops, from their dark complexions: but the country I now describe, including only Abyssinia, Nubia, Abex and Aian, is bounded by Egypt and the desert of Barca on the north; by the Red sea and the Eastern ocean on the east; by Zanzibar and Nigritia, on the south; and by Nigritia and Zaara, on the west: so that I include all that country, that lies between the 5th and the 20th degrees of north-latitude, and between the Eastern sea and Nigritia, under the general name of Ethiopia. This is that country, which most of the learned conjecture was anciently govern'd by the celebrated Queen of Sheba, styl'd the Queen of the south; and afterwards by Queen CANDACE, whose prime minister, the eunuch, was converted and baptized by St. PHILIP: and lastly, this was that country, whereof it is supposed the real or imaginary Prester JOHN, or Prester JOHN, was sovereign. I come now to give a more particular description of the countries I have reduced under the general name of Ethiopia.

C H A P. II.

The ancient Ethiopia.

The boundaries of Ethiopia Superior, and the countries comprehended under that name.

Supposed to be subject to the Queen of Sheba, and Queen Candace, and to Prester John.

And 1st of Abyssinia, a country of a thousand miles extent, that has scarce any communication with the rest of the world at this day. The Turks having made themselves masters of that part of Ethiopia that lies upon the Red sea, and the rest of it being surrounded by mountains or unpassable deserts; within these it appears to be an exceeding fine level country, diversify'd with woods and fruitful plains, well planted with palm-trees, dates and cedars, and water'd by several noble rivers.

Abyssinia.

The river Nile rises in the middle of Abyssinia; and, having first taken a circuit almost round its source, runs an hundred miles to the northward, and afterwards two hundred miles towards the east; and then, turning to the south and south-east, continues its course two hundred and fifty miles further; in which eastern course it forms the lake of Dambea, which is an hundred and twenty miles over: after which, it takes a semicircular sweep; in which course it continues to run five hundred miles, and then turning directly north, enters the kingdom of Egypt; which winding course does not only render the soil extremely fruitful, but is of great advantage to their inland commerce; tho' after its entering Egypt, there are so many steep-falls and cataracts, that they can neither export or import any goods or merchandize upon this river.

Rivers.

There are also two other great rivers, call'd the Moraba and Albara, which run through the country from south to north, and fall into the Nile, in the province of Sennar; and there is still a fourth great river, call'd the Haouache; which, after a course of six hundred miles to the south-east, falls into the Red sea or Arabian gulph.

CHAP. II. This country, thus happily watered, produces plenty of corn, rice, millet, dates, grapes, flax, cotton, sugar, salt, and sulphur: their flax is esteemed the finest in the world; and from hence, 'tis said, the Egyptians had theirs, of which they made the fine linen of Egypt mentioned in scripture: and had they, at this day, an opportunity of exporting the produce of their soil, 'tis said this country alone might raise rice, sugar, &c. sufficient to supply all the neighbouring countries. The Turks, who are masters of the coast of the Red sea, though they will suffer no other nation to trade to Abyssinia, annually fetch great quantities of rice from thence, particularly at the times of the great pilgrimages to Mecca, Arabia not affording provision sufficient for their subsistence.

Gold is also very plentiful here, of which the Turks get some; and, had the Ethiopians an opportunity of bartering it for the merchandize of Europe, 'tis thought we might meet with as great plenty of it here, as any where, though there are no gold mines wrought: they have also mines of silver and copper, the latter of which they work, and have a good deal of that metal; and, 'tis said, they have the largest emeralds in the world.

Animals. As to their animals, they have camels, oxen, sheep, and other cattle in great plenty, and very large; also wild beasts, crocodiles, &c. common to the rest of Africa; but what they are most famous for, is an excellent breed of horses, equal to those of Arabia; or, as some conjecture, those of Arabia are, in reality, bred in Abyssinia, where they abound in rich pastures.

It may be objected here, that, if Ethiopia be thus cut off from any communication with other countries, how could the Queen of Sheba, or Queen CANDACE's eunuch, travel into Judea? To which it may be answered, that the coast of the Red sea was then a part of Ethiopia, by which it was very easy to visit either Egypt, Arabia, or Palestine.

Ethiopia was then a mighty empire, subject to one sovereign, who commanded the sea coast as well as the inland country; but now the King, or Emperor of Ethiopia, is a Prince of small power, his territories being divided into abundance of little principalities like Germany, the Princes whereof scarce acknowledge a superior; and as they are seldom united, are by no means a match for their powerful neighbours, the Turks, who therefore keep them shut up within the bounds of Abyssinia, and will not suffer them to correspond or traffick with the rest of the world.

Provinces and chief towns of Abyssinia. Travellers reckon up nine principalities or provinces in Abyssinia; every one whereof has a distinct sovereign, that acknowledges, however, the King of Abyssinia for his chief Lord.

1. The province of Ambara; the chief towns whereof are, Ambara the capital of Abyssinia, and situated in the middle of it, and Lalibela. 2. Begamedri; the chief towns whereof are, Amadora, Alata and Maker. 3. Dambea; the chief towns whereof are, Amba-Marjan, Dancas and Jenda. 4. Shoa; the chief towns whereof are, Debra, Libanos and Wenthit. 5. Gojam; the chief towns whereof are, Ledanegus, Debra, Semona and Selah. 6. Bugna; the chief towns whereof are Egala and Arguan. 7. Samen; the chief towns whereof are Waldeba and Toraf. 8. Gonga; and 9. Walaka, in the two last whereof no towns are mentioned; and indeed, the people in general live more in tents, than houses, the King keeping his court, like the Great Mogul, for the most part in

his camp, which looks like a city laid out into streets; and, as he is followed by his nobility, officers, tradesmen, subtlers, &c. the camp is always well supplied with provisions and necessaries of all kinds. The King's tent is pitched in the centre of the camp, and his nobility and the rest of his subjects encamp round about him, those of the lowest rank being at the greatest distance from the royal pavilion.

The air of this country in the vallies is excessive hot during the summer months, but on the mountains cold; and, as some affirm, the cold there is more troublesome than the heat, during that season they call the winter, which is about the vernal equinox. They have terrible thunder, and three months of almost continual rain; which, falling from the mountains that surround Abyssinia in torrents, occasions the overflowing of the Nile in Egypt the succeeding months, of which a full account has been given in the description of that country: all the rest of the year almost they enjoy serene settled weather in Abyssinia; the people being generally healthful, and living to a good old age.

As to the persons of the Ethiopians, they are generally of a good stature; their complexion a deep black; their features much more agreeable than those of the Negroes, having neither such thick lips or flat noses: they are said to have a great deal of vivacity and natural wit; to be of a teachable disposition, and fond of learning, though they have but few opportunities of improving themselves.

The better sort of them are cloathed in vests, made of silk stuffs or cotton, after the manner of the Franks in Turkey; but their poor people go almost naked, having only a small piece of skin or coarse stuff wrapped about their waists.

They have no other bread than thin cakes baked upon the hearth as they want them: they eat all manner of flesh almost as the Europeans do, except swine's flesh, and such other meats as were prohibited to the Jews; they also still abstain from things strangled, and from blood, killing their meat in the same manner the Jews do: as to the poor people, they live chiefly upon milk, butter, cheese, roots, herbs, and what their flocks and herds produce.

The meat is brought to the tables of people of condition in earthen dishes, and they have no other plates or trenchers than the thin cakes, that serve them for bread; and, according to some, they use neither knife, fork, or spoon; but this can't be entirely true, if what they tell us of another circumstance in their eating be so: viz. That their Princes and Great men are above feeding themselves, and are fed by boys with spoons; and this latter is the more probable, because, in administering the sacrament of the Lord's supper, the Priest gives the communicants the liquor they use instead of wine in spoons.

They seldom roast their meat; it is generally boiled or stewed, and they are very fond of the broth or soup that is made of it. Their usual drink is mead or metheglin, the country abounding in honey. They have also liquors made of wheat and rice, and their Princes drink some wine; but they do not seem to be well skilled in making this liquor, though they have the finest grapes in the world: you cannot make their Princes a more acceptable present, than some bottles of European wine.

Linen, I find, they have very little, tho' their country is found to be the most proper for flax of any in Africa; and indeed they do not seem to stand much in need of any, for they use no table linen, or sheets; they lie on carpets or mats, as in other hot countries, and not in beds: and this leads me to speak of their manufactures, which are very mean. The Jews are said to be the only weavers and smiths amongst them; and, as for other handicrafts, such as carpenters, taylor and shoemakers, every man breeds up his children to the trade or profession he uses himself. There are particular families, whose business it is to make trumpets, horns, &c. and these several trades, like the casts or tribes in the East-Indies, live separately, and do not intermix with any other trade or tribe, either by marriage or otherwise.

Their buildings are exceeding mean, the generality of their houses being but poor huts, made with clay and splinters. Some travellers tell us of the ruins of magnificent palaces and temples; but, when the Portuguese Missionaries came amongst them, about two hundred years ago, after that people had found the way to the eastern coasts of Africa, by the Cape of Good Hope, there were neither palaces, temples, fortifications, or even a walled town to be found in the country. The Popish Missionaries indeed, after they had insinuated themselves into the favour of their Princes, taught them to build temples, palaces, and fortresses; but of these there are very few at this day: for the King, as has been observed, lives generally in the field, where he is attended by the petty princes, nobility, artificers, &c. the chief of them lying in pavilions and tents; but as these are not easily purchased by the common people, they make them little huts of clay and green boughs; and the towns they talk of, are composed of houses of the like

fort: the silks, stuffs, calicoes, linen and carpets, they use for furniture or cloathing, they receive chiefly from the Turks, by the way of the Red sea, who take the gold and emeralds of Abyssinia in return for this merchandize, with some fine horses: the Brokers, or Merchants, between the Turks and Abyssines, are Jews, Arabians, or Armenian Christians; few or none of the natives trade or travel abroad; and it is very probable, that the Turks would not suffer them, if they should attempt it, lest a communication should be opened again between them and other nations, who might also exchange their manufactures for the gold and precious stones found in this country. When the Portuguese first found the way to Abyssinia, the shores of the Red sea were open; but now the Turks keep so strict a guard there, that it is difficult for any other people to have access to them.

In travelling, they ride upon mules or camels, mules being the best of all animals to clamber the mountains, and camels for their sandy plains: but, in war, horses only are used to charge the enemy. Their troopers, 'tis said, ride on mules, when they march, and lead their horses; which are reserved purely for the day of battle. Their arms are chiefly lances, bows, arrows and swords; and they have some fire-arms, which they purchase of the Turks. The wars of the King of Abyssinia are principally with the Ethiopian Princes; who, being encouraged and assisted by the Turks at first, mightily reduced that Prince's power, and, while the Ethiopians were engaged in civil wars at home, it was, that the Turks possessed themselves of that part of their country that lay upon the Red sea. Thus the Ethiopians, by their

insurrections and encroachments on their Prince, disabled him to defend or recover that part of his dominions, by which only he could have any commerce with the rest of mankind. He is now reduced as low as the Turks can wish, having no trade or intercourse with any other nation, but what they are pleased to allow him; and has lost much of his power and authority at home, by the Princes and Governors of provinces setting up for themselves; which leads me to enquire into the King's titles, prerogatives, government, &c.

This Prince, according to the Portuguese, who visited his country, soon after their passing the Cape of Good Hope, in the 16th century, was stiled *Prefter JOHN*, or *Presbyter JOHN*; which some imagine, was given him because he seemed to be the High priest of his religion, as well as King, having a cross always carried before him, and acting as supreme Governor in ecclesiastical affairs, as well as civil, in all cases except that of ordination: Others say, the Turks and Arabians gave him the title of *Prefter Chan*, or *Cham*, that is, King of Slaves; they receiving most of their black slaves from Ethiopia, of which he was Sovereign. But, however that be, travellers generally agree, that his own subjects style him *Negus*, or King; and oftener, *Negascha*, *Negascht*; which, in their language, signifies King of Kings, to distinguish him from the Princes and Governors of provinces, who are styled also *Negus*: And, for this reason, the Europeans give this Ethiopian sovereign the title of Emperor: The Persians also give him the title of *Pat-Sha*, the Disposer of kingdoms, which is the highest title known in Asia, and equal to that of Emperor in Europe. But every one of these Princes, at his accession to the throne, assumes a particular name, or rather motto; one styles himself the *Pillar of Faith*; another the *Virgin's Incense*; and, a third, the *Beloved of God*, sprung from the stock of *JUDAH*, the son of *DAVID*, the son of *SOLOMON*, &c. for they have a tradition, that their Princes are descended from *SOLOMON* by the Queen of Sheba.

His arms also are said to be a lion rampant, holding a cross, with this motto, *The lion of the tribe of JUDAH has won*.

This Prince is, or rather was absolute, and his throne hereditary; but, as he has lost much of his power and prerogatives, which the Great men of the country have usurped; he is now frequently controlled by his Lords: The eldest son also is sometimes passed by, and a younger, or an illegitimate son, advanced by the Nobility to the imperial dignity: The civil power, however, still seems to be subject to the military. The King is most of the year in the field, attended by great armies of horse and foot; and consequently their laws, if they have any, are silent, when the Prince pleases to controul them; but what laws they have, seem chiefly to relate to their religion. Thus far, indeed the Abyssinian Princes and Nobility are in a better condition than they were formerly; that though they have few or no laws to screen them from the arbitrary dominion of their Emperor; yet they are become so powerful, that he is cautious how he opposes them, or enters upon any thing of consequence without their concurrence; however, the common people still remain in a manner slaves to the Emperor, or their respective Lords. They have gained little by the encroachments the Great men have made on the authority of their sovereign: They have

The
Prince's
titles and
prerogatives.Governa-
ment.The com-
mon peo-
ple slaves.

CHAP. II. no inheritance in their lands; but they themselves, their lands and goods are in a manner their Lord's property: they labour but to maintain the grandeur of their superiors, and make a poor provision for their own wretched families.

The Prince's revenues. The Emperor's revenues are paid in kind, not in money, of which I can't find they have any in their country; but then, pure gold is one of the articles (which is found in the sands of their rivers, or under the roots of trees, on the tops and sides of mountains, for they have not yet wrought one gold mine; tho' it is evident, there are many in the country). Part of his revenues arise by the duties that he lays on merchandize brought from Turkey by the way of the Red sea: the Farmers also pay him a thirtieth part of all their grain, cattle, fruit and produce of their farms every year, by which his table, court and guards are maintain'd in plenty: and every Weaver, and other artificer, presents him with part of his manufacture; whereby his servants and officers are furnish'd with cloathing and other necessities; the King's revenues also arise, by his creating

Knights of St. Anthony. Knights of St. ANTHONY; every one of whom, pays him a fine on being knighted: These are an order, partly ecclesiastical, and partly military, and very numerous; every man of quality being oblig'd to make one of his younger sons a Knight of this order; and some authors relate, that he has no less than twelve thousand of these Knights in his army.

Coronation of the Emperor. The Emperor is crown'd in one of their principal churches, with a kind of coronet set with glittering stones, which is plac'd upon his head by their metropolitan, in the presence of the Nobility and Clergy; when there are hymns sung, guns fir'd, and other demonstrations of joy suitable to the solemnity, as in Europe. The Prince no sooner ascends the throne, 'tis said, but he orders all his brothers, children and relations to be secur'd in a fortress, situated on an almost inaccessible rock, that his Nobility may not set up any of them to rival him, which they frequently do, when they have an opportunity; and the successor is kept in the profoundest ignorance, till he is sent for out of prison, and advanc'd to the imperial dignity.

The laws and customs of the Abyssinians. If the Abyssinians have no written laws, they have however certain immemorial customs, by which offenders are punish'd according to their respective crimes; unless the Prince, or some great Lord interposes his authority to prevent it: For capital crimes, criminals are beheaded, hang'd, ston'd or drubb'd to death with clubs; except murderers, and these are put into the hands of the relations of the murder'd persons, who may kill, torture him, or make him their slave as they see fit; but prisoners of quality, guilty of notorious crimes, 'tis said, are only banish'd to a certain rock, situated in the lake of Tzane. For theft, the offender is whipp'd, and oblig'd to make restitution; but adultery is punish'd with death: Civil causes the parties plead themselves (I can't learn, there are any Lawyers in the country, any more than written laws) before their respective Lords; and they may appeal from these tribunals to the Emperor, 'tis said; but this is seldom done, lest it should be refuted by their immediate Governors.

Their religion. I proceed in the next place to treat of their religion, which seems to be a mixture of Christianity and Judaism; but in their Christianity, they approach much nearer the Greek than the Latin church: They keep both the Jewish and Christian sabbath, and keep each of them more like a fast than a festival: They circumcise their children,

both males and females, the eighth day, and baptize them a fortnight after: formerly they baptiz'd none, till they were thirty years of age. The circumcision of their females sounds a little odd to us; but, 'tis said, they have an excrescence, or superfluous skin, that falls over the Pudenda, a piece whereof is cut off on this occasion: Certain it is, other nations of Africk have such an excrescence, and travellers report that the Ethiopians have it: but of this I cannot be so positive, as that the females of some other nations have.

Circumcision is perform'd by any old woman; but baptism only by a Priest. If it be an adult person, the Priest anoints him with oil, and then going with him into some river or pond, by the assistance of two Deacons, plunges him three times under water; saying, I baptize thee in the name of the Father, Son and Holy Ghost. Then the Deacons bring the person out, and he is anointed again; after which he is cloathed with a white garment, signifying purity or innocence; and over it they put a red vest, to signify he was redeem'd and regenerated by the blood of CHRIST: after which, he is introduc'd into the church and receives the holy communion, and at his departure is presented with milk and honey, and receives the Priest's benediction.

An infant that is baptiz'd, is only gently dipp'd and sprinkled with water; but to these also they give some of the consecrated bread and cup: and annually they celebrate the 6th of January as a festival, going into the water and dipping themselves, in commemoration of our Saviour's baptism, which they suppose happen'd on that day; from whence some have conjectur'd, that they renew'd their baptism once a year.

At the sacrament of the Lord's supper, the consecrated elements are placed on a great square, wooden chest, instead of a table; the holy utensils are a dish, a cup and a spoon, call'd the spoon of the cross; with which they distribute the liquor they use instead of wine, which is made of the bruised stones of raisins infus'd in water; and this, after the bread, the Deacon delivers with the spoon both to the Clergy and Laity. They have also consecrated urns and censers, in which they burn perfumes at these times. Every person receives the sacrament once a month, or as often as he thinks fit; but never out of a church. They acknowledge the same books of holy scripture, as we do, for their rule of faith; and, 'tis said, have a more correct copy of the Septuagint, than is to be met with in Europe.

They admit the councils of Nice, Constantinople and Ephesus, with other provincial councils receiv'd till the council of Chalcedon; and, besides the Nicene canons, have eighty-four other canons in the Arabic language, which their Emperor CONSTANTINE sent to Jerusalem, anno 440, and were carried from thence to Rome, anno 1646. This book contains the synod of the Apostles, said to be written by St. CLEMENT; the councils of Ancyra, Caesarea, Nice, Gangra, Antiochia, Laodicea and Sardis, with the acts of 318 fathers; a treatise of the sabbath, with a decree and canon of penance; to which is annex'd their general liturgy, prayers and offices for the communion, a particular service for holidays, with books containing the lives of Martyrs and Saints, and hymns in praise of the blessed Virgin.

They use the Nicene creed, but have not the Apostle's creed: They hold, according to LUDOLPHUS, that the three persons in the Trinity are one God:

CHAP. II. God: that there are not two natures and wills in CHRIST; and yet affirm he is perfect God and perfect Man, without confusion of the two natures; which, I must acknowledge, I do not comprehend. They have but two sacraments (viz.) Baptism and the Eucharist, and give the bread and the cup both to Clergy and Laity, as has been related already: They believe the real presence in the sacrament, but not transubstantiation; and therefore do not say at the consecration, this is my body; which words, according to the Roman catholicks, produce the change; but this bread is my body, and this cup is my blood; neither do they give those divine honours to the consecrated elements, which the disciples of transubstantiation do.

They make general confessions of their sins, and receive as general absolutions; but make no particular confessions: They seem to believe the soul to be produc'd from matter, and yet, that it is immortal, and that, after death, the souls of good men remain in some intermediate state, and have not the vision of God, till the resurrection; for they have in their divine service, the following petition for their dead (viz.) Remember, Lord, the souls of thy servants; and, O Lord, release our fathers: From whence the Roman Missionaries infer, that they believe a purgatory: They keep holidays in honour of the Saints; and invoke them, begging their intercession, especially the virgin MARY's, whose picture they have, but no image of her, or any other Saint: They also invoke the holy Angels, as they have sometimes appear'd to good men, and brought them answers of their prayers; and reckon up nine orders of those celestial beings: They fast the forty days in Lent, and at some other times, keeping their fasts so strictly, that they eat nothing within the space of four and twenty hours, and sometimes fast two whole days together (which is done much easier in hot, than in cold countries): They also observe Christmas, Easter and Whitsuntide, and all other festivals of the ancient church, tho' at different times from the Latins.

The Emperor, as has been observ'd, is supreme in all ecclesiastical, as well as civil causes; and the Clergy, as well as Laity, are under the jurisdiction of the King's Judges: they have, however, a Metropolitan, consecrated by the Patriarch of Alexandria, who confers orders on the Clergy, who are chiefly Monks: They have neither Archbishop or Bishops, or any order superior to Priests; only the Abbot of every society of Monks is their superior, and has some authority over them.

These Monks do not live in cloysters or convents, but every one in his own hut, forming a kind of village near some church, where they perform divine service in their turns: Their inferior orders below the Priest or Presbyter are, the Sub-presbyter, Deacon and Sub-deacon: The Monks never marry; but one would imagine they had some Clergy that were not Monks; because travellers relate, that Clergymen, who are not Monks, may marry once; possibly this may be meant of the inferior orders, who are not Monks: These Monks manure small parcels of ground, and live by their labour.

Their principal churches were built at first, after the model of the temple of Jerusalem, with a sanctuary and outward court; but they have built them since in the form of a cross, like the cathedrals in other Christian nations: the Princes of the royal family and chief Nobility all receive the order of

CHAP. II. Deacon; and are thereupon admitted into the choir and chancel, and every Prince has a cross carried before him, even after his accession to the throne; from whence, and the supreme ecclesiastical authority he exercises, this Prince is held to partake of the sacred function; and, according to some, from hence it was, their Emperors were stil'd Presbyter Chan, or Cham (not Presbyter JOHN) King of Priests, or the Priestly King.

The people use lighted tapers at divine service like the Greek church: They neither sit or kneel in their churches, but stand; tho' the service, on some holidays, lasts whole days and nights; but they have crutches, on which they are permitted to lean: They keep their churches exceeding neat, and put off their shoes when they enter them, which shews their regard for them, as uncovering the head does with us: And such is their veneration for these sacred structures, that they will not spit on the pavement for the world; and, when they are travelling, 'tis said, they will light when they come near a church, and walk past it: They have pictures of the Saints in their churches, but no images; and, tho' their Clergy carry a cross in their hands, which is kiss'd by all they meet, and they often sign themselves with the sign of the cross, yet they are not suffered to carry about them either an image or picture of CHRIST crucified.

According to LUDOLPHUS, they formerly acknowledged the Bishop of Rome to be the first Patriarch; but denied his supremacy over the whole church: But the Portuguese Missionaries, resorting to Ethiopia at the latter end of the fifteenth century, when their countrymen found the way thither round the Cape of Good Hope, had almost made good Catholicks of the Ethiopians, and persuaded their Emperor, not only to acknowledge the Pope's supremacy, but to admit a Patriarch amongst them, sent thither from Rome. The government also consented to abolish their ancient rites and ceremonies, and conform entirely to the ritual of the Roman church: But many of the Nobility and Governors of the provinces, with a majority of the Common people, having the greatest abhorrence of the Popish religion, rose in arms against their Emperor, which occasion'd civil wars in Ethiopia, that lasted upwards of an hundred years, wherein many thousands were killed; but the Court, with the assistance of the Jesuits, European Engineers, and some Portuguese troops, were generally victorious over those of the ancient religion, but could never subdue their obstinate perseverance in it; and several provinces revolted entirely from the Emperor: However, their Emperors continued still to profess the Popish religion, and submit to the dictates of Rome; till at length the Jesuits, under pretence of maintaining the Pope's ecclesiastical supremacy, took upon them to direct almost all secular affairs, treating the Prince rather as a Viceroy to his Holiness, than Sovereign of the country; and, having erected and garrison'd several fortresses, were sending for European forces to maintain their usurped power; which gave such an alarm to the Emperor, as well as to the Nobility, that it was agreed at once to abolish Popery, and restore their ancient religion. The Romish Priests were hereupon generally sacrificed to the fury of the people, and their Patriarch very narrowly escaped out of the country with his life: And when three Capuchins afterwards came as far as Squaquena, upon the Red sea, from whence they sent letters to the Emperor of Ethiopia to obtain leave to come into his territories again; that Prince requested the

Their Emperor submits to the Pope.

Which occasions a civil war.

Several provinces revolt.

The usurpations of the Jesuits.

The Papists are massacred.

The old religion restored.

Turkish

CHAP. II. Turkish Bassaw, who commanded on that coast, to suffer no Franks to come that way into his territories, and to send him the heads of those Capuchins; which the Bassaw did not only oblige him in, but sent him their skins flea'd off, and stuff'd, that he might know them to be Franks by their colour, and Priests by their shaved crowns. Thus have the Jesuits and Fathers of the Romish church procured their superstition to be banish'd out of almost every country where they have planted it: They have indeed, by their skill in physick and mathematicks, and an artful address, insinuated themselves into the courts of many great Princes;

The Jesuits every where do more mischief than good to Christianity, by preaching up the Pope's supremacy.

but then their advancing the Pope's supremacy to such an extravagant height, and pretending to controul the government in civil, as well as ecclesiastical matters, has ever occasion'd their expulsion. Thus it was in Japan, where that Emperor, finding them usurping upon his civil authority, order'd every Christian in his dominions to be massacred; and that no Christian should ever set his foot on shore there again. This also has put a stop to their progress in China, and occasion'd very severe persecutions of the Christians there; but still they persist in their encroachments on Princes where they have an opportunity; and probably will never be satisfied, till they have made his Holiness universal monarch in temporals as well spirituals; or procured their own extirpation by the general consent of Christian Princes, as the Knights-Templars did by their insolence in the fourteenth century. But to return to Ethiopia:

Marriages of the Abyssinians.

Their marriages are no more than contracts before friends, which are, however, blessed afterwards by the Priest; but this is, I presume, where a person confines himself to one wife, for their religion prohibits polygamy, and they are sometimes excommunicated for taking more wives than one; and yet their Emperor has an hundred at least, and their Great men as many wives as they please: it is only the common people that are forced to keep to one wife; and possibly they need but little restraint in this particular, not being able to maintain more. The sons of the Emperor succeed according to their seniority, as do those of the Nobility, who have obtained an independency: But the rest of the people have no inheritance in their lands, nor can dispose of their estates or effects, but by the permission of the King, or their respective Lords.

Inheritance.

Their funerals.

They seem astonish'd, and make great howlings and lamentations, on hearing of the death of their friends, or any great man. The corpse, after it is wash'd and perfum'd, is wrapped up in a cloth; and, being laid on a bier, is carried to the burying-place by some of the Clergy, who read over some passages out of the Psalms on the occasion: After which, the corpse is laid into the grave without a coffin; but they have no particular funeral service: The relations and friends of the deceased mourn for some time afterwards in rags or tatter'd cloaths, imagining a poor neglected dress best expresses their sorrow for their deceased friends; and this seems to have been the general opinion of the ancients, who, upon any melancholy occasion, rent their cloaths, or at least put on such as were so; and did not study dress while they were in mourning, as some of the moderns do.

Learning and languages of the Abyssinians.

As to the learning of the Ethiopians, it appears to be very mean at present; reading and writing the languages, in use amongst them, seems to be their highest attainments; scarce any of their Clergy pretend to more. The Arabick language, is that wherein the scriptures, their liturgy and divine

VOL. III.

offices, as well as all acts of state, are written: **CHAP. II.** The Court and Nobility use a language, call'd the Amarick, from its being spoken chiefly in the province of Amara; and the common people the Ethiopick, of which there are abundance of different dialects; one province scarce understanding another. Both the Amarick and Ethiopick are a mixture of languages; and, according to some, compounded of the Arabick, Hebrew and Chaldee.

Nubia is one of those countries I have comprehended under the general name of Ethiopia, because it is contiguous to Abyssinia, and was certainly part of the ancient Ethiopia, if it be not of the modern; and because the Nubians, according to the best accounts we can get of them, resemble the Ethiopians more than any other people.

Nubia, the present state of it.

Nubia is usually bounded by the deserts of Barca, and Egypt towards the north; by Abyssinia, on the east; by the lower Ethiopia, on the south; and Zaara, on the west; and is said to be four hundred leagues in length, and two hundred in breadth; but scarce any two Historians or Geographers agree in these matters; and, in truth, they seem to guess at almost every thing they relate of Nubia, and this is the case of almost every other inland country of Africa.

Its situation and extent.

Some tell us of a river that rises in this country, and falls into the Nile; that it abounds in gold, musk, sandal, wood and ivory; having elephants, horses, camels, lions, and such other animals, wild and tame, as are to be found in the neighbouring country of Abyssinia; but they don't so much as know, whether it be a monarchy or commonwealth; or whether it is divided into many little kingdoms and states; the last of which is most probable, because we hear so little of them. The same uncertainty we meet with in relation to their religion: it is suppos'd they were once Christians, there being the ruins of some Christian churches there, 'tis said: They relate also, that their religion is a mixture of Paganism, Christianity, Judaism and Mahometanism, and it is highly probable, every one of these religions is profess'd by one or other of the natives, people of all those various religions bordering upon them.

Dangala is said to be their capital city, and situated in 17 degrees of north latitude; and Geographers pretend to give us the names of several other towns, which perhaps never had any existence; and therefore I shall not trouble the reader with them. I believe we may conclude, that their towns are not better than those in Abyssinia, which we find are compos'd of very mean huts and cottages. Thus much however, I believe, we may conclude, that the people are black, as in Ethiopia, and partake of many of their customs; but as for any thing else, little regard is to be given to what Historians or Geographers have written of them, and therefore I shall take leave of this *terra incognita*, and not tire the reader with such accounts of it, as are not to be depended on.

Chief towns.

Persons of the natives.

That part of Ethiopia, which I comprehend under the names of Abex and Anian, or Aian, is bounded by Egypt and Abyssinia towards the north and west; by the Red sea, and the Eastern ocean, on the east; and by Zanguebar on the south, extending from the 5th degree of north latitude to the 20th.

Abex and Anian.

Anian lies upon, or near, the Eastern ocean, and the Red sea; of which the Portuguese and other Europeans, who have visited it of late years, assure us, it is a perfect desert, from latitude 5, to the straits of Babelmandel, or the entrance into the Red sea, and even within those straits for several miles;

The state of Anian.

19 D

the

CHAP. II. the country being cover'd with sand and weeds, and producing scarce any sustenance either for man or beast; neither inhabited or habitable; no harbour for shipping, or river that waters any part of it, says my author: Tho' there are others, who pretend, that the country is populous, and abounds with plenty of all things; but this can be understood only of the coast of Abex, to the northward of Aian, and lying on the western shore of the Red sea, some degrees within the straits of Babelmandel, of which the Turks are masters. This province is indeed very fruitful; the principal ports whereof are, Suaquem or Suaquee, and Arquico or Ercoco, about 150 miles distant from each other; and in these the Turks keep strong garrisons, which command the country, and collect great quantities of rice and other provisions, which they send over to Jeddo in Arabia, the port town to Medina and Mecca, for the service of the Pilgrims that resort thither, both from Africa and the north and eastern parts of Asia, in vast multitudes; but I do not meet with any other ports or great towns on the coasts of Abex, 'till we come as high as Egypt.

Chief towns. The people here are chiefly Turks and Arabians, and their manners and customs the same with those already describ'd in the first volume of *Modern History*, that treat of Arabia and Turkey.

CHAP. III.

The present state of ZANGUEBAR.

CHAP. III. UNDER the name of Zanguebar I include all the east coast of Africa, extending from 5 degrees north to 28 south, bounded by Aian or Anian on the north, the Eastern ocean on the east, Caffraria on the south, and the inland unknown countries of Africa, sometimes call'd Ethiopia inferior, on the west; comprehending, under the general name of Zanguebar, the countries of Magadoxa, Quiloa, Mozambique and Zofala.

Countries comprehended in it. The country of Magadoxa lies a little to the northward of the Equator; the chief town, of the same name, situated at the mouth of a river, in 3 degrees some odd minutes north latitude. The people here are in alliance, or, rather, subject to the Portuguese; as are all the people almost upon this coast. Their country is very barren, affording scarce any merchandize, or cattle, unless a good breed of Horses, which, 'tis said, they sell to the Portuguese, who dispose of them again to the Arabs. The people are a mixture of Pagan, Mahometans and Christians: Their complexions, generally, a deep black, with flat noses and thick lips, like the rest of the Negroes.

Melinda. The country of Melinda lies to the southward of the Line; the chief town, of the same name, being situated in 2 degrees and a half south latitude, on an island at the mouth of the river Melinda, and is the capital of the Portuguese dominions in this part of the world.

Air. Notwithstanding this country lies so near the Equator, it is exceeding pleasant, fruitful, and healthful; being frequently refresh'd with showers and fine sea-breezes. The city of Melinda is a large populous place, well built, considering where it stands; has a good harbour, commanded by a strong citadel. And here the Portuguese have 17 churches, and 9 religious houses: They have also warehouses stock'd with all sorts of European goods, with which they trade with the natives for

the produce of the country, viz. gold, Elephants teeth, slaves, Ostrich-feathers, wax, and drugs; such as senna, aloes, Guinea grains, civet, amber-grease, and frankincense. The country produces also rice, millet, sugar and fruits; and the Portuguese export great quantities of rice to their other settlements, besides what they use. Some calculate, that the inhabitants of the city of Melinda, and the little island on which it stands, do not amount to less than 200000 souls, great part of them Christians.

The natives have a King of their own, who is a Mahometan; but many of his people are still Pagans; and all of them in some subjection to the Portuguese. The publick buildings in Melinda, besides the churches and monasteries already mention'd, are the Governor's palace, the publick magazine and town-hall; all which are said to be magnificently built; at least, they exceed any thing of the kind that is to be found in Africa.

The country of Quiloa lies to the south-ward of Melinda; the capital city, of the same name, being in 8 degrees odd minutes south latitude. The Portuguese possess'd themselves of this place on their first discovery of this coast; but it being an unhealthy situation, they quitted it again: However, the King of the country is tributary to them (as the rest of the Princes on this coast are;) and pays them, 'tis said, a tribute in gold, amounting to the value of an hundred thousand cruzadoes annually. This part of the country produces excellent sugar-canes; but the Portuguese do not improve them, receiving great quantities of sugar every year from their countrymen at Brazil, who come hither annually for slaves.

The country of Mozambique lies south of Quiloa; the chief town, situate on an island on the mouth of a river, of the same name, in 15 degrees south latitude. Here is a good harbour, defended by a citadel; the town it self regularly fortified; and the island, on which it stands, is thirty miles in circumference, and extremely populous. Here are six churches, and several monasteries; the Monks whereof make abundance of profelytes in the neighbouring country. Here the Portuguese also barter European goods with the natives (whom they have taught to cloath themselves) for their gold, Elephants teeth, and slaves; and here their shipping to and from India calls for refreshments: And, as this country produces great herds of cattle, the Portuguese kill Beef, and salt it up, sending it to the Brazils, or selling it to European shipping.

Mongale, an island-town in this country, also is garrison'd by the Portuguese: And here is their chief staple for European goods. The gold they receive for them of the natives, is found near the surface of the earth, or in the sands of rivers; there being no gold mines wrought in Africa.

The city of Mombaza, in the country of Mozambique, lies in 7 degrees 4 minutes south latitude, which the Portuguese possess'd themselves of when they first visited the east coast of Africa; and, being beaten out of it afterwards, recover'd it again; and have at present a considerable trade here.

In Zofala, to the southward of Mozambique, the Portuguese have also some little settlements; and, indeed, they have the trade of the whole coast almost to themselves as far as the Tropic of Capricorn.

CHAP. IV.

*The present state of CAFFRARIA:**Particularly the south part of it, the country of the Hottentots.*

CHAP. IV.

Situation and extent.

CAFFRARIA is the most southern part of Africa, lying in the form of a crescent about the inland country of Monomotapa, and bounded by the ocean on the east, south and west, extending it self from the Tropic of Capricorn on the east, to the most southerly point of Africa, call'd Cape d'Aguilas, latitude 35, running up from thence to the northward as high as the same Tropic, on the west side of Africa; and by some is carried to latitude 15 south.

Division. Hottentot country. Situation.

This country is divided into two parts, viz. the country of the Hottentots, and Caffraria Proper. The country of the Hottentots is the most southern part of Caffraria, lying between lat. 28 and 35, and between the eastern and western ocean, being about 300 miles from east to west, and about 400 from north to south. The Dutch town, which has obtain'd the name of the Cape, lying in lat. 34 degrees 15 minutes, longitude 18 degrees to the eastward of London.

First discovery of it.

This country was first discovered by the Portuguese Admiral DIAZ, in his attempt to find a way to the East-Indies round Africa, about two hundred and forty years ago. The Portuguese, some years after, attempted to make a settlement there; but the inhabitants falling upon them, and cutting in pieces several of their people; and there being no harbours for the security of their shipping against the violent storms upon that coast, they laid aside their design. The English afterwards visited the Cape, and were discouraged from settling there, for much the same reasons the Portuguese quitted it; namely, the tempestuous seas, and the want of harbours, together with the untractableness of the people: However, the Dutch observing the fruitfulness of the country, and judging that it would be of great use to supply them with provisions in their voyages to and from the Indies, fixed a colony at the Cape about the year 1651, erected a fort, and entered into a treaty with the natives, who, for a very moderate consideration, transferred a good part of their country to them; and here the Dutch have remained ever since, enlarging their territories to that degree, that they have now settlements upwards of two hundred miles to the north and east, well planted and cultivated, of which I shall give a more particular account hereafter.

The Dutch settle at the Cape.

The face of the Hottentot country.

The country of the Hottentots is mountainous; but the tops of the hills, as well as the valleys, are generally fruitful: It is also adorned with groves of trees, and a great variety of plants and flowers, that are watered by little rivulets, and render it exceeding pleasant during the fine season; but in the time of the rains or munsoons, they swell into unpassable torrents. The winds also rage great part of the year, and do not only make the coasts very unsafe for ships, but do a great deal of mischief by land to the grain and fruits, as well as to their buildings. These winds, while the sun is in the southern signs, blow from the south-east, and are then very dangerous to ships coming into the Cape. When the sun is in the northern signs, they blow from the north-west, and then are no less dangerous to the ships at anchor in the bay. How-

ver, 'tis observed, that the inhabitants are never more healthful than during this stormy weather: If the wind ceases for a week or ten days, they are subject to the head-ach and other distempers, which go off again when ever the wind rises.

CHAP. IV.

On approaching the Cape of Good Hope, three remarkable mountains are discovered, viz. the Table-hill, the Lion's-hill, and the Wind, or Devil's-hill, which may be seen 40 or 50 miles out at sea.

The Table-hill was first named so by the Portuguese, as resembling, at a distance, a square table; the perpendicular height is upwards of 1850 feet.

The Table-land.

On the top of it are several good springs, the water whereof is exceeding clear and well-tasted. Between this hill and the bay where the ships ride, is a valley, where stands the Dutch town, their fort, and their fine garden, the admiration of all travellers; but these will be more particularly described hereafter. In the summer-season, viz. from September to March, a cap of clouds constantly covers the top of this hill before a storm, and gives notice to the Sailors to prepare for it.

Table-valley.

The Lion's-hill is not so high as the former: It lies contiguous to the sea, and bears west from the Table-mountain, being separated from it by a narrow valley. It is supposed to have obtained its name from the resemblance it bears to a Lion couchant, with his head erect; or, according to others, from its being infested with Lions when the Dutch first settled there. On this hill stands a flag, guarded by some Soldiers, who give notice of the approach of shipping, from what quarter they come, and their number, by hoisting and lowering the flag.

The Lion's-hill.

The Devil's-hill supposed to be so called from the furious winds that issue from thence when the top is covered with a white cloud, is not so high as either of the former: It lies also along the shore, being separated from the Lion's-hill by a small valley or cleft. These three hills lie in the form of a crescent, about the Table-valley.

The Devil's-hill.

The Hottentot nations, who inhabit this southern promontory of Africa, are 16 in number; at least the Dutch are acquainted with so many; but that there are more to the northward of these, seems pretty certain.

The several Hottentot nations.

The 16 nations enumerated by travellers, and particularly by KOLSEN, are, 1. The Gongeman nation; 2. The Kochaqua; 3. The Sussaqua; 4. The Adiqua; 5. Chirigiqua; 6. The greater and lesser Namaqua; 7. The Attaqua; 8. The Koopman; 9. The Hessaqua; 10. The Sonqua; 11. The Dunqua; 12. The Damaqua; 13. The Gauros, or Gauriqua; 14. The Hauteniqua; 15. The Chamtower; 16. The Heykom.

The Gongeman nation first trafficked with the Dutch; and, in consideration of some brass rings, beads, and other trifles, admitted them into that fine country where the Cape-Town now stands; but when they saw the Dutch erecting a fortress and enclosing the lands, from whence they excluded the cattle of the Hottentots, the natives represented, that they meant no more in their treaty with the Dutch, than that they should be at liberty to dwell with them, and have pasture for their cattle; they were not so stupid as to exclude themselves from their own country, or to suffer forts to be built that would bring them under the subjection of foreigners; and, when the Dutch refused to throw open their enclosures, assembled in arms to drive them out of their country. But the Hollanders were become so strong, that they engaged

The Gongeman nation.

The treaty with the Dutch.

CHAP
IV.

gaged the natives, and defeated them, compelling them to submit to such terms as the victors were pleased to impose; which were, in short, no other, but that the Hottentots might still remain in their own country, and graze their cattle upon such lands as were not enclosed by the Dutch; and accordingly the Gongeman nation are intermixed with the Dutch at this day, but enjoy no more of their lands than the Hollanders have not thought fit to appropriate to themselves (which indeed is all the best part of it.) The Gongeman nation are barely permitted to feed their cattle upon the common or waste grounds that are not enclosed. The Hollanders are now lords of the country, and the natives little better than their vassals, or tenants at will; though the Dutch are obliged to use them with some tenderness, lest the other nations, their brethren, should disturb their distant colonies.

Kochiqua
nation.

2. The Kochiqua nations lie to the northward of the Gongemans, in whose limits is a great deal of good pasture, part of which is enclosed by the Dutch; but the natives still possess more than half the lands: In this country are several salt-pits; but, as there are few springs, not many of the Dutch reside here.

Suffaqua's.

3. The Suffaqua's lie to the northward of the Kochiqua's. The country is mountainous, and there are but few villages in this territory, and no great herds of cattle; the people deserting the country for want of water, though there is good pasture on the hills as well as in the valleys.

Odiqua's.

4. The Odiqua's country lies contiguous to that of the Suffaqua's; and these two nations are always in a confederacy against their neighbours the Chingriqua's.

Chingri-
qua's.

5. The Chingriqua's are a numerous people celebrated for their strength and dexterity, in throwing the Hassagaye or Lance: Their country is mountainous, and extends along the sea-coast; the soil, however, generally good, there being rich pastures on the top of their hills, as well as in the valleys; and through the middle of it runs one of the largest of their rivers, called the Elephant river, from the Elephants resorting in great numbers to it. Here are also woods of large, tall trees, different from any we meet with in Europe; and these are infested with Lions, Tigers, and almost all manner of wild beasts.

Nama-
qua's.

6. The greater and lesser Namaqua; the lesser extending along the coast, and the other contiguous to it, on the east. This people 'tis said, are able to bring an army of twenty thousand men into the field, and are the most sensible of all the Hottentot nations: Their country however, is mountainous and barren, destitute of wood, and hath but one spring in the whole territory; only the Elephant river, running through their country, supplies some part of it with water. Here are also great numbers of wild beasts, and small spotted Deer, of which hundreds and thousands are sometimes seen in a herd. The venison, generally, is fat and good.

Attaqua's.

7. The Attaqua's lie to the northward of the Namaqua's, possessing a very barren country, with very little water in it, and is neither populous, nor well stocked with cattle, the natives dispersing themselves in small parties, that they may the better find a subsistence. This is the most northern nation, described by KOTZEW on the western coast, though he mentions another nation still to the northward of the Attaqua's, called the Chorogauqua's, possessing a vast extent of country, and supposes there may be still several other nations to the northward of them,

before we come to Angola. Then, returning southward, he brings us to

CHAP
IV.

8. The Koopmans, who lie to the eastward of the Gongemans, and the Cape Town: Here the Dutch have a great many settlements and plantations, and a rich tract of land enclosed; but the natives, however, are suffer'd to dwell among them, and graze their cattle on the uncultivated grounds. This country is well wooded and water'd: There runs a rapid stream through the valleys into the sea, call'd Palamite river, whose source is in the Drakenstein mountains, on the Dutch frontiers, receiving several lesser rivulets in its course; the largest whereof is called the Black river. In this territory also is a hot bath, and several salt-pits.

Koop
mans.

9. The country of the Hessaqua's joins also to Hessaqua's. They abound in Cattle, Sheep, and Oxen (the only riches of the natives) more than any other Hottentot nation, and traffick more with the Dutch for brandy, tobacco, coral, brass beads, and other trifles; for which they give their cattle in exchange. They are said to be the most effeminate of the Hottentots, and least addicted to war; and when they are attack'd therefore by an enemy, beg the protection of the Hollanders. Their Kraals, or Villages, are larger than those of any other nation; and their country does not only abound with cattle, but great plenty of game, and every thing desirable in life: The Hessaqua's who have no stock, frequently serve the Dutch; but when they have got a little money to buy cattle, they usually leave their masters, and, returning to their Kraal, set up for themselves.

10. The Sonqua's, who lie to the eastward of the Koopman nation, are said to be a small, but brave people, and dexterous in the management of their arms. Their country is rocky and mountainous, and the barrenest of all those about the Cape. As they are reckon'd good Soldiers, they are frequently hired by their neighbour nations, as the Swis are in Europe, to assist them in their wars, and serve purely for bread; having very little food of their own but roots and herbs, and what they can get in hunting, at which they are very expert: They also plunder the woods for honey, which they sell to the Europeans, not being fond of it themselves.

11. The Dunqua's nation borders upon the Sonqua's. This people enjoy a more level country than the former: It is also well water'd with rivulets, that fall into the Palamite river: The hills as well as vales are good pasture, and they abound in cattle and game.

12. The Damaqua's, who lie next them, also enjoy a fruitful level country, abounding in cattle and game, and the Palamite runs in a winding or serpentine course thro' it; but here is a great scarcity of wood: They have some salt-pits; which, being at a great distance from the Dutch, no use is made of them, the Hottentots eating no salt.

13. The Gauru's, or Gauriqua's, lie next to the Damaqua's. They possess a small country, but are, however, a numerous people, the soil being rich, and every where well supply'd with wood and water: The country abounds also in cattle, and no less in wild beasts; which the natives are so far from regretting, that it is said they look upon it as a happiness they have so many opportunities of shewing their dexterity and courage in engaging them, and they are most of them cloathed in the skins of Tigers or other wild beasts they have killed.

14. The Houteniqua's lie on the sea-coast, north-east of the Gauru's, in whose country is a great deal

Houten-
qua's.

The APPAREL of the Hottentot Men. | The APPAREL of the Hottentot Women.

CHAP. IV. deal of good pasture; and they have woods replenish'd with timber, with great variety of herbs and flowers.

Chamtou- 15. The nation of the Chamtouers, who lie contiguous to the Houteniqua's, possess a very fruitful country, well wooded and water'd; their streams affording variety of fish. Here are also abundance of wild beasts, and plenty of game.

Heykoms. 16. The Heykoms lie to the north-east of the Chamtouers; their country mountainous and destitute of water, but has, however, some fruitful valleys: This is said to be the most northerly country of the Hottentots, on the east coast of Africa, and to lie contiguous to the Terra de Natal, inhabited by the Caffries, properly so call'd, who are a very different people from the Hottentots.

Of their name, I could never meet with any satisfactory account: They had given themselves this name, it seems, before any European nation arriv'd on their coast; and this is all we know certainly of the matter.

and original. Their original is no less obscure; but from some of their customs, that resemble those of the Jews and the ancient Troglodites, it is imagin'd they descended from one or other of those nations. Mr. KOLBEN tells us, they have a tradition amongst them, that their first parents came into their country through a window or door (the word for both in the Hottentot language being the same): That the name of their male ancestor was N'oh, and his wife's, Hing'n'oh: That they were sent thither by God himself; and that they taught their descendants husbandry. This tradition, he says, prevails in all the Hottentot nations; which he looks upon as a certain evidence of their being descended from Noah.

He adds, that they resemble the Jews in their offerings, and regulating their festivals by the new and full moon, and in their separation from their wives at certain times, as well as in abstaining from certain sorts of food, especially Swines-flesh, and undergoing a kind of circumcision at a certain age: But still he thinks they are rather descended from the Troglodites, who inhabited the south part of Egypt, or Ethiopia, in this very quarter of the world, and had these and several other customs which the Hottentots observe; as, the giving their children the name of a favourite animal, and their exposing their superannuated parents without any food, and thereby putting an end to their lives. He observes also, that the manner of hunting of the Hottentots resembles that of the Troglodites; and that their funeral ceremonies are much the same. But, to proceed to something more certain, namely a description of their persons. As to the stature of the men, they are rather low than tall; for though there may be some 6 foot high, there are more about 5 foot. Their bodies are proportionable, and well made: They are seldom either too fat or lean, and scarce ever any crooked or deform'd persons amongst them, any farther than they disfigure their children themselves, by flattening and breaking the gristles of their noses; looking on a flat nose as a beauty. Their heads, as well as their eyes, are rather of the largest: Their lips are naturally thick; their hair black and short, like the Negroes, and they have exceeding white teeth; and after they have taken a great deal of pains, with grease and foot to darken their natural tawny complexions, resemble the Negroes pretty much in colour. The women are much less than the men; and what is most remarkable in them, is a callous flap or skin that falls over the

VOL. III. NUMB. CV.

Pudenda, and in a manner conceals it: The report of which usually excites the curiosity of the European Sailors, to visit the Hottentot village near the Cape, where a great many of those ladies, on seeing a stranger, will offer to satisfy his curiosity for a halfpenny, before a croud of people; which perfectly spoils the character the pious Mr. KOLBEN has given of their modesty.

The men cover their heads with handfuls of Their hair grease and foot mix'd together; and, going without any thing else on their heads in summer-time, the dust sticks to it, and makes them a very filthy cap; which, they say, cools them, and preserves their heads from the scorching heat of the sun; and in winter they wear flat caps of Cat-skin or Lamb-skin, half dry'd, which they tie with a thong of the same leather under their chins. The men also wear a krosse or mantle, made of a Sheep-skin or other skins, over their shoulders, which reaches to the middle; and, being fasten'd with a thong about their neck, is open before. In winter they turn the woolly or hairy sides next their backs, and in summer the other: This serves the man for his bed at night; and this is all the winding-sheet or coffin he has when he dies. If he be a Captain of a village, or Chief of his nation, instead of a Sheep-skin, his mantle is made of Tyger-skins, wild Cat-skins, or some other skins they set a value upon: But, tho' these mantles reach no lower, generally, than their waists, yet there are some nations who wear them as low as their legs, and others that have them touch the ground.

They conceal or cover those parts also which every other people do, with a square piece of skin about two hands-breadth, generally with a Cat-skin, the hairy side outwards, which is fasten'd to a string or girdle about their bodies.

The man also hangs about his neck a greasy pouch, in which he keeps his knife, his pipe and tobacco, and some dacha (which intoxicates like tobacco) and a little piece of wood, burnt at both ends, as a charm against witchcraft. He wears also three large ivory rings on his left arm, to which he fastens a bag of provisions when he travels. He carries in his right hand two sticks, the first call'd his kirri, which is about three foot long, and an inch thick, but blunt at both ends; the other, call'd his rackum-stick, about a foot long, and of the same thickness, but has a sharp point, and is used as a dart, to throw at an enemy or wild beast; which he seldom misses, if he be within distance. In his left hand he has another stick, about a foot long, to which is fasten'd a tail of a Fox or wild Cat; and this serves him as a handkerchief to wipe off the sweat. They wear a kind of sandals, also made of the raw hide of an Ox or Elephant, when they are oblig'd to travel through stony countries; and sometimes have buskins, to preserve their legs from bushes and briars; but ordinarily their legs and thighs have no covering.

The women wear caps, the crowns whereof are a little raised; and these are made also of half-dry'd skins, and tied under their chins. They scarce put them off night or day, winter or summer. They usually wear two krosses or mantles, one upon another, made of Sheep-skins, or other skins, which are sometimes border'd with a fringe of raw leather; and, as these are only fastned with a thong about their necks, they appear naked down to the middle: But they have an apron, larger than that of the mens to cover them before, and another of still larger dimensions that cover their back-sides. About their legs they wrap thongs of half-dry'd skins,

CHAP.
IV.

skins, to the thickness of a jack-boot, which are such a load to them, that they lift up their legs with difficulty, and walk very much like a Trooper in jack-boots: This serves both for a distinction of their sex, and for ornament. But this is not all their finery: If they are people of any figure, instead of Sheep-skin they wear a Tyger-skin, or a mantle of wild Cat-skins. They have also a pouch hangs about their necks, in which they always carry something to eat, whether they are at home or abroad, with their dacha, tobacco, and pipe.

Orna-
ments.

But the principal ornaments both of men and women are brass or glass beads, with little thin plates of glittering brass and mother of pearl, which they wear in their hair, or about their ears. Of these brass and glass beads strung they also make necklaces, bracelets for the arms, and girdles; wearing several strings of them about their necks, waists and arms, chusing the smallest beads for their necks: Those are finest that have the most strings of them; and their arms are sometimes covered with bracelets from the wrist to the elbow; the largest beads are on the strings about the middle; in these they affect a variety of colours, all of which the Dutch furnish them with, and take their cattle in return.

There is another kind of ornament peculiar to the men; and that is, the bladder of any wild beast they have killed, which is blown up and fastened to their hair, as a trophy of their valour.

Both men and women powder themselves with a dust they call bachu; and the women spot their faces with a red earth or stone (as ours do with black patches) which is thought to add to their beauty, by the natives; but, in the eyes of Europeans, renders them more frightful and shocking than they are naturally.

But, as part of their dress, I ought to have mentioned in the first place, the custom of daubing their bodies, and the inside of their caps and mantles, with grease and foot. Soon after their children are born, they lay them in the sun, or by the fire, and rub them over with fat or butter, mixed with foot, to render them of a deeper black, 'tis said; for they are naturally tawny: And this they continue to do almost every day of their lives, after they are grown up, not only to increase their beauty possibly, but to render their limbs supple and pliable. As some other nations pour oil upon their heads and bodies, so these people make use of melted fat. You can't make them a more acceptable present than the fat or scum of a pot that meat is boiled in to anoint themselves. Several of these Hottentots coming on board our ship as soon as we arrived at the Cape, addressed themselves in the first place to the Cook for some of the fat he had skimmed off his boiling coppers; which, being gratify'd in, they immediately clapped it on their heads by handfuls; which confirmed us in the opinion of their nastiness, of which we had heard so much. Nor are they more cleanly in their diet than in their dress; for they chuse the guts and entrails of cattle, and of some wild beasts (with very little cleansing) rather than the rest of the flesh, and eat their meat half-boil'd or broil'd; but their principal food consists of roots, herbs, fruits, or milk: They seldom kill any of those cattle, unless at a festival; they only feed on such as die of themselves, either of diseases or old age, or on what they take in hunting; and when they are hard put to it, they will eat the raw leather that is wound about the womens legs, and even soles of shoes: And, as their mantles are always well stocked with lice of an unusual size, they are not ashamed to sit down in the publick streets at the Cape, pull off the

Diet.

lice, and eat them. And I ought to have remembered, that they boil their meat in the blood of beasts when they have any of it.

CHAP.
IV.

They rather devour their meat than eat it, pulling it to pieces with their teeth and hands, discovering a canine appetite and fierceness: They abstain, however, from Swine's-flesh, and some other kinds of meat, and from fish that have no scales, as religiously as ever the Jews did. And here it may not be improper to say something of the management of their milk and butter: They never strain their milk, but drink it with all the hairs and nastiness with which it is mix'd in the milking by the Hottentot women. When they make butter of it, they put it into some skin made in the form of a Soldier's knapsack, the hairy side inwards; and then two of them taking hold of it, one at each end, they whirl and turn it round till it is converted into butter, which they put up for anointing themselves, their caps and mantles with, for they eat no butter; and the rest they sell to the Dutch, without clearing it from the hairs and dirt it contracts in the knapsack. The Hollanders, when they have it indeed, endeavour to separate the nastiness from it, and sell it to the shipping, that arrives there, frequently for butter of their own making; and some they eat themselves (but surely none but a Dutchman could eat Hottentot butter) and the dregs and dirt that is left they give to their slaves; which having been found to create diseases, the Governor of the Cape sometimes prohibits their giving their slaves this stuff by publick edict; which is not, however, much regarded. The butter-milk, without any manner of cleaning or straining, the Hottentots drink themselves; giving what they have to spare, to their Lambs and Calves.

The usual drink of the Hottentots is Cow's-milk, or water, and the women sometimes drink Ewes-milk; but this the men never touch: and 'tis observed, that the women are never suffered to eat with the men, or come near them, during the time of their menses.

Since the arrival of the Dutch among them, it appears that the Hottentots are very fond of wine, brandy, and other spirituous liquors: These, and the baubles already mentioned, the Hollanders truck for their cattle; and tho' a Hottentot will turn spit for a Dutchman half a day for a draught or two of four wine, yet do they never attempt to plant vineyards (as they see the Dutch do every day) or think of making wine themselves. I proceed, in the next place, to give an account of their towns and houses, or rather, their camps and tents.

The Hottentots, like the Tartars and Arabs, remove their dwellings frequently for the conveniency of water and fresh pasture: They encamp in a circle formed by twenty or thirty tents, and sometimes twice the Number, contiguous to each other; within the area whereof they keep their lesser cattle in the night, and the larger on the outside of their camp: Their tents, or, as some call them, houses, are made with slender poles, bent like an arch, and cover'd with mats or skins, and sometimes both: They are of an oval figure, the middle of the tent being about the height of a man, and decreasing gradually (the poles being shorter) towards each end, the lowest arch, which is the door or entrance, being about 3 foot high, as is the opposite arch at the other end; the longest diameter of the tent being about 12 or 14 feet, and the shortest 10; and in the middle of the tent is a shallow hole about a yard diameter, in which they make their fire, and round which the whole family, consisting of nine or ten people of all

Their
towns or
camps.

ages

CHAP. IV. ages and sexes, sit or lie night and day in such a smoak (when it is cold, or they are dressing of vic-tuals) that it is impossible for an European to bear it, there being usually no vent for the smoak but the door, tho' I think I have seen a hole in the top of some of their huts to let out the smoak; and give them light. Such a circle of tents or huts as has been describ'd, is call'd by the Hottentots a Kraal, and sometimes by the Europeans a town or village; but seems to be more properly a camp: For a town consists of more substantial buildings, and is seldom capable of being removed from one place to another; whereas these dwellings consist of nothing more than small tent-poles, covered with skins or mats, which are moveable, and carried away upon their baggage-Oxen whenever they remove with their herds to a distant pasture.

Furniture. As to the furniture of their tents; this consists of little more than their mantles which they lie on; some other skins of wild beasts they have kill'd or purchas'd, an earthen pot they boil their meat in, their arms, and perhaps some other trivial utensils. The only domestick animals they keep, are Dogs, as ugly in their kind as their masters, but exceeding useful to them in driving and defending their cattle.

Their ge-nius and temper. The Hottentots are agreed by all to be the laziest generation under the sun: They will rather starve, or eat dry'd skins, or shoe-soles at home, than hunt for their food; and yet, when they do apply them-selves to the chase, or any other exercise, no people are to be found more active and dexterous than the Hottentots; and they serve the Europeans often with the greatest fidelity and application; when they contract to serve them for wages: They are also ex-ceeding generous and hospitable; they will scarce eat a piece of venison, or a dish of fish they have catch'd, or drink their beloved drams alone, but call in their neighbours to partake with them as far as it will go.

Govern-ment of the Hot-tentots. The next thing I shall enquire into, is the go-vernment of the Hottentots; and I find all people agree, that every nation has its King or Chief, call'd Konquer, whose authority devolves upon him by he-reditary succession; and that they do not pretend to elect their respective sovereigns. That this Chief has the power of making peace and war, and pre-sides in all their councils and courts of Justice: But then his authority is said to be limited; and that he can determine nothing without the consent of the Captains of the several Kraals, who seem to be the Hottentot senate. The Captain of every Kraal, whose office is hereditary also, is their Leader in time of war, and Chief magistrate of his Kraal in time of peace; and, with the head of every family, deter-mines all civil and criminal causes within the Kraal; only such differences as happen between one Kraal and another, and matters of state, are determined by the King and Senate. The Dutch, since their arrival at the Cape, have presented the King, or Chief of every nation of the Hottentots in alliance with them, with a brass crown; and the Captains of each Kraal with a brass-headed cane, which are now the badges of their respective offices; formerly they were dis-tinguish'd only by finer skins, and a greater variety of beads and glittering trifes.

In their councils their King sits on his heels in the centre, and the Captains of the Kraals sit in like manner round about him. At his accession, 'tis said, he promises to observe their national customs; and gives them an entertainment, killing an Ox, and two or three Sheep, upon the occasion; on which he feasts his Captains, but their Wives are only en-tertain'd with the broth: But then the next day,

'tis said, her Hottentot Majesty treats the Ladies, and their Husbands are put off in like manner with the soup.

CHAP. IV. The Captain of each Kraal also, at his accession, 'tis said, engages to observe the customs of his Kraal, and makes an entertainment for the Men, as his La-dy does the next day for the Women; and though this people shew their Chiefs great respect, 'tis said, they allow neither their King or inferior Magistrates any revenue; they subsist, as other families do, upon their stock of cattle, and what they take in hunting.

As they have no notion of writing or letters, Justice ad-minister'd. they can have no written laws; but there are some ancient customs, from which they scarce ever de-viate. Murder, adultery and robbery, they con-stantly punish with death; and, if a person is sus-pected of any of these crimes, the whole Kraal join in seizing and securing him; but the guilty person sometimes makes his escape to the mountains, where robbers and criminals, like himself, secure them-selves from justice, and frequently plunder the neigh-bouring country; for no other Kraal or nation of Hottentots will entertain a stranger, unless he is known to them; and can give a good reason for leaving his own Kraal.

If the offender is apprehended, the Captain assem-bles the people of his Kraal in a day or two; who, making a ring, and sitting down upon their heels, the criminal is placed in the centre of them; the witnesses on both sides are heard, and the party suffer'd to make his defence: After which, the case being consider'd, the Captain collects the suffrages of his Judges; and, if a majority condemn him, the prisoner is executed on the spot: The Captain first strikes him with a truncheon he carries in his hand, and then the rest of the Judges fall upon him, and drub him to death: Then wrapping up the corpse in his krosse or mantle, it is carried some distance from the Kraal; and buried.

In civil cases also the cause is determin'd by a ma-jority of voices, and satisfaction immediately order'd the injur'd party out of the goods of the person that appears to be in the wrong. There is no appeal to any other Court; the King and his Council, con-sisting of the Captains of the Kraals, never inter-pose, unless in matters that concern the Publick, or where the Kraals are at variance. It may be proper here to add, that the Hottentots cattle and personal estate descend to his eldest son: He cannot disinherit him, or give his effects to his other children; but, as for a property in lands, or any certain real estate, no man has any: The whole country is but one common, where they feed their cattle promiscuous-ly, moving from place to place to find water or fresh pasture as necessity requires.

Even the several nations have no stated bounds; but use such tracts of land as their ancestors did be-fore them: 'Tis true, their respective limits some-times create differences between the several nations, and occasion bloody wars; which brings me to treat of their arms, and the arts and stratagems they use in war.

The arms of a Hottentot are, 1. His lance, **Their arms.** which resembles a half-pike, sometimes thrown and used as a missile weapon; and, at others, serves to push within close fight, the head or spear whereof is poison'd. 2. His bow and arrows, the arrows bearded and poison'd likewise, when they engage an enemy, or a wild beast they do not intend for food: Their bows are made of iron or olive wood; the string, of the sinews or guts of some animal: The quiver is a long narrow case, made of the skin of an Elephant, Elk or Ox, and slung at their backs, as Soldiers

CHAP. IV. Soldiers sling their knapsacks. 3. A dart of a foot long, which they throw exceeding true, scarce ever missing the mark they aim at, tho' it be not above the breadth of a half-crown; these also are poison'd, when they engage an enemy, or a wild beast that is not to be eaten: And, lastly, when they have spent the rest of their missive weapons, they have recourse to stones, seldom making a discharge in vain: and what is most remarkable in their shooting, or throwing arrows, darts, or stones, they never stand still, but are all the while skipping and jumping from one side to the other, possibly to avoid the darts and stones of the enemy.

They never fight on horse-back.

Every man a soldier.

The causes of war amongst them.

Their way of fighting.

They are all Foot, they never engage on Horse-back; but have disciplin'd Bulls or Oxen taught to run upon the enemy, and to toss and disorder them; which these creatures will do, with the utmost fury, on the word of command, not regarding the weapons that are thrown at them: for, tho' the Hottentots have numbers of large Elephants in their country, they have not yet learnt the art of taming them, or training them up to the war, as the military men in the East-Indies do.

Every able-bodied man is a Soldier, and possess'd of a set of such arms as has been describ'd; and, on the summons of his Prince, appears at the rendezvous with all imaginable alacrity and contempt of danger, and every man maintains himself while the expedition lasts. As their Officers, civil and military, have no pay; so neither do the Private men expect any: a sense of honour, and the public good, are the sole motives for hazarding their lives in their country's service.

The principal inducement to their entering into a war at any time, is the preservation of their territories: As they have no land-marks or written treaties to adjust the exact bounds of every nation, they frequently disagree about the limits of their respective countries; and, whenever any neighbouring nation grazes their cattle upon a spot of ground another claims, satisfaction is immediately demanded; and, if it be not given, they make reprisals, and have recourse to arms. But this is not the only occasion of wars among the Hottentots: They are not always that chaste and virtuous people Mr. KOLBEN has represented them, some tempting HELEN (for Hottentots possibly may appear amiable in one another's eyes with all the grease and carrion they are clothed with) has snitten a neighbouring Chief perhaps, who prevails on his people to assist him in the rape of the desired female; and this frequently sets their tribes together by the ears. The stealing each other's cattle is another cause of deadly strife; for tho' each Kraal punishes theft among themselves with death, yet it is looked upon as an heroick act to rob those of another nation; at least the body of the people are so backward in giving up the offender, that they frequently come to blows upon it.

When they march into the field, every man follows his particular Captain, the Chief of his Kraal: They observe little order; neither do they take the precaution of throwing up trenches to defend themselves, and, what is still more surprising, have no shields to defend themselves against missive weapons, tho' some say they will ward off a lance or dart, and even a stone, with a little truncheon about a foot long, which they carry in their hands.

The several Companies advance to the charge, at the command of their Chief; and, when those in the front have shot one flight of arrows, they retreat, and make room for those in the rear; and, when these have discharg'd, the former advance

again; and thus alternately they continue the fight, till they have spent all their missive weapons, and then they have recourse to stones, unless they are first broken and dispersed by a troop of Bulls; for the wife Chiefs and Generals of each side, according to the European practice, remaining on an eminence in the rear, to observe the fortune of the day, when they observe their people are hard press'd, give the word of command to their Corps de Reserve of Bulls, who break into the body of the enemy, and generally bring all into confusion; and that side that preserves their order best, on this furious attack of these Bulls of Basan, are sure to be victorious. The skill of the General seems to lie chiefly in managing his Bulls; who never charge each other, but spend their whole rage upon the men, who have, it seems, no Dogs of English breed to play against them, or this stratagem would be of little service: But I should have observed, that as the battle always begins with horrid cries and noise, which perhaps supplies the place of drums and trumpets; so the victors insult with no less noise over the conquered enemy, killing all that fall into their hands: but they seldom fight more than one battle, some neighbouring power usually interposing to make up the quarrel; and of late the Dutch perform this good office, between such nations as lie near their settlements. From their wars with each other, I naturally proceed to their wars with wild beasts, with which their country abounds more than any other: These people, it seems, esteem it a much greater honour to have killed one of these foes to mankind, than an enemy of their own species.

There are instances of a Hottentot's engaging singly with the fiercest wild beasts, and killing them; but usually the whole Kraal or village assemble, when a wild beast is discovered in their neighbourhood, and, dividing themselves in small parties, endeavour to surround him. Having found their enemy, they usually set up a great cry, at which the frightened animal endeavours to break thro' and escape them: If it prove to be a Rhinoceros, an Elk, or Elephant, they throw their lances at him, darts and arrows being too weak to pierce thro' their thick hides: If the beast be not killed at the first discharge, they repeat the attack, and load him with their spears; and, as he runs with all his rage at the persons who wound him, those in his rear follow him close, and ply him with their spears, on whom he turns again, but is overpowered by his numerous enemies, who constantly return to the charge, when his back is towards them, and scarce ever fail of bringing the creature down, before he has taken his revenge on any of them. How hazardous soever such an engagement may appear to an European, these people make it their sport; and have this advantage, that they are exceeding swift of foot, and scarce ever miss the mark they aim at with their spears: If one of them is hard pressed by the brute, he is sure to be relieved by his companions, who never quit the field till the beast is killed, or makes his escape; though they sometimes dexterously avoid the adversary, they immediately return to the charge, subduing the fiercest either by stratagem or force.

In the attacking a Lion, a Leopard or a Tyger, their darts and arrows are of service to them; and therefore they begin their engagement at a greater distance, than when they charge an Elephant or Rhinoceros; and the creature has a wood of darts and arrows upon his back, before he can approach his enemies, which make him fret, and rage, and fly at them with the greatest fury; but those he attacks

CHAP. IV.

Their way of attacking a wild beast.

CHAP. IV. tacks, nimbly avoid his paws; while others pursue him, and finish the conquest with their spears. Sometimes a Lion takes to his heels, with abundance of poisoned darts and arrows in his flesh: but, the poison beginning to operate, he soon falls, and becomes a prey to those he would have preyed upon.

The Elephant, the Rhinoceros, and the Elk, are frequently taken in traps and pitfalls, without any manner of hazard. The Elephants are observed to go in great companies to water, following in a file one after another, and usually take the same road till they are disturbed: The Hottentots therefore dig pits in their paths, about 8 feet deep, and 4 or 5 over; in which they fix sharp stakes pointed with iron, and then cover the pit with small sticks and turf, so as it is not discernable: and as these animals usually keep in one track, frequently one or other of them falls with his fore-feet into the pit, and the stake pierces his body; the more he struggles, the deeper the weight of his monstrous body fixes him on the stake. When the rest of the herd observe the misfortune of their companion, and find he can't disengage himself, they immediately abandon him: Whereupon the Hottentots, who lie concealed, in expectation of the success of their stratagem, approach the wounded beast, stab him with their spears, and cut his largest veins, so that he soon expires; whereupon they cut him to pieces, and, carrying the flesh home, feast upon it as long as it lasts. His teeth they make into rings for their arms, and, when they have any ivory to spare, dispose of it to the Europeans. The Rhinoceros and Elk are frequently taken in pitfalls; as Elephants are.

Honours
confer'd
on him
that kills a
wild beast.

The Hottentot, who kills any of these, or a Lion, Leopard, or Tyger, singly, has the highest honour conferred upon him; and several privileges, which belong only to such intrepid heroes. At his return from this hazardous and important service, the men of Kraal depute one of the seniors to congratulate him on his victory, and desire that he will honour them with his presence; whereupon he follows the old Deputy to the assembly, whom he finds, according to custom, sitting upon their heels in a circle; and a mat of distinction being laid for him in the centre, he sets himself down upon it: After which, the old Deputy pisses plentifully upon him; which the hero rubs in with great eagerness, having first scratched the grease off his skin with his nails; the Deputy all the while pronouncing some words unintelligible to any but themselves. After this they light a pipe of tobacco, which they smoke, and hand one to another till there remains nothing but ashes in the pipe; and these the old Deputy strews over the gallant man, who rubs them in as they fall upon him, not suffering the least dust to be lost. After which, his neighbours having severally congratulated him on his advancement to this high honour, they disperse, and go to their respective tents. The conqueror, afterwards, fastens the bladder of the furious beast he has killed to his hair; and is from that time, by every one, esteemed a brave man, and a benefactor to his country.

Being retired to his tent, his neighbours seem to vie which of them shall oblige him most, and are, for the next three days, continually sending him one delicious morsel or other; nor do they call upon him to perform duty during that time, but suffer him to indulge his ease: But, what is still more unaccountable, his wife or wives (for he may have more than one) are not allowed to come near him for three days after this honour is conferred upon him; but they are forced to ramble about the fields, and keep to a spare diet, lest they should, as Mr. KOLBEN

VOL. III.

formises, tempt the husband to their embraces: CHAP. IV. But, on the third day, in the evening, we are told, the women return to their tent; are received with the utmost joy and tenderness; mutual congratulations pass between them; a fat Sheep is killed, and their neighbours invited to the feast; where the prowess of the hero, and the honour he has obtained, are the chief subject of the conversation.

There is scarce any wild beast, but the flesh is good eating, if it be not killed with poisoned weapons; but the Tyger is the most delicious morsel; and, as the whole Kraal partake of the feast, the person who kills him meets with a double share of praise, as he both rids the country of an enemy, and pleases their palates. Mr. KOLBEN relates, that he has himself eaten of the flesh of a Tyger, and that it exceeds any veal in the world. But to return to the field-sports of the Hottentots: When they hunt a Deer, a wild Goat, or a Hare, they go singly, or but two or three in company, armed only with a dart or two, and seldom miss the game they throw at; yet, as has been observed already, so long as they have any manner of food left, if it be but the raw hides of cattle, or shoe-soles, they will hardly be persuaded to stir to get more; tho', it is true, when they apprehend their cattle in danger from wild beasts, no people are more active, or pursue the chase of them with greater alacrity and bravery.

From hunting, I proceed to treat of their fishing, The Hottentot fishing. at which, according to KOLBEN, they are very expert; taking fish with angles, nets, and spears; and by groping, they get a certain fish, called Rock-fish, particularly by groping the holes of the rocks near the shore when the tide is out: These are mightily admired by the Europeans; but, having no scales, the Hottentots will not eat them.

When they throw their lines into the sea, KOLBEN pretends, they allure the fish towards the bait by whistling and other noises; which I shall not encourage my readers to have much faith in, our fishermen imagining that a noise frights away the fish: However, both seem to be of opinion, that fish can hear in the water; and, if this may be depended on, I can't see why fish, as well as serpents, may not be charmed with musick, or something like it. Certain it is, the snakes in the East-Indies will rise up and dance to the voice of a gill, and the musick of a very ill instrument: But still, I must confess, I am in doubt, whether fish can hear in the water; and, if they can, whether they may be charmed with sounds of any kind.

But the manner of the Hottentot's swimming is Their way of swimming. as particular as his fishing; for he stands upright in the sea, and rather walks and treads the water, than swims upon it, his head, neck and shoulders being quite above the waves, as well as his arms; and yet they move faster in the water than any European can: even in a storm, when the waves run high, they will venture into the sea, rising and falling with the waves like a cork, in my author's phrase: However, he observes, that before they venture either into the sea or a river, they mutter something to themselves, which he supposes to be a short prayer; adding, that when they have put up their fish in skins, they will swim, or rather walk, with a great load of them on their heads through the waves to the shore.

The next thing I shall consider, is the marriage The marriage of the Hottentots. of the Hottentots; and it seems, every young fellow has such a regard to the advice of his father (or rather the laws and customs of the country require

19 F

(4)

CHAP. IV. it) that he always consults the old man before he enters into a treaty with his mistress; and, if he approves the match, the father and son, in the first place, pay a visit to the father of the damsel; with whom having smoked, and talked of indifferent things for some time, the father of the lover opens the matter to the virgin's father; who, having consulted his wife, returns an answer immediately to the proposal: If it be rejected, the lover and his father retire without more words; but, if the offer be approved by the old folks, the damsel is called, and acquainted, that they have provided a husband for her; and she must submit to their determination, unless she can hold her lover at arms-end, after a night's struggling: For KOLBEN tells us, where the parents are agreed, the two young people are put together; and, if the virgin loses her maidenhead, she must have the young fellow; tho' she be never so averse to the match; but then she is permitted to pinch and scratch, and defend herself as well as she can, and, if she holds out till morning, the lover returns without his mistress, and makes no farther attempts: But, if he subdues her, she is his wife to all intents and purposes, without farther ceremony; and the next day the man kills a fat Ox, or more, according to his circumstances, for the wedding-dinner, and the entertainment of their friends, who resort to them upon the occasion, bringing abundance of good wishes for the happiness of the married couple, as is usual among politer people. The Ox is no sooner killed, but all the company get some of the fat, and grease themselves with it from head to foot, powdering themselves afterwards with Buchu; and the women, to add to their charms, make red spots on their black faces with red oker.

The entertainment being ready, the men form a circle in the area of the Kraal (for a large company cannot sit within doors) and the women form another; the bridegroom sitting in the middle of the men's circle, and the bride in the centre of her own sex: Then the Priest, as KOLBEN calls him, enters the men's circle, and pisses upon the bridegroom, which the young man rubs in very joyfully: Then this Priest, as he is called, goes to the ladies circle, where he does the bride the same favour, and she rubs in the urine in like manner: And thus the old man goes from the bride to the bridegroom, and back again, till he has exhausted all his store; which is another instance of the modesty of the Hottentots, that KOLBEN cries up so much. But, to proceed: He affords them a great many good wishes all the time; as, "That they may live long and happily together; that they may have a son before the end of the year, and that he may prove a brave fellow, and an expert huntsman, and the like." After which, the meat is served up in earthen pots glazed with grease; and, some of them having knives since the Europeans came amongst them, they divide their meat pretty decently; but more of them make use of their teeth and claws, pulling it to pieces, and eating as voraciously as so many Dogs; having no other plates or napkins than the stinking corners of the mantles they wear; and sea-shells without handles, usually serve them instead of spoons. And here it may be proper to describe their manner of roasting meat, which, in speaking of their diet, was forgot. They take a broad flat stone, and having fixed it in the ground, they make a fire upon it, till it is thoroughly heated; then taking off the coals, they lay the meat upon the stone, which they cover with another flat stone of the same dimensions. Then they make a fire on the uppermost stone, and kindle

Their way
of roast-
ing meat.

CHAP. IV. another round about them both; and thus the meat is soon roasted, at least as much as they desire it should; for, if it be a little more than hot through, it is enough for them.

What they leave the first meal, is set by for the next; and, the pots and pans being taken away, each circle lights a pipe of tobacco, which is handed round; and, when that is out, another: Thus they continue smoking, and talking merrily on the occasion, till morning. They drink scarce any thing but water and milk; and that very rarely, but at their meals. They have no strong liquors at their weddings, nor do they dance at the entertainment; but, towards break of day, the bride steals off, and the bridegroom after her; and then the company disperse. There is no throwing the stocking.

The next day all the guests return again, and feast upon what was left, smoke and chat as the day before; and this is repeated as long as the provision lasts: after which, they take their leaves of the new married couple, and return home. The Hottentots allow of polygamy; but seldom have more than three wives at a time; and, it seems, 'tis death to marry or be with a first or second cousin, or any nearer relation.

The Hot-
tentots al-
low a plu-
rality of
wives.

A father seldom gives his son more than two or three Cows, and as many Sheep, upon his marriage; and with these he must make his way in the world; and I don't find they give any more with their daughters, than a Cow or a couple of Sheep: nor do they leave them, or their younger sons, any thing when they die; but all the children depend upon the eldest brother, and are his servants, or rather slaves, when the father is dead, unless the eldest brother enfranchise them: nor has the mother any thing to subsist on, but what her eldest son allows her. As there are no great fortunes among them, they match purely for love; an agreeable companion is all their greatest men aim at: Their Chiefs intermarry frequently with the poorest men's daughters; and a brave fellow, who has no fortune, does not despair of matching with the daughter of a Prince. Merit, according to KOLBEN, is more regarded here, than among the politer nations.

A widow, who marries a second time, is obliged to cut off a joint of one of her fingers; and so for every husband she marries after the first: Either man or woman may be divorce'd, on shewing sufficient cause before the Captain and the rest of the Kraal; the woman, however, must not marry again, tho' the man is allowed to marry, and have as many wives as he pleases at the same time.

Divorces
allowed.

A young Hottentot never is master of a hut or tent till he marries, unless his father dies and leave him one: Therefore the first business the bride and bridegroom apply themselves to after their marriage-feast, is to erect a tent or hut of all new materials, in which work the woman has as great a share as the man; and, this taking them up about a week's time, the new-married couple are entertain'd in the mean time in the tents of some of their relations.

When they resort to their new apartment, and come to keep house together, the wife seems to have much the greatest share of the trouble of it: she fodder the cattle, milks them, cuts out the firing, searches every morning for roots for their food, brings them home, and boils or broils them, while the drone of a husband lies indolently at home, and will scarce give himself the trouble of getting up to eat, when his food is provided for him by the drudges his wives: The more of them he has, still the

The wo-
men work
to main-
tain their
husbands
in idle-
ness.

CHAP. IV. the lazier life he leads, the care of making provision for the family being thrown upon them.

He will, 'tis said, in his turn attend his cattle in the field; but expects every one of his wives should do at least as much towards taking care of them, as he does: he will also sometimes, but very rarely, go a hunting with the men of his Kraal, and bring home a piece of venison, or a dish of fish; but this is not often: and, if he is of any handicraft trade, he may work at it two or three hours in a week, and instruct his children in the art. He also takes upon him to sell his cattle, and purchase tobacco and strong liquors of the Dutch, with necessary tools, beads, and other ornaments, for which the Hottentots barter away their cattle. Their wives are not permitted to intermeddle in the business of buying and selling; this being the sole prerogative of the man.

They have force any side of home. KOLBEN is pleased to take all occasions to cry up the chastity of these poor wretches: You never see them, he says, kissing and toying, or even looking amorously at one another; the woman, he adds, never presumes to enter her husband's apartment, tho' he sometimes steals to her. One would think by this description, every Hottentot took as much state upon him as an Eastern Monarch; and that the poor hut or tent he lies in, had as many spacious rooms in it as a palace: whereas, in another place, KOLBEN himself informs us, that the dimensions of a hut are exceeding small, about 6 foot high and 12 foot diameter; that the man has frequently two or three wives; that his sons and daughters lie in the same hut, when they are men and women grown; and for all this company how is it possible there can be distinct apartments? For my part, I have looked into these huts, where I have seen a fire-hearth of about 3 foot diameter in the middle of it, and the whole family, men, women and children, of all ages and sexes, lying round about the fire-place like so many brutes, no partitions between them, nor indeed room for any. It is merry enough also to hear this grave gentleman talk of separate beds, when they have nothing like a bed; but every one lies down upon his sheep-skin mantle, and has no other covering in cold weather but another skin; and when it is warm, none of them have any covering at all: Nor is it at all improbable, that the Hottentot lies with his wives before all this company; for they have no back rooms to retire into when they have a call. What makes this also the more probable is, that we see nothing like modesty among them; for, when the Europeans came out of curiosity to see the Hottentot villages, the women, old and young, will take off their greasy modesty-bit, and shew you all they have for the value of a half-penny; and that before their own family and the whole village: They will cry their ware as you pass by their tents, and invite you to see it; but the carrion they wear about them on their backs and legs, and the shocking and frightful countenances they take pains to make themselves, are enough to drive any man from them: Indeed, if they happen to be to the windward, no European nose can bear the fragrant odours, ravishingly sweet to them, but enough to poison any thing else that walks upon two legs. But it is time now to give some account of their management of lying-in women.

The lying-in women. When the wife finds herself near her time, the midwife (who is chosen by the whole Kraal, and enjoys that office for life) is called with the good women her neighbours, and the husband is obliged to leave the tent, on pain of forfeiting a couple of Sheep

for the entertainment of the Kraal: When the woman has a bad time, they boil milk and tobacco together, and make her drink it; which, 'tis said, is generally of great service to her, and hastens the birth. If the child be still-born, it is immediately buried, and the whole Kraal are forced to remove to another camp, as they do whenever any person dies. If the woman brings a live son into the world, there is great rejoicing: But the first thing they do with the child, is to daub it all over with Cow-dung; then they lay it before the fire, or in the sun, till the dung is dried; after which, they rub it off, and wash the child with the juice of certain herbs, laying it in the sun, or before the fire again, till this liquor is dried in; after which, they anoint the child from head to foot with butter, or Sheep's fat melted, which is dried in as the juice was: And this custom of anointing their bodies with fat they retain afterwards as long as they live.

If the woman has twins, and they are girls, *They expose their female children, if they have twins* the man proposes it to the Kraal, that he may expose one of them, either upon pretence of poverty, or that his wife has not milk for them both; and this they usually indulge one another in: They do the same when they have a boy and a girl; but always preserve the boys, tho' they happen to have two at a birth. The exposed child is carried to a distance from the Kraal; and, if they can find a cave or hole in the earth, that some wild beast has made, they put the child alive into it; and then, having stopped up the mouth of the den with stones or earth, leave it there to starve: If they cannot meet with such a cavity, they tie the infant to the lower bough of a tree, or leave it in some thicket of bushes, where it is frequently destroyed by wild beasts.

They do not deal thus however, as has been observ'd, by their male children. On the birth of a boy, they kill a Bullock; and, if they have twins, two Bulls; and make an entertainment for all the neighbourhood, who congratulate the parents on their good fortune; and, as with us, the greatest rejoicings are on the birth of the first son.

Their exposed females are sometimes found by the Dutch, and taken care of, and all imaginable pains taken, as they grow up, to make Christians of them, and bring them off from the Hottentot customs: But they no sooner understand of what extraction they are, than they renounce their Christianity, throw off the European habit, and, running away to some Hottentot camp, take the Sheep-skin mantle, and conform themselves to all the customs of the people, from whence they are descended.

But, notwithstanding these people are so inhuman to expose their children, they have an unaccountable abhorrence of their being cut in pieces and dissected, as they are sometimes served by European Surgeons, if the children have not been dead long when they are found. The Hottentots imagine, that this is done with a design to use their flesh in witchcraft or magick; and, it seems, they watch the corpse of a relation that is buried, for some time, lest their own pretended conjurers should take them up again, and apply them to the like purposes; even the Sheep-skin mantle the woman is brought to bed upon, and that after the birth, are carefully buried together, lest some wizard should make use of them to enchant the mother, or some of the family.

The same day a Hottentot child is born, it is *The mother names the child.* named by the mother, and generally has the name of some animal given it, that the mother most admires,

CHAP.
IV.

mires, as that of the Lion, the Elephant, the Horse, the Hart, &c. The man is not allowed to come near his wife in the month, or at such times as the Jews were prohibited approaching theirs, on pain of treating his neighbours with an Ox or Sheep, or forfeiting a pair of gloves, as our nurses call it; but whether there be any religion in the matter, as KOLBEN insinuates, I much question, any more than in the woman's purification, or daubing herself with grease and dust before they meet again: But, if I understand Mr. KOLBEN right, the Hottentots imitate brutes more than men, in the act of generation.

When the woman goes abroad again, after her lying in, she ties the infant between two Sheep-skin mantles at her back, never taking the child into her arms to suckle it; but throws her breast over her shoulder as she walks, and lets the child take its fill of it, while she perhaps is smoking a short pipe of tobacco, which the wind frequently blows into the child's face; but they are so used to it from the time they are born, they don't much regard the smoke. They are weaned at about six months old; and then the mother puts a pipe into the child's mouth, and teaches it to smoke itself, which serves sometimes instead of more substantial diet. As soon as they can go alone, which is very early, they follow the mother abroad wherever she goes, unless it be bad weather; and then they remain at home with the indolent father, who never stirs out, unless necessity forces him abroad: The women and their daughters, as they grow up, do all the laborious work, cut the wood, drag it home, dig roots, and dress them for the father and the sons, who scarce ever give them any assistance, as has been related already: Tho' the sons, 'tis said, are perfectly under the government of the mother, and dangle after her wherever she goes, till they are formally admitted into the society of the men by a certain ceremony, that will be described hereafter; but this is not performed till the sons are 17 or 18 years of age: And this leads me to treat of the religion of the Hottentots.

The religion of the Hottentots.

On the first discovery of this people, and even till within thirty or fifty years past, it was much doubted, whether the Hottentots had any religion; nay, it was so confidently affirmed by those who had visited the Cape, that they had none, that most of our learned Divines knew not how to deny it; and only answered, that they were monsters in nature: That, as every other people appeared to have some sense of God and religion stamped upon them by nature, this one exception ought not to affect that general maxim: "That God had imprinted the knowledge of himself in the hearts of all mankind." But now we have the fullest evidence, that the Hottentots are not an exception to this general rule.

SARREL relates, that the Hottentots acknowledge, they believe there is a God, who made heaven and earth.

Father TACHART affirms, that the most sensible of the Hottentots declared, in a conference he had with them on their religion, that they believed there was a God that made heaven and earth, and caused it to thunder and rain, and who provided food and cloathing.

BOZVINO says, they professed to believe, that, as the Chief of a Hottentot nation presided over the Captains of the several Kraals, so God was the supreme Being, and Commander of all inferior deities. But KOLBEN, who has taken most indefatigable pains to be acquainted with their principles, travelled from nation to nation, and continued many

years among the Hottentots, with a view of making discoveries, and particularly to understand what religion the people had, assures us, that they believe a supreme Being, Creator of heaven and earth, and of all things therein; the Governor of the world, through whose omnipotence all things live and move: And that this Being is endow'd with incomprehensible attributes and perfections; styling him, Gounja Gounja, or Gounja Ticquoa, God of Gods: That he is good, and does no-body any hurt, and dwells far above the moon. And yet it seems agreed, that they pay no divine worship to this supreme God, tho' they worship several subordinate deities; which KOLBEN demanding the reason of, they answer'd, that their first parents grievously offended the supreme God; and he thereupon cursed them, and all their posterity with hardness of heart; so that they now know little of him, and have less inclination to serve him: This tradition he again and again assures us the Hottentots have; and that he has given it us without the least addition or improvement of his own. But, however they have disused the worship of the supreme God, it seems they adore the moon. Father TACHART says, that, on the appearance of the moon, they assemble in great numbers, and dance in circles, clapping their hands, crying and raving (as the Europeans at first term'd it) all night long. They throw themselves into surprizing distortions of body, stare wildly towards heaven, extend every feature, and cross their foreheads with a red stone: And these, says KOLBEN, are certainly acts of religion, tho' he acknowledges the Hottentots have frequently denied it; which, he says, proceeded from the Europeans laughing at them, when they saw them in these ecstasies. They denied it to BOZVINO, and often to himself; but they have seriously acknowledged at other times, that these dancings and howlings are religious honours and invocations of the moon, whom they call Gounja; whereas they call the supreme Being Gounja Gounja, or Gounja Ticquoa, the God of Gods. The moon, they hold, is an inferior visible god, and the representative of the high and invisible: That the moon has the direction of the weather; and therefore they pray to her when it is unseasonable. They never fail to assemble and worship this planet at the new and full moon, let the weather be never so bad; and tho' they distort their bodies, grin, and put on very frightful looks, crying and howling in a terrible manner, yet they have some expressions that shew their veneration and dependance on this inferior deity; as, "Mutichi Atze, I salute you; you are welcome: Cheraqua kaka chori Ounqua, grant us pasture for our cattle and plenty of milk." These and other prayers to the moon they repeat, frequently dancing and clapping their hands all the while; and, at the end of every dance, crying, Ho, ho, ho, ho! raising and falling their voices, and using abundance of odd gestures, that appear ridiculous to European spectators; and which, no doubt, made them at first, before they knew any thing of their language, conclude, that this could not be the effect of devotion, especially when the people themselves told them, it was not an act of religion, but only intended for their diversion. But to return:

They worship the moon.

They continue thus shouting, singing and dancing, with prostrations on the earth, the whole night, and even part of the next day, with some short intervals, never resting, unless they are quite spent with the violence of the action; and then they squat down upon their heels, holding their heads between their hands, and resting their elbows on their knees; and,

CHAP. and, after a little time, they start up again, and fall
IV. to singing and dancing in a circle as before, with
all their might.

They worship a Fly. The Hottentots also adore a Fly about the bigness of a Hornet: Whenever they see this insect approach their Kraal, they all assemble about it, and sing and dance round it while it remains there, strewing over it the powder of Buchu, by Botanists call'd Spissem; which, when it is dried and pulveriz'd, they always powder themselves with it at festivals. They strew the same powder also over the tops of their tents, and over the whole area of the Kraal, as a testimony of their veneration for the ador'd Fly. They sacrifice also two Sheep as a thanksgiving for the favour shewn their Kraal, believing they shall certainly prosper after such a visit: And, if this insect happens to light upon a tent, they look upon the owner of it for the future as a Saint, and pay him more than usual respect. The best Ox of the Kraal also is immediately sacrificed, to testify their gratitude to the little winged deity, and to honour the Saint he has been pleased thus to distinguish: To whom the entrails of the beast, the choicest morsel in their opinion, with the fat and the caul is presented; and the caul being twisted like a rope, the Saint ever after wears it like a collar about his neck day and night, till it putrefies and rots off; and the Saint only feasts upon the entrails of the beast, while the rest of the Kraal feed upon the joints, that are not in so high esteem among them: With the fat of the sacrifice also the Saint anoints his body from time to time, till it is all spent; and, if the Fly lights upon a woman, she is no less revered by the neighbourhood, and entitled to the like privileges.

It is scarce possible to express the agonies the Hottentots are in, if any European attempts to take or kill one of these insects, as the Dutch will sometimes seem to attempt, to put them in a fright: They will beg and pray, and fall prostrate on the ground, to procure the liberty of this little creature, if it falls in a Dutchman's hands: They are, on such an occasion, in no less consternation than the Indians near Fort St. George, when the Kite, with a white head, which they worship, is in danger. If a Soldier takes one of these alive, and threatens to wring the neck of it off, the Indians will gather in crowds about him, and immediately collect the value of a shilling or two, to purchase the liberty of the captive bird they adore. But to return to the Hottentots: They imagine, if this little deity should be killed, all their cattle would die of diseases, or be destroy'd by wild beasts; and they themselves should be the most miserable of men, and look upon that Kraal to be doom'd to some imminent misfortune, where this animal seldom appears.

They worship departed Saints and Heroes. The Hottentots also pay a sort of religious worship to the souls of departed Saints and Heroes: They consecrate fields, mountains, woods, and rivers to their memory; and when at any time, they happen to pass by such consecrated ground, they put a short prayer to the subordinate deity of the place, and sometimes dance round, and clap their hands, as they do in their adorations of the moon: And being asked the reason of it, they will sometimes answer seriously that this is done in honour of certain Heroes among their ancestors; who, when they were upon the earth, were eminent for their valour, beneficence, or other conspicuous virtues: But as the Europeans usually laugh at them for their ridiculous gestures on these occasions, they will very seldom answer seriously; and only reply, this is the Hottentot custom. And from these dif-

ferent accounts it is, that we find authors, who have written of the Hottentots, frequently differ in their history; some assuring us, that these are acts of devotion and religion; and others, that they have not any thing like religion amongst them, and that these anticl postures and gestures are only the effects of mirth and custom.

Mr. KOLBEN relates, that nothing can be more certainly depended on, than the Hottentots worshipping departed Saints and Heroes, and gives the following instance of it. He saw (he says) a Hottentot skipping and jumping round a little mount; and inquiring thereupon into the history of the Saint to whom it was dedicated, the Hottentot answered, he did not know it was consecrated to the memory of any particular deity; but he did not doubt but some eminent Saint resided in that place; for, happening to rest here one night, as he was upon a journey, when he awaked next morning, to his great surprize, he saw a Lion standing near him; but that the creature let him pass, without attempting to seize him; which he would certainly have done, he thought, if the saint, who inhabited that mount, had not protected him. He now therefore gratefully paid his acknowledgments to this good Demon for his wonderful preservation, or to that effect.

But this people, it seems, do not only pay divine honours to good, but evil Demons: They worship, as the natives of the East-Indies do, a powerful evil spirit, whom they believe the author of all the calamities in life; and who has nothing good or gracious in his composition, but rather delights in the miseries of mankind: And this being, or evil genius, they worship, and sacrifice Sheep and Oxen to, that he may do them no mischief; and the Indians, in like manner, perform a solemn sacrifice once a year to this enemy of mankind, at which the whole nation assists, under an apprehension that some great evil will befall them, if they neglect it.

The Hollanders have sent several reverend Divines to the Cape as Missionaries, who have spared no pains to bring the Hottentots off from their idolatry, and induce them to embrace Christianity; even their covetousness and ambition have been applied to, and temporal rewards offered them, on condition of their being instructed in the principles of Christianity. But no motives whatever, whether those relating to this or another state, have yet been able to make the least impression on any one of them: They hold fast and hug their ancient superstitions, and will hear of no other religion; which, with me, is a great argument that they have a religion or superstition of their own; for were they governed only by secular motives, and had no notion of God or providence, why should they not accept the rewards the Dutch offer, and importune them to accept of on their embracing Christianity? And I am apt to think, that the reason that they neither imitate the Europeans in their building, planting or cloathing, is because they imagine themselves to be religiously obliged to follow the customs of their ancestors; and that, if they should deviate from them in the least of these matters, it might make way for a total change of their religion and manners, which they cannot think of without abhorrence.

KOLBEN relates, that one of the Dutch Governors at the Cape bred up an Hottentot from his infancy, obliging him to follow the fashions and customs of the Europeans, to be taught several languages, and to be fully instructed in the principles of the Christian religion, cloathing him handsomely,

The endeavours of the Dutch Missionaries to make proselytes of the Hottentots.

CHAP. IV. and treating him, in all respects, as a person for whom he had a high esteem; and let him know, that he design'd him for some beneficial and honourable employment. The Governor afterwards sent him a voyage to Batavia, where he was employed, under the Commissary his friend, for some time, till that gentleman died; and then he returned to the Cape of Good Hope: But, having paid a visit to the Hottentots of his relations and acquaintance, he threw off all his fine cloaths, bundled them up, and laid them at the Governor's feet, and desired he would give him leave to renounce his Christianity, and live and die in the religion and customs of his ancestors; only begg'd the Governor would give him leave to keep the hanger and collar he wore, for his sake; which while the Governor was deliberating with himself upon, scarce believing the fellow to be in earnest, the young Hottentot took the opportunity of running away, and never came near the Cape afterwards, thinking himself extremely happy that he had exchanged his European cloaths for a Sheep-skin and the rest of the Hottentot dress and ornaments: The English East-India company, I'm inform'd, made the like experiment, bringing over two of that nation hither, whom they clothed decently after the European manner, and used them in all respects, with the greatest goodness and gentleness, hoping, by that means, to be better informed of the condition of their country, and whether it might be worth their while to make a settlement there; but the two Hottentots only learnt English enough to bewail their misfortune in being brought from their country and their friends; and, after two years trial of them, being again set on shore at the Cape, they immediately stripp'd off their European cloaths, and, having taken up the Sheep-skin mantle again, rejoiced beyond measure for their happy escape from the English.

"These infidel Hottentots, says the reverend BOEVING, shew the utmost reluctance to the reasoning on matters of religion. How often (says he) have I exhorted them to adore Gounja Gounja, the God of Gods (as they acknowledge him to be) and to thank him for the benefits they receive daily from his hands. To which they would answer, they did thank him, but still they performed no manner of divine worship to him. And, being told they ought to express their thanks to this God of Gods, by paying him the honour and veneration due to him, they grew uneasy, and had not patience to hear the good man any longer; but retir'd, some frowning, and others mocking and laughing at him; so that I could not (says he) so much as pave a way towards instructing them in Christianity."

The reverend PETER KOLBEN also informs us, that he has frequently allured them in small companies with tobacco, wine, brandy, and other things they are fond of, to places of retirement, that he might draw them off from their idolatry, and instruct them in the true worship of God: That, as long as his stock lasted, he had their company, and they seemed to attend to him with a design to learn, but he soon found they only spunged upon him for what they could get, and laughed at him when he was gone. When his stores were spent, they still called out for more; and, when they found they were exhausted, gave him to understand they would hear no more. But this learned Divine very judiciously adds, that the immoral lives of the Europeans at the Cape, do not a little contribute to the prejudice of the Hottentots against Christianity: The

contradiction between the profession, and the practice of the Hollanders, has been fatal to the Christian faith they send their Missionaries to propagate. These people are not so dull of apprehension, but they can see, that their principles and practices are dissimilar, as well as other people: And, as they discover such a wide difference between them at the Cape, it is not to be doubted, but this gives these Infidels unconquerable prejudices, and defeats all attempts of the Missionaries to convert them; and this must be acknowledg'd to be the case also in every other Pagan nation the Europeans visit. Our sea-faring men are not the soberest and discreetest people in their conduct even here at home; but, when they get abroad, they throw off all manner of restraint, as if travelling gave them a licence to turn debauchees, and to practise every infamous vice their religion prohibits: They run into much greater excesses than the infidels themselves, and give them such an abhorrence of them and their religion, which the natives imagine encourages these extravagancies, that they can never entertain a favourable opinion of it; for even Pagans generally admire virtue, and detest notorious vices; and are apt to think that religion best, that makes the best men. Till our morals are better, therefore, we must never expect to make any real profelytes abroad, tho' possibly we may sometimes make a hypocrite; who, on some temporal views, may for a Time conform himself to our customs.

But to return to the Hottentots: They have several other ceremonies and customs, which intelligent travellers conjecture have a relation to their religion; particularly that of depriving their males of the left testicle, which is universally observed in every Hottentot nation generally at eight or nine years of age; tho', if the parents are poor, and not able to be at the expence of the feast, it is sometimes deferred till their sons are eighteen or nineteen.

At the performance of this rite, a Sheep is killed in the first place, and the Priest, with the fat of the entrails, greases the young lad, who is to undergo the operation, from head to foot; then tying his hands and feet, he is laid on the ground on his back, stretched at his full length, some friend or relation sitting upon each arm and leg, and another lying cross his body to prevent his struggling: Then the Priest takes a common knife well sharpened, and, taking hold of the left testicle, makes a large orifice in the scrotum, squeezes out the testicle, and then ties up the vessels in an instant; after which, he takes a little ball, consisting of Sheep's fat, the powder of Buchu, and of some other herbs, and stuffs into the vacant scrotum, and then sews up the wound, using the bone of a small bird as an awl, and a Sheep's sinew instead of thread: The Priest then anoints the patient again with the fat of the entrails of the new-kill'd Sheep; which, having scraped off again in some Places with his long nails, he pisses upon the boy, and rubs in the urine; and thus the ceremony being finished, the patient is laid in a tent provided for that purpose, where he is left two whole days and nights without any manner of nourishment: In which time, however, the wound is usually so well healed, that he is able to shift for himself: And my author observes, they undergo the whole operation almost without a groan; nor was there any instance of a boy's miscarrying by this painful rite.

In the mean time, the company resort to the father's tent, where the men feast upon the Sheep killed on this occasion, and the women are allowed to eat the soup, but do not touch a morsel of the flesh;

CHAP. IV.

Some rites peculiar to the Hottentots.

CHAP. IV. flesh; and the remainder of the day, and the succeeding night, being spent in smoaking, singing, and dancing, they grease or anoint themselves the next morning with the remaining fat of the sacrifice, and powder themselves with Buchu; after which, they retire to their respective tents, the Priest being first presented with a Calf or a Lamb for his trouble and attendance.

As to the reason of this painful rite among the Hottentots, some have imagined they use it, because it contributes to their swiftness, their speed being equal to that of the fleetest Horses, as it is said. But, as I much doubt whether they are so very swift of foot, as some relate, so I can see no manner of reason to believe that this adds to their heels, if they are so: It is not unlikely, as KOLBEN conjectures, that the using this rite, proceeded from a mistake at first, and was performed instead of circumcision; though it was certainly a very unlucky mistake, if it was one, it putting the patient to so much more pain than the other; but, however that be, no man is permitted to marry, till he can produce evidence, that he has undergone this operation; and the women, it seems, insist upon it the more, because they have a notion, that every man, who has two testicles, gets twins; though, it seems, there are instances among them, that a man with one does the same. There is still another ceremony to be performed, before a person can enter into the married state; and that is, the admitting the young fellow into the company and conversation of the men, which is performed when they are about 18 years of age: Before this, they converse only with the women, and follow their mothers from place to place wherever they go. When the Kraal are inclined to admit a youth into the society of the men, they assemble; and, sitting on their heels in a circle, the lad is sent for, when the Captain, or some other senior Hottentot, demands of the rest, if they think fit to admit him into their society, and to make a man of him? which being answer'd in the affirmative, the speaker informs the young man, that he is now to leave the conversation of his mother and the women, and no more amuse himself with childish toys: That, if he is known to converse with his mother, or any of the sex for the future, till he is married, he will be looked on as unfit for the company of men: That he must now behave as a man, and not discover any softness or effeminacy in his conduct. And these lectures being frequently repeated, that they may make the deeper impression, this, like many other Hottentot rites, is concluded by the old man's pissing upon him, and repeating some wishes at the same time; as that good fortune may attend the youth; that his beard may grow, and that he may encrease and multiply. After which, a Sheep being killed, part of which is roasted and the other boiled, they feast upon it; and, at the latter end of the entertainment, the young fellow is called in, and suffered to eat with them; and from thence forward is looked upon as a compleat man. But, if he is ever seen to converse with the women afterwards, he becomes extremely contemptible; he is in a manner unmann'd, and must give a fresh entertainment to his village, before he can be restored to the privilege of a man: Among which, I find one is, that he may then insult his mother, and even beat her for his own humour, without any provocation, and is not liable to be punished for it; nor is his ill usage of her any reflection on him, but rather looked upon as an argument of a noble spirit.

They have festivals, and kill sacrifices also upon many other occasions; as an obtaining a victory over wild beasts or men; on their recovery from a fit of sickness, and the like. At these festivals they erect an arbour in the centre of the Kraal, which the women adorn with sweet herbs and flowers, while the men take an Ox, and, tying his legs with ropes, throw him on his back; and, having extended his legs to the utmost stretch, they fasten the cords to stakes drove into the ground: After which, they rip the beast open alive from one end to the other; then they tear the guts from the carcase and nobler parts, avoiding as much as possible the breaking the blood-vessels about the heart; by which means the creature is sometimes half an hour a dying. When the entrails are taken out, they anoint themselves with the fat of them; and then roast and boil the rest of the sacrifice, the guts and inwards being the portion of those of the best quality among them, as they are esteemed preferable to any other part of the Bullock: But, tho' the men feast upon the flesh, they send no part of it to their wives, the women are forced to be content with the broth, as upon other occasions: After which, they smoak, dance, and play upon such instruments as they have; but scarce ever drink any other liquor at these feasts, than their usual beverage, milk and water; tho' no people are fonder of spirituous liquors. My author observes, they keep themselves perfectly sober at all religious solemnities; how odd soever their antick postures and distortions in their dances may make them appear to strangers.

At the removing of their Kraal, or camp; which they always do upon the death of any person in it, as well as for water and fresh pasture, the men sacrifice a Sheep, and eat it up among themselves, allowing their wives only the soup; and when they come to a new camp, the women sacrifice a Sheep, and eat it up among themselves, sending the broth only to the men: They also anoint themselves with the fat of the slain beast, powdering themselves with Buchu, as the men do; which my author looks upon also as religious ceremonies, performed for the prosperity of their Kraal.

But whatever notions the Hottentots may have of God or his providence, Father TACHART is of opinion, that they expect no life after this; and therefore, he observes, they endeavour to make the present life as easy and comfortable to them as they can. BOZVINO also affirms, that they do not believe the resurrection of the dead; but imagine, they and other animals, at death, perish alike; for he says, talking with some Hottentots once on this subject, they answered; "Only here, hereafter no thing: The dead come to life again! How can that be?" KOLBEN on the other hand says, that tho' the Hottentots have no notion of a resurrection, yet it is manifest, from several customs they retain among them, that they do believe the immortality of the soul: As first, they offer prayers and praises to those they esteem holy Hottentots after their deaths.

2. They are apprehensive the dead may return, and give them some disturbance; and therefore, upon the death of any one of the society, they always remove their camp to another place, believing that the dead never haunt any place, but that where they died: And, as if they imagined the dead might stand in need of the same things they did while living, they leave the tent standing where he died, with all his cloaths, arms, furniture and implements of household-stuff, and never will touch any thing belonging to a dead man, no not of an enemy's kill'd in the battle.

3. They are apprehensive the dead may return, and give them some disturbance; and therefore, upon the death of any one of the society, they always remove their camp to another place, believing that the dead never haunt any place, but that where they died: And, as if they imagined the dead might stand in need of the same things they did while living, they leave the tent standing where he died, with all his cloaths, arms, furniture and implements of household-stuff, and never will touch any thing belonging to a dead man, no not of an enemy's kill'd in the battle.

Ano-

CHAP.
IV.

Another argument KOLBEN brings to prove they believe the immortality of the soul, is their faith in witchcraft; and that their pretended wizards can lay a troublesome spirit, and prevent their appearing again: For, it seems, the Hottentots ascribe all such diseases as their Physicians can't cure, to the power of magick; and, as in Europe, look upon every decrepid old woman as a Witch. Now, says KOLBEN, if they did not believe the souls of departed mortals had a being after they were dead, why should they take any pains to prevent their haunting their abodes? It is manifest also, he observes, that they believe the souls of men, good or bad, remain about the places they inhabited; and consequently that they do not die with the body: However he admits, that, whatever they believe of departed souls, they have no notion either of heaven or hell, or of a state of rewards or punishments: This is evident from the behaviour of a dying Hottentot, and those about him; neither he nor his friends offer up any prayers to their gods for the salvation of his soul; or even mention the state of departed souls, or their apprehensions of his being happy or miserable after death: However, they set up such terrible howlings and shriekings, when the sick man is in his last agonies, that they may be heard, says my author, at a mile's distance; and yet these very people are frequently guilty of murdering their ancient parents, as well as their innocent children. When the father of a family is become perfectly useless and superannuated, he is obliged to assign over his stock of cattle, and every thing else he has in the world, to his eldest son; and, in default of sons, to his next heir-male: After which, the heir erects a tent or hut in some unfrequented place a good distance from the Kraal or camp he belongs to; and, having assembled the men of the Kraal, acquaints them with the condition of his superannuated relation, and desires their consent to expose him in the distant hut; to which the Kraal scarce ever refuse their consent. Whereupon a day being appointed to carry the old man to the solitary tent, the heir kills an Ox, and two or three Sheep, and invites the whole village to feast and be merry with him; and, at the end of the entertainment, all the neighbourhood come and take a formal leave of the old wretch, thus condemn'd to be starv'd or devour'd by wild beasts (which seems to me the most cruel and ill-natur'd part of the whole tragedy): Then the unfortunate creature is laid upon one of their carriage-Oxen, and carried to his last home, attended to the place, where he is to be buried alive, by most of his neighbours. The old man being taken down, and set in the middle of the hut provided for him, the company return to their Kraal, and he never sees the face of a human creature afterwards: They never so much as enquire whether he was starv'd to death, or devour'd by wild beasts: He is no more thought of, than if he had never been. In the same manner they deal with a superannuated mother; only as she has nothing she can call her own, she has not the trouble of assigning her effects to her son.

They expose their parents to certain death.

When the Hottentots are upbraided with this unparallel'd piece of barbarity, they reply, it would be a much greater cruelty to suffer an old creature to languish out a miserable life, and to be many years a dying, than to make this quick dispatch with them; and that it is out of their extreme tenderness they put an end to the lives of these old wretches; all the arguments in the world, against the inhumanity of the custom, can make no impression on them:

4

And, indeed, as long as the Dutch have resided at the Cape, they have not been able to break them of one single custom, or prevail with them to alter any part of their conduct, how barbarous or absurd soever: And, it seems, the Captain of a Kraal is not exempted from seeing his funeral solemniz'd in this manner, while he is alive, if he happens to become useless. And this leads me to treat of such funerals as are solemniz'd after the person is really dead.

CHAP.
IV.

The sick man, having resigned his breath, is immediately bundled up, neck and heels together, in his Sheep-skin mantle, exceeding close; so that no part of the corpse appears: Then the Captain of the Kraal, with some of the seniors, search the neighbouring country for some cavity in a rock, or the den of a wild beast, to bury it in, never digging a grave, if they can find one of these within a moderate distance. After which, the whole Kraal, men and women, prepare to attend the corpse, seldom permitting it to remain above ground more than six hours. When all things are ready, all the neighbourhood assemble before the door of the deceas'd, the men sitting down on their heels in one circle, and resting their elbows on their knees (their usual posture) as the women do in another: Here they clap their hands, and howl, crying, Bo, bo, bo! (i. e. father) lamenting their loss. The corpse then being brought out on that side the tent, where the person died, and not at the door, the bearers carry him in their arms to the grave, the men and women following it in different parties, but without any manner of order, crying all the way, Bo, bo, bo! and wringing their hands, and performing a thousand ridiculous gestures and grimaces, which is frequently the subject of the Dutchmen's mirth; it being impossible, 'tis said, to forbear laughing at the antick tricks they shew on such an occasion.

Their funerals.

Having put the corpse into the cavity prepared for it, they stop up the mouth of it with Ant-hills, stones, and pieces of wood, believing the Ants will feed on the corpse, and soon consume it. The grave being stopp'd up, the men and women rendezvous again before the tent of the deceas'd, where they repeat their howling, and frequently call upon the name of their departed friend: After which, two of the oldest men get up; and one of them, going into the circle of the men, and the other into the circle of the women, piss upon every one of the company; and, where the Kraals are so very large, that two can't find water enough for this ceremony, they double or treble the number. Then the old men go into the tent of the deceas'd; and, having taken up some ashes from the fire-place, they sprinkle them upon the body of the people, blessing them as they go: And, if the deceas'd was a person of distinction, this is acted over again several days. But I should have remember'd, that the ceremony always concludes with an entertainment. If the deceas'd had any cattle, a Sheep is killed on the occasion; and the caul, being powder'd with Buchu, is tied about the heir's neck, who is forced to wear it while it rots off, which is no great penance, all stinks being perfumes to a Hottentot. All the relations also wear the cauls of Sheep about their necks; which, it seems, is their mourning, unless the children of the deceas'd are so poor, that they cannot kill a Sheep; and then they shave their heads in furrows of about an inch broad, leaving the hair on of the same breadth between every furrow.

As I have treated of the religious customs and ceremonies of the Hottentots, it may be proper now to say something of those officers amongst them, which the Europeans generally denominate their Priests.

Their Priests.

CHAP. IV. **Priests.** These persons are call'd Surri or master, and are elected by every Kraal: They are the men, who perform the ceremony of pissing at their weddings, and other festivals: The Surri also is the person who extracts the left testicle from the young males at 8 years of age; for all which he has no stated revenue, but a present now and then of a Calf or a Lamb, and makes one at all their entertainments. But every Kraal also has its Physician, as well as its Priest, who are persons that have some skill in physick and surgery, and particularly in the virtues of salutary herbs: These also are chosen by a majority of voices, and make it their business to look after the people's health; but have no other reward neither for their pains, than voluntary presents. And such is the opinion of the Hottentots of these Physicians, that, if they cannot effect a cure, they conclude they are certainly bewitch'd; as the Doctor himself also never fails to give out: Whereupon application is made to some pretended Conjuror for relief; and, if the patient happens to recover, it gives the Cunning-man, as we call him, a mighty reputation.

Their
Physicians.

The Hottentot Physician and Surgeon, as has been hinted, is the same person; and tho' these gentlemen scarce ever saw a body dissected, 'tis said, they have pretty good notions of anatomy: They cup, bleed, make amputations, and restore dislocated limbs, with great dexterity; colicks and pains in the stomach they relieve by cupping. Their cup is the horn of an Ox, the edges cut very smooth: the Doctor, having suck'd the part where the pain lies, claps on the cup; and, after it has remained some time, till he thinks the part is insensible, he pulls off the horn-cup, and makes two or three incisions, half an inch in length, with a common knife, having no other instrument: After which, he claps on the cup again, which falls off when it is full of blood; but the patient, 'tis said, suffers great pain in the operation. If the pain removes to another part, they rub it with hot fat; and, if that does not ease the pain, they use the cup again on the part last affected; and, if the second cupping does not relieve the patient, they give him inward medicines, being infusions or powders of certain dried roots and herbs.

They let blood in Plethories and indispositions of that kind, having no other instrument than a common knife; and, if bleeding will not effect the cure, they give the patient physick.

For head-achs, which they are pretty much subject to in calm weather, they shave their heads in furrows, as they do when they are in mourning; but a brisk gale of wind usually carries off the head-ach, without any other application; and this they don't often want at the Cape.

They seldom make any other amputations, than of the fingers of such women as marry a second time, or oftner; and, in this case, they bind the joint below that which is to be cut off very tight, with a dried sinew, and then cut off the joint at once with a knife, stopping the blood with the juice of Myrrh-leaves; after which, they wrap up the finger in some healing herbs, and never any part of the finger receives any hurt beyond the amputation.

They have little or no skill in setting fractur'd limbs; but are pretty dexterous at restoring of dislocations.

The Hottentot Physician, in case he meets with a foul stomach, gives the juice of Aloe-leaves; and, if one dose will not do, repeats it two or three days; and, for any inward ail, they give chiefly the powders or infusions of wild Sage, wild Figs

and Fig-leaves, Buchu, Garlick or Fennel: But, whatever the disease be, it seems the patient never fails to sacrifice a Bullock, or a Sheep, upon his recovery.

CHAP. IV.
The management of their cattle.

I proceed now to treat of the Hottentots care of their cattle, the only wealth or substance almost they are masters of. They have no enclosures; nor has any single man a property in any particular lands, but the whole country is one great common. Between six and seven every morning therefore, after the women have milked their Cows, four or five men of the Kraal (for they take the trouble of it alternately) drive the cattle to the best pasture they can find in the neighbourhood, and there guard them all day against the attacks of wild beasts, bringing them home again between five and six in the evening: As their camp or Kraal is of a round figure, and their tents stand close together, there is only one narrow passage, through which they let in their Sheep, and lodge them in the area of the Kraal all night. They have also a hut in the middle of the Kraal for their Calves and Lambs. As for their Oxen and their large cattle, these are fastened to their tents on the outside of the Kraal, and their Dogs are turned out to give notice of the approach of wild beasts; and, indeed, the cattle themselves, 'tis said, are soon sensible if a wild beast approaches the Kraal, and long before he comes at them, will fall a lowing, and making a mighty noise and bustle, and alarm their masters frequently time enough to come out to their rescue; for a Hottentot is so far from flying from these terrible animals, that be it Lion, Tyger or Leopard, they all immediately run to their arms, and plant themselves between the cattle and the enemy; and if they happen to have any of their cattle carried away, they all pursue the wild beast, and generally make him pay for the robbery with his life, being so swift of foot, that few animals can escape them, especially with their prey.

They breed up also a sort of war-Oxen, as has been observ'd under another head; and these are of great service to them, both in the managing and guarding their herds: Other Oxen they discipline for carriage, loading them with their tents and baggage, whenever they remove. Every Kraal has a Doctor or Farrier for their cattle, who makes it his business to look after them; tho' it seems, they are subject to few diseases, but what are occasioned by their heavy rains, which fall in winter three or four days together, without intermission; and then, the cattle having no barns or shelter to fly to, suffer pretty much: However, my author observes, they never have the rot amongst them. Whatever their cattle ail almost, they bleed them in the first place, and then give them an infusion of Garlick: Instead of gelding their Bulls and Rams, as the Europeans do, they tie up the testicles of the creature so tight with a thong, that they stop all manner of communication between them and the body, and so let them go till they rot off.

Tho' a Hottentot looks upon the loss of his cattle as the greatest misfortune that can befall him; yet he is not inconsolable upon the death of an Ox or Cow; for they esteem cattle, that die of themselves, to be as good meat, or rather more delicious eating, than if they had been kill'd by a Butcher, and all the Kraal partake of it: So that if the loser grieves for his particular misfortune, the rest rather rejoice at it.

CHAP.

IV.

They
serve the
Dutch.

When a Hottentot has no cattle, he usually lets himself to one of his countrymen, or to a Dutchman, till he gets money enough to buy a Cow, or two or three Sheep; but they chuse rather to serve Europeans than their own people, because they can have a daily supply of Tobacco, and now and then a draught of Wine, or a dram from them; and besides, their wages are rather better than what they can get at home: And, notwithstanding their natural sloth, 'tis said, they make very diligent and faithful servants during the time they contract for. Tho' they are extremely fond of Wine and Tobacco, you may safely trust it in their hands; they will not touch any thing committed to their care; nor do they, if we may credit the Dutch, want a capacity for almost any business. This also is sufficiently evident from the handicraft trades amongst them.

Their me-
chanicks.

Their Smiths do not only fashion their iron, but melt it from the oar: They find plenty of iron-stones in several parts of their country; and, having got a heap of these, they put them into a hole in the ground, heated and prepared for their purpose: Then they make a fire over the stones, which they supply with fuel, and keep up till the iron melts; and then it runs into another hole, which they make for a receiver, a little lower than the first. As soon as the iron in the receiver is cold, they break it in other fires, beat them with stones, till they shape them into the heads of lances, darts, arrows and bows, and such weapons as they use; for they scarce ever form any other utensils, but arms of this metal: They get the hardest flat stone, according to Monsieur VOOZT, and laying the iron upon it, as upon an anvil, beat it with another round stone, which serves them for a hammer: Then they grind it upon the flat stone, and polish it as nicely as any European artificer could do with all his tools. They have some copper-ore too, which they melt in like manner; but they make only toys and ornaments for their dress of this metal: Nor indeed do they ever work in iron, but when they want weapons. They would never labour, if their necessities did not sometimes compel them to it: But, when they do, no people work harder, or more indefatigably; for they never leave a piece of work, till they have finished it. But surely, since they have found the way of working both iron and copper, they can't but be accused of very great indolence and stupidity, that they do not make themselves such tools, of iron and copper-vessels, as they want: If they can form and polish arms, and brass beads so exquisitely as some travellers affirm, they might also make any thing else they have occasion for; as axes, hammers, saws, brass pots, and other vessels, with a little more application. But to proceed:

Their Butchers also are said to be great artists in their way, and to handle a knife as dexterously as an Anatomist: Having tied the hind and fore legs of a Sheep, they throw the creature on its back, and, with cords, two of them extend it to its full stretch, while a third rips it up; so that all the entrails appear: Then, with one hand, he tears the guts from the carcase, and, with the other, stirs the blood, avoiding as much as he can the breaking any of the blood-vessels about the heart; so that the Sheep is a long time a dying: In the mean time, he gives the guts to another, who just rids them of the filth, and rinses them in water, and part of them are broil'd and eaten amongst them, before the Sheep is well dead: Having scooped the blood out of the body

of the animal with their hands or sea-shells, they cut the rest of the guts in small pieces, and stew them in the blood, which is the Hottentots favourite dish. An Ox also is killed in the same manner; being thrown upon his back, and his legs extended with cords, he is ripped up, and his guts taken out first; in which cruel operation the beast is half an hour a dying: They separate the parts with great exactness, dividing the flesh, the bones, the membranes, muscles, veins and arteries, and laying them in several parcels, every thing entire. The bones also are taken out of the flesh, and laid together in such order, that they might be easily formed into an exact skeleton: These they boil by themselves, and get the marrow out of them, with which they anoint their bodies. Of the Sheep-skin, as has been observed already, they make a mantle, if it be large; but, if it is small, they cut it into thongs, to adorn their women's legs: And the hide of an Ox serves either to cover their tents, or to make girts and straps of, with which they bind their baggage on the Carriage-oxen when they decamp; and if they have no other use for their Ox-hides, they lay them by, and eat them when they want other food.

They have another artificer, who is both Felt-monger and Taylor; that is, he dresses skins after their way, and then makes them into mantles: He takes a Sheep-skin just flead off, and, rubbing it well with fat, the skin becomes tough and smooth; and, if it be for one of his countrymen, he rubs it over also with fresh Cow-dung, and lays it in the sun till 'tis dry: Then he rubs it with fat and Cow-dung again; which he repeats several times, till it becomes perfectly black, and stinks so, that no European can bear it; and then, with a little shaping and sewing, it is a complete mantle for a Hottentot: But, if it be dress'd for a Dutchman, he only rubs the skin well with fat, which secures the wool from coming off. If he be to dress an Ox's-hide, he rubs the hairy side with wood-ashes; then, sprinkling it with water, rolls it up, and lays it a day or two in the sun: If this does not loosen the hair, so as it may be easily pull'd off, he rubs it with ashes again, and lets it lie some time longer; and then, stripping the hair clean off, rubs it well with fat, which is the full dressing. These hides he usually cuts out into straps or girts of the breadth of two inches, which serve to pack up their tents and baggage on a march, as has been related already: And my author observes, he is very dextrous in cutting out mantles, and sewing the skins together, especially if they are made of Cat-skins. This operator has no cutting instrument, but a knife; his awl is the bone of a bird, and his thread the split sinews of some animal; and with these he performs his work as neatly as a European Taylor with all his instruments about him.

It is the employment of another mechanick to make their ivory rings or bracelets for their arms, which he cuts out of an Elephant's tooth, forms and polishes to admiration also, without any other tool than his knife.

The Potter or maker of earthen vessels is another art; but this, it seems, they are all dexterous at, every family making the pots and pans they want. For these they use only the earth of Ant-hills, clearing them of all sand and gravel; after which, they work it together with the bruised Ant-eggs, that are said to constitute an extraordinary cement. When they have moulded these materials into a kind of paste, they take as much of them

CHAP. IV. as will make one of their pots, and fashion it by hand upon a flat stone, making it of the form of a Roman urn; then they smooth it within and without very carefully, not leaving the least roughness upon the surface; and having dry'd it in the sun two or three days, they put the pot into a hole in the ground, and burn it, by making a fire over it; and when they take it out, it appears perfectly black: Every family also make their own mats, with which they cover their tents or huts; but this is chiefly the business of the women: They gather the flags and rushes by the river-side, or weave or plat them into mats so closely, 'tis said, that neither the weather or light can penetrate them.

The last artificer I shall mention, is the Rope-maker, who has no better materials, than such flags and rushes as the mats are made of; and yet they appear almost as strong as those made of hemp: The Dutch, at the Cape, buy and use them in ploughing, and in draught-carriages.

The traf-
fick of the
Hotten-
tots.
After giving an account of their manufactures, it is natural to enquire into the trade of the natives; but this is very inconsiderable. As they have no money amongst them, they truck and barter one thing for another. The poor Hottentots sometimes employ themselves in making arms, viz. bows and arrows, lances and darts, bartering them with the rich for cattle, to begin the world with: Others get Elephants teeth; and what they do not use in making rings and ornaments for themselves, are generally disposed of, it is thought, to the Portuguese and other Europeans, who touch at Terra de Natal, and other parts of the eastern or western coast. The Hottentots sell very few teeth to the Dutch; tho', 'tis manifest, they kill abundance of Elephants: They supply the Hollanders however with cattle, and take Wine, Brandy, or Tobacco, in return; and KOLBEN relates, that an Ox may be purchased of them for a pound of Tobacco, and a large Sheep for half a one. As to coin, the reader will conclude they have none; nor do they ever see any, unless some small pieces of money the Dutch sometimes give them for their wages at the Cape; and it must not be forgot, that the Hottentots find abundance of Ostrich's-eggs in the sand, which they barter with the sea-faring men, that touch at the Cape, for Brandy and Tobacco; every Sailor almost being proud of bringing home one of these egg-shells to his friends, after he has fry'd and eaten the yolk, which makes a large pancake, and is pretty good food, but rather of the strongest.

Their way
of travel-
ling.
As to the way of travelling here, the natives all travel on foot, unless the aged and infirm; and these are carried on their Baggage-oxen. As there are no inns or places for refreshment, the travelling Hottentot calls at the Kraals in his way, where he meets with a hearty welcome from his countrymen, who endeavour to shew their hospitality to strangers, whether of their own country or of Europe.

When the Hollanders travel either on foot or on horseback, if they cannot reach a European settlement, they also call at the Kraals of the Hottentots, where they are complimented with a hut, and such provision as they have; or they may lie in the area of the Kraal, in the open air, if they please, and the weather be good: And here they are secure both from robbers and wild beasts; for there are, it seems, Outlaws and Banditti on the mountains, who give no quarter to any-body. A European also is in danger from their

Bulls of war, which guard their herds, if he has not fire-arms about him; and therefore the Dutch constantly travel with arms. They also take a Hottentot in their company, which secures them from any misunderstanding with the natives, and procures them the better usage; for there have been some instances where the Europeans have been insulted, and in danger even from the Hottentot Kraals.

As to the language of this people, it has been Lang-
observed already, that they have nothing like writ-
ing or hieroglyphicks to express their thoughts by; and their speech is in many instances so inarticulate, that no European can imitate the words, or rather sounds they use, unless he has lived amongst them from his infancy: Some observe, that it resembles more the noise of an enraged Turkey-cock, than the voice of a man. KOLBEN calls it a monster of languages; and says, though he resided many years among the Hottentots, and endeavoured to acquire it with the utmost diligence, he was still very defective in it; nor could he meet with one in the settlement, that could speak it tolerably, who was not born amongst them: That the pronunciation depends on such collisions or clappings of the tongue against the palate, and such strange vibrations and inflections of that member, as a stranger cannot easily imitate or describe. The Hottentots also find it exceeding difficult to pronounce other languages: They easily understand either French or Dutch; but the motions of their tongues, to which their own language subjects them, renders them almost unintelligible, when they attempt to speak a foreign language.

Many of their own words yielding to no pronunciation known in other countries, it is impossible almost to put them in writing; however, a list of many of their words has been attempted by JUNKERAS, in his comment on LUDOLPHUS, in which KOLBEN observes there are a great many faults, and has given us a new specimen of some of their words; of which I shall take the liberty to transcribe part, viz. Chauna, a Lamb; Kgou, a Goose; Kamma, Water, and other liquids; Quaiha, an Ass; Knonm, to hear; Khoekara, a bird called Knorhan; Kirri, a stick or staff; Kaa, to drink; Kouquequa, a Captain; T'kamma, a stag; Kgoyes, a Buck or Doe; Tik-quoa, God; Cham-ouna, the Devil; Hacqua, a Horse; Chooa, a Cat; Koukekererey, a Hen; T'koume, Rice; Kchou, a Peacock; Kuanehou or Tkeuhouw, a Star; Camkamma, the Earth; Quacouw, Thunder; Tquassouw or Kqvussomo, a Tyger; Tkaa, a Valley; Toya, the Wind.

KOLBEN adds, he has known several of the Hottentots, who have understood French, Dutch, and Portuguese, to a degree of perfection; and, allowing for defects in pronunciation, spoke those languages roundly; and that he knew another, who learnt both English and Portuguese in a little time, and spoke them with great propriety. They never exceed ten in numbering: In reckon-
ing their cattle, or any thing else, when they come to ten, they begin again with a unit, and count ten more; and when they have done this ten times, they say ten ten (by which they mean they have counted an hundred:) Then they begin again in like manner, and count another ten ten, and so on. Their words for their numbers as high as ten are Q'kui, one; K'kam, two; K'ouna, three; Hakka, four; Koo, five; Nanni, six; Honko, seven; Khyssi, eight; K'heffi, nine; Gyssi, ten.

There

CHAP. IV. There remains little more to be observed of the Hottentots, unless it be their musick, which KOLBEN seems to have some taste for; tho' it scarcely excels the marrow-bone and cleaver, as the reader will believe, when he understands that they have but two poor instruments; the one called the Gom-Gom, which is no more than an iron bow, with a Cocoa nut-shell affixed to it, and a split quill, which they play upon like a Jew's-trump; and the other an earthen pot, covered with a Sheep-skin, which makes a very bad drum: Nor is their vocal musick more agreeable to a European ear; tho' they seem to be exceedingly charmed with both themselves, and continue their performances often to an unreasonable length.

The Cape town. I come now to give an account of the colonies and settlements of the Dutch at the Cape; the chief town whereof extends itself from the seashore, along the Table-valley, to the Company's garden, containing between two and three-hundred handsome houses, regularly laid out into spacious streets, with courts before them, and large gardens behind them. The houses are built of stone, but thatch'd, and seldom more than one story high. The stormy weather they are subject to, obliging them to build low, and to thatch most of their houses, instead of tiling them, that they be not knocked on the head with the tiles, as they go about the streets; and as it is, when the winds set in easterly, they usually receive some damage. The Dutch give all imaginable encouragement to their subjects to build here, allowing any person that desires it, ground sufficient to build upon, and for yards and gardens, either adjoining to the town or in the country: But, when such houses are sold, the Government reserves a ground-rent of a tenth or twentieth penny, according to the condition they are in; and of corn-fields, vineyards and pasture-ground, the Government reserves a tenth part of the produce, or the value thereof in money.

At a little distance from the town, in the same valley, the Dutch have a noble fort or citadel, built in stone in form of a pentagon, which defends the landing-place. The Soldiers in garrison are about 200 men; and here the Governor and the principal officers of the company have their respective apartments, and there are very large and commodious store-houses belonging to the Government. The Company have between five and six hundred officers and servants at the Cape, besides slaves, which are near six hundred more: The last are lodged in a large building in the town, which is divided into two wards, one for the men, and the other for the women; and adjoining to it, is a prison for the lewd and dissolute, who are kept to hard labour, as in Holland.

Their church at the Cape is a handsome spacious edifice, but perfectly plain, without any manner of ornament on the inside or outside; and both church and steeple are thatch'd for the same reason, I presume, as the houses in the town are: They have no seats, as in our churches, only forms; and, when the sacrament of the Lord's-supper is administer'd, a large table is placed before the pulpit, and they sit round it, and, in that posture, receive the elements.

They have a fine hospital here, whither they send the sick seamen that arrive in their fleets going to and from India; of whom there are not less than an hundred, or a hundred and fifty frequently in one fleet. This, and the supplying their ships with fresh provisions, are the principal advantages the Dutch yet receive by the possession of the Cape,

here being no secure harbours, or scarce any thing that deserves the name of merchandize besides provisions. CHAP. IV.

But what is the most admir'd of any thing at the Cape, are the Company's gardens, where they have introduced almost all the fruits and flowers that are to be found in Europe, Asia or Africa, and most of them are improved, and flourish more than they did in the respective climates and countries from whence they were brought; and both gardens are watered by springs that fall down from the Table-mountain just above them. The Apples and Pears of Europe are planted here, with the Grapes of Asia, as well as those of Europe, all of a delicious flavour. Here are also Lemons, Oranges, Citrons, Figs, Japan apples, and an infinite variety of other fruits, all excellent in their kind; but I have reserved a particular head for their vegetables, and therefore shall not enlarge on them here.

At a little distance from the town are several beautiful country-seats, vineyards and farms, extending far into the country; besides which, there are two other great colonies or settlements, the one called the Stellenbosch colony, and the other the Drakenstein and Waveren colony, taking up a vast tract of land, upwards of an 100 miles, perhaps near two, to the northward and eastward of the Cape, but intermix'd with the Hottentot nations, who still graze their cattle upon such lands as are not enclosed and cultivated by the Dutch.

The Government of the Cape is administer'd by The eight courts or councils. Dutch Government at the Cape.

1. The Grand-Council, or College of Policy, which consists of the Governor, and eight of the Company's principal officers. These have the direction of trade and navigation, make peace or war with the Hottentots, and have the supreme management of every thing conducing to the security and interest of the settlement. This Council holds a constant correspondence with the Directors of the Dutch East-India Company in Holland, and with the Dutch Governments of Batavia and Ceylon.

2. The second Court is styl'd, The College of Justice, and is composed of most of the same members; and determines all civil and criminal causes of any importance: But appeals lie from it to the supreme Court of Justice at Batavia, or the supreme Court of Justice in Holland.

3. An inferior Court of Justice, for determining trespasses, assaults, breaches of the peace, and actions of debt, under an hundred crowns: This Court consists of one of the Grand-Council, who is President, three Burghers or Townsmen, and four of the Company's immediate servants.

4. A Court of Marriages, which examines into the legality of every marriage-contract before it is celebrated, whether the Parties have the consent of their parents and guardians, and whether there be no pre-contract. The members of this Court are the same as the last; and, when they have received satisfaction in these matters, grant their warrant to the Ministers of the churches where the parties live, to publish the bans the three following Sundays from the pulpit, and then to solemnize the marriage, if no-body forbids it; and, if they do, they must assign some good cause, or else the marriage proceeds. Men of figure usually invite the Court to their houses when these enquiries are to be made, and give them a handsome entertainment, and a present of five or ten crowns. But before this Court can enter upon the examination, the bride and bridegroom must always attend the Governor, and ask his Consent.

CHAP. IV. 5. The Court of Orphans, consisting of the Vice-President of the Grand-Council, three of the Company's officers, and three burghers or substantial inhabitants. Without the consent of this Court, no orphan can marry under five and twenty years of age; but upon a certificate of the Court of Orphans, testifying their consent, an orphan is at liberty to marry, on taking the same steps as other people do.

6. An Ecclesiastical Council, for the government of the reformed churches at the Cape (for here is a colony of French Protestants, which the Dutch transported to the Cape, to assist them in cultivating their vines, and making wine, which is now brought to great perfection): This Council consists of three Pastors, six Elders, and twelve Overseers of the poor (there being three parishes, of the extent of three colonies) and two Elders and four Overseers in every parish. This council determines finally all temporal matters, and many spiritual concerns, relating to the church: particularly, they order what ceremonies shall be observed in divine worship, and alter them from time to time, as they see fit. They distribute such collections also as are made for the poor; which, 'tis said, they manage so well, that no Beggar is seen in the settlement: The surplusage of these charities is applied to the repairs of churches, or the maintenance of schools. There is also a vestry in every parish, consisting of a President (some wealthy Merchant), the Pastor, the two Elders, and four Overseers, who manage the particular affairs of the respective parishes.

7. The Common-Council (of which there is one in every colony) is chosen every year by the Grand-Council. That of the Cape colony has very little business, unless it be to propose matters to the Grand-Council, and collect the taxes: But the Common-Council of the other colonies have great authority; the Lieutenant of each colony presiding in it, who with his brethren take cognizance of all trespasses and actions of debt under an hundred and fifty florins, and try all criminal matters that happen within their respective limits.

8. There are also two Councils or Boards of Militia; one for the Cape-Town, and the other for the districts of Hellenbogist and Drakenstein. In the Council for the Cape-Town presides a member of the Grand-Council, having nine other officers of the Militia join'd with him, and once 'a year their Militia, both Horse and Foot, is mustered and review'd by some of the members of the Grand-Council: For they have now Horses in abundance, which were first brought from Persia, and have multiplied prodigiously. The Company have a free stable of Horses, for the use of the Governor and the rest of their officers: Some of their Horses are fit for the coach; but the most are Saddle-Horses.

The Dutch East-India Company, 'tis said, are still at the expence of forty thousand pounds annually, in maintaining this settlement at the Cape; and all they receive from thence yet, does but barely pay them their charges; tho' it is observable, that they do not allow their Governor above four or five hundred pounds a year, and the rest of their officers proportionably.

The revenues which repay the Company's expences, arise either from the tenths they reserve on all the lands they grant, or from the duties the Company lay on the produce of the Cape, and such merchandize as is carried thither, particularly on Wine, Brandy, Tobacco, Beer, Mum, &c. or by the merchandize they themselves annually send to the Cape, which yields them a profit of 75 per VOL. III. NUM. CVI.

CHAP. IV. Cent. and this very near enables them to ballance their accounts: But, as the colonies are continually encreasing, and improving their lands, it will probably yield them a considerable profit in a few years more.

The Company usually fetch the slaves they employ at the Cape, from the island of Madagascar, which lies a little to the eastward of the continent of Africa. The Dutch represent them as a perverse, stubborn generation, that are not to be dealt with but by the severest discipline and punishments: Certain it is, their masters use them as if they were the worst of the human species. KOLBEN relates, that some of these slaves, running away when he was there, the ringleaders were taken and broken alive upon the wheel, and yet they shew'd no manner of concern, or uttered a single groan at their execution: That after their bones were shattered to pieces by the blows of the executioner, they were taken alive from that wheel, and stretched upon another, where they continued alive a considerable time, and yet never cry'd out or murmur'd in this exquisite torture to the last.

Another of these Madagascar slaves was condemn'd to be roasted alive, for attempting to burn his master's house; which was executed upon him in this manner: He was chain'd to a post; after which a great fire was made round about him, and he run round the post, till being almost roasted by the scorching heat of the flames, he dropp'd down, crying out in the Portuguese, *Dior mio Pay! O God my Father!* and soon after died, without making any other complaint.

From these two instances, every one must admire the spirit and courage of the natives of Madagascar, who can meet death in the most terrible shapes, with so much resignation and composure: But that they must at the same time detest and abhor the tyranny and cruelty of the Hollanders, that can thus inhumanly torture their own species. These people, probably, were born free, stolen from their friends, and sold to the Hollanders, who make them serve with rigour. The first offence, it appears, was only an endeavour to escape from their barbarous task-masters, for which they were broke alive, and kept in the most exquisite pain, till the extremity of it put an end to their wretched lives; not being indulged, like other malefactors, with the Coup de Grace, the favourable blow, to put an end to their pain. The last was roasted alive, for an attempt to fire a house; and who knows the provocation his master had given? Surely, every one may thank God he does not live under the tyranny of the Dutch republick, who will not be satisfied with the bare forfeiture of life, for scarce any offence, but require the party should feel the most exquisite misery that human nature can sustain; and with whom the bare suspicion only of a person's conspiracy against their state, is look'd upon as a sufficient evidence for putting him to the torture, and depriving him of life, estate, and all that he has in the world: Witness the usage the English themselves met with from the Dutch at Amboyna. This is the happy government, that our Whigs so much admire, and what they have made such strenuous efforts to introduce in Great-Britain!

I proceed in the next place to treat of the husbandry of the Dutch in their settlements at the Cape; the three principal branches whereof are, 1. Grazing: The management of their Arable lands; and 3. The cultivation of their Vineyards.

CHAP.
IV.
Their
cattle.

The Government usually contract with four substantial men, to furnish the Company's officers and servants at the Cape, and the company's shipping that touches at the Cape, with beef and mutton; and these Graziers are obliged to keep great numbers of cattle, both Sheep and Oxen, always fat, to answer the sudden demand there is often for them, upon the arrival of a fleet. The Cape Oxen are pretty large, weighing commonly five or six hundred pound, and sometimes a great deal more: Their Cows furnish the Grazier and Farmer with milk and butter for their houses, and some for sale. The mutton of the Cape is good; but what is most remarkable in the Sheep, is, that they have rather hair than wool on their backs, and their tails are of such a length and thickness, that they weigh from fifteen to twenty pound; and they have some Persian Sheep, the tails whereof weigh thirty pound and upwards. There are prodigious herds both of great and small cattle, in all the Dutch settlements, besides those that belong to the Hottentots; among which the wild beasts frequently make terrible havock. The Tyger kills great numbers at a time, for the sake of sucking of their blood, not much regarding the flesh; and there are packs of wild Dogs that will worry the Sheep of a whole flock, when they get in amongst them. But it is observed of the Lion, that he contents himself with carrying off a single carcase, and scarce ever does any mischief to the rest. The cattle smell a wild beast at a great distance, and immediately run for it, when they discover him; but the small cattle usually suffer most, as the larger have the heels of them.

The soil.

The soil at the Cape is exceeding fruitful, and gives great encouragement to the Husbandman. Whether a piece of ground is design'd for a garden, a vineyard, or corn-field, they always plough it up in the first place, and clear it of weeds. Their ploughs have two unequal wheels; that which goes next the furrow being much larger than the other; and their ploughs are drawn only by Oxen, tho' they have great numbers of Persian horses. These are rather too small for drawing, and never used either in plough or cart. They put sometimes five pair of Oxen to a plough, the soil is so very heavy at some times, and so hard at others; and they have frequently almost as many drivers as Oxen.

Their seasons for ploughing, sowing, &c.

The Farmer, here, dungs his land, if it wants it (tho' a great deal of it wants no manure) in April and in May, and, after some rain has fallen, begins to plough. Their seed-time begins in June, in the lowlands, and in July, when more rain has fallen on the hills; and he has seldom done sowing till August; the latter end of which month, and part of September, is spent in pruning his Vines, and dunging them: In October, the Vineyards are weeded, and, after that, the corn-fields: In December, all their grain is ripe; and our Christmas is the height of their harvest. In January they tread out their corn in the fields, and in February they carry it to the Company's magazines, where they receive ready money for all they don't use themselves. They sow almost all manner of grain, but Oats and Lentils; but these are so apt to be shatter'd before harvest, by the tempestuous weather, that they scarce receive their seed again.

The crop of grain sometimes suffers by the mildew as with us; and the Elephants do them a great deal of mischief when they get into a corn-field, devouring some, and treading down more: The Elk, Deer and Wild-goats also do them some damage, as well as birds and insects, which swarm pretty much at the Cape: However, with all their losses they

have generally enough for their use, and a great deal to sell, which is laid up in the Company's granaries, and some of it sent as far as Batavia.

CHAP.
IV.

One bushel of Wheat at the Cape, 'tis said, yields an encrease of thirty or forty bushels; a bushel of Barley, fifty or sixty, and sometimes seventy bushels; a bushel of Peas from thirty to sixty; and a bushel of Beans, from twenty to twenty-five: Tho' sometimes their Peas and Beans suffer so much by the Locusts, that they yield scarce any thing. They never thresh their corn, but tread it out in the field with Oxen or Horses on a hard round floor prepar'd for the purpose, about ten yards diameter, at the extremity whereof the corn is laid, and the cattle drove round over it, the sheaves being turned from time to time till it is all trodden out. As the Oxen and Horses frequently dung amongst the corn when they tread it, the husbandmen separate this filth from it after it is dry'd in the sun: Thus they get all their corn trodden out by their cattle within the space of a month, which would take them up a whole winter to thresh; and when the corn is trodden out, they fan or winnow the chaff from it, and afterwards use a sieve or skreen, as the Europeans do, to clear it of sand and dirt.

They tread out their corn.

From their Corn, I proceed to give some account of the Cape Wine, of late so much admired in Europe: It was a great while, it seems, before they rais'd any considerable Vineyards: They carried thither at first, indeed, Vine-stocks from the banks of the Rhine, and from Persia, in small parcels, which grew pretty well, and furnish'd them with Grapes for eating; but they did not pretend to make any quantities of Wine, till a certain German taught them to take the prunings of their Vines, and cut them in small pieces of half a foot in length, and sow them in fields plough'd up for that purpose. They follow'd his directions; the prunings of the Vines grew, sending out shoots at every knot; by which means they were soon furnish'd with as many stocks or plants as they had occasion for; and, removing them from these nurseries, they planted them in other grounds in rows, the Vines at the distance of two foot and a half from each other, and the rows at the distance of three foot and a half, the land being first prepared by ploughing it: And now there is scarce a cottage in the Cape settlements but has its vineyards, which produces Wine enough for the family, and some for sale; tho' sometimes their Vines receive damage from the mildew, and at others from Locusts. And there is still a little black worm, that is a greater enemy to them than either of the former: This insect eats a hole in the knot of the Vine, whereby the bud perishes; but they employ their slaves in taking these worms every morning, whereby they prevent a great deal of mischief. Their Vines also receive considerable damage sometimes by the south-east winds, which break off the branches laden with the finest clusters of Grapes; for which reason they do not let them run up on poles, or the walls of houses, as in Europe, but endeavour to prevent their rising above three foot from the ground. Their vintage begins the latter end of February, and continues all the month of March; tho' they have some Grapes ripe in January; but these they dry and eat, observing that the Wine made of them will not keep.

The cultivation of their Vines.

Their Wines are put into vessels when they are taken out of the Wine-press; and, when they have stood some time, are rack'd off from the lees; then letting them stand three or four months longer, they are fin'd with ising-glass, and sometimes hot sand is thrown in afterwards; and, when the Wines are fine, they

The management of their Wines.

CHAP. IV. they stop them up close, only giving them vent when the Vines are in blossom, or they will foment and endanger breaking the cask. They put their Wine also every year into fresh casks, and fill them up to the bung, keeping them sometimes till they are three or four years old; but are generally forc'd to dispose of them every year for want of casks to keep them in, which are very scarce at the Cape, there being no pipe-staves but what are brought from Holland. They have both red and white Wines; but the greatest plenty of white, which, if kept two years, has much the flavour of Canary.

Their
kitchen
gardens.

Besides a vineyard, every house almost has its kitchen-garden, in which there are all the roots and herbs that grow in the kitchen-gardens of Europe; and indeed they are supply'd from time to time with their seeds from thence; for it is observ'd, their plants degenerate the third year, so as to be good for little: However, while they do last, their plants are larger and sweeter than those of Europe; the head of a Cabbage, at its full growth, weighing thirty or forty pound, and the head of a Colliflower as much, the seeds whereof are brought from Cyprus and Savoy: Their Melons also are of an exceeding fine flavour, and larger and wholesomer than those of Europe: Cucumbers are likewise very plentiful, and are reckon'd wholesome here; and all these things are rais'd without glasses or hot-beds, their summers being exceeding hot, and winters moderate: Their Potatoes are very large, weighing from six to ten pound; these they brought from India, and they are exceeding good.

Fruit-
trees.

They have scarce any fruit-tree the natural product of the country, at least such as the Europeans care to taste of; tho' the Hottentots eat some of them: However, those that are remov'd thither from Europe or Asia come to great perfection, the fruit being reckon'd much better than in the countries from whence they were brought. Here is the Apricot, the Peach, the Quince, the Fig and many more, which are produc'd in the Cape soil; only by setting a twig of any of these trees in the ground, they immediately take root, and grow up into trees in a very short space: Others are inoculated and grafted on old stocks, and thrive apace; the fruit of four years growth being most esteem'd. And here I shall take an opportunity of adding something to the description already given of the Company's fine garden at the Cape town, which takes up nineteen acres of ground. Here are to be found the most delicious fruits of Asia and Europe growing within squares of Bay-hedges, so high and thick, that the storms coming off the ocean can prejudice them but little; and these hedges afford a most refreshing shade in the hot season. In this garden also is a fine grove of Chestnut-trees that the sun can't penetrate, and secur'd against the blustering winds that infest this shore. Here also we meet with Peaches, Pomegranates, Citrons, Lemons, Oranges, with the apples and pears of Europe intermix'd, all excellent in their kind; and here we see the crimson Japan Apples, which, intermix'd with the green leaves, appear exceeding beautiful. They have great variety of Figs in this garden; but those most admir'd are the Pisang Figs, that grow upon a plant which dies as soon as the fruit comes to maturity, and next year a new plant arises from the same root: It has no stock; but the leaves, which are seven ells long, and about half as broad, twine round each other, and form a kind of barrel instead of a stock; the Figs are blue and large. Here also grows the Indian Guavos, perfectly round, and of the bigness of a Crab-apple: It is a most delicious wholesome fruit,

Compa-
ny's gar-
den.

cover'd with a tender green skin, and within full of seeds, which alone are a remedy against the Flux (the reigning disease of hot countries.) CHAP. IV.

I shall just mention some other vegetables, which are the natural product of the Hottentot countries; and first the Aloe, of which there are various kinds that grow upon the rocks, some of them in blossom all the year round; the flowers whereof are white, red or speckled.

The African dwarf Almond, with narrow leaves and double flesh-colour'd flowers, the Almonds whereof are exceeding bitter; however, the Hottentots eat them, after they are boil'd in several waters.

The Arum Ethiopicum is also found here, having a large round root, which bites and enflames the tongue to a very great degree; and yet the Hottentots eat it instead of bread, after they have boil'd it in several waters, dried it in the sun, and broiled it.

The prickly wild African Asparagus abounds in the low grounds; the stalks whereof are of a grass-green, and very tender, and taste like European Asparagus; and these the Hottentots supply the Dutch with in great plenty, not caring for Asparagus themselves.

The African Night sweet-scented Crane's-bill also is met with here; a twig of which, with two or three flowers upon it, will perfume a whole room; it is commonly call'd Night-flower at the Cape: There are several sorts of them, most of which keep close shut from sun-rise to sun-set. Here also is the African Jasmine, with single leaves and flowers like the common Jasmine.

The African Shrub, with Laurel leaves; the branches being numerous, and very close together, they serve like Box for borders in the Company's gardens.

The Honey-flowers, so call'd from the sweet juice that distils from them, are eaten both by Europeans and Hottentots. And here is the African Ironwood, so call'd, because it is as hard as iron, and will sink, if thrown into water.

The lesser African Sisyinchium, with a large variegated flower, is found here. It has a root that eats like a Chestnut, and is as large as a Potatoe; some of them white, others red, and a third sort black, all of them of a delicious taste, and very plentiful at the Cape in September, and the three following months.

Here also is the African sweet-scented Spirea, with hairy leaves, call'd by the Hottentots, Buchu. Towards the end of the summer, when these leaves begin to wither, the Hottentots gather and dry them in the sun; and, having pulveriz'd them, powder their hair and skins on all festivals and rejoicing times with the dust, which is of the colour of gold. They look upon this powder also as a remedy for the head-ach.

There is a dwarf-tree at the Cape, call'd by the Dutch Cripplewood, with crooked knotty branches; the leaves broad, thick and tough, and shaped like those of the Apple-tree; the fruit something like the Pine-apple; the bark is thick and wrinkled, and used by the Tanners at the Cape; and the Physicians pulverize it, and give it their patients in Dysenteries.

There is a root also in this country, which the Hottentots call Kanna, and will give almost any thing to purchase it, a little of it raising the spirits to a very high degree, and is compared to the Ginseng of the Chinese, which the reader will meet with an account of in the first volume of the *Modern History*.

There

CHAP.
IV.

There grows a tree in this country also, called by the Europeans Stinkwood, from the nauseous scent it gives at the first cutting and hewing of it; but this smell goes off after it has lain and dried some time. It is beautifully clouded, and used by the Dutch Joiners for tables and cabinets; and the wood is also used as a medicine in some distempers.

Exotick
plants.

The Dutch have also introduced several exotick or foreign trees and plants from Asia, Europe and America; and particularly the Fir-tree, which was first brought to the Cape about the year 1690, and planted in the Company's garden, being then about three foot high, and now they are forty feet in height.

Three or four sorts of Almond-trees also have been brought hither, which bear fruit once in three years; and, as they have large plantations of them, yield the Dutch a considerable profit.

The Ananas or Pine-apple, a most delicious fruit also, is planted in their gardens, being of American extraction. If a woman eats of this fruit before it is ripe, it will make her miscarry, 'tis said: What the fruit was, that tempted the first woman to transgress in Paradise, is uncertain; but a more tempting fruit than this is hardly to be met with in the world.

We see in their kitchen-gardens also, red and white Beets, red and white Cabbages and Colliflowers: And here we meet with four sorts of Camphire-trees, the best whereof were transplanted from Borneo, the other three came from Sumatra, China, and Japan, and soon grow to the bigness of a Walnut-tree; the leaves of a grass-green, and being rubbed between the fingers, smell strong of Camphire.

A great deal of Hemp also is raised here; the stalk whereof is almost as strong as wood. The Hottentots smok the seeds and leaves of it as they do Tobacco, and sometimes mix it with their Tobacco: And here the Cardus Benedictus, or blessed Thistle, thrives, and the Clove-gilliflowers, which were brought from Holland: But the plant of the greatest Importance is the Cinnamon-tree they have transplanted from Ceylon. This, it seems, the Dutch can raise in almost any soil or climate; and yet the rest of the European nations scarce attempt to transplant it, at least to any purpose: The English African company have one of them indeed, in a garden belonging to one of their forts, on the coast of Guinea; and the Portuguese have planted a walk of them in the same country; but, 'tis said, they durst not proceed any farther, lest the Dutch should come and take away their country and plantations from them. But I hope this is not the case of the English; we are not yet so much under the dominion of the Dutch, that we dare not cultivate the fine spices in our own plantations: And yet one would think we were afraid of them, or we should never purchase Cinnamon of the Hollander, at what price he is pleased to set upon it, and never attempt to raise this plant ourselves. Our East-India Merchants possibly are still frightened at the tortures their predecessors suffered under the Dutch at Amboyna; and therefore are determined to sit down contented under the loss of that valuable branch of their commerce, which the Hollander, by the most barbarous violence, deprived the English of. But to give some description of the Cinnamon-tree: The outward bark is rough, and good for nothing; but this being taken away, there is a tender inward bark of a dark green colour, which being cut off, and dried in the sun,

turns brown, as we see it here: Within three years the tree recovers itself again, so as to yield another crop; and the oftner it is peeled, the better the Cinnamon is, till the tree grows very old.

CHAP.
IV.

It is needless to specify every plant the Dutch have brought to the Cape, having already observed, that there is scarce any fruit-tree, flower-root, or herb, that is of any great value, in Europe or Asia, but the Dutch have transplanted, and which flourish in great abundance in their colonies here, unless it be Cloves and Nutmegs, and such plants as require a warmer sun; and therefore I shall proceed, in the next place, to treat of the animals that are found in this part of Africa, and first of their quadrupeds.

Quadrupeds.

The Lion is frequently seen here, whose strength and stately gait have obtained him the title of the king of beasts: His shin-bones, 'tis said, after they are dried, are as hard and solid as a flint, and used in the same manner to strike fire with: When he falls upon man or beast, he first knocks them down with his paw, and deprives his prey of all sensation, before ever he touches it with his teeth, roaring most terribly at the time he gives the mortal blow. KOLBEEN relates, that when he resided at the Cape, a Soldier, who stood centinel before his Officer's tent, was thus knocked down by a Lion, and carried off: And that he knew another Lion knock down a middle-sized Ox, and jump over a brick wall with him of a considerable height. When a Lion is enraged or hungry, he erects and shakes his dreadful mane, and lashes his back and sides with his tail, threatening destruction to all that come in his way; but this the traveller seldom discovers, till 'tis too late to avoid him; for the noble brute frequently lies lurking in thickets and bushes, till his prey approaches pretty near him; but if he does not shake his mane, or move his tail, 'tis said, a traveller may easily pass by him. A Horse will run full speed, if ever he sees a Lion; and, if he has a rider upon his back, will endeavour to throw him, to get away the faster: And, indeed the best thing a traveller can do in such a case, is to quit his horse; for the Lion will follow the Horse, and pass by his master. I am almost afraid to relate another story after Mr. KOLBEEN, though he be a traveller of as good credit, as most I have met with; for, as he did not see the adventure, perhaps he was imposed upon. The passage is this: He says, two brisk young fellows, walking in the fields near the Cape, a Lion rushed on them from his covert, aiming at one of them the mortal blow; but the fellow, jumping nimbly on one side, the Lion missed him: Whereupon the man caught hold of his main with one hand, and running the other into his mouth, held the beast fast by the tongue, till his comrade shot him: But, as I observed before, I must leave the story on this reverend gentleman's credit, who relates it as tho' he believed it himself; however he might be imposed upon. He adds, that he has eaten of the flesh of a Lion several times; that it tastes something like venison, and is very innocent food. It is needless to give a particular description of this noble animal, since we never are without some of the species here in England.

The Tyger and Leopard also are among the wild beasts at the Cape: They are very much alike, only the Tyger is larger, and distinguished by rings of black hair, enclosing yellow spots; whereas the black streaks of a Leopard are of the form of a crescent, with an opening: The heads of both are much like that of a Cat, and they have terrible whiskers: They seldom run fairly at their prey, but

The Tyger.

CHAP. but lie concealed in covert, and jump upon it as a
 IV. Cat does upon a Mouse: The flesh of both is very white and tender, and, according to some, preferable to veal. Sir EDWARD WINTER, Governor of Fort St. George in the East-Indies, was surprized by a Tyger as he was hunting; but, as the beast flew up at him, he grasped the creature so close in his arms that it could not breathe; and, falling with the Tyger into a pond, he drowned the brute, without receiving any manner of harm; for which King CHARLES II. knighted him, at his return to England; and the family have ever since carried a Tyger in their arms. Mr. KOLBEN also relates, that one BOWMAN, a Burgher at the Cape, walking alone in the fields, a Tyger leaped up at his throat; but the Dutchman seizing the brute and struggling with him upon the ground, and drawing a knife out of his pocket, cut the Tyger's throat; but was himself so grievously torn and wounded, that it was a great while before he recovered. He tells us also, that when he was at the Cape in 1708, an he and the Leopard, with three young ones, entered a Sheep-fold; and having killed and sucked the blood of near a hundred Sheep, tore a carcase in three pieces, and gave each of their young ones a piece: After which, each of the old Leopards took a carcase, and were marching off; but being way-laid by the owners and their servants with arms, the female and the three young ones were killed; but the male broke through, and made his escape.

The Elephant. The Elephants of this part of Africa, KOLBEN says are larger than those of any other country (but I believe he is mistaken, those of Pegu and Siam are said to be larger:) Their teeth weigh from sixty to one hundred and twenty pound; and their strength is scarce to be conceived. KOLBEN says, one of them being yoked to a ship at the Cape, that was careening there, fairly drew it along the Strand: They are from twelve to fifteen foot in height, and some say a great deal more; the female is much less than the male, and has its breasts or dugs between its fore-legs: Their usual food is grass, herbs, and roots, and the tender twigs of trees and shrubs; and, if they meet with a corn-field, they will devour a great deal of the grain, as has been related already: They pull up every thing with their trunk, which serves as a hand to feed themselves; and with this they suck up water, and empty it into their mouths: But, having described these animals already, in treating of India, in the first Volume of *Modern History*, it is unnecessary to say more of them here.

The Rhinoceros. The Rhinoceros also is to be met with at the Cape. This animal is something less than the Elephant, but of equal, if not greater strength; at least, the Elephant runs away and avoids him, whenever he discovers him: His skin resembles that of the Elephant, being without hair; of a dark ash-colour, inclining to black, and so hard that scarce any weapon will pierce it; but he is not armed with scales, as our Painters frequently represent him; tho' the scars and scratches he gets by forcing his way thro' the thick woods, look something like scales at a distance: He has a snout like a Hog; upon which there grows a solid horn, of a dark-grey colour, that turns upwards a little, being from a foot to two foot in length; with this, when he is enraged, he rends up the earth, and tosses it over his head, as he does the stones that lie in his way, throwing them to a great distance behind him: On his fore-head he has another convex-horn, almost of the shape and size of a hat-crown: He has the

sense of smelling very quick; and when he has the scent of his prey in the wind, forces his way to it, in a direct line, thro' the thickest woods, tearing up every thing that obstructs his passage, grunting as he goes like a Hog; but is discovered the soonest by his throwing about the stones, and breaking his way through the thickets: He seldom falls upon a man, unless he has a red coat on; and then he attacks him with all his fury, flinging him over his head with such force, that he is killed, or rendered insensible, by the fall; and then, according to KOLBEN, with his rough prickly tongue licks the flesh off his bones: His eyes are very small, and he looks only right forward, not easily turning his neck; and though he is pretty swift of foot, a traveller, by a sudden turn, may avoid him; for then he loses sight of the man. Our reverend author assures us, he has experienced this himself, having met a Rhinoceros more than once in all his fury: But this does not seem to agree with the observation Mr. KOLBEN makes just before, that a Rhinoceros would not attack a man unless he was in a red coat; for, I presume, this reverend writer wore black. The Rhinoceros does not feed much on grass; but delights more in Broom, Shrubs, or Thistles. The flesh of this beast is frequently eaten; and his horn, his skin, and his blood are used in medicine: The horn, KOLBEN assures us, from his own experience, will not endure the touch of poison: They make cups of it at the Cape, tipped with gold and silver; and if wine be poured into one of them, it will immediately rise and bubble up, as if it boiled; and if there be poison in it, the cup will split: If poison be put into one of these cups alone, it immediately flies in pieces. They carefully preserve the very chippings of the horn, being esteemed a great remedy in Convulsions, Fainting-fits, and other diseases. The blood also is dried and preserved by their Physicians, being of great service in obstructions.

There are wild Dogs, not unlike English wild Hounds, that hunt in packs near the Cape, without a Huntsman, or any thing to direct them but their appetites; chasing almost every thing that falls in their way; even Lions and Tygers are sometimes attacked by them, and overpowered by their numbers: They will hurt no man, and travellers are very glad to see them, being assured there are no wild beasts near the place where they are. Both the Dutch and the Hottentots follow these Dogs, when they see them chasing their prey; which, when, they have run down, they will suffer any man to take it from them, without snarling: The flesh the Hottentots get by this means they eat, and the Dutch salt it up, and give it to their slaves. But as much friends as these Dogs are to Men, they worry and kill greater numbers of their Sheep than any other wild animals, if the Shepherds happen to be out of the way. KOLBEN relates, he has known them worry above fourscore at a time in one flock; tho' they don't eat up more than five or six perhaps.

There are two sorts of Wolves at the Cape; the Wolves, one like the European Wolf, and the other called the Tyger-wolf, supposed to be begot between a Tyger and a Wolf: His head is broad like a Bulldog's; his nose and eyes large; his hair shagged, and spotted like a Tyger's: He has large claws, which he draws in like a Cat, and a short tail; keeps all day in his den, and preys only in the night; when he keeps such a dismal howling, that he frequently alarms the Hottentot Dogs, who drive him away;

CHAP. IV. away; but if he gets into a flock of Sheep he usually kills two or three of them; and, having eaten as much as he cares for, carries off a carcase. The Lion, as well as the Leopard and Tyger, frequently hunt these Wolves, and tear them to pieces if they catch them.

Buffaloes. There are great numbers of Buffaloes in the Hottentot countries, larger than the Buffaloes of Europe; being of a brownish red, and having short horns that turn inwards, and almost meet: Their hides are so hard and tough, that a musket-ball will scarce enter them; if a gun be let off at a Buffaloe, he will run with the utmost rage at the man that fires it; neither fire nor water will stop him. **KOLBEN** relates, that one of these creatures jump'd into the sea after a man that had attack'd him; and he had no way to escape but by diving, till the enraged beast lost sight of him. The flesh of a Buffaloe is not so tender as that of an Ox.

The Elk. The Elk is also found in the Hottentot countries: He is about five foot in height; has a fine slender neck, and a beautiful head, not much unlike that of a Deer: His horns are about a foot long, rough and twisted towards the lower part; but smooth and pointed at the ends: The hair of his body smooth and soft, and of an ash-colour; his legs long and slender, and his tail about a foot long: His flesh is good either roasted or boil'd, and much like tender beef: He frequents the mountains, and will climb the steepest rocks with great celerity; but sometimes comes down into the valleys, and does considerable mischief to the gardens of the Europeans, who thereupon set traps for the beast, or shoot him.

A fine wild Ass. The European Asses are common at the Cape; but there is another wild animal, which goes by the name of an Ass, which has nothing like that creature but his long ears; for he is a well-made, beautiful, lively beast; of the size of an ordinary saddle-horse; his hair soft and sleek; and there runs on the ridge of his back a black streak, from his mane to his tail; and, from the ridge of his back down to his belly, fall several streaks of various colours, forming so many circles: His head, ears, mane and tail also have streaks of white and brown; and he is thought to exceed a Horse in swiftness: Such of them as are taken alive, are sold at an extravagant price; but there is no instance of their being broke for the saddle, or for any other use: It is their beauty, and the difficulty of taking them alive, that makes them so much valued. **KOLBEN** says, he has seen great numbers of them running wild in the Hottentot countries.

Goats. The common Roe-buck and the European Goat also are found here; but they have another Goat, of a fine blue colour, and as large as a Red Deer; his beard is long and graceful; his legs long; his horns not so long as those of the common Goat, but finely turn'd in rings till near the point: Their flesh is said to be pretty good, but lean; and they are often killed for their skins, than for food.

There are another sort of Goats, not much differing in size or shape from the former; spotted red, white and brown: Their beards also very long, and of a brown red.

There is still a third sort of the same size, with a streak of white from head to tail on their backs, and other white streaks crossing this, and running down on each side; the hair on all other parts of the bodies grey, with little touches of red, and long grey beards. The flesh of these is said to exceed that of venison.

Hogs. The Dutch have replenish'd their settlements with European Hogs, as well as those of the Indian black

CHAP. IV. breed without bristles, whose bellies almost touch the ground: They have very few wild Hogs like those in Europe; but there is another sort called an Earth-hog, from his digging himself a den, and lying commonly under ground; of a red colour, and toothless; for which reason, 'tis said, he feeds chiefly upon Ants, which he catches in this manner: He lays himself down among their little hills, and putting out his tongue, which is of an unreasonable length, the Ants get upon it; and, being so clammy that they can't get off again, he lies still till he has got a good number, and then draws it in and swallows them: After which he lays the same bait for more. Both Europeans and Hottentots frequently hunt him; he is a poor defenceless creature, having neither teeth or claws, and is easily knock'd down with an ordinary club.

Porcupine. The Porcupine is another animal very common at the Cape; the body of it about three foot long, and two foot high: His head and feet resemble a hare's, and his ears are not unlike those of a Man; when he is bowel'd, he weighs about twenty pound. But what is most remarkable in this animal, is a wood of quills, with which his back and every part of him, except his belly, is cover'd: They are about the length of a Goose-quill; but straight, hard and without feathers, and, growing less and less from the middle to the end, terminate in a sharp point, the longest being towards his rump: These quills lie close to his body, unless when he is attack'd by man or beast; and then he sets them up and appears of a round form, not much unlike a Hedge-hog, enclosed with his bristles, and, like the Parthian, fighting retiring from the foe, at whom he shoots his pointed quills, till he is almost naked; but can give no dangerous wounds, unless he happens to hit his pursuers in the eyes: His quills might possibly stick in the flesh of a naked man; but not go deep enough to do him any considerable mischief. The Europeans frequently set him down in an enclosed yard or garden, and run after him in sport, till the creature has shot away all his quills at them: The flesh of a Porcupine is well tasted, and esteem'd wholesome food.

Monkeys. They have large Monkeys or Baboons in the Hottentot countries; but these are animals so well known every where, that they need not a particular description. They frequently rob the Dutch gardens at the Cape in troops; which, 'tis said, they manage with a great deal of artifice, setting their centinels at every avenue, to prevent surprize, and planting a line of their comrades, from the orchard, or garden, to the hills: That they toss the fruit from one to the other, and thereby make a surprizing dispatch in pilfering a garden. When their centinels discover any person approaching, they set up a great cry, and alarm the rest, who immediately take to their heels; and, if there be any young ones amongst 'em, they jump upon the backs of the old ones, and are carried off: But, 'tis said, they sometimes get so drunk in robbing a vineyard, that they are easily taken. The Dutch frequently tame these animals, which serve them in the place of House-dogs, and are extremely watchful in the night-time.

Horses. There are some wild Horses in the Hottentot countries; but I don't find any of them have been tam'd or broke by the Dutch. They had indeed brought over Persian Horses, before they discover'd them; which are multiplied to that degree, that some European planters have two or three hundred of the Persian breed, and many of them thirty or forty. These Persian Horses are generally small, and of a chestnut colour.

There

CHAP. IV. There is a creature at the Cape also, call'd by the Dutch a Sea-cow; but it always feeds on grafs a-shore (according to KOLBEN) and only runs into the sea for its security. The head of this animal resembles rather that of a Horse, than a Cow, and is called by several writers a Sea-horse. KOLBEN assures us, it is as large as a Rhinoceros, and of the same colour; but the legs something shorter. The nostrils of the creature are very large, out of which it spouts water when it rises out of the sea, or from the bottom of a river: The legs are short, and all of a thickness, and the hoof is not cloven: The tail is like that of an Elephant, with very little hair on it; and it has no hair at all on the body: The female suckles its young ones, as another Cow does. KOLBEN relates, that he has frequently seen them suckle their Calves, which were about the size of ordinary Sheep. The skin of a Sea-cow is tough, and near an inch thick, so that a musket-ball will scarce penetrate it; and therefore they usually aim at the head, which may be fractured by a bullet.

On each under-jaw this animal has two large teeth, or tusks, the one streight, and the other crooked, about the thickness of a Cow's-horn, and running a foot and a half out of its mouth; these teeth weigh, each of them about ten pound, and are exceeding white, and never change yellow, as the ivory of Elephants teeth does, and therefore are more valuable.

The Sea-cow, raising her head above the water, smells a Man at a considerable distance; and, if she perceives any one near the shore, drives down again, spouting up the water from her nostrils like a Whale: After which, she goes to the bottom, and does not come up again a great while: Therefore, if a man discovers the head of the beast above water, he must fire that instant; she certainly dives out of his reach, if she turns her head towards him. When she is wounded in a river, or near the sea-shore, they follow her in boats by the blood; and, with hooks and grappling-irons, fish up the carcase, which is said to be a good load for a waggon: the flesh of this creature is so much admired by the Dutch at the Cape, that they will give twelve or fifteen pence a pound for it: The leaf and other fat is valued as much as the lean, being melted and used like butter in cookery, and some eat it with bread. It is reckoned also an excellent remedy in case of a surfeit, or a redundancy of humours. This animal has been conjectured by some of the learned, to be the Behemoth in JOB; while others take the Whale, the Elephant, or the Rhinoceros, for the Behemoth; the ancients called it the Hippopotamus.

The Stink-bingsem, as the Dutch call it, seems to be an animal peculiar to the Hottentot country, and to have obtained its name from the stinking scents it emits from its posteriors; which are such, that neither man or beast can bear them. This is the creature's best defence when it is pursued: The very Dogs will desert the chase, rub their noses, and howl when the beast lets fly; and a man is perfectly stifled with the nauseous stench. The Dutch sometimes shoot it, but no-body dares take it up; for it has been found, that, if a person but touch the carcase, all the washing in the world will not sweeten him again for some time; and no man living can bear him in his company.

From the four-footed animals, I proceed to describe some of the most remarkable of the feather'd race, in the Hottentot countries; and first their Eagles. There is one sort of them, which the

Dutch call the Dung-bird, from his tearing out the guts and entrails of animals. If these Eagles find an Ox or Cow laid down, they fall upon the beast in great numbers, make a hole in the belly of it with their bills and talons, and perfectly scoop out the inside of it, leaving nothing but a bare skeleton covered with the hide. The feathers of these Eagles are most of them black; but some of a light grey: The body of one of them is something larger than a wild Goose, and the bills large, and bent like a Hawk's. When these birds are looking for their prey, they mount up almost out of sight; and, when they have discovered it, they fall down upon the animal in an instant, and, by their numbers, overpower the largest cattle.

They have another Eagle in the Hottentot countries, called by the Europeans Aquila Anatoria, or the Duck-eagle, because he preys upon the Ducks: And there is still a third sort, called the Bone or shell-breaker, that delights in the flesh of the Land-tortoise. When this Eagle has seized one of these animals, he carries the unfortunate captive up a great height; and, letting his prey fall upon a rock, breaks the shell in pieces, and has no more trouble in getting at the meat.

There is an excellent beautiful fowl at the Cape, Flamingo, called by the Dutch Flamingon, and by Mr. RAY, *gos. Phœnicopterus*, larger than a Swan, and its head and neck as white as snow. The upper part of the wings are of a flame colour, and the lower black: The legs longer than those of a Hern, and web-footed like a Goose: They fish in ponds and rivers in the day-time, and at night retire to the hills: They are frequently killed by the Europeans at the Cape, their flesh being esteemed very good. Here are also abundance of wild Geese, that are very easily taken; and their flesh so good, that tame Geese are in no esteem at the Cape.

There is no country that abounds more in Ostriches than that near the Cape: This is the largest fowl we are acquainted with; the neck is very long, the bill short and pointed, the legs thick and strong; the feet cloven, with which they will strike a very smart blow; their feathers are sometimes black and sometimes white, and of a very great value in Europe, being exceeding ornamental: The eggs are as big as a child's head; the hen lays her eggs in the sand; but they are not hatch'd by the sand alone, as some have given out: 'Tis true, that the Ostrich covers up her eggs with the sand on the shore, till she sits; but then the cock and hen take it by turns to sit on the eggs, and very seldom leave them both at a time: Neither do they leave their young ones to shift for themselves when they are hatch'd; for their chickens cannot walk till some time after they are out of the shell: In this feeble state the old ones feed them, and, when they can run, if any person attacks their young ones with arms, the old ones have courage enough to retaliate the injury, and will put a man hard to it to defend himself. The Ostrich cannot fly, but, with the assistance of its wings, makes such speed when it is pursued, that a man must be well mounted to overtake it. It has been said, that an Ostrich will digest pieces of iron or pebble-stones; and it is true that an Ostrich will swallow them, but they always come out as they went in, without any alteration of the shape or size.

There are a great variety of Hawks in the Hottentot countries; but this being a sport the Dutch don't

The
Stink-
bingsem.

Fowls and
birds.

CHAP. IV. don't seem to delight in, or the natives know any thing of, they are never tamed or taught to fly at game.

Pheasants. Pheasants are common at the Cape; and the way of taking them, according to KOLBEN, very particular: He says, that when they see them feeding, they advance behind a piece of canvas, on which a Pheasant is painted, and by this stratagem come so near the bird, that they can throw a net over it.

Other Fowls. They have also, in this part of Africa, Turkeys, Peacocks, Ducks, Snipes, Larks, Black-birds, Thrushes, Finches, Canary-birds, Pigeons, wild and tame Swallows, Sparrows, and almost every fowl and bird we meet with in Europe; but, as these are all well known, they need no particular description.

Reptiles and insects. Of the reptiles and insects about the Cape of Good Hope their serpents are the largest, of which they have great variety; particularly the Asp, a serpent of an ash colour, speckled with red and yellow spots; the head and neck broad, and, near the eyes, a fleshy protuberance of the bigness of a Hazel-nut, some of them several yards in length.

Serpents. The Eye-serpent, so called from light specks that appear like eyes on his black skin. This is also called sometimes the Dart-serpent, from its darting or shooting himself forward with great swiftness. There is also a Tree-serpent, which has obtained its name from winding itself round the branches of trees, which it so resembles in colour, that men are frequently bitten and surpriz'd by it, taking the creature for part of the tree.

The Dispaß, so call'd from the violent thirst it occasions in those that are bitten by it, also is found here; as is the Cobree Capelle or Hairy-serpent, according to KOLBEN, which the reader will find described in the first volume of *Modern History*.

From the head of this serpent, it has been said, that the Bramines of India extract a stone, which will draw out the poison from a wound, if any person is bitten by a serpent; but others affirm, there is no such stone in this serpent's head, but what goes under the name of a Serpent-stone, is a composition; however it has certainly very strange effects. KOLBEN says, he saw it tried upon a child that was bitten by some poisonous animal, which swelled up the arm prodigiously; and the stone, being applied to the wound, stuck fast, drinking in the poison till it could receive no more, and then dropped off; and, after the stone was purged in milk, it was applied again, and this was repeated till all the poison was drawn out; after which, the arm soon healed.

But the most troublesome serpents here, are the House-serpents, so called from their delighting in houses; and, if they can, they will get into bed to a man, but will not attempt to bite, unless he happens to hurt them; and, if they do, their bite is not mortal: This Serpent is an inch and a half thick, and from an ell to a yard and a half in length.

There is also a very small Serpent, that harbours and lays its eggs in the thatch of houses. These are about a finger's length, and the thickness of a Goose-quill: The Water-Snake is of the same thickness, but about six inches long.

KOLBEN, speaking of their sea and river insects, mentions a Sea-flea, of the size and shape of a Shrimp, which fixes itself on fish, and stings

CHAP. IV. them intolerably: And of the Sea-louse, that resembles a Horse-fly, and will sting and suck a fish to death, if it can't rub them off. He speaks also of a great variety of Sea-worms, some a yard and a half in length; but does not acquaint us, whether they have any of those worms, which are so prejudicial to ships, which we meet with in the Straits, and in the East and West-Indies.

Among the land insects, according to Mr. KOLBEN, there are some Ants, that have wings, and fly; but, in nothing else, differ from the common creeping Ant. Their Bees are exactly like those in Europe; but the Dutch seldom hive them, having plenty of honey, on very easy terms, from the Hottentots, who take it in the woods, or on the tops of rocks, which is said to have a better flavour than that in hives: However, as the Hottentots put it into a half-dry'd skin, with the hair inwards; when the Dutch bring it to the Cape, the Dutchmen must have pretty good stomachs to eat it.

They swarm also with Flies in this part of Africa; many of which sting intolerably: And here are green Flies, which have exactly the same effect as Spanish Flies, and are used by their physicians in raising blisters.

The Gnats are exceeding troublesome at the Cape, and the Fleas are no less so, especially to the Hottentots, whose nastiness makes them multiply to that degree, that they are forced to remove their camp, and go to a new ground, to avoid them: It is, in a manner, part of the Dutch litany, it seems, "From Flies, Fleas and the winds, good Lord deliver us." But, as KOLBEN observes, when the winds begin to rise, it redeems them from the Plague of Flies, as well as the head-ach, and many other distempers they are afflicted with in calm weather.

The Grass-hoppers at the Cape, it seems, do a great deal of damage to their corn-fields, orchards and gardens; and to get rid of them, the Dutch sprinkle the grounds where they come, with water in which tobacco has been steeped; and this, KOLBEN assures us, will oblige them to quit the place.

As to Lice, the same writer relates, that, tho' the Hottentots swarm with them, they will not live with a European here, any more than in the East-Indies, or in any hot latitude; and, as for Headlice, he observes, the Hottentots so load their hair with grease and Cow-dung, that they have none of that species: But I have observed in the East-Indies, that the heads of the natives there were very lousy, tho' neither they nor the Europeans had any on their bodies; and, according to Don QUIXOT's observation to his man SANCHE, no body lousy ever passed the line alive: Tho' our Sailors swarm with them in cold voyages to the Baltick and the North, they never are troubled with these vermin in hot climates. Bugs, however, are a great torment to the Dutch at the Cape: The best remedy they have yet met with against them, is the painting their wainscots and bed-posts with oil colours, in which mercury is mixed; but this will not always do.

There are abundance of Scorpions at the Cape: They are between two and three inches long, of the thickness of a small finger, green and yellow, and carry their tails with a sting, open to view, upon their backs. This creature creeps very slowly, and may possibly have no inclination to mischief, never attempting to sting any one, unless it is in danger

CHAP. IV. danger of being crushed ; but, if it does sting a man, the pain is equal to that he would receive from a hot iron clapt to the part for twelve hours, and makes him run out of his house like a mad Dog ; but, about twelve hours after, the pain begins to abate, especially if some oil of Scorpion be applied to the wound. This I speak of the house Scorpion, that is found among dirt and rubbish ; for the sting of the black Scorpion, that is found in woods, is said to be mortal.

There is also a little black Spider, of the bigness of a pea, at the Cape, whose bite is mortal. KOLBEN relates, that he knew a Negroe-slave killed by one of these insects ; and that a European boy was put to a great deal of pain, and in danger of his life, by the bite of one of them ; but was cured by the applying the Snake-stone to the wound, which sucked out all the poison.

Wasps are another plague in this country ; but a brisk gale of wind, which they seldom want, drives these away, as well as the Flies. The Centapedes, or Hundred-legs, is another troublesome insect, his bite being as prejudicial as the sting of a Scorpion : It is about a finger's length, hairy, and a little thicker than a Goose-quill. The Snake-stone is a remedy against this poison also ; and some say, a roasted onion will draw out the poison.

Weevils or Whules, as the country farmers call them, abound here, and destroy abundance of corn in the granaries ; insomuch that they are forced to let them remain empty sometimes for several years. These insects also are found on ship-board, and soon spoil the biscuit when they get into it.

The Terra de Natal in Caffraria.

As to that part of Caffraria, which lies on the eastern side of Africa, and between the Hottentots nations on the south, and the Portuguese settlements of Zanguebar on the north, and usually called the Terra de Natal : The natives of this country are blacker than the Hottentots, and have been taught to cloath themselves more decently. They have also some buildings that may deserve the name of houses, and traffick with the Portuguese, and other European nations that touch on this coast, bringing gold and Elephants teeth from the inland countries, and bartering it for cloathing, strong liquors, utensils and toys. As to the Caffries upon the western coast, which lie between the Hottentots on the south, and the Portuguese colonies in Congo on the north ; including the country of Mataman or Matapan, and extending to the 16th degree of south latitude : This is all a desert uninhabited coast, where no European nation has yet found it worth their while to settle colonies, or even factories, producing no article fit for commerce, or even necessary provisions ; and consequently we can know no more of this coast, than its defects already mention'd. And, as for the inland countries of Monomotopa and Monomuegi, &c. which lie between the eastern and western coast, and have the Hottentots on the south, and the upper Ethiopia on the north ; all that we know of them is, that the natives are Pagan Negroes, and sometimes bring their gold and Elephants teeth to those countries that border upon the sea ; and that the natives of the south-east coast of Africa purchase these goods of inland people, and barter them again with the Europeans for cloathing, arms, utensils, toys, &c. I proceed therefore to the description of Congo, the greatest part whereof is at this day subject to the Portuguese.

The Caffries on the western coast.

Monomotopa and Monomuegi.

CHAP. V.

The present state of CONGO.

Containing the present state of the kingdoms of Congo, for the most part subject to the Portuguese ; under which are included the countries of Angola, Congo Proper, and Loango.

CONGO is situated on the west-coast of Africa, between four degrees and half north, and sixteen degrees south latitude ; taking up near twenty degrees of latitude, and consequently is above twelve hundred miles in length, from north to south ; but is not of a proportionable breadth, scarce extending two hundred miles from the sea into the land, in any part : It is bounded by the kingdom of Benin and Nigritia, on the north ; by the inland unknown countries of Africa, on the east ; by Matapan in Caffraria, on the south ; and by the Atlantick ocean, on the west.

Situation and extent.

The kingdom of Angola, the first division of it, commences at Cape Negro, latitude 16 degrees south, and extends northward to 8 degrees south latitude, including several small kingdoms, which our mariners have given various names to, scarce ever agreeing in the same name for any one country ; and therefore I thought proper to include them all under the general name of Angola.

Angola the southern part of Congo.

The chief town of Angola, and indeed of all the Portuguese settlements, on this side of Africa, is St. Paul de Loanda, situated upon a small island near the continent, in 12 degrees of south latitude, a little to the northward of the great river Coanza. This is the seat of the Portuguese Viceroy : However they do not seem to be so much masters of the coast of Angola, as of the rest of Congo ; for both the English and Dutch trade thither, and the English transport abundance of slaves from Angola to America every year.

The chief town St. Paul de Loanda.

Congo Proper is situated to the northward of Angola : The chief town St. Salvador, situated in the latitude of six degrees, upon the great river Congo, or Zara, about 150 miles from the sea, said to be 17 miles in compass, and, according to some, a great deal more ; but then fields and gardens are included, I find, and the houses are not contiguous. The Negroe King has a magnificent Palace in the middle of the town, if we may credit the Portuguese, whose tributary this Prince is ; and the district belonging to the palace, is so large, they inform us, that there are three Christian churches in it, besides a Cathedral, and twelve churches more in the outward city. The cathedral is built of brick, without ornament on the outside, but exceeding rich within, the Portuguese relate. There are also several religious houses and convents in the place ; and the number of souls, Portuguese and Negroes, in St. Salvador, 'tis said, amount to 100000. Both the cities last-mentioned are Episcopal Sees.

Congo Proper, the second division, Chief town St. Salvador.

In the subdivision of Loango, the chief towns are Loango, on the sea-coast, in 2 degrees south latitude, and Cape Lopas, half a degree to the southward of the Equator : Here the Negroe King lives in the castle with the Portuguese Governor, and is treated as their good ally ; but the Portuguese are in reality masters of this town and kingdom, as well as of the rest of Congo, except part of Angola.

Loango, the third and most northerly division of Congo.

CHAP.

V.
Other towns and settlements of the Portuguese in Congo. Negroe towns.

Their principal towns and settlements on the coast of Congo, besides those already nam'd, are Great Cascais, that stands at the mouth of a navigable river, which I find no name to: Goango, situated at the mouth of the great river Zara or Congo; and further southward on the coast, Cape Pulmerino, Cape Lehdo, Libolo, Benguelas, or Fort St. Philip (near which the Dutch have a factory) Tortuga, and Angra de Negros. As to the towns belonging to the Negroes, most of them consist of a few huts, built with clay and reeds, in an irregular manner; and as every tribe or clan has its particular King or Sovereign, his palace is usually distinguished by a spreading tree before his door, under which he sits and converses, or administers justice to his subjects. But I perceive most of their towns are in or near a grove of trees; for our Sailors always conclude, there is a Negro town, wherever they observe a tuft of trees upon the coast: And, as these consist of Palms, Cocoa-nut-trees, Oranges, Lemons, and other fruit-trees, that retain their leaves and verdure all the year; such dwelling-houses, how mean soever the materials of their houses are, cannot be unpleasant. The Negroe towns, in fruitful countries, stand very thick, and are exceeding populous, the whole country appearing almost one continued village. As to their persons, they are as black as any of the Negroes, but much more civiliz'd. The Portuguese fathers have not only converted most of the people upon this extensive coast to christianity, but taught them to cloath themselves like Christians, and they now take off great quantities of European manufactures.

There are a multitude of Kings or petty Sovereigns in this country, most of them in some kind of subjection to the Portuguese, who permit them, however, to govern their own people, according to their ancient customs. Notwithstanding this country is situated under, and on both sides the equator, 'tis not so excessive hot as in some higher latitudes; for which several reasons are assigned; as, 1. Because their day is never above twelve hours long: 2. Their rainy season continues four months; viz. from June to September inclusive, when their rivers, like the Nile, overflow the level country; and this renders Congo no less fruitful than Egypt. The Portuguese have taught the natives also to make the best of their lands, and introduced European corn, fruits, and plants; and, as the country is very populous, there is now scarce a spot of ground uncultivated.

The Portuguese masters of the country.

The Portuguese have the sole foreign trade in this country, except in some part of Angola, whither the English and Dutch resort for slaves. They bring from thence chiefly slaves, Elephants teeth, wax and peltry, consisting of the skins of Buffaloes and other beasts, for which they give the natives in return all manner of cloathing, made of cotton, linnen, or slight stuffs, tools, utensils, tobacco, brandy, and other spirituous liquors; and 'tis said, the Portuguese frequently purchase slaves and teeth here, with the gold they bring from Brazil (for there is no gold found in Congo;) and that, from this coast and some other settlements they have in Africa, they do not send less than 100000 slaves to Brazil.

Negroes purchased cheap at Angola.

The English and Dutch at Angola also barter linnen, calicoes, slight stuffs, beads, toys, tobacco and brandy, for slaves, which are transported from thence to America. Negroes, 'tis said, are purchas'd cheaper at Angola than in Guinea. Young Blacks at full growth and in their prime, under three pounds a head, and boys and women in proportion;

and these poor creatures are pack'd as close as Her-rings, 7 or 800 of them in a ship, where they are forced to lie double, almost the whole voyage, and kept with no better food than horse-beans; tho' their profit, one would think, should induce the Merchants to use them well; for a slave, that is purchased for three or four pounds at Angola, is worth twenty or five and twenty in America.

CHAP. VI.

Most of the cattle that are found in Caffraria, Product of may be seen in Congo, such as Cows, Oxen, Buffaloes, Sheep, Goats, Hogs, Deer, Elephants, Lions, and Tygers. The country also produces rice in great plenty; and here grows the Palm and Cocoa-nut-tree, which are not to be met with in Caffraria; and, among the many exotick plants the Portuguese have brought hither, is the Cinnamon-tree, of which they have a flourishing long walk, in a small island near the coast; but dare not propagate them any further, lest the Dutch should come and take their country from them, as has been observ'd already.

And now, travelling westward, according to my usual method, I proceed to give a description of the celebrated coast of Guinea, the gold whereof attracts so many European nations thither.

CHAP. VI.

The present state of GUINEA:

Comprehending the countries of Benin and the Slave Coast, the Gold Coast, the Ivory Coast, and the Grain Coast.

GUINEA, in its largest extent, comprehending, 1. Benin and the Slave Coast; 2. The Gold Coast; 3. The Ivory Coast; and, 4. The Grain Coast; lies between 4 degrees and a half and 10 degrees and a half north-latitude; and between the great river Camarone, on the east, and the mouth of the river Sierra de Leon, on the west, taking up 30 degrees of longitude, viz. from 15 east, to 15 west, of London; which, at 60 miles to a degree, makes it 1800 miles long. This country is bounded by Nigritia, or Negroland, on the north; by the undiscover'd inland countries of Africa, on the east; by Congo, and the Atlantick ocean, on the south; and by the same ocean on the west.

CHAP. V.
Its situation, extent and subdivisions.

This country, according to some, obtained the name of Guinea, because it is hot and dry, the word signifying as much in the language of the natives; but those, who derive it from hence, surely never consider'd, that no country is better water'd, either with rain from heaven, or with more numerous rivers. I am therefore inclined to think, that it took its name from a town call'd Guinhy, which the Portuguese touched at when they first visited this coast.

The first subdivision of this country Benin, in which I include the Slave Coast, is bounded by Nigritia, or Negroland, on the north; by the unknown inland parts of Africa, on the east; by Congo, and that part of the Atlantick ocean, call'd the gulph or bite of Guinea, on the south; and by the Gold Coast, on the west; lying along the sea-coast, from the river Camarone, on the east, to the Danish fort of Christianburgh, near the river Volta, on the west: The principal rivers in this division, besides the great river Camarone, the south-east boundary of it, are the river Del-Rey, or the King's River, to the westward of it; and the rivers Forcades, Formosa and Lagos, further westward; and lastly, the river Volta, near the western bounds of this division.

Benin and the Slave Coast the first subdivision.

The

CHAP. VI. The chief towns, which give names to so many kingdoms or districts are, 1. Benin, situated on the river Benin or Formosa, in 7 degrees and a half north latitude, said to be 11 miles in circumference, and to contain 100000 inhabitants, all Negroes, with a magnificent palace of their King's; but, notwithstanding all the fine things said of this town, both palaces and houses have clay-walls, and thatched roofs. 2. Awerri, situated also in Benin, at the mouth of the river Forcades, not subject to the King of Benin, but to the Portuguese, who have a castle, with a strong garrison, that commands it. The Portuguese also have settlements for 150 miles up the river Formosa, and most of the petty Sovereigns of this country are either their allies, or subject to them. 3. Arebo, on the east-side of the mouth of the river Formosa: This was formerly a place that the Europeans visited pretty much for slaves; but now the Portuguese have almost the sole trade of this part of the country. 4. Great Ardra; and, 5. Little Ardra, situated near the river Lagos, on the Slave Coast: The greater said to be extremely large and populous, and both of them inhabited by Negroes. 6. Fida or Whidah, situated on the Slave Coast, between the rivers Lagos and Volta: The town and country about it extremely populous; but consisting of such poor huts as the Negroes usually live in. 7. Great Popo; and, 8. Little Popo; both which towns lie upon the same coast to the westward of Fida. 9. Lampo or Alampo, a little to the eastward of the mouth of the river Volta: This, and the other towns, consisting only of Negroe-huts, require no particular description. I shall only add, that the English have two factories or settlements on the Slave Coast; one at Alampo, and the other at Whidah: And that the Portuguese, French, and Dutch, have each of them one settlement at Whidah on the same coast. But, as to the country of Benin Proper, no European nation has any settlement there, but the Portuguese, who are in a manner, masters of it: And, if we may believe their Missionaries, have made proselytes of most of the natives. But travellers tell us, that those, near the sea-coast, are a very sad sort of Christians, a profligate and abandoned race, addicted to all manner of vice.

The Gold Coast. The Gold Coast, so named from the abundance of gold that is found there, is bounded by Nigritia, on the north; by the Slave Coast, on the east; by the ocean on the south; and by the tooth or Ivory Coast, on the west.

The principal river in this division is that of the Rio Cobra, or Ancober, by some called the Gold-River, which falls into the sea, near the Dutch fort of St. Anthony, a little to the westward of Cape Three-Points.

Chief towns. The chief towns, which give names to so many petty kingdoms or states dependent on them, are Aquamboe, Agonna, Acron, Fantyn, Sabo, Fetu, Commami, Jabi, Adom, Ante and Axim.

European settlements. On this coast are several European forts and settlements: The most easterly, called Christianburgh^a, belongs to the Danes: The second, called fort Crevecoeur^b, stands a little to the westward of the former, and belongs to the Dutch, and further westward Acra, which belongs to the English: In Agonna stands fort Simpas, which belongs to the English: In Acra^c fort Patience^d, to the Dutch: In Fantim Anambo^e, to the English, and Amsterdam^f to the Dutch: In Saboe fort Nassau^g to the Dutch: In Fetu Conradburgh^h, to the Dutch; and Cape Coast-Castleⁱ, or Carolus-Burgh to the Dutch.

CHAP. VI. English: In Covani Vredenburgh^k and Las Minas, or Delmina^l, to the Dutch: In Ante or Hante, fort Infuma^m, to the English; Batensternⁿ, Orange^o, and St. Sebastian^p, to the Dutch: In Axim^q, the forts of Axim and St. Anthony^r, to the Dutch; and fort Frederickburgh^s, and Dorothea^t, to the Prussians, which is the most westerly of all the European settlements on the Gold Coast. There are also several other small forts and factories belonging to the English and Dutch on this coast; but those already mentioned are the chief: The two strongest forts are those of Cape Coast, which belong to the English; and that of Las Minas or Delmina, which the Dutch are in possession of. The Hollanders took this, and several others, from the Portuguese; and also treacherously dispossessed the English of the fort, to which they have since given the name of Amsterdam, and several others, in the year 1665, during full peace; and which was one occasion of the first Dutch war: Nor have our good allies restored them to this day.

The next division of Guinea, is that of the Ivory or Tooth Coast, which takes its name from the Elephants teeth found here, and is bounded by Nigritia, on the north; by the Gold Coast, on the east; by the ocean on the south; and by the Grain or Pepper Coast, on the west.

The most remarkable places and towns on the Ivory Coast are, Jaque, Cape Lahoe, Drumyn, Cape, Palmas, Sestre, Sino and Bottowa; and the chief rivers those of Rio de Suerio, and Rio Escravos.

The last and most westerly division of Guinea, is that of the Grain or Pepper Coast, bounded by Nigritia, on the north; the Ivory Coast, on the east; and the ocean, on the south and west: The principal rivers whereof are, the Rio de Sestre, the Rio de St. Paul, and the river de Sierra Leon.

The chief towns are, Bassoe, Sanguin, Sestro, Gorea, Buga and Tomba: And here are also two English settlements on the coast, viz. those of St. Anne, at the mouth of the river Sierra, Leon, and Sherbro fort, to the eastward of it. I proceed now to give a more particular account of the coast of Guinea.

Travellers usually make but two seasons in this country; namely, winter and summer: From April to September inclusive, in their winter, or rainy season; and from October to March inclusive, is their summer, and their hottest, as well as fairest weather; though then the Sun is farthest from them on the south-side of the equator; whereas the coast of Guinea lies 5 degrees north. But their wet season does not always begin just at the same time; nor is it the same at all places on this coast. At some time, and in some places, it begins a month or two sooner than in others, and is sometimes of a longer, and at others of a shorter duration; however, between the vernal and the autumnal equinox, they generally have excessive rains, attended with violent storms of wind, as well as thunder and lightning; and as the winds at this time blow from the southward, and there is not one harbour upon the coast, if any shipping happens to be there in these storms, they are infallibly run on shore, unless they can stand out to sea, or get into the mouth of the river Sierra de Leon, when they find them coming on: And, it seems, there always sits such a surf or swelling-sea on this coast, that it is very difficult going on shore at any time, even during the fair season, especially at Whidah.

The

CHAP.
VI.
Winds.

The most violent storms, or travadoes, are in July and August, and come from the southward : It is observed also, that, during the hot season, the winds are periodical on this coast, blowing from midnight till one or two in the afternoon, from the land ; and then, shifting to the southward, blow from the sea : And that the sea rages to that degree on this shore some months in the year, that it looks like fire, which makes the Sailors stile it, The Burnings, at which times it is almost impossible to go on shore.

Rivers.

The rivers in this country, falling from high mountains not very far from the coast, form so many rapid torrents, and in the wet season overflow the valleys, from whence ascend thick stinking fogs, that make the country very unhealthful to foreigners ; but what I take to be still more pernicious is, that the European factories always lie near the sea, and the mouths of the rivers, and, from the Ouze and salt-marshes underneath them, till more unhealthful vapours arise : And, 'tis said, the fish, which the Negroes lay upon the shore till they putrify, do not a little contribute to corrupt the air. But from what cause soever it proceeds, few Europeans visit these shores, but have a dangerous fit of sickness soon after their arrival, and many of them are carried off by it.

Bad air
upon the
coast.

Their rivers, running but a short course from north to south, and being made chiefly by the rains, are not any of them navigable for ships, from the river of Sierra de Leon, in the west, to the river of Benin in Formosa, in the east ; but abound however with variety of very good fish, as well as their seas.

It may be observed farther, that, during the rainy season, though the sun be then directly over their heads, the weather is moderately cool, especially in the evening. Some relate, that in September, about the end of the rains, it is really cold ; and though the middle of the day is excessive hot in summer, viz. from October to March, yet even then the evenings are cool ; and they have this further relief, that there are no long days : It must be nine in the morning before the intense heat begins, and at three or four in the afternoon it is pretty much abated, the sun not being then above two or three hours high.

The face
of the
country.

As to the face of the country, it is agreeably diversified with mountains and valleys, woods and open fields : The hills adorned with trees of an extraordinary height, and the valleys between them rich, large, and extensive, proper for the cultivation of all manner of corn and fruits, with villages every where agreeably interspersed, the country being exceeding populous : But the most pleasant and fruitful part of the country, is that about Fida or Whidah, which, from the description of some travellers, one would imagine a perfect paradise, if it was not for the unhealthfulness of the place, with regard to European constitutions.

It must be supposed, however, in so extensive a coast, as from the river of Sierra de Leon, to the river Camarone, there is a great deal of barren desert ground : We find much of this upon the Gold Coast ; and other parts of it are so overflowed in the rainy season, that the soil will produce scarce any thing but rice ; all other corn and plants almost are destroyed by the annual floods : But then Whidah and other places makes amends for this, by their abundant fertility.

The persons
of the
Negroes.

The persons of the Negroes are so well known among us, that it is almost unnecessary to describe them : They are generally of a good stature, well

proportioned, robust, able-bodied men ; their complexion a shining jet black ; their noses flat ; their lips thick ; they have large rolling eyes, of which great part of the white appears, and exceeding even white sets of teeth ; their hair black, short, and curled, appearing more like black wool than hair.

CHAP.
VI.

The habit of a Negroe is a Paan, or cloth, about his waist, about two foot broad ; and those of the better sort have another cloth of a good length wrapped about them, and thrown over their shoulders ; but yet so as their arms, legs, and a good part of their bodies appear naked both of the men and women. Their ornaments consist of a multitude of rings or bracelets, of gold, ivory, or copper, according to their circumstances, worn on their arms and legs, with necklaces and girdles of coral, one upon another ; but the plaiting and adorning their hair takes up the greatest part of their time, especially of the women : The hair of some of the Negroes is longer than that of others ; and they have a way of pulling it out of the natural curl, and making it strait, by hanging weights to it ; after which, they form it into various fashions, dressing it up with little thin plates of gold, copper, tinsel, beads, coral and shells, that make a glittering shew : Some of the women throw a veil over all, to keep off the scorching sun, and some of the men have caps ; their fishermen particularly have them made of skins or rushes, and are very happy if they can get a European hat : But many of the Negroes go perfectly bare-headed ; and their scalps, 'tis said, are so hardened by it, that they are not sensible of the sun's intense heat.

Their salutations in the inland country are performed by stretching out their hands, bending the knee, or embracing each other ; and where a subject or inferior person addresses himself to his Prince or superior Lord, he prostrates himself on his face before him, till he is bid to rise : As for the people of the coast, who have furnished themselves with caps and hats, they have learnt of the Europeans to salute their friends by pulling them off. Our Factors observe, this people do not want sense, but employ it to the vilest purposes ; namely, in defrauding all the Europeans they deal with, as well as one another. But our people are so ingenious to confess, that the Christians have, in a great measure, contributed to make them those exquisite cheats. The Europeans first taught them to adulterate their gold, and mix copper and other paltry ingredients with it ; and therefore have no great reason to complain of them on this score : They have been made much worse by their traffick with us, both in this respect, and many others. Our Merchants have sent over large quantities of brandy and spirits ; and our Factors and Sailors frequently shew them, that Christians get drunk with them, and commit as many extravagancies, as those who never heard of christianity : And tho' our people reflect upon their women for their lewdness, they see the Europeans, who visit their coasts, as lewd as they can be : They cannot but observe, that the professors of that religion which requires the strictest justice, chastity, and temperance, are as abandoned libertines as the Pagans themselves, and by that means are confirmed in the vicious habits we censure them for. All the difference is, that Christians do this in defiance of the principles of their religion ; and the Negroes, in conformity with theirs, at least as to wine and women ; from which their superstitions do not restrain them, but rather encourage them in the practice of those vices : And this

Debauched
by the
Christians.

A Moorish Man and Woman on the Coast of Barbary

A Negro Man and Woman on the Guinea Coast

CHAP. VI. this is, and ever will be, the great obstruction to the propagation of Christianity in Pagan countries, That the profession and practice of our people are so widely different, that the heathen nations can never think our missionaries in earnest, when they preach up virtue, and endeavour to make profelytes of them. It is observed also, that the Negroes in the inland countries are not near so vicious and corrupt in their morals, as those that converse with us upon the coast.

Melatto's. There is still a more abandoned race here than the Negroes, according to the accounts our Factors and Seamen give of them : These are the Melatto's, or mixed breed, proceeding from Negroes and Europeans. The Portuguese, when they first discovered the south-west coast of Africa, propagated both their religion and their species in many parts of it. These are of a tawny complexion, profess themselves Christians, but retain many of the superstitions of the Pagan Negroes. They dress, 'tis said, like the Portuguese, but exceed both Negroes and Portuguese in their vices. The men are drunken, lewd, thievish, and treacherous to the last degree ; and the women prostitutes to both Negroes and Europeans ; to the first, privately, and to the last publicly, without any manner of shame or restraint. This vice they see countenanced by the practice both of Negroes and Christians, and therefore make no scruple of indulging themselves in it, whenever pleasure or profit tempts them to it. Such are the Christians we find upon the eastern and western coast of Africa, whose ancestors were profelyted by the Portuguese Missionaries : Not that I would ascribe their vicious habits to the doctrines the Missionaries taught, that might be agreeable to the Christian purity ; but I am afraid our Factors and Sea-faring men, both Papists and Protestants, have for the most part been such lewd, drunken, vicious wretches, that these unhappy Melatto's have either thought those crimes none at all, or venial at least : To the dissolute lives therefore of the European Christians chiefly is to be ascribed the vices of the Melatto's we censure so severely. But, to conclude the character both of Negroes and Melatto's, it is agreed, they are both of them very deficient in point of courage, and both of them extremely lazy and indolent ; and some have charged them with the most barbarous cruelty.

They are observed also to be very covetous, and yet such masters of their temper, or so easy in all conditions of life, that no sudden changes or alterations in their fortunes can disturb them. If they lose a battle, 'tis said, they sing and dance, as if they had gain'd one ; and if a man is deprived of all his effects and treasure at one stroke, he appears contented ; it is not to be perceived by his countenance : Which shews a great deal of philosophy, or an unusual degree of stupidity. But I am apt to think, the one is frequently taken for the other in every nation ; and therefore, whether this calm, undisturbed manner of theirs in every change of fortune is to be admir'd or condemn'd, is not easy to determine : But thus much we may venture to assert, that the man that is least mov'd at such shocks, is happiest in himself, and least troublesome to his friends ; and that men of the finest sense are generally soonest moved, and more subject to passion than those of a heavier make : The first are apt to have too quick a sense of the consequence of misfortune, and to aggravate and multiply them, before reason comes to their relief : But then, such a man, perhaps, will obviate a dif-

V O L. III.

CHAP. VI. ficulty, and behave himself better under a calamity, when he has duly consider'd it, than the dull unthinking mortal.

Having given a description of the people, I proceed to enquire into the animals that are found here, and first their quadrupedes : Of which the first in magnitude is the Elephant. There are found such numbers of these monstrous creatures, in that part of this country call'd the Tooth-coast, that there is more Ivory brought from thence than from any other part of the world : But we are not to understand, that there are no Elephants in the rest of the country, comprehended under the name of Guinea ; for there are Elephants in Benin, on the Slave-coast, in Proper Guinea, and the Malaguetto or Pepper-coast, tho' not in so great numbers as are met with on the Tooth-coast. Those creatures have been already described, in treating of the East-Indies, Ceylon, and the country of the Hottentots ; and therefore I need say little of them here. **Bosman** tells us, that they sometimes come down to the European forts and factories, in the day-time : That they are not afraid of fire, or even of guns ; and that their hides cannot be penetrated by a musket-bullet : That one of them that came down to their fort Elmina, received above 300 shot before he fell : That most of the bullets fired at him, were flattened by his impenetrable hide, and dropp'd off, as if they had been shot against a wall : However, some of them hitting him on the head, he was brought down at last, and the Negroes feasted on his carcase.

They have Bulls and Cows, but no Oxen in this country, the Negroes applying themselves very little to grazing. The flesh of these animals is dry and hard in most places, and their sheep, which are clothed with hair instead of wool, make very indifferent food, and yet both the one and the other are very dear : Their Cows also give wretched milk, and very little of it. They have Goats, Hogs, and Deer, which are much better food than the former. The Horses are exceeding small, and used sometimes for the saddle, as well as Asses ; but they neither use them or any other cattle for the draught of carriages, or to lay burthens on ; all their goods are carried on porters backs, if it be 100 miles, unless they have the conveniency of water-carriage, which they have but very little of, their rivers falling from steep rocks and mountains, and consequently can be navigated but a very little way.

Here are also found Lions, Tygers, Leopards, wild Hogs, Jackalls, wild Dogs, Foxes, and Crocodiles ; but I meet with no travellers that mention Camels in this part of Africa, tho' they are so numerous to the northward of the river Niger ; the reason whereof may be, that neither hilly nor dirty countries (as the valleys of Guinea are) are proper for these animals ; whereas they are extremely useful in carrying burdens over sandy plains and desarts, and there we meet with great numbers of them, both in the north of Africa and in Asia.

There are several sorts of wild Cats in Guinea, and among the rest a Civet-Cat. They have also a Mouse that yields a kind of Musk, but no animals are more numerous here than Monkeys, of which one species, **Bosman** assures us, are not much less than Men. He himself saw one, he says, 5 foot high ; and these are so bold and impudent, that they will sometimes attack men : But they have another sort of Monkey, coal-black, with

19 M

white

CHAP. VI. white beards, not above two foot high, and very pretty; they are all very thievish here, as well as in other places, plundering gardens and corn-fields, but pretty nice in their diet, chusing the best of every kind of grain and fruit. The Camelion also is found in this part of Africa; of which Animal it is reported, and not without grounds, that he frequently changes colour. I have stood and look'd on him a great while, under a garden-hedge, and, I must own, he seem'd to me to vary his colour frequently: It is observed, that the colour he usually puts on when he is surpriz'd, is a fine green, spotted brown, or yellow; for, his ordinary colour is grey, and the skin almost transparent: But BOSMAN observes, that they never change to a red, nor to some other colours; though some have affirmed they always appear to be of the colour of the thing that is next them. It is a very small animal, less than a Rat, but bigger considerably than a Mouse, and will live several months (some say years) without food; though others are of opinion it catches Flies, as some other creatures do, by putting out its tongue, which is almost as long as the body: But the Flies must light on the Camelion's tongue, if he does catch them; for he is so exceeding slow that he can overtake nothing by running after it.

Reptiles.

There are, besides these, innumerable quadrupeds in this part of Africa; for which our travellers wanting names, and having given but odd descriptions of them, I proceed to their reptiles; and first their Serpents, which are of various kinds, some of them of a monstrous size: And tho' it be very certain that venomous reptiles do grow to a great bigness, in all countries that are hot and moist, I must beg Mr. BOSMAN's pardon, if I do not believe there are Serpents that have swallowed Deer and Men: For it is not only incredible, that their bodies should grow to such a size as to enclose the body of a man; but the throat of this animal is so remarkably narrow, that 'tho' a Serpent be of very large dimensions, yet it is with a great deal of difficulty that he gets down a small Chicken, or even a Rat: And this BOSMAN himself observes, though he tells the story of a Serpent's swallowing men and beasts; adding, that when he was there, Serpents of 22 foot long were taken, and, he believed, in the inland country there might be much bigger; however, he admits that the most venomous Serpents are not a yard long; and observes, that they are spotted black, white, and yellow: Nor are Serpents only found in the fields and woods here, but get into their very houses and bed-chambers; which is not much to be wonder'd at, since one species of them is worshipp'd by the Negroes, cherish'd, and us'd with more tenderness, than they shew to their own children; and if any one should strike or wound one of these Serpents, the whole country would rise upon him, and pull him to pieces. The crime is look'd upon to be unpardonable; but I shall have occasion to treat of this sort more particularly under the head of religion, and only observe here, that the bite of one of these Serpents is not mortal.

There are also Scorpions in this country, which have been describ'd in treating of the Hottentots: But the Toads, mentioned by BOSMAN, are as extraordinary in their dimensions as his Serpents. He relates, that he has seen them as broad as a plate we eat on, and that he took them for Land-Tortoises, when he first saw them. I remember another writer, who says, that their Toads at Born-

bay in the East-Indies are as big as Ducks; but I must confess I never saw any such, and am apt to believe, that author stretch'd a little; but my friend BOSMAN, who compares them to Tortoises, has certainly overdone it.

Centapedes, or Hundred-legs, are also very numerous here, and creep into houses and bed-chambers. It is a little, long, flat insect, with abundance of feet, from whence it obtain'd its name, and its bite is very painful and venomous, but not mortal. They have a species of Ants in Guinea that do incredible mischief: They will not only get into beds, and force a man to get up; but, if we may believe BOSMAN, there are such numerous hosts of them, that they will seize upon a Sheep or Fowl, and devour it alive: That they will eat their way through a thick wooden chest, in a night's time; and the Factors find it very difficult to secure their goods from them, and Gnats, and Flies, which are the plague of this and other hot countries.

They have plenty of tame fowl, but wretched Fowls. lean, dry stuff: Here are also some Turkeys and Ducks, first brought hither by the Portuguese; but plenty of Pheasant, Partridges, wild Ducks, Snipes, and other wild fowl, natives of the country: They have also a very beautiful bird, of the shape of a Parrot; the upper part whereof is red, grey, sky-colour, and deep blue; the breast and lower part green, as are the head, neck, and tail; but only admir'd for its beauty. Here are also Eagles, Herons, Parrots, Parakeets, Hawks, and other birds of prey, and a vast variety of feather'd kind, never seen in Europe; which with other uncommon animals, would take up a volume alone to describe.

I proceed therefore, in the next place, to their Fish, which are exceeding good and plentiful, both in their seas and rivers: The sea particularly affords a fish very like our Cod, with Plaice, Flounders, and other flat fish. They have also Mackerel, Soles, and Dabs; Lobsters, Crabs, Shrimps, and Prawns: In their rivers are fine Jacks, a fish like a Trout, Mulletts, and abundance more, that are very delicious eating. These are the principal support of the Europeans, as well as of the natives, on the coast; for flesh is neither so cheap, so good, or so wholesome, as their fish: In their seas also are the Grampus, or small Whale, the Sword-fish, and the Dog-fish, which are of no other use but to make oil of it.

From the animals in Guinea, I proceed to give Corn and some account of their vegetables: They have, in plants. some places, Rice, Millet, Maize or Indian Corn, in great abundance; though there are other parts of the country so subject to floods, that the soil bears little except Rice: They have also Yams and Potatoes, which serve the natives often instead of bread: And Sugar-canes grow to great perfection, but not much cultivated by the natives; and the Europeans, having no more land than what lies about their forts and factories, don't think it worth their while to plant them.

The Palm-tree is of infinite use to the natives, as they draw wine from the tree, and press oil from its nuts: These abound more in Guinea, than in any other country. Here also is the Cocoa-nut-tree; but they do not put it to the many uses they do in the East-Indies, contenting themselves with drinking the milk of the Cocoa when it is young, or eating the nuts when they are ripe: Of these I have given a particular description in the first volume of *Modern History*, that treats

CHAP. VI. treats of India, to which I refer the reader; it being the most generally useful of any plant that grows.

The Palm-tree described.

But to be a little more particular as to the Palm-tree: The body of it, at full growth, is about as thick as a man's body, and six foot in height; but, from the trunk, its branches shoot upwards 20 foot, and more: The leaves are an ell long, and about two inches broad, and terminate in a sharp point, much like the sedge that grows by the sides of the ponds; and these branches the natives frequently cover their huts with. There are great variety of Palm-trees, some of which are not of half the thickness of this, and the liquor, drawn from them, differs in flavour and strength.

When they find a tree old enough to yield a quantity of wine, they cut off all its branches; and, having let it stand a few days thus stripp'd of its ornaments, they bore a hole in the thickest part of the trunk, in which having placed a hollow reed or pipe, the wine ouzes through it into a pot set to receive the liquor, but so slowly, that they don't get above two quarts in 24 hours; but this it will do for 20 or 30 days successively, according to the goodness of the plant; and, when it has almost done dropping, they make a fire at the bottom of it, which forces out something more: After which, the tree dies, and is good for little but the fire; though, in other countries, where they content themselves with drawing small quantities, 'tis said, a tree will last several years after it is tapp'd. The Palm is reckon'd to be in its prime at 10 or 12 years growth; and then may yield 10, 15, or perhaps near 20 gallons of wine; of which an anchor, or 5 gallons, is usually sold at about half a crown English on the coast, a great deal of it being brought down from the inland countries, the cheapness whereof shews, that there must be a vast number of Palm-trees in the country. This Wine, when first drawn, is extremely pleasant, and yet strong; but the Negroes, who bring it to the coast, frequently mix and adulterate it: However, it goes down with the Fishermen and inferior people, who drink it more to raise their spirits and intoxicate them, than for its fine flavour; and perhaps the older and sourer it is, the stronger it may be.

They have also both sweet and sour Orange-trees upon the coast, but not many; I'm apt to think they were first planted here by the Portuguese: But there are vast numbers of Lemon-trees, and great quantities of Lemon, or Lime-juice; and small pickled Lemons are annually exported to Europe from Guinea. The Papay-tree also is to be met with all over the coast; the trunk whereof is, from 1 foot to 3 foot, in thickness; and, from 10 to 30 foot, in height, being a tender spongy wood, very easily cut, the fruit growing at first at the top of the trunk, without either branches or leaves; but, as it grows older, branches shoot out from the top, and from them other small twigs, with fine broad leaves, not unlike those of the Grape-vine; the fruit is about as big as a large Pear, of an oval figure, green without, and white within; but, with lying, turns red, and has within it abundance of little white seeds: It serves the natives for food, but is scarce so good as a Pompon. There is also some Ginger grows in this country, and the Pisan or Bananas-tree is found here, which yields a sweet luscious pulp; the fruit is of the size of a Cucumber, cover'd with a thin yellow rind; but these have been describ'd more than once in treating of India and the Hottentot countries: There are several other fruits, which resemble our Plumbs, both blue and

white, on the Guinea coast, but ill-tasted, and scarce ever eaten, either by natives or foreigners, any more than many other fruits that grow naturally on this coast. Here are also some Pomegranates, Tamarinds, the delicious Ananas or Pine-apple, and the finest Melons. The Portuguese endeavour'd to introduce Grapes; but there are scarce any of the Vines that thrive: However, 'tis observ'd, that almost all manner of European roots, herbs and garden-stuff, come to great perfection here, as the Europeans experience in their gardens; and there are several sorts of Beans, the natural product of the country, that are pretty good food.

But the plant Guinea is most famous for, is the Guinea Malaguette or Guinea Pepper, which grows chiefly in that part of it, which has obtained the name of the Grain or Pepper-coast.

The Guinea Pepper grows on a shrub, in long, slender, red shells or pods, separated into four or five divisions or cells, and cover'd by a white film: It grows also in some places like rank grass; and there is a sort of Pepper here, called Pimento, by us Spanish Pepper, which grows likewise on shrubs, of the height of a Gooseberry-bush, in great abundance: It is of two sorts, great and small, both of them at first green, but afterwards red, and the larger inclines to black: This fruit is hotter than common Pepper, especially the small sort. There is also a very strong sort of stinking Tobacco grows on this coast, which the Negroes smoke; but so offensive, that an European can scarce bear the smell of it.

Amongst that variety of forest-trees, that are found on the Guinea coast, their timber-trees, 'tis said, grow to a prodigious magnitude, and others are admired for their beauty and the fine shade they afford in this hot climate: Of the bodies of some of these trees hollow'd, their Canoes are made. There are others, that have a very beautiful grain, streak'd red and yellow, and clouded fit for tables and cabinets; and others, 'tis said, fit for masts and yards. There is also the Capot-tree, that bears a sort of Cotton, which BOSMAN speaking of by way of figure, I presume (as he does in describing the Guinea Toads and Serpents) says, that a musket-shot will scarce reach the top of it; but sure 'tis needless to caution the reader, that this cannot be literally true: It were to be wish'd, however, that travellers and voyage-writers would not speak in poetical strains, and enlarge at this rate; it being difficult sometimes to distinguish what is to be taken literally, and what figuratively. I believe the reader may depend upon it, that BOSMAN meant no more, in the description of his monstrous Toads and Serpents, and of this high tree, than that they were exceeding large in their kind; for, if he did intend more, it is enough to destroy the credit of his whole book, which however, at this day, is look'd upon as one of the best descriptions we have of Guinea. But what he intimates of another tree so large, that several thousand men may be drawn up under the branches of it, if he means one of the same kind with the Banian-tree, which is common in India, this may be true; for the boughs of the Banian-tree, reaching down to the ground, take root again, and grow up into additional bodies; so that one of these trees frequently form a grove alone: And under these it is, that the Banians worship their God, and perform their penances in India; which leads me to observe, that the Negroes also consecrate trees and groves to divine worship, or rather worship some particular trees as gods. But on this I shall enlarge further under the head of religion.

Having

CHAP.
VI.
Minerals.

Having seen what the surface of the earth produces, I proceed to their minerals; of which, 'tis said, they have several, namely, Iron, Copper, Silver and Gold; but none of their mines are wrought; and some have questioned, whether there be any Silver in the country; but, as to Gold, Guinea is supposed to contain more than any other part of the world, there being such vast treasures washed down from their mountains, and found in their rivers, while the mines yet remain unopened: And this it is, that has drawn so many European nations hither, though it be with the extremest hazard of their lives.

Gold,
where
found.

It has been already observed, that, during the rainy season, the water falls in torrents from the hills, washing away the earth, and sometimes great pieces of rocks are undermined, and come rolling down the stream; which, being thus removed, the cavities, where the Gold before lay concealed, are sometimes discovered, and large pieces of this mineral picked out of the holes and clefts of rocks or mountains; but much more is washed down in little particles, no bigger than sand, into the rivers; the former being called Rock-gold, and the other Gold-dust: When the rains abate therefore, and the dry season comes on, both men and women resort to all the little streams, and, gathering up the sand in heaps, put it into trays and tubs, where they wash it, till all the earth and sand is washed clean away; and if there be any Gold, its weight fixes it at the bottom of the tub: This they continue to do every day from morning till noon; some of them perhaps finding the value of six or seven shillings, others the value of six-pence, and a great many find nothing at all. But the streams, where the Gold is found, are generally at a distance from the sea; scarce any of it is to be met with on the shore, or near the mouths of rivers: Great part of it comes two or three hundred miles, and upwards, out of the country, being brought down by the Negroes at the season for trading, when they expect shipping upon the coast. The Mountain or Rock-gold, it is observed, touches better than the dust; but then there are abundance of small stones that adhere to it, and occasion a great loss in the melting; and therefore the Factors chuse rather to purchase the Gold-dust. As to the rest of their minerals, I meet with no account of them; but I must not forget their Salt, which is made by letting the sea-water into shallow pans in the dry season, till the sun exhales the water, and then the Salt is left at the bottom: They also make a great deal of Salt by boiling the sea-water, and furnish the inland countries with it.

Salt.

Trade of
the Guinea
coast.

And now, having shewn the produce of the country, and thereby discovered the principles of commerce, it seems extremely proper, in the next place, to enter upon a description of their traffick with other nations; the four great articles whereof are, 1. Gold; 2. Slaves; 3. Elephants teeth; and, 4. Drugs; under which last I comprehend Guinea Grains or Pepper, Civet, Cardamums, Indigo, and Gums of several kinds, particularly Gumtragant, Wax, and Red-wood.

Gold.

1. Gold is had chiefly on that part of the coast called Guinea Proper; though there is Gold to be met with in other places: The same may be said of the Tooth coast and Slave coast: There are more of each to be had in the districts that go under those names; though some of every species may be met with from one end of the Guinea coast to the other, taken in its largest extent.

The European Merchants, or Factors, ^{CHAP. VI.} ~~never~~ go up into the country to purchase Gold: But the trading Negroes come down to the forts and factories, and on board the European ships, with it, and are, by Christian instruction, 'tis said, become very sharp, or rather roguish traders: It seems, we have taught them to mix Copper, and other ingredients of less value, both with their Rock-gold, and Gold-dust; and they are such exquisite proficients, that they frequently cheat their masters who instructed them in the mystery. Some pieces they cast so artfully, that quite round, of the thickness of a shilling, the piece shall be pure Gold, and perhaps filled up with Copper or Iron; but the common false Mountain gold is a mixture of Silver, Copper, and a proportion of Gold very high colour'd, which makes the cheat not easily discernible; for, being obliged to receive an infinite number of little pieces in a pound, it is almost impossible to touch every one, and the metal, looking so well, is scarce suspected. They also tinge powder of Coral so artificially, that it is impossible to distinguish it any other way, than by the weight: Of this also they make a powder, resembling Gold-dust; but chiefly of the filings of Copper, to which they give a very good tincture; but all this false-tinged metal, in a month or two loses its lustre.

The way the factors take to distinguish true Gold from false, if it be in large pieces, is to cut it thro', which easily discovers what it is; and, if the pieces be small Mountain-gold, they lay them upon a stone, and beat them with a hammer; and, as this is not practicable in Gold-dust, they put the dust into a Copper-bason, winnowing and blowing it, by which the false Gold flies away, leaving the pure Gold behind. The value of Gold, brought from the Guinea coast one year with another, by all the European nations that trade thither, is supposed to amount to the value of three hundred thousand pounds, and upwards; of which the English may import one third, the Dutch another, and the French, Portuguese, Danes and Prussians, another third.

The Slave trade is carried on in much the same ^{Slave trade.} manner the Gold trade is: The Negroe Factors and Merchants come down to the coast with their slaves, agree with the Europeans for the price of them, and the price of the goods they are to take in exchange; and a ship is soon dispatched, if they act fairly. But, if a Merchant delivers any part of his goods before he has his slaves, they will make him wait a great while for them, and sometimes not bring them at all, unless the European Factor finds some way to make reprisals: And yet it is found necessary to trust these people; for, as they trade with other nations beyond them, and have not always effects to purchase slaves, they have no way of getting them sometimes, unless they can be credited with goods to go to market with, and exchange for slaves in the inland country. As Guinea has a multitude of petty Sovereigns, who are frequently at wars with each other, the slaves are generally such as are taken in these wars, not only men, but women and children; for, where they invade a country with any success, they carry all the inhabitants into captivity. There are also a great many others, who are made slaves for debt, or for some misdemeanour; and not only the debtor or criminal himself loses his liberty, but oftentimes the whole family, and all that are related to him: And, 'tis said, people sell even their wives and children where they have offended them, while others lessen their

CHAP. VI. their families, under an apprehension that they shall not be able to maintain them; and if a famine, or great scarcity happens, they will sell themselves to one another for bread. It is reported, that one of the petty princes upon this coast, on some small disgust, sold a score of his wives to a Captain of a ship at once, parting from them with as little reluctance as a Grazier does with a score of Sheep; and, in times of full peace, nothing is more common, than for the Negroes of one nation to steal those of another, and sell them to the Europeans: There have been instances also, of children selling their fathers and mothers when they have been weary of them, and wanted to enjoy what they had. These are the various ways by which the unhappy Negroes are frequently reduced from flourishing Circumstances to a state of slavery, and brought down to the coast to be sold to the Merchants of Europe.

The first business, after a ship arrives upon the coast to trade for slaves, is to pay the duties, and make a present to the King or Governor of that part of the country, for leave to trade: Then the King's slaves are to be taken off at almost what price he pleases to set upon them, before the Merchant is permitted to deal with his subject. When the price is agreed on, the European Surgeon views all the slaves naked, men, women, and children; and the grown men, that are supposed to be above 35 years of age, are usually excepted to, as are all that have any lameness, or other defects, those whose sight fails them, and such as have the venereal disease, or any other distemper that is not easily cured; and even the loss of a tooth is sometimes made an objection. The infirm being set aside, the rest are branded with a hot iron by the Merchant, to distinguish them, and locked up in some prison, till they can be sent on board; for the Europeans have no forts or factories in many places, where they meet with the greatest number of slaves. The price of an able-bodied man may be about five pounds, the woman a fifth part less, and the children in proportion to their respective ages. When they are sent on ship-board, their former masters strip them of every rag, so that the Merchant receives them all perfectly naked; and thus they generally remain till they come to America; tho', as they are packed close together, six or seven hundred in a ship, cold is the least of their hardships. The decks are divided so, that they are forced to lie, or sit double, on the hard boards, the whole voyage; and all the men are loaded with irons, many attempts having been made, by the slaves on board, to kill the ship's crew, and run the ship a-ground; in which some of them have succeeded: Others have jumped overboard, rather trusting to the mercy of the sea, than their white masters, from an apprehension, as our Sailors suggest, that they are to be fatted for slaughter, and devoured by white men. But there seems to be reason enough for their attempting to escape, without any such apprehension: To be carried away from their country, laid in irons, and crowded together in dismal dark holes, where they have not room to stand or sit upright, may very well put them upon attempting to escape, if they had no other views, than the rescuing themselves from these barbarous masters, in whose service they cannot but expect to live very miserably, when they find themselves so hardly used at first. No wonder therefore, that many of them chuse to hazard their lives, by endeavouring to escape, when life, in such circum-

stances, is more to be dreaded than death itself; and this is surely such a traffick as can never be justified or defended. Were these miserable wretches brought to Europe, and used with humanity; or were they disposed of to Planters in America, that would treat them as their own species ought to be treated, they might be no great sufferers by exchanging black for white masters: But to sell them again to the cruel Spaniard to work in his mines, and be used worse than brutes, must be condemned by every man that reflects on the practice: And, as I'm informed, many of our English Planters don't use their slaves much better, generally agreeing not to make Christians of them, lest they should understand, that our religion teaches us to do as we would be done by; and thereupon they should expect to be dealt with like men, who have the same God, the same great Lord and Master. But to return: One would think, that the exporting slaves thus continually from Africa to America, should dispeople the former; for, it is computed, that the Portuguese alone export above a hundred thousand, and the rest of the European nations about the same number: I question whether the English do not transport fifty thousand; for they are obliged to deliver thirty thousand to the Spaniards annually, by the cursed *Asiento* contract; a bargain that surely can never prosper, and, possibly, instead of encreasing our wealth and trade, may engage the nation in perpetual broils with the Spaniards.

The next great article of trade to that of Slaves, *The Ivory trade.* is Ivory: This may be had in small quantities from one end of the Guinea coast to the other; but is met with chiefly in that part of the country, that has obtained the name of the Tooth coast; and probably abundance of teeth are brought some hundreds of miles out of the country: There are large plains, 'tis said, where teeth are found in abundance, which either belonged to Elephants that died naturally; or were killed by people that did not know the use of their teeth; though some have conjectured, they shed their teeth, and receive them again; which, if they do, it must be at a very advanced age: For a full-grown tooth or tusk (of which they have but two that grow out of their jaws, and turn up like a horn) weighs sometimes upwards of an hundred weight, and ordinarily fifty or sixty pounds: But whether they shed these teeth or not, and to what age these monstrous animals live, is very uncertain; all that we know of their age is, that in India, where they tame Elephants, and use them for travelling, and in their wars, they live to a very great age; having continued in some families for several generations, and the proprietors only know, that their fathers and grandfathers were possessed of them.

The last article of trade is the Guinea Pepper, Wax, and Drugs, which are had chiefly upon the Grain coast: But what quantities of these, or of teeth, are brought from Guinea, is uncertain: Only a late writer computes, that the English, Dutch, French, Danes, and Brandenburgishers, export from Europe to Africa, in the whole, about the value of two hundred thousand pounds in goods; and that they bring from thence annually in Gold, Slaves, Ivory, Pepper, and Drugs, the value of three millions; and that the Portuguese are possessed of such vast territories and tracts of land upon the eastern, as well as the western coast of Africa, that they trade for as much as all the rest of the European nations put together, in slaves and teeth.

Guinea Pepper and Drugs.

A calculation of the value of the Guinea trade.

CHAP.
VI.
Goods ex-
ported to
Guinea.

The goods, which the Europeans carry to Africa, and barter for Gold, Slaves, and the rest of the commodities above-mention'd, are chiefly these, (viz.) Callicoes, Cottons, Linen and Woollen-Stuffs, Serges, Perpetuana's, wrought iron, Pewter and Brass; such as Swords, Knives, Hatchets, Nails, Hammers, Pewter-dishes, Plates, Pots and Cups, Brass-pots, Kettles, and other household utensils; Fire-arms, Powder, Shot, Brass and Glass-toys, Beads, Beugles and Cowries, or Blackamoor's-teeth, with Brandy, Spirits and Tobacco. The brass ware, 'tis said, the Negroes are infinitely fond of, and will purchase almost at any rate; and wrought Pewter, Iron and Lead, are good articles. There are great quantities of Powder, Shot, Arms, Cloathing, Liquor and Furniture, also sent from Europe annually, for the use of the European forts and factories there.

Artificers
in Guinea.

Having treated of the trade of the Europeans, with the Guinea coast, I proceed to enquire into the manufactures, traffick and employment of the natives; and, I perceive, every tribe or family almost make their own tools, instruments and utensils: They are all Smiths, Carpenters and Mafons, building their own houses, or huts, with wood and clay, and thatching them with reeds, or Palmeto branches: They also make their own arms; such as darts, arrows, launces and broad-swords; but their fire-arms, gun-powder and bullet, they purchase of the Europeans: They also make their instruments of husbandry, and several household utensils. It is with a surprising dexterity they form and polish their swords, and heads of darts and spears, considering the few poor tools they work with: Their anvil is only a flat stone; and, till the Europeans taught them the use of hammers, another stone supply'd the place of them: But their Smiths bellows, it seems, have three pipes or snouts, which blow up a fire very suddenly, and are said to be an invention of the natives.

Fisher-
men.

Their Watermen and Fishermen are but one tribe, and are very numerous upon the coast; eight hundred, or perhaps a thousand of them, go out a fishing at once: They have hooks, harping-irons and nets, and all the implements that European Fishermen use; and every Canoo, or Boat, is but one piece, made out of the body of some large tree; the largest 30 foot long, and 6 broad: These the Europeans hire to carry their merchandize to and from their ships, and along the coast from one factory to another; but they have a lesser sort they use in fishing. Their Canoos, according to their size, are rowed by two, three, seven, nine, eleven, and sometimes fifteen Watermen; for, where there are more than two, you have always an odd number, because one of them steers the boat. Instead of oars, they row with an instrument, fashion'd like one of our shovels, with which they push themselves along, looking the same way they row, and move exceeding swiftly; and, as these boats are only a large piece of timber scoop'd hollow, there is no sinking of them; for, if they are over-set, and turned bottom upwards, as they frequently are, by the great surf and swelling seas, upon this coast, still the vessel floats upon the waves; and the Watermen swimming like so many spaniels, turn their canoos, and get into them again, arriving safe ashore, frequently when the Europeans they carry, and all their goods, are lost.

Their hus-
bandry.

Manag'd
by the
women.

As the Negroes have two harvests in the year, great part of their time is taken up in digging, planting Rice, and sowing Millet and Maize, or Indian corn, and planting Yams and Potatoes; but the husbandry is left almost entirely to the women:

And, except, in their fisheries, their Carpenters and Smiths work, the women go through the drudgery of every thing: Their wives dig up the ground, sow, plant, make their cloaths and mats, brew the beer, and dress their food; while the husband loiters away his time, and does scarce any one thing towards the support of the family; so that the more wives a man has, the richer he is in Guinea, and the easier his circumstances are. And some of the Negroes on the coast, 'tis said, make money of their wives, by letting them out to others that can pay for their favours. They make but little distinction between their wives and their slaves; but seem alike indifferent to both: However, it is held highly criminal to meddle with a Negroe's wife of any quality. But to return to their husbandry: They have two harvests, as has been observ'd, of Millet and Maize, every year; one in August, and the other in December; but the last is inconsiderable, it being a dry time; and, as that sort of corn, call'd Millet, will not grow without some moisture, the Rice will not grow at all without water; and therefore they can have but one harvest of the latter in any place where they cannot flow their grounds. And, as it has been hinted, some parts of the country produce only Rice, and others only Millet: But the soil yields them such plentiful crops, that they need never have a scarcity, if they were not the most improvident people in the world; but they never lay up any stores. When they have a plentiful crop of Rice, the European shipping sometimes takes it off their hands; and, before the next harvest, they are starving: They seldom consider what they shall want themselves, when they meet with a good market for their grain; insomuch, that they have been obliged to sell their wives, children and slaves, to the Europeans for food, or they would have been starved; and this, in years, when they have had plentiful crops.

As to the traffick of the Negroes among themselves; it consists either in carrying the corn, and other produce of the respective maritime countries, from one place to another along the coast, in their large canoos, as there happens to be a demand for it; or in bartering and exchanging goods with one another on shore. Those near the coast exchange the merchandize they get of the Europeans, with those of the more distant countries, for Gold, Slaves and Elephants teeth, which foreigners take off their hands, furnishing them with new supplies of European goods; and, with these, they go to market in the inland countries again.

Before I quit this article of trade, it may be proper to say something of the rise and progress of this traffick between the Europeans and the Guinea coast. The Portuguese were the first that discover'd the south-west shores of Africa in the 15th century; and, as the Pope was then thought to have a right to dispose of all Pagan countries, they obtained a grant from his Holiness, Anno 1442, of all countries discover'd to the south and east of Cape Bajadore, which lies on the western side of Africa, latitude 27 north. The Pope however afterwards, on the discovery of America by COLUMBUS, published another Bull in favour of the Spaniard, dated the 3d of May 1493; whereby he assign'd and transferr'd, to the King of Spain and his successors, all the countries discover'd, and to be discover'd, 100 leagues to the westward and southward of the Azores and Cape Verd islands; which the Portuguese looked upon as an infringement of the former grant to them; and this bred a misunderstanding between those two nations: However, they came to

CHAP.

groes.

The be-
ginning of
the Gui-
nea trade.

CHAP. VI. an agreement in the year 1493, that the line, mentioned in the grant to Spain, to be drawn from north to south through the Azores, and the Cape Verd islands, should be extended 270 leagues farther west-ward; and that all new discover'd lands to the westward of that line should belong to the Spaniards; and those to the eastward of it to the Portuguese: And accordingly the latter built forts, and settled colonies on the eastern and western coasts of Africa, and in the East-Indies, and remained in the quiet possession of them, enjoying the sole trade of Africa and the East-Indies about 100 years without a competitor: No other European nations attempted to interrupt them in it; but acquiesced in the Pope's determination in assigning America to the Spaniard; and the discoveries in Africa, and the East-Indies, to the Portuguese.

The Reformation, however, happening in the 16th century, the English and Dutch, and other Protestant nations, began to call in question the Pope's power of disposing of Pagan countries; and, being ambitious of sharing the Gold of Africa with the Portuguese, both the English and Dutch, in the 16th century, sent several ships to the coast of Guinea, where, in imitation of the Portuguese, they exchanged toys and trifles with the Negroes for Gold, and made very advantageous returns: But the Portuguese building forts upon the coast, and keeping the natives in a sort of subjection, that they could not trade with freedom with any other people, the Negroes invited the English to settle among them; and, for some small consideration, assign'd them places to erect forts and factories upon, that they might be able to protect their own trade, as well as that of the natives, from the insults and encroachments of the Portuguese; and the Dutch, falling upon the Portuguese settlements about the same time, deprived them of their capital fort of Elmina, and, at length, drove them from all their settlements on the Gold-coast: Whereupon the Portuguese removed farther eastward, and gained a vast extent of country, in which they are not disturbed by the Dutch, or any other nation; there being little or none of the same tempting metal there, tho' they meet with slaves in great abundance: But these the Dutch have little occasion for, having scarce any plantations in America.

The Dutch endeavour to drive the English from the Gold-coast, and take some of their forts in time of peace.

The Hollander had no sooner driven the Portuguese from the Gold coast, but he began to contrive how he might beat the English, and all other nations, out of that trade, as he had from the fine spices in the East-Indies, and engross this noble mineral to himself: Accordingly, by various artifices, the Dutch spirited up the natives to fall upon the English factories and distress them, supporting the Negroes under-hand in their hostile attempts; and at length, in the year 1664, were guilty of such a piece of treachery towards the English, who had protected their infant state, as is scarce to be credited. They had, by treaty, it seems, agreed to join an English Squadron, to suppress the Pirates upon the Barbary coast; and DE RUYTER, the Dutch Admiral, actually sailed to the Straights with the English, under pretence of putting that project in execution: But then making an excuse to the English Admiral, that he was ordered another way, he sailed to the coast of Guinea; and there, with the assistance of the Negroes his countrymen had already spirited up against the English, made himself master of several English forts, and particularly of that still in their

possession, which goes by the name of Amsterdam Fort: And, not contented with this, the Dutch afterwards sailed to the islands belonging to the English in the West-Indies, plunder'd and ravag'd them in a most barbarous manner; and all this, in a time of full peace, without any manner of provocation. But the Court of England, having some way or other got intelligence of the matter, was so fortunate as to make reprisals on a fleet of Hollanders in the Channel; which however BURNET, and our Whig-historians, clamour wonderfully against, because war was not declared: The Dutch had before driven us from the Spice islands in the East-Indies; they were now endeavouring to monopolize the Gold-coast, they plundered our plantations in the West-Indies; and yet these pacifick gentlemen would have us sit still with our arms a-crofs, and never attempt to do ourselves justice? and, when we do, cry out upon it as a breach of the law of nations; when the ungrateful Dutch, who are so much indebted to this nation, were the aggressors: Which is an undeniable instance of the partiality of our admired Whig-writers, or of their ignorance, if they were not appriz'd of the true state of the case.

The Dutch had the same views here, as they had in the East-Indies: They intended to have brought such a force to Guinea, as should have subdued the natives, and excluded all other European nations from the Gold-coast; after which, no doubt, they proposed to have opened the mines where this glorious metal was lodg'd, and become the sole masters of them, as the Spaniards are of the Silver mines in Potosi: But they were forced to relinquish part of what they had plunder'd the African company of, the Court of England espousing their interest heartily at that time; and thereupon this project of the Hollanders proved abortive. However, the African, or Guinea company, received very great losses, from time to time, by the treacherous practices and depredations of the Dutch, and have suffered perhaps yet more by our own Interlopers, or Separate traders; which brings me to consider what has been so long, and so warmly controverted; namely, whether this branch of our commerce ought to be laid open, or restrained to a particular Company? It is said in behalf of the Company, that, if it had not been for the forts they erected there, the Dutch would infallibly have monopoliz'd the Gold-trade, as they have the Spices of India: And that it seems hard upon them, that, when they have been at such an expence to erect and maintain forts there, to protect this valuable part of our trade, Interlopers, who are not at these expences, should be suffered to come and undersell them, and run away with the profit. On the other hand, the Separate traders alledge, that all companies are the ruin of trade: That their Directors and Managers mind nothing but enriching themselves, and making the fortunes of their relations and dependants, whom they prefer to the Governors, Factors, or Captains; and that the trade always suffers in such hands: Private Merchants manage with greater frugality, making the best of every thing; and that, since the trade has been laid open to such traders as pay Ten per Cent. towards the Company's charges in maintaining their forts, the trade has been much improved.

Upon the whole, forts seem absolutely necessary to preserve this trade: If we had no settlements there, the Dutch would soon subdue the natives, and drive all other nations from that rich coast; and therefore it is but highly reasonable the Separate traders should contribute

Remarks on the trade to Guinea by a Company.

CHAP.
VI.

contribute sufficiently towards maintaining such forts : If Ten per Cent. is not enough, they ought to allow more. On the other hand, if this be done, I know no reason why any subject of England should be excluded from the trade : To say, that Private traders are better husbands, can afford their goods cheaper, and will always undersell the Company, is a very weak observation : For why don't the Company manage as frugally ? They have always their Governors, Factors and Warehouses, upon the spot ; and can take all advantages in trade, by laying in commodities, when things are cheapest, at the best hand, and providing freight for their ships against they arrive ; and consequently may transact their affairs to greater advantage than the Separate trader can, if they observe as good economy : And the cheaper we afford our goods, and the less profit we are contented with, the greater market we shall have. It is no matter how much we undersell other nations, so as we are not losers in the main. I doubt, if the Separate traders did not get away the trade from the Company, the Dutch would : And surely, it is better our own people should have it, than foreigners. It is very well known, since the African trade has been laid open, it has vastly increased. If the English traded for five or six thousand slaves upon this coast, when the Separate traders were excluded, they now trade (according to GEE) for thirty or forty thousand ; and so in proportion in other articles perhaps. But there are some gentlemen, I find, not only for supporting our present settlements on the Gold coast, but for sending such a force thither, as might make us masters of the country ; by which means we might, they imagine, possess our selves of the Gold mines, and gain an immense treasure by working them. They observe also, that this being about the same latitude as the islands, where the Cloves, Nutmegs, and Cinnamon grow, in the East-Indies, all those spices might be propagated here.

On the project of possessing the Gold mines.

But, as to the possessing ourselves of the Gold mines, I doubt this would require a greater force than ever it will be thought proper to send thither : For not only the natives, who look upon those mountains as sacred, and therefore never pretend to break into them, would unanimously oppose such an attempt ; but they would be join'd by the Dutch, and the rest of the European nations, who have forts there ; it being their mutual interest to prevent such a monopoly. Besides, those mines are supposed to lie at a good distance from the coast ; and the country agrees so ill with English constitutions, that we should lose some thousands by the distempers of the country, before it could be effected, if we had no other enemy to contend with : And I make no doubt, if the thing were feasible, the Dutch would have made such a conquest long before this. We see they were about to attempt it in the reign of King CHARLES II ; but the resistance they found they should meet with both from the European nations, and the natives, obliged them to desist, and lay aside the project. As to planting the fine spices here, I very much question whether Cloves or Nutmegs could be transplanted : We have no instance of their growing any where, but in the East-Indies, where they were first found : The Cinnamon indeed has been transplanted from Ceylon, and will thrive here. But, as it will probably grow in other parts of Africa, as well as on the Gold coast, it would be better to make the experiment in some other part of Africa, where such a plantation would be less liable to be disputed : And after all, I am afraid the Cinnamon would degenerate on being transplanted : The tree

On planting the fine spices here.

might appear as well to the eye ; but the spice possibly would not be so good : For there are a great many Cinnamon-trees upon the coast of Malabar, very near Ceylon, where the best Cinnamon grows, and the trees seem to flourish as well as in that island ; and yet it is but a bastard Cinnamon they produce, and never used where that of Ceylon can be had : And as for transplanting Tea and Coffee thither, which the same gentlemen propose, there is yet no instance of Tea growing any where, but in China and Japan : Coffee indeed the Dutch have raised in Batavia ; but, I am informed, it is not comparable to that of Arabia. All which being duly weigh'd, I believe the British Court will never sacrifice the lives of so many men, as such an acquisition must cost, upon such romantic views. I shall conclude this head of trade, with some account of the Negroe Weights : They have Copper, Gold, scales of the form of half an Orange-scoop'd ; and their weights are either of Copper, Lead, or Tin ; and, tho' divided in a different manner from those of the Europeans, upon reduction agree exactly with them. The Gold weights made use of on the Guinea coast are, 1. The Peso ; 2. The Angel ; 3. The Bendo ; 4. The Ounce ; 5. The Mark ; and 6. The Pound : The Peso is four Angles ; the Bendo two Ounces ; four Bendo's one Mark ; one Mark eight Ounces ; and two Marks one Pound weight averdupois. Three Marks of pure Gold, are in England 24 ounces, or two pound troy weight ; which, at four pounds sterling the ounce, is 96 pounds : But, as the finest Gold yields some advance, it is generally reckon'd, that three marks of fine gold are worth one hundred pounds sterling.

Weights of Guinea.

The Negroes, like the Hottentots, never exceed- ed ten in numbering, till the Europeans taught them to proceed farther : They now lay down a finger for every ten ; and, when they have lain down all their fingers, and made one hundred, they begin again, and so on.

Numbers.

In Guinea, there are some sovereign Princes, whose dominions are very extensive, rich, powerful and arbitrary ; Monarchs limited by no laws, or any other restraints : And there are a multitude of others, to whom the Dutch and other Europeans have given the name of Kings, whose dominions do not exceed the bounds of an ordinary parish, and whose power and revenues are proportionably mean. But the latter seem to me, to be no more than particular Clans or Tribes, whose Chiefs are permitted to bear some resemblance to Princes ; to administer justice in their respective districts, and make war upon one another, when they apprehend themselves injur'd by any neighbour. But these are, in reality, all subject to some of the superior Monarchs first mention'd, and no better than their vassals ; obliged to attend them in their wars, to quarter their Soldiers, and to submit to such duties and impositions as are imposed upon them. We find, indeed, the Dutch Factors on this coast boasting, that they are sometimes served by the sons of Kings, and retain them in their pay, in the quality of Footmen : But they might as well be proud of being served by the son of a petty Constable. The vanity of the Dutch may easily be perceived, when they give themselves these airs, as well as the hatred and contempt they have for all Kings. One reason of their denominating every little officer a King, is to shew, that the high and mighty brutes have Kings subject to them. They formerly brought some such petty Princes from the East-Indies, and confined them in a barren island near the Cape, where they were forc'd to work, and make lime for the Dutch-India company, who, in derision of Kings, gave this

The Princes and States of Guinea.

CHAP. VI. this wretched place the name of King-Island; and I don't doubt, but they would serve all the Monarchs upon earth in the same manner, if they had them in their power; tho' if it be true, that the same word in the Negroe language signifies a King, and the Governor of a village of twenty huts, they have the more colour for giving the title of King to both: But the Dutch relate farther, that there are some republicks on the Guinea coast like theirs in Holland, and particularly two near their capital fort of Las Minas, or D'Elmina: But of these I shall treat, after I have shewn in what state the great Monarchs on this coast live; and particularly the King of Fidah or Whidah. This Prince, in the words of one of the Dutch Factors, is feared and revered by his subjects as a demi-god, who always appear in his presence, either kneeling, or prostrate on the ground: When they attend him in the morning, they prostrate themselves before the gate of his palace, kiss the earth three times, and, clapping their hands together, use some expressions that look more like the adoration of some deity, than complements paid to an earthly Prince; and they even tremble at the sight of him: He has his Viceroys, Governors, Generals, and other Officers, as European Princes have, of whom he constantly maintains four or five thousand with meat and drink; some of whom frequently are permitted to eat in his presence; but no person whatever is permitted to see his Majesty eat, or to know in what part of the palace he sleeps, unless his wives, of whom the King seldom has less than a thousand. These continually surround him: These are his life-guards, and frequently sent on embassies, and employed in executing such commands and sentences as seem much more proper for men; as to punish criminals, pull down their houses, and the like. BOSMAN relates, that, a little before his arrival at Whidah, a Negroe officer of his acquaintance having been unjustly accused to the King, orders were issued to demolish his house, and destroy all that he had: Of which the man having received some notice, when a detachment of two or three hundred of the king's wives came to execute the sentence, they found him placed near a heap of Gunpowder, with a lighted match in his hand, professing his innocence; but threatening to blow both them, and himself up, if they did not give him time to represent his case to the King; which being agreed to, he had the good fortune to convince his Fidaian majesty of his innocence, and to get the sentence reversed.

When the King goes abroad also, five or six hundred of his wives run before him, or attend him: He has not, 'tis said, a single man in his train; but he spends the greatest part of his time at home in his palace, administering justice to his subjects, and transacting affairs of state; or conversing with the European Factors and Merchants, who find him usually in a stately hall of audience, richly habited in Gold and silver stuffs: His wives also, when they attend him, are richly clothed and adorned with Gold, Coral and glittering trinkets, especially their hair; and tho' the King never eats before company, 'tis said, he will drink very plentifully both with the Europeans and his own subjects.

Their Nobility. The chief Magistrates under the King are: The Cabicero's, whom he consults in state affairs, and concerning peace and war; and, by these, he usually administers justice to the people. Travellers make two classes of Nobility in every government in Guinea: 1. The Cabicero's last mention'd, who are the Grandees of every kingdom or state.

VOL. III.

2. Their inferior nobility, an order of Knights; who, being possess'd of considerable fortunes, either by descent or purchase, and, having obtained some reputation in their respective countries, are allowed to have seven trumpets, or hollow Elephants teeth, sounded before them when they go abroad. Every one, who is initiated into this order, gives a grand entertainment, and makes presents to the principal men of the country, in order to obtain this honour: After which, he purchases a shield and arms, and performs the ceremony of lying in arms all night, with his family, in the open field; intimating, I presume, his readiness to defend his country: After which, several days are spent in feasting and martial exercises; and the new Knight is afterwards allowed to carry two shields both in peace and war. But to return to the King:

I don't find he wears a crown, or that there is any other ceremony at his accession, than the shewing him publickly to the people, and sacrificing some animals to his gods. The eldest son is always entitled to his father's throne; the females never succeed, unless in one kingdom upon this coast: And there have been instances of a younger brother's usurping the throne, when the eldest has been at a distance from court, by the favour of the people, and taking possession of the palace, and the King's wives; for this, it seems, goes a great way in fixing a Prince upon the throne, where the succession is contested: And the successor makes no scruple of enjoying the same wives his father did, unless his own mother be amongst them; and then she has a separate house and revenue settled on her: And, to his father's wives, the son, soon after his accession, adds many more, being usually presents made him by his Viceroys and Governors, of the most beautiful black virgins in his dominions. On the death of a King, the government seems to be dissolved till the successor is proclaim'd; for the populace are suffered to plunder their wealthy neighbours, and commit all manner of extravagancies with impunity, till the new King assumes his authority; and therefore the Great men use all imaginable diligence to invest him with the regal power.

This country of Fida is so rich, and of so large an extent, that the King's revenues are very considerable. BOSMAN says, there are not less than 1000 officers employed in collecting the several duties and taxes, who are dispers'd through every part of his dominions, there being scarce any thing that is not taxed. There are three Receivers-General purely upon the account of the Slave trade, the King having a Rixdollar (about a Crown) for every slave that is sold: And of the shipping, which comes upon the coast to trade, he receives, one with another, not less than four hundred pounds sterling each; and there sometimes does not come less than fifty in a season. But, as it is in other kingdoms, his officers find means, 'tis said, to defraud their Prince of the best part of his revenues:

Tho' there be no written laws in Guinea, they have particular punishments appropriated to certain crimes by custom. Murder is usually punished with death, if the person killed was a free-man; but, for the murder of a slave, a fine only is exacted. Adultery also is punished with death, where it is committed with any of the King's wives, or the wife of a Great man. BOSMAN relates, that two Negroes having been guilty of murder at Whidah, they were, in pursuance of their sentence, ripped open alive, their bowels taken out and burnt, and afterwards their bodies stuff'd with salt, and fixed upon

CHAP.
VI.

upon two stakes in the market-place, where he saw them: That another Negroe, having been familiar with one of the King's wives, was fixed to a stake, and there stood as a mark, for the Courtiers to throw their darts and lances at, in the presence of the lady, the partner of his crime, who also saw the offending member cut off and burnt: After which, they were both tied hand and foot, thrown into a deep pit, and, after a pot of boiling water was leisurely poured on them, the pit was filled up, and they were buried alive.

Another young Negroe, who had dress'd himself in the habit of a woman, and lived some time among the King's wives, contriv'd to run away with one of them, and a rich parcel of goods; but they were taken in the attempt: Whereupon the young fellow was tortur'd, to make him confess if he had been familiar with any more of them; but not being able to extort a confession from him, they were both burnt in the same fire.

Thievery is usually punished by a heavy fine and restitution of the stolen goods; and, if the offender has nothing to pay, he is either punished with death, or becomes a slave to the injur'd person: And so in debt, where the party is insolvent, himself, his wife and children are liable to be sold for slaves, according to the sentence in the Gospel.

Two little
republics.

BOSMAN, giving an account of the two little commonwealths of Axim and Ante, near their fort of d'Elmina, says, that the Cabicero's are their Sovereigns, and take the administration of the government upon them in times of peace; but the rest of the people are consulted in making war: That the Cabicero's are guilty of great corruption in the administration of justice; and that the party that bribes highest, usually carries his cause; and it is not uncommon, when a cause is delay'd or given against a man, for him to attempt to do himself justice, by seizing the goods of his enemy or debtor; and this sometimes occasions a war between the tribes or great families, who frequently espouse the interest of their respective friends.

The
Dutch u-
surp an au-
thority o-
ver the
natives.

In this republick, the stealing of men, as well as the stealing of cattle, is punish'd with death; and I find the Dutch have usurp'd some sort of authority or dominion over the natives subject to these commonwealths: Whereas no other European nation pretends to bring the people of this coast into subjection to them (the Dutch attempt it not only here, but in every part of the world where they get footing.) Their countryman relates, that two Cabicero's of Axim, men of some figure in this state, having been long engaged in an odd dispute, viz. which of them was slave to the other, the cause came by way of appeal before the Dutch Factor at fort d'Elmina, who took upon him to decide the cause; however, he did it in an amicable manner, by persuading them to lay aside their animosities, and own each other for a free-man; which they agreed to, embrac'd, and seem'd perfectly reconcil'd before they went out of the fort, making the Dutch Judge handsome presents for putting an end to the strife; but, before two months were elaps'd, one of the parties hir'd two assassins to murder the other, which they effected by shooting him through the Head. This the Hollanders looking upon as a contempt of their jurisdiction, in order to assert their authority, sent some of their officers to demand the murderers, that justice might be executed upon them; and, the natives refusing to deliver them up, the Hollanders march'd with an arm'd force into their country, threatening destruction to their state: At which the

Negroes were so terrify'd, that they deliver'd the criminals into the hands of the Dutch; who were contented however with a large fine, at the entreaty of the Negroes. This story, related by the chief Factor of their capital fort of Elmina, shews sufficiently the dominion the Hollanders have usurp'd over the natives: And were not the English and other Europeans possess'd of forts in their neighbourhood, whereby they protect the people and themselves from their insults, the Hollanders would tyrannize as much on the coast of Guinea, as they do in the East-Indies, and in a short time not only make slaves of the natives, but drive the rest of the Europeans out of the country, as they have done from the Spice islands and Java; where the Spaniards, Portuguese, and English had settlements, till they were treacherously and barbarously driven from thence by the Dutch, which the English never can forget, so long as there is such an island as Ambon in being, and so long as we, and all the other nations of Europe, remain depriv'd of the fine spices by the usurpations of the Dutch. It is amazing to me, that all the Princes of the world should tamely sit down, and suffer the Dutch to monopolize so valuable a branch of trade, and never attempt to recover their rights, or so much as to put in for a share of the fine spices! I proceed in the next place to enquire what arms are used by the Negroes, their military discipline, and way of making war.

The Arms
of the Ne-
groes.

Before the arrival of the Europeans upon their coast, the Negroes knew nothing of fire-arms; bows and arrows, lances, swords, darts and shields constituted a complete set of arms; which were all made by the natives themselves, with no better tools than a stone for their hammer, and another for their anvil: Their swords were very broad, turn'd back like a hanger, had a wooden guard, and were not above a yard in length; and, 'tis said, the inland Negroes us'd to poison their darts and arrows; but this was never done by those we meet with on the Guinea coast. They cover and defend themselves very dexterously with their shields, against swords, lances and darts; but these are of no use against musket-bullets. Their shields are of an oval figure, above 4 foot long and 3 broad, made of light basket-work, cover'd with the skin of a Tyger or some other animal, sometimes with thick leather gilt, and they have copper plates or bosses on them, which contribute to their defence, and adorn the shield. The Dutch have been much censur'd for furnishing the Negroes with fire-arms and gun-powder; but they will sell any thing for money to friend or foe: and this is now one of the best articles in the commerce of the Europeans with Guinea; for, since the Dutch began to sell them guns and ammunition, they have been imitated in it by other nations; and the Negroes are observ'd now to be very good marksmen, having learnt to shoot standing, sitting, lying or running; but they generally attack the enemy under cover, if they can, creeping upon the ground, and firing as they lie upon their bellies, or getting behind some tree. Every Chief of a tribe or family leads on his own people, slaves and dependants; but with very little order: They look like so many crowds or heaps of men, rather than soldiers; tho' sometimes their heroes single out each other, and fight hand to hand with their country weapons. But, if any of the crowd fires a musket, he runs out of the fight to load, and then returns again, if his party is not routed in the mean time. And here give me leave to observe, how the Soldier is habited when he

Their
way of
making
war.

CHAP. VI. he marches to the wars : He sticks his broad sword in the cloth he wraps about him, and has a belt of bandaleers to load his musket with, and a pouch for his bullets, a cap on his head, made of the skin of a Crocodile, or some wild animal, which is adorned with red shells, a bunch of Horse-hair, and a bright chain bound like a coronet about his head, and his body usually painted white, which makes him a very shocking figure.

Habit of a Soldier.

Every able-bodied man is obliged to march into the field for the defence of his country, or at the command of his Prince ; so that there are as many Soldiers as men : But there are, however, some who make arms their only profession, and let themselves out to the neighbouring nations when their own are at peace. The Princes also form alliances here, as ours do in Europe ; and, when any power becomes formidable to the rest, unite in confederacies to reduce him within bounds. But the most frequent occasions of wars are, the depredations of their Great men upon some neighbouring nation : These make excursions frequently into each others territories in time of peace, and carry off a booty ; and, if satisfaction is not given upon demand, the injured party makes reprisals, and their respective tribes or nations engage in the quarrel : Nay, if a Great man in one country has a debt owing to him in another, and payment is delay'd, he falls upon any of the tribe the debtor belongs to, and carries off at least as much as will satisfy his debt ; and if the debtor represents to the Prince or State he is subject to, that he does not owe any such debt, or that he has been hardly and unjustly dealt with by the creditor, the matter becomes a national quarrel, and they fight it out ; and the side that apprehends itself weakest, hires foreign troops, and sometimes whole nations to assist them ; insomuch, that in one of these private quarrels four or five tribes, or nations, perhaps engage on each side ; and though several of the lesser kingdoms and states can't raise two or three thousand men, there are others that can bring forty or fifty thousand men into the field ; and in the inland country, their Kings can raise as many more : But, 'tis observed, they are all forced to quit the field during the rainy season. Plunder and prisoners, on whom they set excessive high ransoms, or the extending their territories, are their principal views in these wars, as well as those of Europe.

Before I dismiss this head, it may be proper to take notice of some wars, in which the Dutch and English have been concerned on this coast, and the occasion of them ; which will further evince the design of the Dutch to make a conquest of Guinea, and seize the Gold mines there to the exclusion of other nations ; and that they had probably effected it, if they had not been opposed in this project by the English African Company.

As an attempt of the Dutch to seize the Gold mines defeated. BOSMAN, the chief Factor for the Hollanders at the capital fort of St. GEORGE d'Elmina in Guinea, relates, That the Dutch sent Miners thither, in the year 1694, who actually attempted to open a Gold mine, in a certain mountain near the Dutch fort of Vredenburg, in the kingdom of Commany. But the Negroes, observing what the Miners were about, let them know, that this hill was dedicated to one of their gods, and must not be touched. They represented also, no doubt, that they had only given the Dutch leave to erect forts there, for the security of their effects ; but never intended to transfer their country to them, and suffer foreigners to dig and carry away their Gold : And, when the Dutch still persisted in their design, the natives rose, and fell upon the workmen, wounding some,

and making prisoners of others. Whereupon the Hollanders complained to the King of Commany of the hostility ; and receiving no satisfaction from him, marched a party of Soldiers into his country, in order to compel the Commanians to relinquish their mines, and acquiesce in their being wrought by the Dutch ; but they were so warmly received by the natives, that they were glad to retreat to their fort : And the Commanians, justly resenting this attack of the Hollanders, entered into a confederacy with the English, in order to defend their country, and particularly the Gold mines, against any future invasion : For, it seems, the Commanians had given the English leave to erect a fort in their country, about a mile from the Dutch fort (which the Hollanders complain was a great hindrance to the projects they had formed :) And, as the English had reason to believe their good allies would take the first opportunity of depriving them of this fortress, in order to possess themselves of the Gold mines, they very readily consented to come into an alliance with the Commanians for their mutual defence. However, I perceive the English concerned themselves no otherwise in the war, than by influencing some other Negroe powers to join the King of Commany. The Dutch also advanced five thousand pounds, as appears from their own relation ; with which they hired two Negroe nations to assist them in subduing the Commanians, not doubting but they should meet with the same success their countrymen had done in the year 1687, when they gained several victories over the Commanians, and obliged them to submit to such terms as the Hollanders were pleased to impose upon them ; but, the Dutch Governor very imprudently threatening several other nations at the same time, they united against the Hollanders and their allies, and gave them one of the greatest defeats that ever was known in that country ; scarce any of the allies of the Dutch escaping alive out of the field : However, the Hollanders did not yet desist from their project ; but, finding means to corrupt some other Negroe powers, and prevail on them to join them, they engaged in a second battle, and received a second memorable overthrow. And now, finding that it was not possible to subdue the Commanians, and dispossess the English of their fort, they thought fit to drop their design of monopolizing those golden mountains, and strike up a peace with the natives.

The Religion of the Guinea Negroes shall be considered in the next place : And, it seems, they generally acknowledge one supreme almighty Being, that created the universe ; and yet pay him no manner of worship or adoration, never praying to him, or giving him thanks for any thing they enjoy. They believe he is too far exalted above them, to take any notice of poor mortals ; and therefore pray and sacrifice to a multitude of inferior deities ; of which they have some in common to whole nations : And yet every man has a god or more of his own chusing. Next to the being of God, no principle seems to be more generally entertained in this and other nations of the world, than that God is too great to be approached and addressed to by men, and has left the government of the world to inferior deities, that are ready to hear and answer their prayers. The chief deity of the Fidaians, a considerable kingdom of Guinea, is a Serpent of a particular species, whose bite is not mortal ; and is so well used by his votaries, that he scarce ever attempts to hurt them. They address themselves to this animal on the most important

CHAP. VI.

Religion of Whidah.

A Serpent worshipped.

CHAP.
VI.

tant occasions; as for seasonable weather, the preservation of their state, or whatever else concerns the publick welfare. They have also a grand temple erected in Fida, dedicated to this serpent; and a lesser in almost every village, with Priest and Priestesses to officiate in them. The King annually makes presents and offerings to the great temple, consisting of gold, cattle, pieces of silk, and all manner of meat, drink, fruits, and European merchandize, to obtain a plentiful harvest, and the prosperity of his kingdom; and, if they apprehend any calamity like to befall them, these offerings are frequently repeated.

The Ser-
pent's
temple.

In this temple, 'tis said, they always keep a serpent, of a monstrous size, worshipping the creature in person, and not in effigy: And formerly, the King used to go on pilgrimage with his whole Court, annually, to adore this serpent; but, of late, deposes a certain number of his wives to perform this act of devotion in his stead. Once every year it is pretended, that the virgins, and young women of the country, are seized by this species of serpents, and work'd up to a kind of religious frenzy: Whereupon they are carried to the serpents temples in the respective villages, and obliged to remain there for a certain time, till they return to their senses. These are usually the wives and daughters of the principal men of the place, who thereupon make presents to the Priests and Priestesses; but my author looks upon the whole to be a pious fraud to get a little money out of the people: And, it seems, if any one refuses his wife or daughter to go to this idol temple, when they pretend to be thus inspired, he does not only incur the reputation of a prophane person, and an enemy to their religion, but is in danger of being ruined by the influence and suggestions of the Priests: And that they may be supported by the Government in their pretensions, the King, it seems, is allow'd to share the profits which the Priests gain by this pretended inspiration of the females, who, when they are dismiss'd from the serpent's temple, are required not to divulge what has happened to them there, under the severest penalties; but this seems to be needless, because the women are fond of going to these temples on such occasions, being allowed to take greater liberties there, than they could at home. To confirm which, BOSMAN relates, that one of the natives of his acquaintance, having a wife that pretended to be seized with this religious frenzy, humour'd her in it, and offered to conduct her to the serpent's temple; but, instead of it, convey'd her to the house of a European Factor, and gave her to understand, that he would certainly sell her for a slave, if she did not immediately lay aside her mask, and return to her wits: Whereupon she fell upon her knees, and begged his pardon, promising never to trouble him with these humours any more, if he would forgive her; which he readily granted, on her promising she would never divulge what had happened to her Priest; and thus (says my author) he saved the trouble and expence of sending her to that religious mad-house: But, had the matter been discover'd, the man would infallibly have been ruined. Another Negroe, of the Gold-coast, who married a wife at Whidah, laying her in irons for pretending to counterfeit a religious frenzy, was actually poison'd by the Priests, when our author was there, according to his apprehensions at least; the man visibly declining in his health thereupon, of which he could give no other account. But this seems to be only a conjecture of BOSMAN's, who appears to have been an enemy to Priests of all religions, and to every thing that had any relation to

religion; for his inference is, "From hence you may observe, that, throughout the world, it is very dangerous to disoblige Ecclesiasticks;" not excepting the Priests of his own church: And, indeed, few Dutchmen have any other god, but their gain; at least they generally make their spiritual concerns subservient to their secular interests, witness their renouncing their Christianity at Japan, for a liberty to trade there, exclusive of all other Christian nations. Certain it is, the Japanese will suffer no other Christian, Protestant, or Papist, to trade with them at this day: And, as the Dutch know themselves to have been charged with this scandalous piece of hypocrisy for many years, and have never endeavour'd to clear themselves of it, the world now takes it for granted that they cannot: I wish they would, if they are innocent, take an opportunity of refusing the charge, that I might do them justice; for I would not be instrumental in conveying down such an aspersions on a whole nation to posterity, if I did not think there were too good grounds to believe it. But to return to the Fidaians: Such is the reverence they bear to these ador'd serpents, that, should any person hurt one of them, or but touch him with a stick, our author assures us, he would be condemn'd to the flames: He says, the English, when they first traded thither, being ignorant that these serpents were worshipp'd by the natives, killed one of them they found in their house; and that the whole country rose in arms thereupon, pull'd them in pieces, and burnt their merchandize and all their effects; but I must confess I do not give entire credit to the fact, since our author informs us, it was an old story; and I do not find it mentioned by any other writer. But BOSMAN relates, that, when he was at Fida, a Negroe, who was a foreigner, only took one of these snakes gently on a stick, and carried the creature out of his house without hurting it: Whereupon the natives of Fida set up their great howl, as they usually do in case of a fire, immediately alarmed the whole city; and it was with great difficulty that the King of Fida, being made sensible of the stranger's ignorance, saved his life.

The same writer assures us, that, in hot weather, these serpents creep out of their holes, into their houses, by half dozens, laying themselves upon their chairs, benches and tables, and even getting into their beds when they are asleep; and they have no way of getting rid of the vermin, but by calling the natives to their assistance, who will gently take them up in their hands, and carry them out of doors. The more venomous serpents, it seems, frequently attack these deified snakes, and would be too hard for them, on account of their strength and superior venom; but, the whole country usually rising when they see the ador'd animal attack'd by man or beast, he never fails to conquer, if the battle happens in view of any of his votaries. The largest size of these adored serpents are about two yards long, of the bigness of a man's arm, and adorn'd with white, brown, and yellow streaks. They are great devourers of Rats; but, if a snake of this size seizes one, his throat is so narrow, that it is an hour before he gets the Rat through into his belly.

Such is the veneration of this people for these crawling, and to us terrible animals, that they will not hear any thing spoken in derision of them, stopping their ears, and running away, if any European pretends to laugh at their superstitious reverence for them. BOSMAN relates, that a Hog happening to devour one of these snakes, a proclamation was immediately issued for destroying all the Hogs in the country, and abundance of them were

CHAP.
VI.

CHAP. VI. were slaughter'd on the occasion ; but, at the instance of some of their rich owners, and some presents made to the King, the severe decree was revok'd : But BOSMAN assures us, that so many were slaughter'd, that Hog's-flesh became very dear while he was there.

Lofty trees adored, The next things the Fidaians pay divine honours to, are fine lofty trees and groves. To these they apply in their sickness, or any private misfortune ; and I ought to have taken notice, that all the serpents temples are in some grove, or under some spreading tree.

And the Sea. The Sea is another of their principal gods, to whom they sacrifice when the winds and waves are so tempestuous, that no foreign merchants can visit their coast ; which usually happens in July and August, and sometimes in other months : Then they throw in all manner of goods, meat, drink, and cloathing, to appease the enraged element.

But, besides these publick objects of adoration, every man has a numerous set of gods, of his own choosing, at Fida. Every thing they meet with on going abroad, animate or inanimate, they introduce into the number, after it has undergone the following trial : They pray to it for something they stand in need of ; and, if they obtain their desire by any means, they ascribe their success to the influence of this new god ; but if they are disappointed, they conclude that it cannot or will not help them, and treat it with contempt, addressing to it no more : Which puts me in mind of the Portuguese, who are said to pray very zealously to the image of St. ANTHONY, which they carry about them ; but, if he does not answer their expectations, they beat the image unmercifully, and drag it through every kennel by way of revenge. But to return :

Both Priest and Priestesses have an uncommon respect shewn them in the kingdom of Fida or Whidah : Their persons, and all that belong to them, are held sacred and inviolable ; and tho' the wives of other men are little better than slaves to their husbands, the husband of a Priestess is obliged to be all obedience at his peril : Both the ecclesiastical and civil Government would resent his assuming any authority over such a wife ; which makes the natives very cautious of marrying a Priestess. Nor would they ever consent, that their wives should be admitted into the order of priesthood, if they could help it. For, as I apprehend it, there is a certain tribe amongst them, who are Priests and Priestesses by inheritance ; but then there are others admitted by that tribe into this order upon special occasions.

They have imperfect and confus'd notions of Heaven and a future State ; and some of them mention a local Hell for the punishment of the wicked, but seem to regard it as little as Christians do. Thus, having enquired into the religion of the Fidaians, I proceed to treat of the opinions of the people of the Gold-coast in this article, where our author resided many years.

Religion of the Negroes on the Gold-coast. Here the people also believe in one supreme, almighty Being ; but look upon him to be too much above them, to regard their affairs ; and therefore address their prayers upon all occasions to some inferior deities or demi-gods, as the Greeks usually did of old : Some of them believe, that both black and white men were created by the supreme God at the same time : while others ascribe the creation to a great spider they call Anansie. Every thing relating to religion they denominate Fetiche, as has been observed already ; but to the

VOL. III.

CHAP. VI. idol of their hearts, or favourite god, they give the title of Bossam, and to this god the beloved wife is always dedicated.

Every Priest, or Feticheer, have a different god, to whom the people under his care apply on publick occasions or common calamities. When they are debating on war and peace, they bring sacrifices, and consult the god by their Priest, who sometimes performs the ceremony alone, and returns an answer to those who come to enquire of him ; at other times he consults the idol in their presence ; from whom however they expect no vocal answer ; but the Priest throws up some nuts or small pieces of leather, and, as they fall nearer or further from each other, he foretells good or bad success to the undertaking. They take every solemn oath also before an idol, drinking a draught after it, and praying that their god may strike them dead, or the liquor may burst them, if they do not perform their engagements, or if the thing be not true which they attest : However, it seems, the Priest has power to absolve them from these oaths : To prevent which, upon great occasions they make the Priest swear, that he will not absolve the party, or dispense with his oath, requiring the most dreadful imprecations from the Priest to confirm it : And the Negroes believe that whoever drinks the dreadful cup with such imprecations, and afterwards breaks it, will infallibly burst or die soon after.

When the weather is unseasonable, either excessive wet or dry, the whole town, or country, consult their Priest how the vengeance of Heaven may be appeas'd ; and he generally advises them to offer certain sacrifices, which is readily comply'd with : And every village has a sacred grove set apart, where the sacrifices are kill'd, and divine worship perform'd ; and these they will not suffer to be profaned or cut down upon any occasion. But, besides the idol that belongs to the Priest, every person has his particular household-god, before which he constantly performs his devotions on the day of the week he was born : This they call their Bossam, as they do the day itself, and drink no wine or strong liquor on that day before sun-set : They are also then habited in white, or their skins colour'd with a whitish earth or paint. There is another day of the week also set apart for divine worship ; when the Poor sacrifice Poultry, and the Rich a Sheep, to their god, without the assistance of a Priest, which is eaten by the man and his friends ; but the guts and inwards, boil'd in the blood, is reckon'd the most delicious morsel here, as well as in Caffaria : And there are few families in Guinea, but what are obliged, by ancient custom (which they think themselves religiously bound to perform) to abstain from certain kinds of meat ; some from the flesh of Goats, others from that of Hogs, and a third perhaps from tame white Fowls ; and their respective children and posterity never deviate from the rules prescribed by their ancestors : Among which, at Acra on the Gold-coast, circumcision is one ; but, from whence they received it, or how long they have used this rite, none amongst them know ; nor is it used by any other nation of Guinea.

What notion they have of the deities they worship is, uncertain, any further than that they look upon them as beings vested with great power, and that carefully observe their behaviour, and reward and punish them in this life according to their demerits : They have not any great expectations, or dread of futurity, 'tis said ; the rewards they expect, are a multitude of wives and slaves, health and wealth, and other prosperous circumstances in this world : And

19 P

the

CHAP.
VI.

the punishments they apprehend, are a deprivation of these. The greatest calamity that can befall them, and what they dread most, is death: Murder, adultery and theft, according to my author, are venial crimes, and may be attoned for with Gold, &c. But their eating forbidden meats, and drinking prohibited liquors, and a neglect of their holidays, they think can never be pardoned, but will (with deliberate and wilful perjury) be punished with death. Most of them, as has been hinted already, believe little of future rewards and punishments; tho' they seem generally to agree, that the souls of good men survive after death; and some few of them talk of a Paradise not unlike the Elysian fields, whither good spirits are sent; that is, such as have kept their holidays, inviolably abstained from forbidden meats, and observed their oaths: And those that have been deficient in any of these particulars are drown'd in a certain river, and a period put to their existence; but scarce any of them seem to have any notion of a wicked man's being punished eternally. Those that have, are supposed to have learnt it from the Christians, with whom they have conversed upwards of 200 years: And there are those, that imagine their souls, after death, pass into the bodies of white men, and undergo almost an unlimited transmigration.

Tho' all the Negroes worship some creature or other, yet they have not all idols or images in their houses; and some of the natives of the mountainous inland country, 'tis said, worship a living man, as the Tartars near China do; of whom they relate ten thousand miracles, and believe he dooms them to happiness or misery after death, according to their deserts: They are charged also with worshipping the Devil, and keeping a solemn festival, of eight days continuance, annually to his honour. But BOSMAN is of opinion this is a mistake; he acknowledges indeed they hold such a festival; but, he says, it is in order to drive the Devil out of their country.

Seven days are spent in feasting, singing and dancing, and great liberties are taken with impunity at that time: They lampoon their superiors, and make ballads on them, committing all manner of extravagancies; and, on the eighth day in the morning, they hunt the Devil out of every town and village with horrid cries and howling, throwing dirt and stones after him; and, when they have continued the frolic as long as they see fit, they return home, where they find the good woman employ'd in cleaning and scouring all their pots, pans and utensils, and purifying them from all uncleanness they might have contracted by Satan's residing amongst them. They have no other annual festivals but this, and another after harvest, when they sacrifice to their gods for affording them the fruits of the earth: As to their weekly sabbath, some keep it on a Tuesday, and others on a Friday, when no person is permitted to go a fishing; but they don't seem very scrupulous as to other kinds of work. However, they all abstain from Wine on their respective sabbaths, and sacrifice something to their gods on that day.

They certainly believe, that their souls survive after death; not only because some of the gods they worship are thought to have been once great and virtuous persons upon earth, but by the numerous stories they entertain the Europeans with of apparitions or spirits: Nay, they seem to believe spectres and apparitions more firmly than any article of their religion, terrifying themselves and others with an apprehension of being disturbed by them. Never any person dies, especially if he be a man of figure,

but they believe he appears for several nights about the place where he died; which does not consist at all with the notion some have given us of them, that they believe the soul dies with the body: Nay, they ascribe a great power to such unembodied spirits; of which BOSMAN gives the following instance. He says, one of their Kings happening to be killed, who was a professed enemy to the Dutch, and the chief Factor of the Hollanders fort dying some few days after, they concluded he had been snatch'd away by their deceased King, who had a power of punishing him in the other world, tho' he could not subdue the Dutch while he was in this mortal state. They seem to have a great deal of faith in magick or witchcraft, or something like it, endeavouring to revenge themselves on their enemies by charms and spells, which they hire a Priest to use, believing his curses will have the desired effect: They apply to him also for the discovery of stolen goods, which he pretends to help them to by the aid of good or bad spirits, but which of them our author don't inform us; only observes, that their Priests act in a triple capacity, viz. as Prophets, Conjurers and Physicians; and, when medicine does not answer their expectations, they have recourse to sacrifices and charms; and the people have so good an opinion of them, that, if the Priest does not recover the patient, or succeed in what he undertakes, they impute it to some defect in the sacrifice or themselves, or to any thing, rather than the unskillfulness or inability of the Priest.

The next particular I shall enquire into, is the Diet of the Negroes: And, it seems, they eat but poorly upon the Gold-coast (at least in the opinion of the Europeans,) Millet, boil'd to the consistence of bread, is their common food, or Potatoes, Yams, and other roots in the room of it, well drench'd in Palm oil; and, if to this they add a few boil'd herbs and stinking fish (for they always let them lie upon the ground till they stink) the common people think they live luxuriously that day: Nor do their superiors eat better, only they allow themselves a greater quantity of fish and herbs than the poor can afford. They have a dish also much admir'd by them, which is a mixture of corn, paste and Palm oil boil'd together, to which they give the name of Malaget, and is in some esteem with the Dutch, possibly because it may resemble their own Grout. They have also variety of Garden-beans and Pulse, with Banana's and other fruits that serve them for food.

At Benin and the Slave-coast the better sort of people eat Beef, Mutton and Fowls; and are so good to their poor, 'tis said, that they are always welcome to their tables when they want employment, and cannot provide for themselves. They are also extremely hospitable to strangers, being proud of nothing more than the character of generous free-hearted people. Dried fish and roots are the principal food of the common people at Benin: But, how meanly soever the Negroes live as to eating, those near the coast make it up with liquor. There is no part of the Guinea coast where they don't drink drams in the morning, and Palm wine in the afternoon; and their Chiefs of the towns, or petty Kings, as the Dutch call them, will meet the meanest of their subjects in the market-place of an evening, and, forming a circle upon the ground, drink to a very great excess, being attended by their women at the same time, who are no less addicted to drinking than the men, and their conversation is usually as smutty as that of a drunken crew of sailors, which does not at all offend the modesty of the Negroe females,

CHAP.
VI.

CHAP. VI. females, who maintain their ground, and sit drinking and smoking with the men frequently till morning. But, I'm apt to think, the Negroes of the inland country are not so dissolute a people as those upon the coast: If foreigners were to make an estimate of the English, from the people of both sexes they meet with in the sea-port towns, it would not be much to our advantage. But, besides Wine, they have a sort of Beer made of Millet, some of it very strong; few of them drink Water, it being esteemed very unwholesome here: And they have also the milk of young Cocoa-nuts, which is an exceeding cooling and refreshing liquor; but, as for Cow's milk, I perceive they never drink of it.

Diseases of the Negroes. Notwithstanding this country is found so unhealthy for European constitutions, the natives have but very few distempers: The Small-pox is the most fatal to them of any. This, indeed, sweeps them away like the Plague, as it generally does all other people in warm climates: And Worms are an epidemical distemper; not such as afflict our people in their stomachs and bowels, but a species that are found between the skin and the flesh, and give the patient inexpressible torment till they are drawn out; and this is an operation that lasts for a month, and more sometimes.

As soon as the head of the Worm has broken thro' the tumour, and is come a little way of itself, they draw it further, winding it about a stick a little at a time; and, when they find it come hard, they desist, for fear of breaking it; and then try at it again another day, and so on till they have got it quite out, and then the patient is at ease: But, if the Worm breaks, he endures a great deal of pain; for the Worm either rots in the flesh, or breaks out at another place: Some of the Negroes have 9 or 10 of these worms in them at once, and the Europeans are not entirely free from them. These Worms are a yard long, and sometimes as much more: Nor is this the distemper of Guinea only, our people, as well as the natives, are afflicted with it in the East-Indies. A greedy ravenous Appetite is also reckoned among the diseases of the Guinea Negroes, which proceeds, as some imagine, from drinking Palm wine to excess. The Venereal distemper is also fatal to many of them, having yet no methods of cure; and few of them escape it amidst such numbers of common women, who make a trade of letting themselves out. Wounds in the wars of Mars are no less dangerous than those of Venus, especially if there be any shattered bones; for they can cure nothing but ordinary flesh-wounds, which they do by applying pulvestes of some salutary herbs to them. But tho' the Negroes are generally healthful, they seldom live to a great age; one of fifty is esteem'd an old man in this country. As to the remedies for these, and other diseases, travellers relate, that they use green herbs in most cases: But what herbs those are, they have not yet inform'd us, possibly few Botanists have made the voyage, it being generally so fatal to Europeans. I proceed therefore to enquire into the distempers Europeans are principally afflicted with on the Guinea coast, and the reasons usually given for their ill state of health here. The distempers Europeans are most subject to, are Fevers, Dysenteries, and the Colick. BOSMAN ascribes them to the excessive heat of the day, and the coldness of the night, the Europeans not being used to such sudden changes. Another reason he assigns, is the thick stinking fogs, that arise from the valleys between the hills, and from the salt-marshes near the sea, and

at the mouths of the rivers where their factories are usually situated: Nor does the stinking fish, which the natives lay to rot upon the shore, contribute a little to infect the air, he thinks: And it is a matter of fact not to be contested, that few arrive here, but are immediately seized with a fit of sickness, of which abundance die. But he ascribes this, in a great measure, to the want of good kitchen physick and good medicines; and tho' a great many hasten their own deaths by intemperate living, yet the most regular men are frequently carried off: Indeed the Portuguese, who come from a warmer climate, and are used to another sort of diet than the English and Dutch, have their healths on all the coast of Africa almost as well as the natives; and therefore discoveries in those warm latitudes seem much properer for them, than for the more northern nations. But, among other causes that BOSMAN assigns for the ill health of the Europeans, is the plague of Flies; such swarms of Gnats or Muskeeto's are perpetually buzzing about and stinging them, so that they can get no rest night or day: And this is the case of all countries that are hot and moist. These and a thousand other insects are perpetually feasting upon the blood and flesh of those that come amongst them; and, as they seem to delight most in that of foreigners, so their stings are attended with worse consequences, than when they attack a native: For the first are so swelled up at their arrival, that they can scarce be known by their friends; whereas the natives, and those who have been used to the country, feel no such effects from their bite or sting. It is observed also, that warm woody countries, that are not cleared, and where the winds have not a free passage, are much the worst.

I shall, in the next place, enquire into their Marriage-ceremonies, and the condition of their women and children: And, I find, the lover or his friends contract with the father of the virgin, and that frequently before the girl is capable of making any choice; so that if matrimony consist in the mutual consent of the parties, there is no such thing here. The parents of the bride and bridegroom make the bargain when they are children, and no son or daughter ever pretends to dispute the authority of the father in this matter, when they grow up. As soon as the bride is deem'd capable of marriage-joys, she is taken home by the husband, without any other fortune to recommend her, than her native charms: For the husband, it seems, presents her with her very cloaths and ornaments, of which he takes a particular account, because, if she misbehaves herself, she is stripped of them, and return'd naked to her friends; but, if the man divorces her without any fault of hers, she carries off her wedding cloaths and jewels. There is an entertainment for the friends and relations when the wife is taken home, and she is suffered to dress and live at her ease for some few days; but then she is forced to work amongst the rest of his wives, to dig, plant, and sow the ground; for the men leave the husbandry, as well as the business of the house, entirely to the women; and there seems to be very little difference between their wives and slaves in this respect: Therefore no man stands upon quality in the choice of a wife; for, as he designs to use her as a drudge, he will as soon take the daughter of the meanest man, as of one of their chiefs. Those that live the easiest amongst them, are the wives of the Merchants, the dealers in Wine, and the Fishermen, who have no lands to manure; for these do something towards bringing in a livelihood, and providing for their families: Whereas the men of

Diseases of the Europeans there.

CHAP.
VI.

of estates make their wives manure and cultivate them; and the more wives they have, the greater is their stock of Corn, Rice and Plants, which makes them multiply their wives as fast as they can; tho' those on the Gold coast, my author says, are limited to twenty: yet, in the kingdom of Whidah, they take some hundreds, and the King several thousands, who are no more exempted from husbandry and other drudgeries, than those of private men, except some few of his favourites. They have also one wife they call their *Bossom*, dedicated to their household-god, who is exempted from working, and enjoys many other privileges in the life-time of her husband; but some say, it is expected she should follow her lord into the other world, when he makes his exit, as is expected also from some Indian wives; but this does not seem to be much practised of late: The *Bossom* is usually some young beautiful slave, purchased with a design of dedicating her to his god, and with whom he seems under some obligation of spending his time on the night of his birth-day, and of the other day of the week appropriated to the service of their gods. There is also another wife, to whom the affairs of the house are entrusted, and the government of the rest is committed, who is exempted from labour: And these two the Negroes are very jealous of, and endeavour to keep to themselves; but, for the rest, they are not so much concern'd: The common people will wink at their bestowing their favours on other men; and, indeed, promote their own dishonour, provided they can get money by it: They will, 'tis said, contrive with their wives how to draw young fellows into the snare, for the sake of the damages they are entitled to, when another invades their property; for the meanest man does not recover less than five or six pounds sterling, if he can prove the offence; and they generally find means to have some evidence of the fact, besides the wife's: For, if the man will take a solemn oath that he is innocent, and there can be no witness against him but the wife (as I understand *Bosman*) he cannot be convicted.

Descent of
estates.

Upon the Gold coast, the man and his wife have not a community of goods, 'tis said; but those the man leaves, go to his eldest brother and his children; and those of the women to her eldest brother and his issue: Their respective children do not inherit the goods of either father or mother. However, if the father be a sovereign Prince, or Lord of any town or country, the eldest son succeeds his father in these commands, tho' he has nothing of his effects, but his arms; and at Whidah, and other parts of Guinea, the eldest son succeeds to his father's estate and effects, as well as in the governments and lordships he held: And tho' the Negroes use their concubines and female-slaves frequently, as well as their wives by contract; yet are their children illegitimate, and slaves to the heir, if he does not enfranchise them before his death. The multitude of wives, concubines and slaves these people keep, is for the state and grandeur of the matter, as well as on account of the profit of them: Here, as well as in India, a man is esteem'd according to the number of women and slaves he keeps to run before him, and to sing and dance, and divert him when he appears in publick. But there is one inconvenience in a man's having a large family, and numerous dependance, in Guinea; that he is answerable for all the mischief and damage they do any one, and obliged to make it good: Nor do the people here wait, till they can have justice done them in courts of

CHAP.
VI.

law; but, where a man's slave has done them any injury, they immediately make reprisals on the master; and this is frequently the occasion of wars among the different tribes, who usually espouse the cause of their several friends and relations, as has been hinted already.

The Negroes of the inland country are much more jealous of their honour, than those upon the coast: If any one is familiar with their wives, nothing less than his ruin will satisfy them: If the offender be a slave, his death must atone for the crime, in which he usually undergoes the most exquisite torture; and his master is obliged to pay a considerable fine besides. The woman also pays for her wantonness with the forfeit of her life, unless her relations will redeem her with a swinging fine; and where she has committed the crime with a slave, no money will purchase her peace: She is put to death without mercy, and the master of the slave obliged to pay the husband very considerable damages: There have been instances of those who have been obliged to pay two or three thousand pounds for the offence of a slave, where a Prince or Great man is injur'd; and these usually assemble their subjects and dependants, and do themselves justice, as in other cases, engaging the whole country in the quarrel. But, if the man goes astray, the wife has no redress, she must not murmur whenever he ranges; which seems a little unjust, because the custom of the country allows a man women in abundance of his own: Whereas twenty or thirty females, perhaps a great many more, share but one man amongst them.

They seem to have a great regard to their women when they are with child, and make sacrifices and offerings to their gods when a woman is first found pregnant. At the birth of the child the Priest is sent for, who binds up the head, puts on some rings and spells to protect the infant against enchantments, and performs some religious ceremonies upon the occasion, as our Europeans apprehend at least: And there are two names bestowed upon it, viz. the day of the week on which it is born, the grandfather's name if a boy, and the grandmother's if a girl; and, as they grow up, they gain a third by their employment, or some great action they perform; as the killing a wild beast, signalizing themselves in the wars, and the like. In some places they circumcise their children; but this is not perform'd 'till they are five or six years of age, or more. They also imitate the Jews, in obliging their women to live separately from them at certain times; and are so severe upon them in some parts of Guinea, that they make it a forfeiture of their liberties to come into any man's house in such circumstances.

The women that are unmarried, 'tis said, take very great liberties, which is no reproach to them upon this coast, neither does it hinder their getting husbands; but this is to be understood only of the inferior people: And, as these sell their favours as dear as they can, *Bosman* relates, there are others purchased by every township almost, to supply the necessities of unmarried men; and that these are obliged to admit of the men's company, whether slaves or others, for the value of a farthing: That these women have huts by the way-sides, where they entertain those that are disposed to become their gallants: That they generally get an ill disease by their conversing with such numbers of men, and become the most miserable objects in the world; none thinking it worth while to take any care of their cure, or to relieve their wants, tho' these crea-

tures

CHAP. VI. tures are mightily careffed while they are in their bloom: and the Dutch tell us, that, when they would bring any of the neighbouring towns to their terms, they seize these ladies of pleasure, and carry them to their forts, being assured the natives will submit to any thing to obtain their liberty. BOSMAN adds, that people here look upon it as an act of charity to purchase such young female-slaves, to relieve the necessities of the publick; and that the rich Negroe women frequently leave some legacies of this kind when they die; which brings me to treat of the behaviour of the Guinea Negroes, on the death of their relations, and the solemnity of their funerals.

Their funerals.

When a person of any figure dies, his wives, his relations, slaves, and dependants, immediately set up a dismal howl: His wives shave their heads, cloath such parts of their bodies with rags, as are usually cloathed, and, for the rest, colour their black skins with a white paint or clay, running about the streets, and bewailing themselves like so many distracted creatures; and this they repeat several days successively: And, it seems, the people of Guinea scarce look upon death to be natural; but that it is always a punishment inflicted on them by their gods, for some notorious offences. The Priest therefore being sent for, a very strict enquiry is made into the life of the deceased; as, Whether he was ever perjured? Whether he was guilty of eating prohibited meats? Whether he observed their sabbaths and holidays, or the like? BOSMAN says, the deceased is carried about upon men's shoulders, while, the Priest puts these questions to him; and, by some circumstances in the position of the body, or its inclining one way or other when the Priest puts the question to him, he conjectures the cause of his death, and communicates it to his relations. There is still another way they usually imagine he may have been taken off; and that is, by the charms or spells of his enemies: And accordingly, if any of his enemies have been suspected of practising magick, they make no scruple of charging him with the death of their friend, and perhaps endeavour to revenge it.

While the corpse remains unburied, all the relations, friends, and neighbours, attend it, and join in the lamentations of the family: It is customary also to bring presents with them of gold, linnen, good liquor, fruits, and other eatables, which seems the more reasonable, since they are entertained by the heir all the time of their stay. At length the corpse being richly habited, is put into a coffin, with a considerable quantity of gold, coral, and other valuable effects, suitable to the circumstances of the deceased: He is carried to the burying-place, preceded by great numbers of musketeers, who fire their guns all the way, and the rest of the people follow the corpse, making the air ring with their lamentations, but observe no manner of order in the procession.

So soon as the corpse is interred, most of the company return to the house of the deceased, which is now no longer a place of mourning; for here they drink and feast for several days successively, congratulating the heir probably on his coming to the possession of his estate.

Slaves sacrificed on the death of a King.

When a King is buried, BOSMAN assures us, several of his slaves are sacrificed, in order to serve him in the other world; as, are his Bossums, or wives, dedicated to his gods; which is another manifest proof, that the Negroes believe the soul survives the body, and that men have much the same necessities, and enjoy the like stations in the other world,

VOL. III.

as they did in this: Though the latter part of this notion is very different from the Christian's belief, who make the virtuous only to be entitled to a place in Paradise: But what is still more to be lamented, than the putting these miserable wretches to death, is the pain they endure in the execution. They pierce and cut them, as in sport, for several hours: BOSMAN says, he saw eleven put to death in this manner; and amongst them, one who had endured a most exquisite torture, was delivered to a little child to cut off his head, which he was an hour in doing with a heavy broad sword he could hardly lift.

Instead of a tomb, the Negroes usually build a house, or plant a garden over the grave; and, at Axim, they set images of clay upon it, which they wash and clean every year on the anniversary of the funeral, when the expence is as great, as at the time the person was buried.

They are not less desirous of being interred among their ancestors, than the people of Europe; and, when they die at too great a distance from home to be removed thither, their relations, however, will bring home their friend's head, and some of his limbs, particularly if he is killed in a foreign war.

There are some other articles that still remain to **Language** be spoke to, such as their languages, learning, music and diversions; but I meet with little on these heads. BOSMAN tells us, that their language is a very disagreeable brutal sound: That though the Europeans have often endeavoured to express their words in writing, they have never been able to do it: From whence I am apt to infer, it is not very different from that of the Hottentots, who express themselves, in many instances, by inarticulate sounds, which travellers compare to the noise of Turkey-cocks: However, of this sort of language, it seems, there are many different dialects, so different from each other, that, in the space of sixty miles, there are six or seven several people upon the Gold coast that don't understand one another, according to the same writer: And, as for learning, where there is neither reading or writing, and they know nothing of the dead languages, or even of the modern of any country but their own, nothing of that kind can be expected from them: They are perfectly ignorant when their country was first peopled, and from what nation they derive their original; but seem to have a pretty general tradition, that both Black and White men were created so at first by God, and do not ascribe their dark complexions to the heat of the Sun, or to any accident or circumstance in their situation. To which some add another tradition, (viz.) that God, soon after the creation, gave them the choice of wisdom or wealth; and that their ancestors chose the latter: Whereupon God placed them in Africa; but was so angry with the option they made, that he doomed them to be slaves to the White men, on whom he bestowed wisdom, learning, arts, and sciences, and gave the Black the treasures of Gold; for, according to their notion, learning is appropriated to the White men, and Gold to the Blacks: That there is no Gold to be had out of their country, nor any learning amongst those who inhabit it. BOSMAN mentions a Popish Priest, that used great endeavours to set these people right in their notions, and make profelytes of them to Christianity; and, when all his arguments proved ineffectual, threatened them with the flames of hell for persisting in their superstitions: To which they only answered, that they should be in as good a condition as their ancestors, who had, for time immemorial,

19 Q

wor-

CHAP. VI. worshipped the same gods, and observed the same customs.

Musick.

Their musical instruments at Axim, BOSMAN informs us, are trumpets, made of Elephants teeth, bored through, with which they make a loud, but disagreeable noise; and, it seems, it is more for the honour of the matter, than the musick, that their Great men have these instruments sounded before them. They have also a kind of drum, made of a wooden bowl, with a Sheep's-skin stretched over it in the form of a kettle-drum, having two wooden hammers for drum-sticks; though sometimes they play upon them with their bare hands in concert with their trumpets, which afford no great harmony neither in the opinion of any but Negroes; nor is the hollow iron bell they beat upon at the same time much more agreeable: The least shocking of any part of their musick, is an instrument made in the shape of a harp, which makes a noise that may be borne with patience. They have also a great variety of other drums and musical instruments, very entertaining in their opinion; but travellers don't think them worth a description. They sing and dance, however, to their musick, such as it is; and seem to be as much charmed with it, as Europeans are with the best voices and instruments, and the finest compositions of the Italians.

Some tribes of the Negroes are mightily given to gaming, and will stake all they have upon the event of the game; but I don't find, that they play'd at any other game than that of Draughts or something like it, in which they used large Beans, till the Europeans taught them to play with Cards and Dice: Their rural sports are either hunting, shooting, or fishing; and game is so plentiful at Whidah, and some other parts of Guinea, that a man may load himself with it in a few hours, 'tis said; but they have no dogs to hunt or spring the game for them, or Horses to ride after it, as with us; Guns, Nets, and Snares are what they use on these occasions: But, in fishing, they want no tackle that the Europeans use, as has been related already: And, indeed, fishing is the principal employment, as well as diversion, of those tribes that lie near the coast.

CHAP. VII.

The present state of NIGRITIA, ZAARA, and BILEDULGERID.

Containing the Present State of Nigritia or Negroeland, Zaara or the Desert, and of Biledulgerid olim Numidia.

CHAP. VII.

NIGRITIA, or Negroeland, supposed to receive its name from the dark complexion of the natives, or from the river Niger, that runs thro' the middle of it, according to the best information I can get of the country, extends from 10 degrees to 20 north; and, in longitude, about 3000 miles, as Geographers conjecture; bounding it with Cape Verd, 18 degrees west of London, and carrying it to the confines of the Upper Ethiopia, or Abyssinia, 30 degrees to the eastward of London: But, should it be admitted, that some Europeans have gone up the river Niger, and discovered the country for 300 miles, to the eastward of Cape Verd, as they pretend; certain it is, that all the remainder of the 3000 miles to the eastward of that, is perfectly unknown to the European nations, unless what they have gathered from the report of the natives,

who are but poorly qualified to give a description of their country: Neither is the language of several of the Negroe nations, who come down to the mouths of the river Niger to trade with the Europeans, understood by them, or even by the natives on the coast; and consequently all the descriptions we have of the Negroeland, above 300 miles to the westward of Cape Verd and the Atlantick Ocean, must be imperfect; I doubt they can scarce be rely'd on in any one particular: There may be forty kingdoms and nations of different people, for aught we know, comprehended in that vast tract assigned to Negroeland, which our Geographers continue under that name, for no other reason, than that they are very much in the dark as to all beyond the mouths of the Niger.

This mighty river empties itself into the Atlantick Ocean by several mouths; of which the three largest are, 1. The Rio Grande, or Great River; 2. The Gambia; and, 3. The Senegal: And, as the mouth of the river Grande lies in 11 degrees north latitude, and the Senegal in 16, consequently it is upwards of 300 miles between the two most distant mouths of this river; and all the country between, except the rising grounds, are annually overflow'd, as the Delta in Egypt is by the Nile, and much about the same time, the heads of the Nile and the Niger not being very far distant, and the rains that swell them falling at the same time. The Portuguese, on the first discovery of Cape Verd, fixed several colonies and settlements on the river Niger; of which they still retain those of Catheco and Bisseo, on the river Grande: The English have, at this day, two settlements, one on Charles island, and another on James island, in the mouth of the river Gambia, and 100 miles farther north: The French have two settlements, one on the south, and the other on the north of Cape Verd, near the mouth of the Senega or Senegal, and to the northward of them, on the river of St. John: The Dutch also have some settlements; all which formerly belonged to the Portuguese.

The chief Negroe town, which Historians and Geographers frequently make the capital of a mighty empire, is Tombut, situate in 15 degrees north latitude, 6 degrees and a half westward of London: But I can't learn, that this, or any of their towns, consist of any other or better buildings than our ordinary cottages, having clay walls and thatched roofs. Such towns or villages as those, 'tis said, stand pretty thick in that part of the country which the Europeans are acquainted with: And, 'tis thought, if their lands were as well cultivated, they would yield as good crops of grain, as those of Egypt do, which have the like advantage of being overflow'd annually by the Nile, as these are by the Niger. However, as it is, the soil of Negroeland yields great plenty of Rice and Millet, Palm-trees, Cocoa-nuts, and other fruits, herbs, and roots, with flesh, and fowl; so that the natives live very plentifully. As to their persons, they are generally of a good stature, and of hale, robust constitutions; their complexions the deepest black; their hair black, short, and curled like wool; their noses flat; their lips thick; and scarce differing in any thing from those of their neighbours in Guinea; only, as they are much less versed in traffick, it is observed, they are a plainer honest people. There are some Mahometans, and a few Christians, which the Portuguese have made proselytes of, 'tis said, upon the coast, and near

CHAP. VII.

The river Niger.

European settlements on the mouths of the Niger.

Chief towns of Negroeland, Tombut.

Fruitful country.

Persons of the natives.

C H A P. VII. near the mouths of the rivers: But all the inland Negroes are still Pagans, as those of Guinea are; and probably their customs, rites and ceremonies not very different from theirs. The European nations, that are settled on this coast, deal with the natives chiefly for slaves; tho' they may sometimes meet with Gold, Elephants teeth and Drugs, but in no great quantities. **Cape Verd.** Cape Verd, which lies in 15 degrees of north latitude, near the river Senega, is the most westerly promontory of Africa, as has been observed already, and obtained the name of Verd, from the verdure of the groves of Palm-trees, and other ever-greens the Portuguese found upon it at their arrival on this coast.

Before I take leave of this land of the Blacks (for the nations to the northward are of an olive colour) it may be proper to take notice of the different opinions of the learned, concerning the reason of this dark complexion of the Negroes.

An enquiry into the reason of different complexions and features.

It was long the opinion of the Christians in general, and perhaps of the Jews before them, that all men were white till after the Flood; but that Ham, the second son of Noah, was converted from a white man, to a black man, by his father's cursing him; and that Africa, falling to the lot of this son, all his posterity, who possess'd this part of the world, have remained black ever since.

But that this curse of Noah's was not the occasion of such a change of complexion is pretty evident: For first, the posterity of Cham, or Ham, if they possess'd Africa, are not all black: The entire northern coast, from Egypt to the empire of Fez inclusive, and for several hundred miles to the southward, even as far as the Tropic of Cancer, if not further, are not black, any more than those who inhabit to the southward of the Tropic of Capricorn.

2. The people, in some parts of Asia, particularly in the peninsula of India, on this side the river Ganges, and who are supposed to be the posterity of Seth, the favourite son, are full as black within the Tropic of Cancer, as any of the Negroes in Africa: Nor is there, in the inland country of India, at a distance from the coast, a single person to be found, that is not black; at least I never met with one, tho' I travelled 100 miles in that country, and resided some time in it. It has been reported, indeed, that there are no Blacks out of Africa; but probably those writers, who asserted this, had their information from such Merchants, or Seamen, as had visited only the coast of India; where, 'tis true, there is a tawny mingled breed; but even there the greatest numbers of the natives are black, who lie within the Tropic of Cancer: Indeed the Indian Blacks have not the flat noses, and thick lips, or the short frizzled hair of the Negroes: But these, I think, have never been reckon'd part of Noah's curse.

Another reason assign'd for the blackness of the Negroes, is the heat of the climate; their country being situated within the Torrid Zone. But neither can this be admitted as the sole reason of it; for great part of the continent of America also lies within the Torrid Zone; and yet there never was a black man there, till the Europeans transported them thither from Africa.

Others have suggested, that the people of Africa, being of a tawny complexion, between black and white originally, and not able to make themselves as white as their northern neighbours, took great pains to make themselves black, as a more desirable colour than the olive: That they accordingly rubbed over their bodies with oil or grease, mixed with

foot, or some other black ingredient; and thereby contributed to render their complexions darker than they were originally; and that the women afterwards, seeing nothing else but black men, brought black children into the world: And these strengthen their opinions by some very notable facts. It is observed by all travellers, that the Negroes grease or anoint themselves, and their children, continually from the hour they are born; and that many of them mix black ingredients with the ointment: That the Caffries and Hottentos, beyond the Tropic of Cancer, who are not naturally of so dark a complexion as the Negroes nearer the Line, do actually darken their skins pretty much, by rubbing them with fat and foot.

Others observe, that not only the complexions; but the very features, hair, make and stature of people differ, as the country and climate differs; wherein they were severally born: And as to the Negroes in particular, their hair, their lips and noses, are not at all like those of Asia or Europe, or even those who live in the north of Africa. The Scythians, of old, and the Tartars and Laplanders, at present, are of a very different make from the people of the southern parts of Europe or Asia: The Tartars are remarkable for their olive complexions, squat make, flat faces, and little eyes set deep in their heads. In some countries the people are tall, in others short; and not only the persons, but the very genius and temper of men differ, as the soil and climate differ where they were born. The Spaniard is grave and sedate, mighty slow and circumspect in his actions; while the French are gay and airy, perpetually dancing and singing: And this difference, no doubt, proceeds from the soil and situation of the respective countries; for, transplant any people from one country to another, they will alter or degenerate into the same kind of men, in a few generations, as the former inhabitants were. If the Spaniards and French were to change countries, they would, in a few generations, alter their persons and humours; the French would be Spaniards, and the Spaniards French.

Does not every body see a remarkable difference between the French and the English, when the French first came over hither? And yet, in two or three generations, 'tis impossible to distinguish the one from the other. And so I take it to be in complexion, as well as in features and in humours: Blacks, in a few generations, would become white, if brought over hither; and possibly White men might become black, or very near it, if they were planted a few generations in the heart of Africa, especially if pains were taken to make them so, by rubbing their children with grease and foot from the time they were born, as the Africans do.

To sum up all: The Sun, no doubt, goes a great way towards the darkening the complexion of the people that inhabit the Torrid Zone; but then the soil they live upon, the pains they take to make their children still blacker, and their women conversing altogether, or chiefly with Black men, every one of these may contribute something towards making them so exceeding black; for the Sun alone, it is certain, will not do it; or the people, who live within the Torrid Zone in America, would be equally black. And, as to Noah's cursing his son Ham, it is evident, this can be of no weight; for, as I have observ'd already, great part of the people of Africa (the country his posterity are supposed to inherit) are not black: And the

CHAP.
VII.

the people of the East-Indies, who are supposed to be the descendants of Seth, the favourite son, are as black as any of the Negroes of Africk; tho' 'tis true, their hair is long, and their features much more engaging than those of the African Negroes.

If it be still doubted, whether the alteration of climate or soil will have any effect upon the features as well as complexion, we may remember, that the Turks, Persians, Indians, and Chinese, all come originally from Tartary (at least the sovereigns and governing parts of those empires); and yet they do not at all resemble the Tartars, from whence they descended, at this day, but the people of those countries they respectively possess'd to the southward of them; which, I believe, will be admitted to amount to a demonstration of what has been advanc'd on this head.

Zaara and
Biledulgerid.

I proceed, in the next place, to the description of Zaara and Biledulgerid, which are supposed to extend from the Atlantick Ocean to the east, as far as Ethiopia Superior; to run all along parallel to Nigritia; and to lie between the 20th and 28th degrees of north latitude; being bounded by the territories of the Emperor of Morocco and Barbary, on the north; by Ethiopia, on the east; by Nigritia, on the south; and by the Atlantick ocean, on the west. The north division of this country, called Biledulgerid in our maps, the Sailors charts denominate the country of Gualata; and to the south-division, which in our maps has the name of Zaara, our Mariners give the name of Arguin, from a town that lies near the mouth of a river of St. John's: However, it is agreed, that both Biledulgerid and Zaara are barren desert countries at this day, with scarce any towns in them; for which reason I have thrown them together.

The principal river is that which the Portuguese have given the name of Dorada to. There are some few lesser streams here, but none of them navigable; and the country is so very far from being well water'd, that, when the caravans cross it from Morocco to Nigritia, they do not meet with water in several days, and are forced to load one half of their Camels with water and provisions for their subsistence.

The natives of a
different complexion
from the Negroes.

What is most remarkable in the people of this country is, that they are most of them tawny: Tho' Nigritia lies contiguous to them, there are few Negroes in it; neither do the inhabitants agree with the Negroes in their religion, manners or customs. The inhabitants of this vast desert, like the Arabs, live in tents, moving from place to place, as they can meet with pasture and water for their cattle; and, like the Arabs, they live chiefly, 'tis said, by plunder and rapine: They are generally Mahometans; and probably the descendants of those Arabs, or Saracens, who over-ran all the north of Africa in the 7th century. Biledulgerid, that now lies waste, and almost uninhabited, was one of the celebrated kingdoms of Numidia, then well peopled and fruitful; and there are still the ruins of ancient palaces and temples to be met with here; but every country is the worse for being possess'd by Mahometans; they neither regard building, or the cultivation of the soil. Thus we find it in Persia; a great part of which country, by the industry of the former inhabitants, in collecting the little rivulets, and flowing of their grounds, rendered them as fruitful as other soils; whereas now great part of the same lands yield nothing but weeds and briars: And even that fruit-

Of a different religion, &c.

ful country of Natolia, or the Lesser Asia, where were so many flourishing towns and provinces anciently, is now become a desert. It is true, all soils are not alike fruitful; but good husbands will make almost any thing produce a crop by their labour and industry; whereas the careless slothful Turk can scarce subsist upon the richest soil; nor will he trouble himself to improve his country by trade, how advantageously soever it is situated; but this is left in a manner entirely to the Christians and Jews under their dominion. As we know very little more of Zaara and Biledulgerid, than that the country is a desert; and that the few people in it live in tents, ranging perpetually from place to place, and have no settled habitation; I proceed to the description of the empire of Morocco.

CHAP. VIII.

The present State of the Empire of Morocco:

In which are comprehended the Kingdoms or Provinces of Fez, Morocco, and Suz.

THE empire of Morocco lies between 28 and 36 degrees of north latitude; and between 4 and 9 degrees of western longitude, reckoning from the meridian of London, being bounded by the Mediterranean, on the north; by the river Fulvia, which separates it from Algiers, on the east; by Biledulgerid, on the south; and by the Atlantick Ocean, on the west; being upwards of 500 miles in length from the north-east to the south-west, and about 200 miles in breadth. Some extend this empire as far south as the river Niger, almost making it upwards of 1200 miles from north to south; but all that tract of land from the province of Suz to Nigritia, being only a barren desert inhabited by Arabs, who wander from place to place, and are under no manner of government, is very improperly comprehended in the empire of Morocco.

CHAP.
VIII.Situation
and extent
of the empire
of Morocco.

This empire, now call'd Morocco from a city of that name (on the north part of it at least) was the Mauritania Tingitana of the Romans, and so denominated from the city of Tingis, now Tangier, lying on the south-side of the Streights of Gibraltar. The country is finely diversified with mountains and vast extended plains, most of them very fruitful, and pretty well inhabited. The principal mountains are those of Atlas, which lie almost in the form of a crescent between the kingdoms of Morocco and Suz, and extend from the kingdom of Algier to the Atlantick ocean. There are not many woods in it, and those there are destitute of timber.

Antiently
Mauritania
Tingitana.Face of
the country.

The chief rivers are, the river Suz, in the kingdom of Suz, at the mouth whereof stands the city Santa Cruz; the river Rabata, at the mouth whereof is the piratical town of Sallee; the river Ceba, at the mouth whereof lies the piratical town of Mamora; the river Lecus, on which stands the port-town of Larrach: None of these rivers are navigable for ships; nor will the ports at the mouths of them admit of large vessels. Arzilla, to the northwards of Larrach, is another inconsiderable port-town; and the Portuguese are yet in possession of Malignan on the same coast to the southward: There are also the bays of Tangier and Tetuan in the Mediterranean, where ships may ride during some winds, but are very unsafe in others; and the Spaniards are yet in possession of Ceuta over-against Gibraltar,

Rivers
and port
towns.

C H A P. VIII. Gibraltar, and of Penon de Veloz further to the eastward : But in none of these is there any safe harbour.

Sallee, a piratical port. Sallee, on the west coast of the kingdom of Fez, is esteemed the best port the Emperor of Morocco hath : And, tho' this appears to be a pretty good harbour when a ship is got into it ; yet, at a full tide, there is not above 12 foot of water ; and the bar, at the mouth of it, is seldom to be pass'd by any thing but boats and very small vessels : And yet from this place, and Mamora, a little to the northward of it, do the Pirates of this country perpetually infest these seas, taking abundance of Christians ships, with their row-boats and small craft, with which they board and overpower merchantmen that have but few hands : And even our East-India-men and stoutest ships are under great apprehensions when they pass near this coast ; for, tho' they have no quarrel with us, they will seize and carry in our ships upon very frivolous pretences, particularly if they find passengers on board of any other nation they are at war with.

The air of the country. The air of this country is generally temperate, especially on the mountains, and near the sea-coasts, where they oftner complain of cold than heat : It freezes sometimes in the winter very hard, and the tops of the mountains are cover'd with snow great part of the year. However, in the valleys, their winter is but short ; and, when it freezes in the morning, the middle of the day is generally warm. It freezes hardest in January, as with us ; February is more moderate, and the weather variable, changing several times the same day.

Seasons. In March the north and west winds blow furiously ; in which month their trees begin to blossom : Towards the end of April they have ripe cherries ; in May, Figs ; and, in the latter end of June, all manner of fruit is ripe, except their latter Figs, which are not ripe till September. The spring (when the weather is very temperate) is reckon'd to begin the latter end of February, and end the latter end of May : Then their summer begins, and lasts to the middle of August. This is a pretty hot season, the air all the while wonderful clear and serene ; and it is usually very unhealthful, if it happens to rain in the summer ; the sun then is parching hot, and occasions malignant fevers. Their harvest begins in the middle of August, and lasts till the middle of November ; when their winter begins, and continues till the middle of February. During this time, and the beginning of the spring, they have hard gales of wind and storms, with snow, hail and thunder ; and the east and south-east winds frequently blast their fruits in the spring.

Their rainy weather begins in October, when they sow their lands upon the hills ; but, in their valleys, their seed-time does not begin till February.

Division of the empire. The empire of Morocco being divided into the three grand provinces or kingdoms of Fez, Morocco and Suz ; I shall give a brief description of each, and of the principal towns contained in them.

Province of Fez. The kingdom of Fez is bounded by the Mediterranean, on the north ; by the territories of Tangier, on the east ; by Morocco, on the south ; and the Atlantick Ocean, on the west : The chief towns whereof are, 1. Fez, the metropolis of the empire, situated in a plain on a branch of the river Cebu or Fez, latitude 33, longitude 4 west of London. This city is rather two cities joined, the one call'd Old Fez, and the other New Fez. Old Fez is situated the lowest, and has a small river running through it : The town is of a round figure, and

C H A P. VIII. about three miles in circumference : There are between 50 and 60 mosques, or Mahometan temples, in it : The houses of their Great men here, as in other places, contain several squares : Those of the common people are very mean, and the shops like so many pedlars stalls : The streets narrow and unpaved, miserably dirty in winter, and dusty in summer : Their inns, that have been so much cry'd up, are built in form of a square also, with lodging-rooms on the inside : The traveller buys his own provision, and dresses it, and has the conveniency of feeding his horses and cattle before the door of his lodging in the square : So that I find they pretty much resemble the caravansera's, or places of refreshment, on the roads in Persia and Turkey.

The town of Old Fez is defended by a double wall, and a castle on each side of it, situated upon an eminence ; but lies very much exposed, being commanded by some rising grounds in the neighbourhood ; Their best defence lies in their numbers, being able, 'tis said, to arm forty-thousand men.

The new town is separated from the other only by a small river, and has a double wall round it, with square towers, like those of Old Fez : There is also one tolerable bastion on the walls of the new town, said to have been built by an English Renegado. This town was designed as a citadel to command the old town ; and here the King always keeps a good body of horse for that end, whose principal business it is to collect the corn of the neighbouring country, and lay it up in the magazines for grinding ; of which they have several water-mills on the rivers that run by the town : Here are some palaces of the Kings and great men, but run to ruin since the court removed to Mequinez ; and the houses of the common people have only clay, or mud walls and thatch'd roofs. The new town is about a mile and a half in circumference, and very populous : The gates magnificent, and make a grand appearance at a distance ; but a traveller is miserably disappointed when he comes into it, to find little else but thatch'd cottages, besides the mosques, the magazines, and some few ruinous palaces. However, Old Fez is a town of the greatest trade of any town in the empire.

Mequinez. Mequinez, the present residence of the empire of Morocco, is situated in a delightful plain, about a day's journey to the westward of Fez, and two to the eastward of Sallee, on the same river that Sallee stands : The palace and the olive parks about it make a very beautiful appearance at a distance ; but neither does Mequinez answer the expectations of the traveller when he comes into it. It is of an irregular form, about two miles in circumference, and said to contain three hundred thousand souls : The streets, like those of Fez, are dirty in winter, and dusty in summer, meanly built, and their tradesmen have stalls on some of the highest ground in the town, where they sell their goods : Mequinez is surrounded by an ordinary wall, and parted by a road from the Negroe town, which is inhabited by the King's black troops (the cavalry, on which he principally relies) with their families.

The palace lies on the south-side of the city, and indeed is another city interspersed with parks, fields, canals and gardens : In one quarter whereof is the Haram, assign'd solely to the use of the King's women and their guard of Eunuchs : A second contains the rooms of state and audience : In a third quarter are the King's handicrafts, workmen and armoury :

CHAP. VIII. armoury : In a fourth his guards are lodg'd, where are the artillery and magazines : And in a fifth the stables : Every part divided into large squares ; being in the whole about three miles in circumference. And here the walks and pavements are kept exceeding neat, and the galleries frequently adorn'd with mosaic work. Mr. BLAITH-WAIT, who attended Mr. RUSSEL, the English Ambassador to the Court of Morocco in the Year 1727, gives us an account of that Minister's audience at the palace of Mequinez, which affords us a tolerable idea of the place and people, as well as of their prince.

The reception of the British Ambassador at Mequinez. An. 1727.

He says, on the day appointed for the audience, a Spaniard, Alcaide (Governor) of the Christians, and several officers of the palace, came to conduct the Ambassador to Court : That about twelve of them mounted, and rode in the following manner : The Ambassador, between the Bassaw who conducted him to Mequinez, and the Bassaw's brother, preceded by twenty Musketeers : The rest of the English gentlemen accompanied by another of the Bassaw's brother, and some officers of the Court : Two of the Ambassador's servants in liveries on horseback ; and after them, the captives and the Moorish and Jewish servants, who walk'd on foot. The whole clos'd with a guard of horse belonging to the Bassaw : However, a drunken Moor of quality, in the abundance of his zeal, rode in amongst them, calling them Christian dogs and rogues, presenting his piece at the English, and it was with some difficulty he was persuaded to go about his business : Nor was this insult taken any notice of ; for, it seems, a flaming zeal for their superstition is an attonement for almost any crime.

Being enter'd the first gate of the palace, they all alighted, and in the square within it were found thirteen fine Horses of the Emperor's, richly caparison'd and accoutred, and held by so many Negroe grooms for state. These the Bassaw led them to take a view of. After which, having pass'd through two or three squares more, they came to the Emperor's apartment ; but in such a crowd, that it was with a great deal of difficulty they arrived there. After some time they were conducted into a long gallery ; the floor and sides whereof were covered with small tiles, an inch square, of various colours. Hither his British Majesty's present was brought, and set out to the best advantage ; consisting of a large crystal scone with twelve branches ; eleven bales of coarse cloth, each bale containing three pieces ; three boxes of superfine cloth, containing fifteen pieces ; one box of French linen, call'd Brittanies ; two boxes, containing each fourteen loaves of double-refin'd sugar ; one box of China ware ; one box, containing eighteen pound of tea ; one box, containing three large China jars of sweet-meats ; one box of toys ; one box, with brocades, silver tabbies, thread sattins, and gold lace ; one case, containing a gun and a pair of pistols ; four chests of Florence ; and one box, containing hollands and cambricks.

Having waited here about an hour, they were conducted to an open gallery, which gave them the prospect of a fine meadow within the palace ; over the middle of which there was a terrace walk from one end to the other, thick shaded with Vines supported by an arch'd frame. Having pass'd in a continual crowd still a great way farther, they were at length stopp'd, and given to understand the Emperor was in the next room. Whereupon the Bassaw, his brothers, and several other great officers immediately pull'd off their Alhagues (their outward

vests) or habits of distinction, as well as their slip-pers, and each of the Bassaw's brothers took a China jar of sweet-meats, part of the present, to carry in to the Emperor ; and all the rest of the present was carried in, and placed in the Emperor's sight, before the Ambassador was admitted : Then two great doors were flung open, and they saw his Majesty sitting under a canopy in an open gallery ; and, at his feet, his favourite brother MULEY 'AMSTEDDY, with his Prime Minister Bassa EMP-SAEL, a great fat Negroe.

The Ambassador, being led up to the throne, pull'd off his hat, and made three bows ; and, having deliver'd the King of Great-Britain's letter, tied up in a handkerchief, into the Emperor's own hand, and a gold watch in another, he put on his hat, and made a speech, expressing the great esteem his Master had for his Imperial Majesty, condoling his father's death, and congratulating the Emperor's accession, which was interpreted (my author observes) to very little purpose ; for the Emperor was so drunk, he could scarce hold up his head : However, it seems he understood so much by the speech and the present, as to be very well pleas'd ; and answer'd *buono, buono*, ordering the Alcaide of the Christians to see they did not want Wine and roast Pigs every day, charging his Prime Minister to let the Christian Minister (the Ambassador) have whatever he demanded. Then the Courtiers prostrated themselves on their faces, and crawl'd upon their hands and knees to kiss his feet : Soon after which, his Majesty's Eunuchs, finding him much out of order, carried him away, and the Court retir'd. My author says, while the Ambassador waited to be admitted, there was such a noise and disturbance among the drunken Courtiers, that he could compare it to nothing else, but the common side of a Jail ; tho', at their audience, things were a little compos'd.

He adds, this Emperor, MULEY HAMET DUEBBY, was upwards of 6 foot high, about 50 years of age, of a fierce countenance, and much pitted with the small-pox ; his face bloated, and his fore teeth out ; and, being a Malatto of a tawny complexion, made a very indifferent figure : It being cold weather, he had a black cloak over a white Alhague or vest ; his turbant was a green silk sash, which hung carelessly about his head, and shewed he was drunk. All he had about him worth admiring was a fine scimiter in a gold scabbard, richly set with precious stones.

The Emperor being carried away, the confusion among his drunken Courtiers was as great as before ; neither was there any care taken to conduct the Ambassador back again to his house : They were push'd and shov'd about, and in danger of being trodden under foot ; and, instead of being assisted by the Officers of the Court, the gates were shut against them, and extravagant sums demanded for permission to go through them. In the mean time the throng was very great, and their very buttons were cut off their cloaths before they could get away, and they expected every minute to be stripp'd by the mob : However, by bribing the Porters very handsomely, they were so fortunate at length to escape out of the palace, and get to their house. But to return to the Emperor : It was usual with him, it seems, to drink with his Ministers, till he fell down dead drunk ; and then he was carried to bed by his Eunuchs : And, when he waked again, he was sure to give some examples of his cruel and fierce disposition ; insomuch, that his servants fled, and dreaded to come near him ; and happy was the Minister who could make an excuse to be absent.

While

CHAP.
VIII.

He murders several people.

While the English Ambassador was at Mequinez, he shot two men that waited on him, and he endeavoured to kill his Prime Minister with his own hand: But this Courtier, keeping out of the way till his fury was over, was then taken into favour again: He commanded two young Jewish women to be brought to his bed; and, when he sent them home again, hearing that their husbands had presumed to go to bed them, he ordered their husbands to be put to death: Another of his mistresses disoblighing him, he ordered all her teeth to be drawn out; and, enquiring for her afterwards, and being told she was not recovered from the illness that operation had occasioned, he ordered the man's teeth, who drew them, to be pulled out, and sent her by way of satisfaction. For any trifling offence, or for his humour, would he order a man to be tossed, that is, thrown up into the air by four lusty slaves, as high as they could, and then let fall again; whereby sometimes the person was killed, and others made cripples of: And such feasts as these, it seems, were his sport and diversion. From such a court as this, no wonder, therefore, if the English Ambassador hastened to be dismissed.

The demands of the British Court.

The demands Mr. RUSSEL was instructed to make at the Court of Morocco were, To get all such captives released, as had been taken under British colours: To get restitution made to such Merchants, whose ships had been robbed by the Sallee pirates since the last peace; and to confirm that peace with the present Emperor. But he was soon given to understand, that there was no restitution to be expected from this Court; and, for the captives, they did consent to release about a dozen of them, of which four were English: And for these the Ambassador paid a great deal more than their ransom could have been valued at. The Prime Minister, the favourite Women, and every Officer concerned in his dispatches, were bribed again and again; nor was there a servant about the Court, but was perpetually begging something of him, under pretence of some good offices they had done him: However, at a vast expence, and with abundance of difficulty, the following articles of Peace were agreed on; and those made by Admiral STEWART with the same Court, in the reign of King GEORGE I. were confirmed.

ADDITIONAL ARTICLES of Peace and Commerce,

BETWEEN the most high, and most renowned Prince GEORGE II. by the Grace of God, King of Great-Britain, France and Ireland, Defender of the Faith, &c. and the most high and glorious, mighty and right noble Prince, MULEY HAMET DAHREBY, BEN MULEY ISMAEL, BEN MULEY ZERIPH, BEN MULEY ALY, King and Emperor of the kingdoms of Fez, Morocco, Taffilet, Suz, and all the Algarbe, and its territories in Africa, &c. concluded, agreed, and adjusted by JOHN RUSSEL, Esq; on the behalf of his Britannick Majesty; and by his Excellency Bassaw HAMET, BEN ALY, BEN ABDALLA, and his Imperial Majesty's Admiral of Sallee, HADGEZ, ABDELCAHER, PEREZ, on the behalf of the Emperor of Fez and Morocco.

The Articles of Peace and Commerce.

ARTICLE I. That all Moors and Jews, subject to the Emperor of Morocco, shall be allowed a free traffick, viz. to buy or sell for

thirty days in the city of Gibraltar, or island of Minorea, and not to reside in either place, but to depart with their effects, without lett or molestation, to any part of the said Emperor of Morocco's dominions.

ARTICLE II. That the King of Great-Britain's subjects, residing in Barbary, shall not be obliged to appear before the Cadi, or Justices of the country; but only the Governor of the place; and his Britannick Majesty's Consul, are to take cognizance of, and adjust the differences they may have with the natives of the country.

ARTICLE III. That the menial servants of his Britannick Majesty's subjects, tho' natives of the country, either Moors or Jews, be exempt from taxes of all kinds.

ARTICLE IV. That all his Britannick Majesty's subjects, as well passengers as others, taken by any of the Emperor of Fez and Morocco's Cruisers, on board any foreign ship or vessel whatever, shall immediately be set at liberty, and sent to the city of Gibraltar.

ARTICLE V. That there be permission for buying provisions, and all other necessaries for his Britannick Majesty's fleet, or city of Gibraltar, at any of the Emperor of Fez and Morocco's sea-ports, at the market-prices; and the same to be shipped off without paying custom, as has been extorted lately, contrary to the treaty of peace subsisting.

ARTICLE VI. All other Articles, being fifteen in number, concluded, agreed, and adjusted by the honourable CHARLES STEWARD, Esq; on the behalf of his Britannick Majesty, and by his Excellency Bassaw HAMET, BEN ALY, BEN ABDALLA, and his Imperial Majesty's Treasurer, Mr. MOSES BEN HATTAR, a Jew, on the behalf of the said King of Fez and Morocco, shall stand good, and be of the same force, as in the reigns of the most high, and most renown'd Prince GEORGE I. King of Great Britain, France and Ireland, &c. of glorious memory, and the high and glorious, mighty and right noble Prince, ALBUMAZAR MULEY ISMAEL, late Emperor of Morocco. And it is farther agreed, that all the Articles aforementioned, as well the fifteen, as these additional ones, shall in twenty days after the date hereof, be publish'd in the Arabick language, and affix'd on the gates of all the sea-port towns in his Imperial Majesty's dominions.

Sign'd and dated at the Court of Mequinez, January 14. 1727-8.

Soon after the signing this treaty, the Ambassador took leave of the Court of Mequinez, and began his journey for Tangier under a Moorish guard commanded by officers, who had money allowed them, by their superiors, to defray the whole expences of the journey; however, they put it in their pockets, made the Ambassador pay his own and their charges upon the road, and yet forced the country people to furnish provisions, without allowing any thing for them: and, when the Ambassador came to Tangier, he was under apprehensions of being detain'd there by the Bassaw, under pretence of some further demands: But the Bassaw, being then treating with the Governor of Gibraltar for powder and other warlike stores he wanted, was so good as to permit the Ambassador to embark for Gibraltar, where he

CHAP. VIII. he arriv'd the 7th of February 1727-8. He had been promis'd two fine Barbary Horses, and a Lion, by the Court of Mequinez; but, it seems they never intended to gratify him in this particular, unless he would have paid double the price of them, as he did for every thing else: And he was very glad to make his escape from that barbarous Court without them.

The several quarters of the city of Mequinez.

But to return to the description of Mequinez: This city, as has been observ'd, is divided into several quarters, or rather is several cities united: The palace is a distinct town: The quarter of the Moors is another: The Negroe town a third; and the Jews have a quarter to themselves, in which there does not less than fifteen thousand of them inhabit, being allowed a Shiek, or Governor, of their own nation: And, tho' the Princes and Great men insult them sometimes, yet the Government take a particular care of their protection; for, when Mr. RUSSEL was there, five Moors were crucified for murdering a Jew; and indeed they are so useful here, that the Government cannot do without them. All money affairs, and all foreign trade, are negotiated and carried on in this country by the Jews; their principal employment at Mequinez, is working in Gold and Silver, changing of money, and lending it upon usury: And not only the Jews, but the Christian slaves, have their Alcaide, who is a Christian and their Protector, and are allowed to carry on any business almost. Several Christian slaves get money here, and are allowed a property in it; in which respect their condition is to be prefer'd to that of the Moors themselves.

Jews the only Merchants.

A Convent at Mequinez.

Here also is a Convent of Spanish Friars allow'd, that is endow'd with a revenue of five hundred pistoles a year, for the relief of captives, both with food and physick, for preventing their turning Mahometans: These also are under the Emperor's protection, on account of their taking care of his sick slaves, and the presents they annually make him: They have an Infirmary capable of entertaining an hundred persons; and to these the captives apply when they are sick, lame, or in any other distress.

The condition of Christian slaves here.

My author adds, that in the late Emperor MULEY ISMAEL's time the case of the Christian slaves was a great deal worse than it is at present; for he employ'd many of them in his buildings: However, their work was not harder than that of our day-labourers. And he gave several of them licences to keep taverns, on condition of subsisting their poor brethren; to whom he also order'd a daily allowance of bread: Nor were masters of ships, or those who had a little money to bribe the Alcaide, forc'd to work at all. But further, the Canute, where the Captives are lodg'd, is a much better place than any of our common prisons: Here every nation has a distinct apartment, in which are taverns and a market of all manner of fruit and eatables: Nor are any of the Moors suffer'd to disturb them, or indeed to come into their house but upon permission. My author adds, that he saw several captives at Mequinez, who liv'd much better than ever they did in their own country; and they have not only the Spanish convent to go to in their distress, but whatever money their friends send over for their subsistence, is faithfully deliver'd them, unless they defraud one another; nay, several captives have grown rich here, and carried money out of the country; and some of them, that were at Mequinez when Mr. RUSSEL was there, kept their mules and their servants. Where-

upon our author observes, it is not so insupportable a slavery as has been represented. There may have been some instances of cruelty towards the captives, but not many; and they have themselves sometimes, by needless provocations, drawn on them the ill usage they met with. They have also this farther satisfaction, to be slaves only to the Emperor; for he reserves all the Christian captives that are taken to himself, and very rarely parts with any of them to his subjects.

CHAP. VIII.

The most wretched and abandon'd people at Mequinez, are the Renegadoes, who have renounc'd Christianity, and turn'd Mahometans: These are despis'd by the Moors to the last degree, and deserve to be so by every body else, not only on account of their changing their religion, but because they prove the most vicious, treacherous, dissolute mortals that the country affords. They are generally entertain'd in the army, where they are half naked and half starv'd; unless some few of them, who understand engineering or gunnery, or such as can be useful to the Moors in fitting out their piratical vessels at Saltee: These are pretty much careis'd, and perhaps contribute more to the making prizes of the shipping and merchandize belonging to the Christians than the Moors themselves: They have their own Alcaide, or Governor, as the Christians and Jews have theirs.

The next town I shall describe in the province of Fez is Tetuan, which is situated on the ascent of a rock, about eight miles from a Bay of the Mediterranean sea, call'd from this place Tetuan Bay, and is between 20 and 30 miles south of Ceuta, and about 50 south-east of Tangier. The Town is about a mile long, and half a mile broad, and has a fine prospect of the sea and the country beneath it: The streets are narrow, unpav'd and full of dung-hills, which makes it a filthy place in winter; and yet this is said to be one of the best towns in the country, on account of its being better built than most others. Their houses are usually built about a little open square, with piazza's supporting galleries above them; and in the middle of the square people of substance always have a fountain. There are commonly four rooms on a floor, one on every side of the square, which have no other light than what they receive from the great folding-doors that open into the piazza.

Tetuan describ'd.

The town of Tetuan contains about thirty thousand inhabitants, of which five thousand at least are Jews, who have seven synagogues here; but, tho' their numbers are so great, they have not two hundred houses amongst them, several families living under the same roof. They are said to be very poor, tho' all the trade of the place passes through their hands; for they are the only brokers between Christians and Moors. One thing which seems particular to this town, is, that the people walk on the tops of the houses, and visit one another from thence, more than by the streets. The town is surrounded with an ordinary wall, and defended by an old castle, consisting of two squares; the outward square flank'd with towers, but the walls not cannon proof, and it is commanded by hills about it. They have a burying-place, on a hill above the town, adorn'd with such numbers of cupola's and pyramids, that it looks like a town itself; but what is best worth seeing in Tetuan, is the Bassaw's palace.

The entrance into this palace is by a cloyster, which leads to a spacious square, surrounded by a piazza, and in the middle a marble fountain; the pavement of the area and the piazza being of a mosaic

The Bassaw's palace.

CHAP.
VIII.

saic work: On each side the square is one large room, and in each of the angles a square tower of a considerable height above the building; in two of which are stair-cases, that lead to the grand apartment above: In the third is a door that leads to a mosque; and in the fourth another, through which they go into the gardens. On each side of the galleries above, which run over the piazza, are fine apartments for the Bassaw's four wives; each apartment consisting of five rooms, namely, one large room, cover'd with a cupola, in the centre of four lesser rooms; and through these are doors, that lead to the bagnio's of the women, and the lodgings of the female slaves; but the inner rooms have no other light, than what they receive by the door of the great outward room: Both the doors and ceilings of the house are very lofty; and over the women's apartment are four noble terrace walks, that overlook the town, a frightful vale beneath it, the river, and part of the Mediterranean sea; and at the end of each terrace, is a turret with latices, where the women sit to work, and can see all that passes without being seen: In the evening the ladies usually walk in the garden; where several of the walks are shaded with Vines turn'd over arches: the walls of the garden being so high, that they cannot be overlook'd from any part of the town. This description of Tetuan, and the palace, is taken from Captain BLAITHWAIT, who has also describ'd another elegant seat of the same Bassaw in the neighbourhood of Tetuan: And, as these may serve as a model of all other houses of the Moors of any quality (for they scarce ever vary in their form) and will give us the most advantageous idea of them, I shall take leave also to subjoin the following account of his country seat.

His country seat.

This palace stands in a pleasant valley, about two miles from Tetuan, and consists of two large squares surrounded by piazza's, and galleries over them: In the middle of the outward square is a fountain, and the area, as well as the piazza, pav'd with Dutch tiles: The inner square is much larger than the first, to which there is a descent by several steps: In the middle of it is a fine square parterre, and in the centre of that a circular basin, with Orange-trees and flower-pots about it: There are four openings to descend by steps into the fountain on one side, and over-against these four alcoves; in one of which the Bassaw frequently sits to see his women bath themselves: Beyond both these squares is a very large garden, and a wilderness, consisting of Orange-trees, Lemon-trees, Figs, Pomegranates, Dates, Tamarinds, and other fruit: in which are two bowers; and by the side of the garden runs a river, which altogether make it a most agreeable retirement. My author observes, that the Moors of quality in Barbary have scarce any pleasures, but what they take in their women, their houses, gardens and horses: Conversation with men is what they do not relish at all; the reason of which is supposed to be, that their law prohibits them wine, without which, good humour, and a sprightly conversation, cannot be long kept up: And this may be the case with some people possibly; but I cannot help being of opinion, that most men are in reality better company without strong liquor, than with it.

Tangier.

The next town I shall describe is Tangier, because it was once ours; tho' there is scarce any thing in it worth mentioning at present. This town is situated on a bay of the sea near Cape Spartel, just at the entrance of the streights of Gibraltar, on the African side: It is built on the declivity of a hill, which makes it excessive hot in summer, the after-

noon sun lying full upon it. When the English had it, the walls were upwards of a mile in circumference, and they had lines and redoubts that took in the neighbouring hills, with two castles, the upper and lower, for its defence; in the former whereof lived the English Governor, and the Bassaw at present: And there was a mole built for the security of shipping, the heads whereof run out 300 fathom into the sea, and were defended by three batteries of cannon; but these and most of the works were blown up, or demolish'd by the English, when they abandon'd the place, and it is now not very strong: There is but one single mosque in the town, and another in the castle; however, it makes a tolerable appearance from the sea, the houses being white, and all in view; but they have scarce any trade. This, as has been observ'd, was the Tingis of the ancients; and from it this part of Africa was call'd Mauritania Tingitana. ALPHONSUS the fifth King of Portugal, took it from the Moors in the year 1463; and, in 1662, the Court of Portugal transferr'd it to CHARLES II. King of England, on his marriage with the Princess CATHERINE, Infanta of Portugal. The English kept it twenty-two years, and laid out a great deal of money on the mole and fortifications; but the parliament refusing to let the King have money to maintain the garrison, he found himself obliged to quit the place; though, 'tis agreed, it would have been of very great service to the nation, if we had been masters of it in the last wars with France and Spain.

The kingdom of Morocco, the next division of Morocco. this empire, is bounded by the kingdom of Fez towards the north; by the mountains of Atlas, on the east; and by the same mountains, which separate it from the province of Suz, on the south: The chief town whereof is Morocco, a large old city, situated in a fine plain about the centre of the kingdom, latitude 31 and a half, west longitude 7 degrees. This, in some of our old writers, is said to be one of the greatest cities in the world; to contain an hundred thousand families; to be elegantly built, especially their mosques and palaces: But all these matters appear to have been wonderfully magnified; and, since the seat of the empire has been removed from thence, the town is extremely declin'd; and as to the fortifications so much talk'd of, they would not be able to hold out twenty-four hours against an army prepared for a siege. The rest of the towns mention'd by Geographers in this province are, Elgiamba, Imegiagen, Imzimzi, Delgumba, Agmet, Teneffa, which have little in them that deserve a particular description, and are most of them, indeed, no better than open villages; tho' some writers have dignified them with the name of cities.

The province of Suz, in which I comprehend Suz. that of Tafilet, is bounded by Morocco, on the north; by Biledulgerid, on the east and south; and by the Atlantick ocean, on the west: The chief towns whereof are, Taradant and Tafilet; the former the capital of Suz, and the other of the province of Tafilet: The rest of the towns mention'd in the province of Suz are, Messa Guargesen, Tejeat, Garer, Tagovost, Tedsi, Santa Cruz (a sea-port) and Illec: But the only town travellers mention in Tafilet, is the capital of the same name, situated in latitude 26 and a half, longitude 2 degrees west of London. The present imperial family came from the province of Tafilet; MULLEY ISMAIL, the late Emperor, was of that country; which, lying the farthest south of any

C H A P. VIII. of the territories belonging to this empire, and his mother being a Negroe, the complexion of the royal family is exceeding dark; for the inhabitants of this empire differ much in their complexion according to their situation; those to the southward are very tawny, as are also the Arabs, who range about the plains, and live in tents like the Arabs of Asia; the Moors and Jews, who live in towns and on the sea-coast, are many of them fair; and those that inhabit the villages on the mountains, are not of so dark a complexion as the Arabs: As to the Blacks, that of late years have had the administration of the Government, and compose their best cavalry, these being brought from Negroland, or descended from parents who came from thence, differ very little from the Guinea Negroes.

Habits.

The habit of a Moor is a linen shirt or frock next his skin, a pair of drawers, a sash, and over all a loose coat, or vest, of silk or cloth, with small buttons of gold, silver, or other metal: Their arms are bare to the elbow, as well as their legs; but people of distinction sometimes wear Turkey-leather buskins, and most of them sandals or slippers: They shave their heads all but one single lock upon the middle of the crown, and wear a turban, which is never pull'd off before their superiors, or in their temples; they express their reverence, both to God and Man, by putting off their slippers, which they leave at the door of the mosque or palace, when they enter either; and, when they attend their Prince in the city, they run barefoot after him, if the streets are never so dirty: Their Turbans are of silk or fine linen, some of them five or six ells long, and in their sash or girdle, under their outward garment, they usually carry three fine knives in a silver scabbard about a foot long, adorn'd with precious stones: Their handkerchiefs, and such things as we carry in our pockets, they have in their bosoms: They never shave their beards, but clip them into form, and keep them very neat.

The habit of a woman is not very different from that of a man, except that she wears a fine linen cloth, or caul, on her head instead of a turban, and her drawers are much larger and longer than the mens: The women also, when they go abroad, have a linen cloth over their faces, with holes in it for their eyes like a mask: Those of quality wear pendants in their ears, and bracelets on their arms; but wrap themselves up in a white cloth, several ells in length, when they walk in the streets; so that little of them is seen: They paint and colour their hair and eye-brows with burnt Antimony, endeavouring to make them look as black as possible, and the ends of their fingers are painted blue. I have already described the houses of the Moors,

Furniture.

but not their furniture, which is but mean: They have neither wainscot nor hangings, neither beds, chairs, stools, tables or pictures; they sleep upon a mattress on the floor, which, in the houses of persons of quality is cover'd with carpets, and the meaner people have mats: On these they sit cross legg'd also at their meals, having pillows and cushions to lean on. They wash always before and after they eat, wiping on their handkerchief; but have neither table-cloth or napkin. Rice seems to be a great part of their food here, as well as in the east; tho' they eat also bread, beef, mutton, veal, fish and fowls: Their favourite dish is Cuscusou, which is fine flour grain'd as large as hemp-seed, and stew'd with mutton, fowls and roots: When it is enough, they put the flour thus grain'd into a large

dish, leaving a vacant space for the meat and fowls in the middle, and then pour in the broth. This dish is very high season'd with Garlick, Onions and spices, and garnish'd with whites of eggs. Their meat is all boil'd and roasted to rags, so that they can pull it to pieces with their fingers; and this is very necessary, because they use neither knives nor forks; but, having wash'd their hands, every man tucks up his sleeves, and, putting his hand into the dish, takes up and squeezes together a good handful of all the ingredients, as much as his mouth will hold; and consequently their food is neither very hot when it is brought before them. Their cups and dishes are of brass, pewter, earth or tin, the law prohibiting their using gold or silver vessels; and, as wine also is forbidden, they drink nothing but water, sometimes mixing it with honey: If they have a dish of soup or other liquids, they eat it with a great wooden spoon, which is handed round the company. At an entertainment the desert usually consists of the fruits of the country, such as Grapes, Oranges, Figs, Pomegranates and Melons.

They smoke pretty much, and play at draughts and chess; but never for Money; this being another prohibition of their law: And I should have remember'd, that they are as scrupulous of eating blood as the Jews; and therefore cut the throat quite through of every beast they kill, and drain all the blood from it. The company are sometimes entertain'd with musick and dancing; but people of any fashion never dance themselves; and tho' their musick is not very agreeable to an European ear, they seem extremely pleas'd with it themselves.

The Moors are said to be a covetous, inhospitable people, intent upon nothing but heaping up riches; to obtain which they will be guilty of the meanest things, and stick at no manner of fraud; and, as they know themselves to be such treacherous, deceitful wretches, they are very suspicious of foreigners. The Arabs also have always had the character of a thievish pilfering generation; and, 'tis said, will even rob and destroy one another, when they have no body else to prey upon; and, as they perpetually lead a rambling life, are observ'd to be of a more tawny complexion, and much thinner and leaner than the Moors. The people, who inhabit the hills, and who have the least to do with the Court or with traffick, are much the plainest, honestest people amongst them, and still retain a good share of liberty and freedom, the Government using them rather as allies than subjects, lest they should entirely disown their authority. But to proceed in the character of the Moors: They are observ'd with all their bad qualities to be very dutiful and obedient to their parents, their princes and every superior; but, under an arbitrary government, where none dares resist on peril of his life, this may rather be the effect of their fear, than their virtue. Another thing however they are certainly to be commended for; and that is, their Reverence for God and Religion, and whatever is esteem'd sacred amongst them: They will not suffer these to be burlesqu'd, and made a jest of by prophane fools, which is too often conniv'd at among Christians, and sometimes encourag'd by those who ought to give a better example; neither do they imitate us in fashionable murder, destroying each other, like fools of honour, in duels. 'Tis acknowledg'd they do not want courage; and yet their quarrels rarely proceed

The complexion of the natives.

Genius and temper of the Moors.

Arabs.

CHAP. proceed to blows, and scarce ever to the taking
VIII. away each others lives: Tho', 'tis observ'd, they
have not the same tenderness for Jews and Christians, and the enemies of their religion: It seems to be an universal opinion among them, that the cheating, robbing, and even killing of these is meritorious; and did not the Government, for political reasons, restrain their subjects from these outrages, there would be no living amongst them for one of a different faith. And this leads me to consider their Laws and the Constitution of their Government.

Laws and Government. Here, as in all other Mahometan countries, the Alcoran, and their comments upon it, are their only written laws; and their Cadi's, and other Ecclesiasticks, their only civil magistrates: And tho' these seem to be, in some instances, controll'd by the arbitrary determinations of their Princes, Bassaws, Generals and military officers; yet the latter have a very great deference and regard for their law: And indeed, if their Princes or Governors are found to despise and slight their law in any notorious instances, how loyal soever the Moors may be in all cases where their religion is not concern'd, this would be look'd upon as a sufficient ground for renouncing their authority. The present Emperor, by his drunkenness, which their law forbids, has lost the hearts of the best part of his subjects, and is maintain'd on the throne purely by the power of his Negroe troops, who probably profess themselves Mahometans, only because it is the Court religion, and are as great lovers of wine as the Prince they serve.

Succession of the crown. The late Emperor MULEY ISMAEL sat upon the throne sixty years; his mother, as has been already observ'd, was a Negroe, which possibly might make him less acceptable to his Moorish subjects, and put him upon establishing the Blacks, and giving them in a manner the dominion of the country for his own security. As the crown seems to be in the disposal of the reigning Prince, MULEY ISMAEL appointed the present Emperor MULEY HAMET, his son by his favourite wife, to succeed him, tho' he had an elder son by a former wife, named ABDELMELECK, who being Governor of the Province of Suz at the death of MULEY ISMAEL, disputed the title of MULEY HAMET, and, obtaining a victory over an army of his Negroes, possess'd himself of the kingdom, or province of Morocco, as well as that of Suz; but impolitickly declaring, that he would extirpate all the Blacks, when he came to the throne, they united against him as one man, and the country has been in a state of civil war ever since; the Blacks adhering to MULEY HAMET, and the Moors, that dare declare themselves, to ABDELMELECK. As to the more ancient history of this country, I shall defer it till I have describ'd the rest of Barbary, and then give it entire.

Their Magistrates, as has been observ'd, are either Ecclesiasticks, or military officers: Their Cadi's are judges of all religious and civil affairs; and their Bassaws, Governors, Alcades, and military officers, of what concerns the State or the Army. If a Moor should turn Christian, or a Renegado, after he has profess'd Mahometanism, apostatize from it, he is burnt without mercy. Murder, theft and adultery, also are generally punish'd with death; and their punishments for other crimes, particularly those against the State, are very cruel: As impaling; dragging the prisoner through the streets at a mule's heels, till all his flesh is torn off; throwing him from a high tower upon iron hooks;

CHAP. hanging him upon hooks till he dies; crucifying
VIII. him against a wall; and indeed the punishment, as well as condemnation of criminals, is in a manner arbitrary. The Emperor, or his Bassaws, frequently turn executioners, shoot the offender, or cut him to pieces with their own hands, or command others to do it in their presence.

Land-forces. As to their military forces, were they assembled in one place, they would certainly constitute a very numerous and formidable army. It is computed, that the Black cavalry and infantry do not amount to less than forty-thousand men, and the Moorish horse and foot may be as many; but, being dispers'd in several parts of this large empire, are not seen in such numerous bodies as the Negroes, who live at Mequinez, and have the guard of the Emperor's person: The Blacks are esteem'd their best horse, and the Europeans have been sensible of their bravery and military skill, both at Oran and Ceuta: They have fire-arms, as well as swords and lances: Their Troopers ride very short, and their saddles have long peaks before and behind: Their stirrup-irons are shap'd to the foot, so that they can stand up and strike when they make their blow; and no men shew more dexterity in riding, wheeling or firing: Their horses are very swift, and beautifully made; but not so heavy and strong as ours.

It is their cavalry they chiefly rely upon, both in their civil wars, and those with foreigners. Their infantry indeed are numerous, and carry fire-arms; but are not disciplin'd, and observe no manner of order; and, as their country is generally open, know not how to defend themselves against a body of horse; five hundred of their foot will fly before a troop of fifty horse: Nor do they understand how to attack, or defend a town; which may be the reason they have scarce one place of any strength in the country, and but few guns mounted on the walls of their towns. They seem very ignorant in the management of great guns and bombs. These are altogether left to the skill of renegado Christians, of whom there are some thousands in their armies. They have a train of an hundred and fifty brass guns in the palace of Mequinez, besides several mortars, which are sometimes drawn out in times of danger; but I do not find there are any mounted upon the walls.

Strength at sea. As to their shipping: Captain BLAITHWAIT relates, that, when he was there in the year 1727, their whole naval force consisted but of two twenty gun ships, the biggest not above 200 tons, and a French brigantine they had taken, with some few row-boats; and yet with these, being full of men, do they issue out from Sallee and Mamora, which lie on the Atlantick Ocean, near the Streights mouth, and make prizes of great numbers of Christian merchant-ships, carrying their miserable crew into captivity. Tho' they are at peace with Britain; they make no scruple of seizing and carrying their ships into Sallee, if they find a passenger on board belonging to a nation at war with them; however, they are usually so good as to dismiss the ships, and their crews, after they have robb'd them of some of their merchandize. The charge of these piratical cruizers is borne entirely by private adventurers; tho' the Emperor has a tenth of all the prizes they make, and all the captives that are taken; which leads me to enquire into the Revenues of this Prince.

Revenues of the empire. These arise either from the labour of the husband-men, and the fruits of the earth; or by duties upon goods imported and exported: The Emperor has a tenth

CHAP.
VIII.

tenth of all corn, cattle, fruits and produce of the soil, as well as the captives; and a tenth of all the prizes that are taken. The port-charges of ships, that trade to the dominions of the Emperor of Morocco, are one barrel of powder for entrance, twelve ounces for loading and anchorage, and twelve to the Captain of the port: Vessels, trading to and from Gibraltar, pay but half this duty for loading and discharging.

Customs.

The duties on goods exported are, on Wax, per hundred weight, twenty-five ounces; Tangout, six ditto; old Copper, twelve; red Morocco skins per half dozen, one; ditto other colours, two blanquils; Hides tanned or raw, each two ditto; Wool, Dates, Almonds, Gums, Soap, great quintal, three ounces; Tallow, per small quintal, six ounces; Mats, per bale, six; Goat-skins in hair, per bale, six; Calves-skins dress'd or raw, one blanquil; Sheep-skins, per half dozen, two: His whole revenue being estimated at 500 quintals of silver, each quintal worth three hundred and thirty pounds sterling.

Coin.

The Coins of this Empire are, 1. A Fluce, a small copper coin, twenty whereof make a blanquil of the value of two-pence sterling. A Blanquil is a little silver coin, which is made still less by the Jews clipping and filing it. The Moors, therefore, who have always scales in their pockets, never fail to weigh them; and, when they are found to be much diminished in their weight, they are re-coin'd by the Jews, who are masters of the Mint, by which they gain a considerable profit, as they do also by exchanging the light pieces for those that are full weight. Their Gold coin is a Ducat, resembling the ducat of Hungary, worth about nine shillings sterling, and they usually give three of them for a moidore. Merchants accounts are kept in ounces, an imaginary coin, ten of which make a ducat in Merchants accounts; but, in payments to the Government, 'tis said, they will reckon seventeen ounces and a half for a ducat.

When Gibraltar was besieg'd by the Spaniards, the Moors and Jews, at Tetuan and Tangier, lower'd the price of the moidores and other gold coins the English paid them for provisions, and raised their own silver. They also frequently put light money on the seamen, and then got money of them for exchanging it again: And, tho' they will give but thirty-seven ounces for a moidore upon the sea-coast, when foreigners come to traffick with them, they will give forty-five ounces for a moidore at Mequinez and the inland towns. Four blanquils, or two-penny pieces, when full weight, pass for an ounce; but their blanquils, being so very thin, clipp'd and crack'd, make payments very troublesome; for scarce any other money pass'd, their gold being generally hoarded up.

Animals.

The Animals of this part of Africa, whether wild or tame, are much the same we meet with to the southward, except the Elk, the Elephant, and Rhinoceros, which no travellers pretend to meet with in the empire of Morocco; and, as they want these, so they have some others, that are not to be found in the south of Africa, particularly Camels, Dromedaries, and that fine breed of horses call'd Barbs; which, for their beauty and swiftness, can scarce be parallel'd in the world: As to Buffaloes, Cows, Oxen, Sheep, Goats, Deer and Hares, they have great plenty of them: Their deserts also are very much infested with Lions, Tygers, Leopards, and Serpents of a prodigious magnitude. But, as to their Dragons and flying Serpents, that travellers and voyage-writers of the last age talk'd so much of,

these may be put into the list of their monsters that never had any existence in nature. They have also great numbers of Ostriches, Pheasants, Partridges, Turkeys, and other fowls wild and tame; and their seas and rivers abound with fish. As for domestick animals, they keep the greatest number of Dogs of any people, which make such a barking in their towns all night, that there is no resting for them: And as these are their favourites; so Hogs are the aversion of Moors, Arabs and Jews, being prohibited by their respective laws to eat swine's flesh: These, therefore, are left entirely to the Christians. On the other hand, 'tis said, the Moors and Arabs will eat the flesh of Camels, and of many other animals, which we refuse.

The most useful creature they have, is the Camel, which serves them not only for meat and drink, but will carry a burthen of a thousand weight, and travel eight or nine days without water, and with very little food: Some few balls, made up of barley paste, is all they give them on a journey. These animals are extremely proper for their sandy plains, several of which are many days journey over, and not a drop of water to be met with; inasmuch, that they are forced to load one half of the Camels with water, for the use of the merchants and people belonging to the caravans they send into the east and south: But, tho' the camel carries his burthen with ease over a level sandy plain, he is very ill made for going up hill or down; nor does stony or slippery ways suit with his soft tender feet; a mile in such a road wearies him more than ten upon the dry sand; and sometimes after rain, when the ways are slippery, their caravans are forced to lie still till they are dried again, lest their Camels should slip down and lame themselves: Nor are their Horses to be admir'd only for their beauty and speed, but their use in the wars; being extremely ready to obey their riders upon the least sign in charging, wheeling or retiring; so that the Trooper has his hands very much at liberty, and can make the best use of his arms. The Roman historians relate, that the Numidians and Mauritanians, who possess'd the coast of Barbary formerly, made no use of bridles, even in an engagement; but that their cavalry were manag'd altogether by signs, or the voice of their masters. But I don't find they ever put their Horses to drawing, or carrying burthens. In their husbandry they plow with Oxen, and the Camels and Mules are the beasts of burthen; and they have Mules to draw their carriages: The Arabs also live pretty much upon the milk of their Camels, as well as that of Cows and Goats.

As to the produce of the soil, they have or might have vast quantities of corn, wine and oil: No country affords better Wheat, Barley or Rice; both the French and Spaniards fetch these from the Barbary coast when they have a scarcity at home: And our garrisons of Gibraltar and Port-Mahon have been supplied with provisions from the African coast, tho' I think the natives of Fez and Morocco make some scruple of sending corn out of their country, it being prohibited by their law; but the Turkish ports to the eastward are not so squeamish, it being one of the best articles in their trade. The plains of Fez and Morocco are well planted with the finest Olives, that yield delicious oil; and there are no better Grapes for making wine in the world, as the Jews at Tetuan experience; tho' the cultivation of Vines is not encourag'd, wine being prohibited them: However some of their Great men, who do not stand in awe of their Priests, will drink wine when they can get it, and that pretty openly. The Jews also

CHAP.
VIII.Camels,
their usefulness.

Horses.

Produce
of the
soil.

CHAP. VIII. also distil spirits in Barbary, for which they meet with a quick market, even among the Mahometans, who do not, possibly, look upon this as wine. However, I find sobriety to be still a very advantageous character among the Turks: The less a man drinks, the more he is esteem'd; and therefore most of them chuse to confine themselves to Sherbet, Coffee and small liquors; and, when they have a mind to intoxicate themselves, do it with Opium. But to return to the produce of the soil: Besides the fruits already mention'd, they have Dates, Figs, Raisins, Almonds, Apples, Pears, Cherries, Plums, Citrons, Lemons, Oranges, Pomegranates, with plenty of roots and herbs, in their kitchen-gardens; and their plains produce excellent hemp and flax: As to forest-trees, I find they have but few, and scarce any good timber; possibly their soil is not proper for timber, or they take no care to preserve it, having very little use for any. Here are some mines of very fine Copper, but it is not very plentiful; and, as for the Gold and Silver mines mention'd by some writers, I cannot learn that any such have ever been open'd in this country.

They have no shipping to carry on a foreign trade by sea: But the Europeans bring them whatever they want from abroad; as Linen and Woollen cloth, Stuffs, Iron wrought and unwrought, Arms, Gunpowder, Lead, and the like; for which they take in return, Copper, Wax, Hides, Morocco leather, Wool (which is very fine) Gums, Soap, Dates, Almonds and other fruits.

Trade by land. Their trade by land is either with Arabia or Negroeland: To Mecca they send caravans, consisting of several thousand camels, horses and mules, twice every year, partly for traffick, and partly upon a religious account; great numbers of Pilgrims taking that opportunity of paying their devotions to their great Prophet. The goods they carry to the East, are woollen manufactures very fine, Morocco skins, Indigo, Cochineal and Ostrich feathers: And they bring back from thence, Silks, Muslins and Drugs. Caravans. By their caravans to Negroeland, they send Salt, Silk and Woollen manufactures, and bring back Gold and Ivory in return, but chiefly Negroes; for from hence it is, that their Emperor chiefly recruits his Black cavalry, tho' there are also great numbers born in the country, for they bring those of both sexes very young from Negroeland; the females for breeders, and the males for soldiers as they grow up: They first carry a Musketeer and serve on foot, and after some time are preferred to be Cavaliers. And as these have no other hopes or dependance but the favour of the Emperor, they prove much the most dutiful and obsequious of all his subjects; and indeed support the Prince in his tyranny over the rest, who would not probably have borne the barbarous cruelties of the two last reigns, if they had not been govern'd with a rod of iron in the hands of these Negroes; who, like other foreign mercenaries, never enquire into the reasonableness of their Prince's commands, but execute his most inhuman decrees without remorse. But to return to their caravans: They always go strong enough to defend themselves against the wild Arabs of the deserts in Africa or Asia; tho', notwithstanding all their vigilance, some of the stragglers and baggage often fall into their hands: They are also forc'd to load one half of their camels with water, to prevent perishing with drought and thirst over these extensive deserts; and there is still a more dangerous enemy, and that is, the sand itself: When the winds rise, the caravan is perfect-

VOL. III.

ly blinded with the dust; and there have been instances, both in Africa and Asia, where whole caravans, and even armies have been buried alive in the sands. There is no doubt also, but both men and cattle are sometimes surpriz'd by wild beasts, as well as robbers in those vast deserts. But what I had almost forgot to mention, tho' I have frequently suffer'd by them myself, are the hot winds: These, blowing over a long tract of burning sand, are equal almost to the heat of an oven, and have destroy'd abundance of merchants and pilgrims: In short, if it was not for devotion, or in expectation of very great gains, no man would undertake a journey in these deserts; so great are the hazards and fatigues they must of necessity undergo, and many of them frequently die in the voyage. However, as those that go to Mecca assure themselves of paradise if they die, and have uncommon honours paid them at home if they survive, people croud to be taken into the eastern caravans: And the Gold that is found in the south, makes them no less eager of undertaking that journey.

As to the religion of this country: Having given a very full account of the Mahometan superstition, in treating of Persia, Arabia and Turkey, in the first volume of *Modern History*; I shall take but a short view of it here. They are of a different sect from the Mahometans of Turkey and Algiers, and have also a Musti or High-priest of their own, who resides at Mequinez: And under him are Priests and Ecclesiasticks in every city and town, who determine civil as well as ecclesiastical causes, and officiate in their mosques. But besides these, they have their Saints or Marabouts, that live retir'd in the mountains and unfrequented places, for whom they have such a veneration, that, if a criminal can escape to their abodes, the Officers of Justice dare not seize him, and the Saint frequently procures the offender's pardon: These have a very great influence on all degrees of men; and some of them, I perceive, are temporal as well as spiritual Lords, having whole towns and countries that are their vassals; indulging themselves in a reasonable number of wives and concubines, and all the pleasures that the world affords. But then there are others that live the life of Hermits, and use great austerities, going about in rags and a neglected dress; who are, however, no less reverenc'd and ador'd than the others. The people prostrate themselves before these Marabouts, esteeming it a great favour to kiss their feet, or but the hem of their garments; tho' Captain BLAITHWART, who attended the English Ambassador to the Court of Morocco, in the year 1727, says, he could observe nothing extraordinary in these Marabouts, but an affected gravity and reservedness, with some uncommon agitations, distorting their countenance, and rolling their eyes, that people might imagine they were inspir'd; which seems to be pretty near the character we have of the first Quakers, and their successors in hypocrisy the French Prophets: However, the people adore them, and never presume to suspect the pious fraud; which is the better to be borne, since these pretended Saints make use of their influence to do good offices, and not to oppose their weak brethren, or to fleece them of their money: And it is much easier for a Protestant to live under the government of Morocco, in one respect, than in any popish kingdom or state; and that is, that they compel no man to be of their religion, but allow every one the free and open exercise of divine service, according to their respective forms of worship: Nay, they suffer their very slaves to have their

CHAP.
VIII.

their priests and their chappel in the capital city of the empire; whereas it is reported, that the Spaniards, and some other Roman catholick kingdoms and states, where the Inquisition is establish'd, have been very severe upon such Moors as have happen'd to fall into their power, in order to force them to turn Christians: Nor is it possible for the people of Barbary to forget how their ancestors were used in Spain, and how many hundred thousand of them were depriv'd of all they had in the world, and transported to Africa, on account of religion, or rather through the avarice of the Spaniards to possess their estates. I say, considering all these things, we cannot but admire the moderation of those Mahometans, in suffering the Spaniards and other Christians that fall into their hands, to profess the Christian religion in that country, when nothing less than a total extirpation of Mahometans would satisfy the Catholics of Spain; and, as some have observ'd, the cruelties of the Turks on the Barbary coast, which are so much complain'd of, are not more to be dreaded than those of the Inquisition: Nor are there near so many instances of the former, as of the latter.

Marriages.

As the religion of this Empire is the same with that of other Mahometan countries, so are their marriages celebrated in the same manner. The parties and their friends having agreed upon terms, they come before the Cadi, or Civil magistrate, who records the contract; after which, an entertainment is made, and the bride carried home in great state to her husband's house, which is the whole of the ceremony: And we may be sure it is no part of the contract, "That the man shall keep no other woman," as with us; because he is allowed four wives, and as many concubines as he pleases; and the greater the husband's quality is, the greater number of women he keeps; more for ostentation, and the state of the matter, than for any thing else. But whether it be part of the contract, that the man shall let every wife take her turn in his bed, or whether the law requires this of him, I can't tell; but it is held a great piece of injustice to defraud any of his wives of their due: However, I find they make no great scruple of keeping boys, as well as concubines, and often deal unnaturally by their wives: But the latter is held to be a sufficient ground for a divorce; and, 'tis said, a divorce is not difficult to obtain on either side: Only, if the fault be in the man, the wife is suffer'd to go off with her cloaths and jewels; and, if the woman goes astray, she is turned out naked, and indeed seldom escapes with her life; for death is the punishment of adultery, if the man will be satisfied with nothing less than the rigour of the law; while sodomy with boys is scarce deem'd a crime amongst them.

Funerals.

Their funerals also are solemniz'd here, as in other Mahometan countries: Women are hir'd to lament and howl over the corpse, who tear off their hair, and cut themselves till the blood follows. After some time, the corpse is carried to the burying-place, with the head first, in the usual dress, the Priests singing as they go, *Lailla illalah Mahomet reffoul Allah*; "God is a great God, and Mahomet his Prophet;" and, having set the corpse upright in the tomb, with the face towards Mecca, they leave it in that posture.

As to their burying-places: Every person, according to his quality, purchases a piece of ground, a little out of town near the highway-side, which they enclose with a wall, and make a kind of flower-garden of it, erecting a dome, or a spire, sometimes over the graves of their deceas'd friends; and those who can do no more, place a stone at the head, and

another at the feet, as in our church-yards; but they never bury in their mosques, or within the walls of a town. The women piously visit the tombs of their husbands, or other relations, every Friday (their sabbath) carrying thither meat and fruits, which the poor eat when they are gone: And here, or at home, the women perform their devotions on that day; for they are never suffer'd to enter into a mosque, nor are they visited by their Priests. Possibly the men don't trouble themselves much what religion they are of, or whether they have any; for they expect a seraglio of virgins in paradise, form'd on purpose for them, whose charms will never decay, or satiate the appetite.

CHAP. IX.

*The present State of Algiers.**Containing the present state of the kingdom of Algiers.*

THE kingdom of Algiers is bounded by the Mediterranean sea, on the north; by Tunis on the east; by the mountains of Atlas, which separate it from Biledulgerid, on the south; and by the river Zea, or Mulvia, which divides it from the kingdom of Fez, on the west; extending along the coast of the Mediterranean about 600 miles from west to east, the breadth various, and very uncertain; tho' our best Geographers place it between the 30th and 37th degrees of north latitude.

The principal rivers, which rise in mount Atlas, and run northward into the Mediterranean, are 1. The river Arefgola, or Hartegol, which falls into the Mediterranean, about seven leagues to the westward of Oran. 2. Asiafran, which discharges itself into the sea, five leagues to the westward of Algiers. 3. Chilef, which falls into the sea, near Mostagan. 4. Sofaya, which runs into the sea, to the eastward of the city of Algiers. 5. Sef Gomar, which runs by Constantina, into the Mediterranean. 6. Zinganor, or Major, which falls into the sea, near Bugia. And, 7. Mira, which discharges itself into the Mediterranean, near Arcea. None of these have a very long course, rising but in the mountains of Atlas, or other hills in this kingdom; nor do I find that any of them are navigable, at least that there is any navigation upon them; tho' there are some of them large enough, and would probably be made navigable, if any other people but the Turks were possess'd of them; and indeed they appear so very indolent here, that they have not one bridge or ferry over any river in the country, but go about frequently some miles to find a ford; and if there happens to fall heavy rains, travellers are forced to wait till the waters are down again, before they can pass them.

This kingdom is usually divided into five provinces, viz. 1. Tremesen, or Telenfin; 2. Tenez; 3. Algiers; 4. Bugia; and, 5. Constantina.

The province of Tremesen is bounded by the Mediterranean, on the north; by Tenez, on the east; by Biledulgerid, on the south; and by the kingdom of Fez, on the west: The chief towns whereof are, Tremesen, Marsalquivir, or Almarfa, and Oran.

1. Tremesen is situated in 34 degrees north latitude, under the same meridian that London lies, and is about 60 miles to the southward of the Mediterranean sea, formerly the capital of a kingdom of the same name; but has been under the dominion of the Turks of Algiers these hundred years and more: Historians describe it to have been a most magnificent

CHAP.
IX.CHAP.
IX.
The situation and extent of the kingdom of Algiers.

Rivers.

Provinces.

Tremesen.

Towns.

CHAP. IX. magnificent city, large, rich and populous, while it was in its glory, and govern'd by its native princes. But there seems to be scarce any thing in it remarkable at present.

Marfalquivir. 2. Marfalquivir, or Almarfa, lies on a bay of the Mediterranean sea, three or four miles south-west of Oran, and is esteemed one of the safest roads on this coast. It was possess'd by the Spaniards, till the Algerines took Oran from them; but surrender'd to the Spaniards again, immediately after their retaking Oran, in the year 1732.

Oran. Oran is situated on another bay of the Mediterranean sea, latitude 36 degrees, east longitude 1, about 250 miles west of Algiers. It lies partly in a plain, and partly upon the ascent of a hill, and is about a mile and a half in circumference, as well fortified as the ground about it will permit; but, it being commanded by some of the neighbouring hills, if there be not a garrison of ten or twelve thousand men to defend the avenues, distant castles, and redoubts, as well as the town itself, it cannot sustain a long siege.

The Spanish coasts and merchant-ships suffering much from the Corsairs or Rovers of this town, Ferdinand, King of Spain, sent over an army, under the command of his Prime minister, Cardinal Ximenes, in the year 1509, to besiege it; who, having a correspondence with some of the inhabitants, when the Moors sallied out with the best part of the garrison against the Christian army, their friends in the town shut the gates against them, and the Cardinal obtain'd an easy conquest, killing above 4000 Moors, and delivering at the same time 20000 Christian slaves out of captivity: The Turks of Algiers made several attempts to recover this town from time to time for near 200 years; but were always repuls'd till the year 1708, when they made themselves masters of it, by the treachery or cowardice of the Governor, as the Spaniards give out, and remained in possession of Oran till the year 1732. But King PHILIP, having at this time no other enemy to contend with, and a fine army of veteran troops, that had no other employment, embark'd a good body of them at Alicant, about the middle of June 1732, under the command of the Conde de Montemar, who landed near Oran, on the 29th of the same month, with very little opposition; and, having afterwards gained the height of the mountains above Oran, the garrison abandon'd the place, without waiting to be besieg'd in form: of which transaction we receiv'd repeated advice in our common news-papers; but the account the Turks give of this enterprize affords some further particulars.

Oran taken by the Spaniards, anno. 1732. They say, that the Dey of Algiers, believing that this armament of the Spaniards was intended against his capital, did not send such reinforcements to Oran as he would have done, if he had expected they would have attempted that city: However, the Bey or Viceroy of Oran had assembled an army of twenty thousand men, for the defence of the place, most of them horse; with which he did endeavour to hinder the descent of the Spaniards; but his troops were disorder'd by the continual fire of the cannon of the enemy from their men of war and galleys. He attack'd them also after they were landed; but, the ground being unfit for cavalry, and his horse still galled by the Spanish artillery, he was obliged to retire; and thereupon determined to wait for a reinforcement of four thousand Turks, and six thousand Moors, which he daily expected from Algiers, before he engaged the Christians again: And, in the mean time, for fear of the

CHAP. IX. worst, removed all his effects, his treasure, and his women, out of Oran to a place of security: Whereupon the garrison and inhabitants were in the greatest consternation; imagining they should be soon abandon'd by the Governor, and sacrificed to the Christians; and thereupon pack'd up all that they had, after the Bassaw's example, and kindly quit- ted the town to the Christians without a blow; leaving in it an hundred and forty-six pieces of canon, besides mortars, and at least fifty ship-loads of provisions, which contributed very much towards the preservation of the conquest; for the sea was so tempestuous they could receive nothing from their fleet for several days.

However, the Bassaw attack'd the Spanish army as they were marching into the place; and, tho' he found it impossible then to save the town, so obstinate was the engagement, that the Spaniards lost near five thousand men; and were afterwards so harass'd by the Turks, before they could put the place in a posture of defence, that great part of their army was cut off, and amongst them their new Governor the Marquis of Santa Cruz, and several of their best Generals. But to proceed:

The next province to the eastward of Tremesen is that of Tenez, bounded on the north, by the Province of Tenez. Mediterranean; on the east, by the province of Algiers Proper; on the south, by the mountains of Atlas; and on the west, by Tremesen; extending about an hundred miles from west to east, along the coast of the Mediterranean; but the breadth from north to south is very uncertain: The chief towns are Mustagan, Tenez, and Ser- Towns. celli.

Mustagan is situated at the mouth of a river that falls into the Mediterranean, in the mid-way between Oran and Tenez; of which I meet with no particular description.

Tenez, the capital of the province, is situated also on the sea-coast, in 36 degrees odd minutes north latitude, about an 100 miles to the eastward of Oran; and is supposed to be the Julia Cæsarea of the antients.

Sercelli, or Serfela, stands near the sea, latitude 37 degrees, between Tenez and Algiers; anciently a large populous city, but not very considerable at present.

The province of Algiers proper is bounded by the Mediterranean, on the north; by the province of Bugia, on the east; by Biledulgerid, on the south; and by Tenez, on the west; extending, from west to east, along the coast of the Mediterranean, upwards of two hundred miles, and about four hundred miles from the same sea to the southward: The chief Towns whereof are Algiers, the capital, and Metafuz, or Temendfast. Towns.

The Town of Algiers is situated in latitude 37, west longitude three and a half, on a bay of the Mediterranean sea, a little to the eastward of the river Safran: It is built on the side of a mountain; the houses flat-roof'd, terrass'd, and white-wash'd; and, rising gradually from the sea-shore up the hill, forms a kind of amphitheatre, and appears very beautifully on the approaching it by sea; but this, like most other Turkish towns, looks better at a distance than when we are in it: The mosques, the domes, the spires, the castles, and palace standing in full view, give us a great idea of the place; but, as the streets are extremely narrow, and the private houses but mean, our expectations are not answer'd when we come to examine it closely: However, there is this convenience, that the Inhabitants can visit each other from the tops of the houses

CHAP.
IX.

houses almost all over the town, without going into the streets. The walls are about a league in circumference, defended by some bastions and square towers between them: The port is secured by a pier or mole, in length about five hundred paces, extended from the continent to a small rocky island, where stands a castle, call'd the Lantern, with three tier of brass cannon, besides other fortifications, lately erected for its defence, since the French bombardment: The town has five gates; and in it are ten great mosques, or Mahometan temples; fifty lesser mosques, three colleges, and abundance of schools, where the children are brought up with the utmost prejudice to Christianity. It is computed, there are about an hundred thousand souls in the town.

On the side of the bay, opposite to the mole, is a fort defended by about twenty great guns, call'd Fort Metafuz, from the cape near which it is situated; built to command that part of the bay where the French gallies lay when they bombarded it: There are also two other forts on that side, where the English lay when they bombarded the town, well furnish'd with cannon: So that Algiers is much better prepared to defend itself against a bombardment, than it was formerly.

On the land side there is a fortress at the very top of the hill, above the town, call'd Al Casabba; and without Bebalweyd-gate are three other forts; and a little farther a fourth, called the Emperor's castle, being situated upon the hill, where the Emperor CHARLES the Vth had his head-quarters when he besieged Algiers: But the greatest strength is the numbers and resolution of the natives, brought up and enur'd to daring and hazardous enterprizes; being in a manner in perpetual war with all mankind.

The houses are very close throng'd together in the town, no gardens or vacant spaces, and many families in one house; but their gardens extend a great way beyond the walls, both on the hills and in the valleys, affording a most agreeable prospect; the soil extremely fruitful, and well planted, by the labour of the Christian slaves, who have the cultivation and management of them for their high and mighty lords the Janizaries and Burghers of Algiers.

Metafuz.

The town of Metafuz lies upon the sea, about four leagues to the eastward of Algiers, and is not remarkable for any thing that I can meet with, but being the place where the Emperor CHARLES V. embark'd, when he was forced to raise the siege of Algiers, and the giving name to a certain cape or promontory on that coast.

Province
of Bugia.

The next province to the eastward of Algiers is Bugia, extending from west to east about thirty miles along the Mediterranean, and upwards of an hundred to the southward of that sea; the chief towns whereof are, Gigeri, or Gergel, and Bugia.

Towns.

Gigeri.

Gigeri is situated 14 or 15 leagues north-east of Algiers, upon the Mediterranean sea, remarkable for little but an old castle, that stands upon a mountain of very difficult access. Here the French were fortifying themselves in the year 1666; but were driven from thence by the Algerines, and compell'd to leave their cannon and most of their effects behind them.

Bugia.

Bugia, now the capital of the province, and formerly of a kingdom of the same name, is situated at the mouth of the river Major, about twenty leagues to the eastward of Algiers. The town lies upon the side of a hill, and is defended by a castle that stands above it, but not able to protect ships in the river; for I find, the English Admiral,

Sir EDWARD SPRAGUE, in the year 1671, took or destroyed nine Algerine men of war here.

CHAP.
IX.

Near the mouth of the river Major, lies the little island of Tabaria, in the possession of the Genoese; and which they have so well fortified, as to bid defiance to all the power of the Algerines.

The province of Constantina is the most eastern province of the kingdom of Algiers, being bounded by the Mediterranean, on the north; by the river Guadalbar, which divides it from Tunis, on the east; by Biledulgerid, on the south; and by the province of Bugia, on the west: The chief towns whereof are Constantina, and Bona.

Constanti-
na pro-
vince.

Constantina is situated on a river, about ninety miles south-east of Bugia, latitude 35. There are some noble ruins found in and about this town; but it is remarkable for very little else at present.

Constanti-
na.

Bona, or Hippon, lies on the Mediterranean, latitude 37, about ninety miles north-east of Constantina; and near it is a coral fishery. This town, among others, was taken by CHARLES V. in his expedition against Tunis, but recover'd by the Turks not long afterwards. It is said to be the place where the famous St. AUSTIN died.

Bona.

Having given a description of the situation of the provinces and great towns of the kingdom of Algiers, I proceed to consider the face of the country; and I find, that mount Atlas runs through the south part of it, from east to west, from the kingdom of Tunis to the kingdom of Morocco: It is also very mountainous towards the Mediterranean sea; but both hills and valleys are exceeding fruitful where they are cultivated, abounding in corn and fruits; such as Dates, Olives, Figs, Grapes and Almonds: They have also good store of Wax and Honey, and their coasts afford great quantities of Salt.

Face of
the coun-
try.

The Government of Algiers is, in reality, an absolute monarchy at this day, tho' it has some appearance of a mix'd Government; because the Dey, or Sovereign, sometimes assembles a Divan, consisting of the chief officers of the State and the Janizaries, and demands their advice in matters of importance; but this, it seems, is only to screen him against popular discontents; for he acts, by his sole authority, whenever he pleases. The Dey is, indeed, elective; his son never inherits by descent, and this election is by the Turkish army: Those, who have no relation to the sword, have nothing to do in the election. There are frequently several candidates nam'd upon a vacancy; and, when they have fixed upon one, they all cry out, "Allah " Barick, God prosper you, and shower down his " blessings upon you;" and, whether the person is willing to accept the honour, or not, he is immediately invested with the Castan or robe of sovereignty: Then the Cadi is call'd, who declares, that God has vouchsafed to call him to the government of that kingdom; and that he is to maintain his subjects in their liberties and properties, and duly administer justice to them; and exhorts him to employ his utmost care for the prosperity of his country: And, 'tis said, he sits daily, administering justice from five in the morning till noon, and from one till four, hearing and determining all causes that are brought before him, without any associates or assistants but four secretaries. However, matters relating to lands of inheritance, to religion, or the breaches of their ecclesiastical and civil laws (which are the same among the Turks) are determin'd by the Cadi's, or Ecclesiastical judges; so that these causes, determin'd by the Dey, seem to relate chiefly to the government of the State and

Govern-
ment of
Algiers.

the

CHAP. IX. the Militia, or to personal debts, and other controverted matters; for which the Alchoran has made no provision: His judgments are arbitrary, not regulated by laws; nor is there any appeal from his tribunal. But, as the military men do not only elect their Sovereign, but depose, or put him to death, whenever they apprehend he does not consult their interest, he is oblig'd to be very cautious in the decree he makes.

Of the six Dey's that have reign'd since the year 1700, four have been murder'd, and a fifth resign'd his government to save his life. The want of success in any instance, almost infallibly occasions a rebellion; and 'tis well if the Dey is not sacrific'd to the fury of the Janizaries, and another elected, in whose hands they hope their affairs will prosper better.

Land-
forces.

The Militia who elect their Dey, are all natural Turks or renegado Christians, admitted into those troops generally denominated Janizaries, and amount to about twelve thousand men: These are, by some, styl'd the nobility of Algiers; and certain it is, that the frequent revolutions that happen at Algiers, are brought about by this class of people chiefly: They are but few in number indeed, compar'd with the native Moors; and yet do they tyrannize over the natives in a most insolent manner. On the contrary, in the empire of Morocco, the Moors govern every thing, and will not suffer the Turks to have any share in the Government. The Moors here are said to be a cowardly and mean-spirited people, in comparison of the Turks; who have defeated armies of them, both in Morocco and Tunis, of six times their number, and storm'd and plunder'd both their capitals within a very few years, compelling their respective Princes to accept of such terms as the Dey's of Algiers were pleas'd to impose on them. The reason of which superiority is suppos'd to proceed either from that submission the Turks have always exacted from the Moors, whereby the latter are in a manner dispirited; or that the Algerine Turks, being all men of the sword, engag'd perpetually in the most desperate services by sea and land, and, dreading no dangers, are an over-match for all their neighbours, who endeavour to live in peace: But, from what cause soever this superiority proceeds, it is surprizing to observe, that less than ten thousand of the Algerine Turks should dare to march through great part of the empire of Morocco, and make themselves masters of the capital city of Fez one year, and afterwards of Tunis the next. But, 'tis certain, the native Moors have as great a dread of these Pirates by land, as our defenceless Merchants have of them at sea, and tremble at the very name of an Alger Turk: And, tho' this kingdom consisted at first of little more than the lands within view of the city, by what they have taken from the Kings of Tunis and Bogia on the west, and the Emperor of Morocco on the west, we see it extended, at this day, 600 miles and upwards in length, and 3 or 4 hundred in breadth, to the southward, except some few inaccessible hills, where live a wretched sort of people, that are not worth their conquest. But to proceed:

Three
Beys or
Viceroys.

In these extensive territories the Dey has three Viceroys, or Beys; one in the east, another in the west, and a third in the south; who, in the latter end of the summer, assemble each of them a small army, with which they make the tour of their respective Governments, to gather in such taxes, as the Dey is pleas'd to impose upon the people; and, in case any of them refuse payment, the Bey seizes

VOL. III.

or destroys their whole crops of grain and fruits. In collecting these taxes, the respective Beys are employed three or four months every year; and whatever the whole country can raise, is brought to Algiers for the support of the Government, and particularly the payment of the Janizaries, which must be prefer'd to all other services, it being very dangerous disobliging that body: But, as money is pretty scarce in this country, I find great part of the taxes are taken in kind, that is, in corn, cattle, and such other goods as may be most useful to the Turks at Algiers; and the prizes they make at sea some years, equal the revenues they exact from the natives at land. These Pirates seem to look upon the whole world as their tributaries; or rather, that the rest of mankind were only made to be slaves to their pleasures, and ought not to expect justice, or common humanity, at their hands. They agree with our Fanaticks, that dominion is founded in grace: That true believers have a right to every thing this world affords, and, according to CROMWELL's notion, ought not to be subject to laws, human or divine, at least in their commerce with reprobates, and infidels, as they esteem all men but themselves. But, as has been observ'd, the Turks here do not only treat the Christians and Jews with insolence, but even the Moors, who are of the same faith: The meanest Turkish soldier will make the wealthiest Moor give him the way: They are us'd more like men of quality, than common soldiers: They have their quarters in spacious squares, where they are maintain'd, and serv'd by slaves, at the publick expence: They are duly paid every other moon, and have the privilege of buying their provisions one third cheaper than any other of the inhabitants. Besides these, the Dey of Algiers has several thousand Moors in his service, horse and foot, and every one of his Beys commands an army of the same people, as has been observ'd already; but these have no share in the election, or deposing their Princes; or are entitled to any of the privileges the Turkish soldiers enjoy.

The Algerines are more formidable at sea, than any other power on the coast of Barbary; and the sea-faring people are in great esteem, on account of the prizes they frequently bring in; but still they have no share in the election of a Dey: The fathers of the Trinity assure us, that the Algerines have no less than five and twenty ships of war, from eighteen to sixty guns, besides a multitude of smaller cruising vessels; and, as they have very little timber in the country, nor any naval stores whatever, their ships are either those they take as prize, or built, and rigg'd out of the materials of such ships as are taken: However, they never suffer the number of their ships of war to be diminish'd; but, if any of them are lost, or decay'd, they immediately add as many more.

Force of
the Algerines
at
sea.

The English have been at peace with the Algerines ever since the year 1682: But the Dutch could not obtain a settled peace 'till very lately; in negotiating which, their good friends (the English) assisted them, or they would probably have been in a state of war with Algiers at this day: And surely this must be ascrib'd to an excess of goodness in the English nation on many accounts: For first, the Dutch are every where their rivals in trade; there is scarce any part of the world where the Hollander has not endeavour'd to supplant them, and in too many succeeded. In the next place, while the Dutch were at war with Algiers, they were forced to send strong convoys with their merchant-ships into the Levant; nor could these always protect their ships: They found it necessary to employ the English in carrying their

19 U

CHAP.
IX.

their goods thither, and consequently the English were gainers by this war between Holland and Algiers; and yet were we so very kind and disinterested, as to make their peace for them, and let them into the trade again. Whether the Dutch will ever make any returns for so signal a favour, we shall see, if we live long enough; but their usual way of requiting a British kindness, is by acts of treachery and injustice. I question whether the Hollander has not done the trade of England more mischief, than ever the Algerines have, particularly in depriving us by violence of the Spice Islands, which they keep possession of to this day: Nor were their cruelties at all short of those the Turks exercise on their Christian slaves; for, to deter the English Merchants from ever coming to the Spice Islands again, they burnt off their flesh by inches, and exercis'd all the tortures upon them they could invent. Let them never therefore cry out of the piracies of the Algerines, when they themselves took not only our ships, but our lands (the invaluable Spice Islands) from us, and have never made restitution to this day; tho' they have often promised it by solemn treaties: And what aggravates the injury is, that this was done at a time of full peace, and in the very next reign after the Queen of England had rescued them from the oppressions of the Spaniards. But to return to the Government of Algiers:

It has been already observ'd, that the Dey is an absolute Sovereign, and in reality knows no superior; however, the Grand Signior still styles him Lieutenant, and the people, under his jurisdiction, subjects to the Porte, as appears by the letter written to the Dey by the Grand Signior in behalf of the Dutch, in the year 1719; a translation whereof follows.

To the Dey and Bassa of Algiers, MEHEMED Bassa, a Prince chosen to enjoy the dignity whereof he is possessor, who has been preserv'd by the help of the most High; and to the most learned Musti, and you Cadi's and Judges abounding with eloquence and equity; as likewise to all others among you, who are replete with knowledge; and to all the Chiefs of your Militia fighting for the faith; and also to all our faithful Algerine subjects, Health.

A letter from the Grand Signior to the Dey of Algiers in behalf of the Dutch.

WE give you to understand by the tenor of this noble and sublime Order, that the Holland Ambassador, who is now at our High Porte, having represented to us, that you have declared war with Holland without any cause, and that the same was unjust, and contrary to the articles of those treaties which have been granted them by our Porte, with which they are in peace. All which, having been examined with attention, we have been informed, that the unjust war, by you declar'd against the Hollanders, is repugnant to those articles the said Dutch Ambassador has exhibited; by which articles it is specified, That, while they shall be in peace with our High Porte, no injury shall be done to their persons, or their effects, by our subjects of Algiers, Tunis or Tripoli: Nevertheless, you have transgress'd the treaties, taken from them to the value of fifty thousand dollars, and their Consul has been oblig'd to retire into France.

Having a regard to those respectful remonstrances, made by the Holland Ambassador at the threshold of our happy Porte, we have heretofore dispatch'd to you our order and intentions

upon this matter; and the effect, not having answer'd what we ought to have expected from loyal and obedient subjects, we now send this present order, whereto you are to conform; which order will be deliver'd you by HASSAN AGA, one of our Capiji Bassas. Our intention is, that you send to Constantinople two officers, who being commission'd to negotiate a peace with the said Hollanders, shall exhibit their allegations; you knowing that such subjects as disobey their Emperor are criminals, and frequently expos'd to chastisements sent them down from the most High, as it is expressed in the noble Koran: Wherefore, it is better that you preserve to yourselves love and applause, than that you incur hatred and reproach. For which reason you are to put in execution what is enjoin'd you by the present order, at the top whereof is the noble signet, to which it behoves you to give credit."

While this was reading in the Divan, the whole audience kept a most respectful silence; and, being ended, the Bash-Chiaus cried out, fatha, fatha, expressing thereby the respect and submission wherewith the Emperor's Firman, or Order, ought to be receiv'd: And it appears, that the Algerines have indeed a great veneration for the Grand Signior, as the head of their religion; but have a still greater for their own interest, and are not to be moved by any threats of the Porte, when it pretends to debar them from exercising that piratical war with the European nations, which is the foundation of all their wealth and grandeur; for it was not till some years afterwards they made peace with Holland; and that, at the instance of the English, as has been observ'd already, as well as in consideration of very rich presents distributed among their leading men; and indeed, the Algerines, like other people, are govern'd chiefly by interest, nothing else inclines them either to peace or war; if they think they shall get most by peace, they prefer that; and, if they propose greater advantages by war, they will never listen to a peace.

The Grand Signior had, 'till very lately, a Bassa always residing at Algiers, to whom he expected the Dey and his subjects should pay a great regard; but, finding his authority slighted, and that they would not permit his Bassa to intermeddle in their affairs, or even allow him a vote in their Divan, he was pleas'd to constitute the Dey himself his Bassa, that he might seem still to retain some authority over the Algerines: And accordingly we find the preceding letter directed, To the Dey and Bassa of Algiers, MEHEMED Bassa, who indeed are the same person with two different titles.

The next temporal officer to the Dey, and who has the greatest influence in the Algerine Government, is the Aga, or General of the Turkish Militia. This is the oldest officer in the army, who continues in this post but two months, and then is succeeded by the next senior officer. While he remains Aga of the Militia, the keys of the city are in his custody, all military orders are given out in his name, and in his palace only, the Turks are punish'd (according to the decrees of the Dey) whether by bastinado, imprisonment, or death.

The three chief Ecclesiasticks are extremely reverenc'd by all; and these are the Musti, the Cadi, and the Grand Marabout: The first, the High Priest, of their religion: The second, the supreme Judge in ecclesiastical causes, and such civil matters, as the military power does not interpose in; and

They have little dependence upon the Grand Signior.

The Aga of the Janizaries the next officer to the Dey.

The Musti, Cadi, &c.

CHAP. IX. and the Grand Marabout, their great living Saint, or Hermit, or rather the General of that Order, who profess themselves Hermits or Marabouts; the last have an inconceivable influence both on the Government, and the affairs of every private man in the kingdom of Algiers: The three Ecclesiasticks may be distinguish'd by the largeness of their turbants: They sit in the Divan, a little below the Dey, on his right hand; and, when they enter the assembly, he rises up, and embraces them; but, tho' they are advis'd with on important occasions, they have no vote here: The Divan, I perceive, consists of near two thousand officers and soldiers, and of none but the Turkish soldiery. In the electing the Dey, if I am not mistaken, every man of the Turkish Militia has a vote: As to the deposing him, this is done generally by tumults of the populace: They are not govern'd by laws, or precedents, in these revolutions; but by interest, revenge, ambition, or perhaps mere caprice; so that the reign of the Dey is generally short, and always precarious, notwithstanding all the arts they use to secure their dominion: And, what is still more unfortunate, there is no descending from that dignity, without running an apparent hazard of his life: There is scarce any medium between the throne and grave.

The Dey chosen by the soldiers only.

Administration of justice. The Dey, as has been related already, sits on his tribunal several hours every day, to hear the complaints of his subjects, and administer justice: The plaintiff, it seems, always makes his complaint in person (there are no Council, Proctors, Attornies, or Solicitors, to manage their causes for them;) and the defendant or wrong-doer is immediately summon'd to answer the complaint. Upon his appearance, both parties are examin'd upon oath, as well as the witnesses; and, if either of the parties appear to have been guilty of perjury, he immediately receives 300 bastinadoes with a cudgel, and is oblig'd to make the injur'd person satisfaction forthwith. If a person appears to be indebted to another, he is decreed to pay the debt in such time as the Dey awards: In which if he fails, an officer is order'd to sell his effects by auction, and make the creditor satisfaction; and this is done without any manner of charges. If the creditor have no effects, or real estate, he is imprison'd; and, if he have a real estate, and satisfaction is to be made out of it, the matter is refer'd to the Cadi, or ecclesiastical Judge, who only can determine matters in relation to lands and inheritances. And, since I have mention'd lands, these always descend to the eldest son; and where a person leaves no heirs, all his lands and effects, or, in other words, his whole real and personal estate, are seiz'd and possess'd by the Government.

Descent of estates.

Punishments.

The usual punishment at Algiers for offences not capital, is the bastinado, which consists often of some hundreds of blows over the soles of the feet, the calves of the legs, the buttocks or belly, with an unmerciful cudgel. In capital cases the Turks are strangled with a bow-string, which two people pull different ways with all their strength: But the various deaths the poor Christian slaves are put to, that offend these barbarous Pirates, are almost innumerable; impaling, and burning, or rather roasting, the unhappy sufferers alive, are but too frequent on their attempting to make an escape, especially if any Turk is kill'd in the scuffle; but the worst of all deaths, is the throwing them off the walls of the town upon iron hooks, on which they are catch'd by the jaws, by the ribs, or some other part of the body, and hang in the most exquisite torture for several days before they expire; but

this, 'tis said, has not been executed for many years: **CHAP. IX.** However, I find there have been instances of the crucifying Christians, and nailing their hands and feet to the walls within these few years; to which they have been provok'd by reports that were spread of some of their Christian neighbours having been equally cruel to the Turks they had taken. And this leads me to give some account of the condition of the Christian slaves at Algiers.

The Corsair or Pirate, it seems, no sooner takes a prize, but he examines into the quality and circumstances of all his prisoners; and, if he imagines they do not give him a just account of themselves and their comrades, he orders them to be bastinado'd on the soles of their feet till they do. Having got what information he can, he brings them on shore after he has stripp'd them almost naked, and carries them to the Dey's house, whither the European Consuls immediately repair, to see if there be any of the prisoners who belong to their respective nations, who are at peace with Algiers; for, in that case, they reclaim them, provided they were only passengers: But, if it be proved the prisoners serv'd for pay on board the ships of any nation at war with this Government, there is no way to get them releas'd, but by paying the full ransom.

Condition of slaves at Algiers.

The matter being settled between the Dey and the Consuls, which of the prisoners shall be set at liberty, and which of them deem'd slaves, the Dey has his choice of every eighth slave, and generally takes the Masters, Surgeons, Carpenters, and most useful men belonging to the respective prizes: And, besides his eighth, he lays claim to all such prisoners as are of any quality, for whom a swinging ransom may be expected: The rest are left to the Captor and their Owners, and usually carried to the Bessistan, or Slave-market, where the Crier proclaims the quality, the profession and circumstances of each of the unhappy captives; and the respective prizes set upon them. They are led afterwards to the court before the Dey's palace, and sold by auction in his presence to the best bidder; but whatever is given beyond the first price set upon them belongs to the Government: The Captors and Owners have no more than the first price, which is divided equally between them.

Those slaves, which belong to the Dey and the publick, who have no particular profession, and cannot be serviceable to the State in the building and rigging of ships, or in any art or manufacture on shore, are put to the most laborious employments; as in drawing carriages with materials for building, removing stones or rubbish, cleaning the streets and houses, carrying the soldiers baggage, and the like, and are lock'd up at night in the prisons belonging to the State; of which there are three that have obtained the name of Bagnio's: They have each of them a ring of iron on one ankle, and those they apprehend inclin'd to make their escape, are sometimes loaden with chains, in which they are forced to work all day. However, there are others, it seems, when they have got a little money from their friends, or by way of charity, or can borrow any of the Jews upon an extravagant interest, are permitted to keep taverns, paying a certain duty to the Dey, in proportion to the wine they vend: And these, it seems, are oblig'd to contribute towards the maintenance of their brethren in servitude, and to the Christian chappels that are allow'd in these prisons: And yet, with all the duties and interest they are forced to pay, the slaves that keep these taverns usually get money: There have been instances of some that have got enough to purchase their

Taverns kept by Christian slaves.

CHAP.
IX.The Turks
of Algiers
drink
wine.

their liberties, and carry money away with them; for the Government allow their slaves a property in what they get, and protect them in it. These taverns are no better than cellars, and dark warehouses, that have no other light than what they receive from the door; and in the same room stand the butts of wine, the beds and the tables where the company sit; but people will make a shift, with very poor accommodations, for the sake of a little good wine; and hither Turks, Moors and Christians resort promiscuously. Very little regard is paid to their great Prophet's prohibition in Algiers; only the good Mussulman has so much respect for the Alchoran even here, that he will not keep a tavern and distribute the forbidden liquor to others for the world, tho' he makes little scruple in drinking it. The management of these houses therefore is left entirely to the Christians, or Jews; and the man that keeps a tavern, tho' a slave, is empower'd to strip any of his guests, even the Turks themselves, if they refuse to pay their reckoning; and in this he is protected by the Dey. Every slave belonging to the Government also is allowed three loaves a day, about the bigness of a penny-loaf, besides what he earns himself, or is given him in charity; for, when the Government have no other employment for them, they are allowed to work in any manufacture they are masters of, and take the profit of it. Every Friday particularly (the Mahometan Sabbath) they are allowed to work for themselves, or to rest from their labour as they see fit.

Slaves to
private
men.

The condition of those, who are slaves to private men, depends very much upon the temper of the master, and their own behaviour. They are employ'd in the business of the house, in trade, husbandry, or gardening, according to their qualifications, and the business the master has for them to do: Ship and House-Carpenters, Sail-makers, Smiths, and the like, are very useful, and much encourag'd; and a European Surgeon is a notable Physician among them. Notwithstanding the dread our people are in of being taken by Turkish Rovers, many of them live better in their masters houses at Algiers, than ever they did in their own countries, being entertain'd rather as companions than servants, where they happen to be good for any thing: Tho' 'tis true, some barbarous masters use their slaves ill, giving them ill language, and beating them unmercifully, that they may oblige them to redeem themselves at an extravagant price, especially where they are inform'd they are people of substance. As to female slaves, unless their masters expect a considerable ransom for them, they make them their concubines, or sell them to those who want to purchase such conveniences, if they are young. The Popish Priests, who are employ'd for the redemption of captives, entertain their readers with abundance of tragical stories upon this head; of which I shall present the reader with one, in the very dress the fathers have introduc'd it; which, tho' it may be true in the main, I will not be answerable for every circumstance these good men are pleas'd to transmit to us. They relate, that ANNA MARIA FERNANDEZ, a native of Toledo, aged sixteen, being taken captive with her mother, and a sister named FLORA, was brought by a Chiaus to the palace, September the 1st, 1715, while ALI Dey was superintending the pay of his Militia. This young maid being in the court-yard, prepossess'd with sentiments of her holy religion, and foreseeing that her youth and beauty were on the point of exposing to very great perils both her faith and her innocence, took advantage of the confusion, occasion'd by those multitudes of Janizaries, and daub'd her face all over

The story

ous Spanish
slave, as re-
lated by
the Pa-
thers.

with dirt, beginning withal to lacerate her cheeks and arms, having first recommended herself to God, and, with showers of tears, invoked the powerful aid of our blessed Lady. The pay being over for that day, this poor victim was presented to the Dey, who made her go up into his apartment: There he endeavour'd to bring her into temper by great promises, exaggerating the happiness she might hope for, in case she submitted to his pleasure; and as, amidst these protestations, he attempted to caress her, this young creature generously repell'd all his caresses, and all his violences, telling him, that she would not purchase his protection, nor the advantage he offer'd her, at the price of her soul: That she was his slave, and he might condemn her to hard labour, which she was ready to undergo; but that she could not consent to any criminal actions, because she was a Christian. She still persever'd in resisting with a constancy equal to the violence ALI Dey continued offering her, till, atham'd to find himself thus baffled, after having given her several kicks and buffets, he retir'd much incens'd. This was but the prelude to what other trials he made her undergo. That very evening he return'd to the charge, and found her no less inflexible than before: Her cries, which resounded even without the palace, made such as heard them judge what violence was offering her; and it evidently appear'd that her constancy was not vanquish'd, when the Dey was seen all in a rage, drawing her by the hair from the top to the bottom of his stair-case.

Either the
Dey un-
derstood
Spanish,
or he must
have an
interpre-
ter.

Finding himself unable to succeed in this first assault, he changed his battery: He lodg'd her in a handsome chamber, with a Negroe slave to attend her, and went often to see her, making her abundance of fruitless protestations; to which he join'd what is most capable of dazzling young persons of that sex, magnificent apparel, costly jewels, &c. But this virtuous maid, more curious to preserve her nuptial garment without a stain, refused them all, spite of the Dey's intreaties, earnest remonstrances and commands, daily repeated for more than a month. To remove her scruples, he caus'd a Christian girl, of her own country and acquaintance, to be brought her as a companion; and who, in her presence, made no difficulty of taking from the Dey's hands such things as he offer'd to our virgin, and therewith adorn'd herself. But this generous maid made her blush with confusion, bitterly reproaching her base compliance, and criminal forgetfulness of her baptismal vows. ALI Dey could not but admire the one, and heartily contemn'd the other, who yielded so easily: But that admiration did but add fuel to his passion; he imagin'd, that the country-air might work some effect on her, and that amidst those rural pleasures she might lose some of her austerity, and become more tractable: Spite of all her resistance, he forced her to put on a suit of fine cloaths, and mount on a mule, after that country fashion, in a Racabia, a sort of cage, most sumptuously cover'd after their manner; and therein she was conducted to his uncle's garden-seat. As she was persuaded, that the amorous Dey would not fail following her, and that abroad in the country her cries would not be heard, she made loud lamentations as she pass'd the streets of Algiers, that all people might be witnesses of the violences she underwent; and that such Christians, as were within hearing, might be excited to succour her, at least with their fervent prayers to the Almighty; which she ceas'd not calling on them to do for her, imploring with great outcries for God's assistance, and our blessed Lady's intercession.

The

CHAP. IX. The Dey's uncle could not, with all his efforts and artifices, make any impression on the heart of this young virgin; all this was much less dangerous to her, than the presence of her persecutor: Nor had menaces and promises much force to stagger her, after the attacks she had actually sustain'd. She there found herself, as it were, under shelter; nor did she begin to tremble, till the Dey, after a three weeks interval, sent for her home, where he had already got her mother and sister, in order to try if he could not, through their means, bring her to a compliance. He flatter'd them with hopes of their liberty, in case they could engage her to be more condescending: But all was in vain; and this bringing them together served only to make all three firmer in their sentiments of virtue and religion. Our apostolick Vicar, and the Father administrator of the Gospel, touch'd at this maiden's situation, went to our Consul, M. CLAIRAMBAULT, to confer on the means to put a stop to so cruel and so dangerous a persecution, and in what terms to attack ALI Dey on the affair: They knew what an answer he had return'd to the complaint brought him against a certain patron, who used the like compulsion to a Christian female slave of his; he said, she was his own proper goods, which he might use just as he pleased. M. CLAIRAMBAULT however undertook speaking to him, and did it with his usual discretion: The Dey reply'd, that he did not offer to force his slave to change her religion. Our consul return'd very sorrowful, as judging from this answer, that BORRA ALI design'd not to quit his pretensions; and, in effect, he pursued her with more artifices and greater violence than ever. This continued till such time as the Omnipotent, vouchsafing to put a period to the combats of his servant, suddenly changing the Dey's fury into admiration; and that, touch'd with the constancy of his slave, he frankly set her, together with her mother and sister, at liberty. May the 10th, 1717, they were all three embark'd on a vessel, wherein our Spanish fathers of the redemption carried off two hundred and thirty captives, whom they had ransom'd. Of such estimation is persevering virtue, since it casts a lustre, which makes it admir'd and recompens'd even by a passionate enamour'd Barbarian.

Admini-
stration of
justice far-
ther confi-
der'd.

But to enlarge a little further on the administration of justice among the Algerines; for pirates and usurpers must observe forms of justice for the preservation of their lawless governments, whatever rapine and injustice they are guilty of towards the rest of mankind. The Moors, Jews and Christians, who are freemen, have their respective Judges of their several nations assign'd them, who are permitted to administer justice among their people (unless the crime affects the State) and these are judged by their several laws. Traitors, House-breakers and Highway-men, are put to the most cruel deaths here, tho' their State is supported by robbery: And a Moor, who has been guilty of theft, has his right hand cut off; which, being hung about his neck, he is set upon an ass, with his face to the beast's tail, and led about the streets, a cryer going before him and proclaiming his offence. Adultery and robbery are always punish'd with death; apostates from the establish'd religion are burnt here, as in other Mahometan countries: And tho' the Popish Priests, that are slaves at Algiers, are used better than other captives generally, their brethren taking care constantly to remit money to their several masters, to excuse them from labour; yet, if any Christian nation is at war with Algiers, the Priests

Popish
Priests,
how us'd.

are always made the first sacrifice. When the French bombarded the city in the next year 1688, the Turks fir'd no less than forty Frenchmen at the Fleet, from the mouths of their great guns or mortars; among whom were the French Consul, and French the apostolick Vicar, who had the management of the Christian-hospital at Algiers; but, 'tis said, the French Admiral set them an example, by firing several Turkish slaves from his mortars into the town: out of However, these are extraordinary cases; generally Christian slaves are treated very well at Algiers, they neither tempt, or force them to change their religion; it is not for their interest: Their masters had rather they would not turn Mahometans, for then they lose the benefit of their ransom; neither can they sell them to others. Indeed, when a Christian slave has committed some crime that deserves death, the Dey will sometimes offer him his life, if he turns Mahometan; and if they have any slaves under twelve years of age, some rich Musselman will endeavour to bring them up in their superstition, cloath them handsomly, and even adopt them for their children; but, as for those that are grown up, they never attempt to make them change their religion. 'Tis true, some purchase young girls, on purpose to make concubines of them; and there are others that buy up young boys for their unnatural lusts: But for the most part, it is observ'd, Christian slaves are used better than those Christians that are at liberty: The latter are insulted and abused frequently both by Turks and Moors; but they take care how they meddle with slaves, as their masters will resent the affront, and they are forced to make satisfaction if they do them any injury.

The
Turks do
not force
their slaves
to turn
Mahome-
tans.

There is much more danger of falling into the hands of the mountaineers on the coast, than of the Algerines; for the former are not content with making Christian slaves, but make them serve with rigour, frequently taking away the life of a Christian prisoner, which those barbarians look upon as a meritorious action. But even here I find the people much more inclined to preserve their prisoners, where a good ransom may be expected, than to destroy them; as may be collected from the Relation LAUGHER DE TASSY has given us of the captivity of young Miss DE BOURK, daughter of the Count DE BOURK, which I chuse to recite, because it gives us some notion of the mountaineers of the kingdom of Algiers, and how very little authority the Dey has over them.

Monsieur DE TASSY relates, that the Countess DE BOURK embarked at Cette in Languedoc, on the 23d of October, 1719, in a Genoese bark, with her son, her daughter, M. L'ABBE DE BOURK her brother-in-law, another Irish gentleman, with six domesticks, two of them men, and four of the other sex: She was going for Spain to her husband Chevalier TOBIAS, Count DE BOURK, a gallant Irish officer, then in his Catholick Majesty's service, and who had followed King JAMES into France. On the second day of their voyage, being on the Catalan coast near Barcelona, the bark was made prize of by a small Algerine: But the Countess having a pass from the French court, the Captain treated her with the utmost civility and distinction, recovering her from the fright she was in, by assuring her, that no injury should be offer'd either to herself, or any of her retinue. She desired to be left with her family on board the Genoese bark; which request the Corsair readily granted. He took into his own ship the Genoese equipage, and put in their stead a few Turks and Moors to conduct the bark,

neers.

CHAP.
IX.

bark, which he took in tow, steering away for Algiers. But, on the 30th of that month, being near the Barbary coast, and attack'd by a most furious tempest at N. W. the Corsair was oblig'd to cut away the bark, in order to govern his own vessel; that prize not able to keep up with the Algerine, and the wind forcing her towards land, she run a-ground between Bujeya and Jeil, where she was dash'd in pieces. The Cabails, who, whenever the northerly winds blow tempestuously, are extremely attentive to observe from the tops of their mountains what passes upon the coast, having seen the approach of this vessel, ran down to the sea-side in great numbers to wait for and pillage her: The Algerines, who saved themselves by swimming, acquainted the chief of those Moors, that there was in the bark a French Princess. Immediately several Cabails threw themselves into the water, to save her at least; but could only save Miss DE BOURK, her uncle L'ABBE DE BOURK, a chamber-maid, with the two men-servants; the Countess, with her son, three women servants, and M. ARTHUR, her gentleman, were all drown'd: They made L'ABBE carry the child on his shoulders, and conducted them all to a place the least accessible in certain mountains, some days journey from the sea. Being arrived there, Miss DE BOURK, her uncle, and one domestick, were carried to one tent; the chamber-maid and second domestick to another. Next day the Shieks, or Chiefs of the Adouars or villages, assembled to consult on what was to be done with the prisoners, whether they should write to the Aga of Jeil, to send information to the French Consul at Algiers, that he might ransom the lady and her retinue? or whether it would not be better they should wait till the said Consul claimed them, and so get a sum more considerable? It was determined to stay till they were claimed, which obliged Miss DE BOURK (then only in her tenth year) to write a very moving letter (November 4.) to the Consul at Algiers; wherein she acquainted him with her misfortunes and condition: She conjur'd him to redeem her at any price whatever, and deliver her from the horrors she underwent. The Moors sent this letter to a certain Marabout near Bujeya, who passes for a great saint, and is held in such veneration, that when any one of that country asks a favour, he does it in the name of God and of the said Marabout. This saint immediately dispatch'd away to Algiers a courier, who deliver'd the letter to the Consul, by whom it was communicated to M. DUSAULT, lately arriv'd there from France, in quality of his most Christian Majesty's Envoy-extraordinary.

During this interval, the son of one of the most considerable Shieks demanded Miss DE BOURK in marriage of his Father, who propos'd it to the other Shieks. These imagin'd he might thereby acquire vast riches; and therefore several others of the most powerful disputed her with him; but none obtained her: And it was finally resolv'd in their council, that she should be ransom'd.

His most Christian Majesty's Envoy went instantly to MEHEMET, Dey of Algiers, of whom, in the strongest and most pressing terms, he demanded the liberty of Miss DE BOURK and her retinue: The Dey answer'd, that the Cabails acknowledg'd not his sovereignty, by reason he could not reduce them to obedience in a mountainous country, which was inaccessible to all but its inhabitants; and, when any Algerine forces were sent thither, in order to their reduction, they always laid ambuscades, into which the Turks could not possibly avoid falling.

He added, that all he could do, was strictly and precisely to enjoin his Agas of Jeil and Bujeya, to use all practicable means to get those Christians releas'd, and then ransom them on the easiest terms they were able to obtain. He immediately sent away his orders to that purpose, joining therewith letters for the Marabouts of those places, requiring them to act in concert with his said officers. On the 24th ditto, M. DUSAULT order'd to sea a French vessel then in the port of Algiers; whereon embark'd IBRAHIM HOJA, our nation's Interpreter, to carry those dispatches to the Aga's and Marabouts: On their receipt thereof they instantly took horse, and rode to that Adouar where Miss DE BOURK was detain'd: There they negotiated the ransom of her, and those with her, and procured the release of all five for 1300 Algiers current dollars. But to return to the Christian slaves at Algiers.

LAUGIER DE TASSY observes, that the French and Spanish slaves have each of them their Priests and chappels at Algiers, where divine service is perform'd after the mode of their respective countries: That the Jews also, who are computed to be five thousand families in the town, have their synagogues and their Priests; but that Britain, and the several Protestant nations of Europe, have neither chappels or ecclesiasticks to perform divine service, tho' they have Consuls here to take care of the interests of their respective nations, and transact their affairs: But one reason the English have no chappel or Priest here may be, that there are not many English slaves in the place. We have been at peace with Algiers these fifty or threescore years, and no Englishman can be made a slave, unless he serves in the fleets of foreigners, who are at war with the Algerines, for pay; of which indeed there are some, but they are redeemed from time to time, either by the Government, or by private charities. Queen ANNE redeem'd several in her reign; King GEORGE I. redeem'd 37; and his present Majesty 150, and upwards.

Something should be said of the trade of the Algerines; but in truth their trade, by which they principally subsist, is piracy and man-stealing. In their prizes they find all the merchandize of Europe; and this, as well as the prisoners, the Captain of the pirate and his crew divide equally with the owners, after the Dey has taken the eighth share he claims in every prize. The Jews are the principal merchants at Algiers, as they are in every town upon the Barbary coast, tho' there are in some Moorish merchants also; but, as to the Turks, they trouble themselves with no kind of merchandize but slaves, arms and ammunition: They are all of them men of the sword, and look upon traffick to be beneath them. The Jews buy the goods found in the prizes, and retail them at home, to export them again to foreign markets; and there are some few European ships that come to Algiers on account of trade, but meet with little encouragement, unless there have been no prizes made in a great while; for the pirates, who come by their goods without paying any thing for them, must certainly be able to afford better penny-worths than the Merchant, who buys his goods.

Turkish vessels, and those of the Moors, pay twenty Piasters, in the port of Algiers, for anchorage, whatever burthen the ship is of; and those of Christians, at peace with that nation, pay forty Piasters; while those, who are at war with Algiers, pay fourscore piasters for anchorage: For they take all foreign ships into their protection, when they have

Trade of Algiers.

CHAP.
IX.CHAP.
IX.

have enter'd any of their ports, whether they are at peace with them, or not; but, if they meet with the same ships at sea, even in their return from Algiers, they look upon them as lawful prize.

The duties on all merchandize imported by Turks, Moors or Jews, are twelve and a half per Cent.; and the duties on exportation, two and a half per Cent. The English, by their treaty in the year 1703, are to pay but five per Cent. on goods imported, and two per Cent. on those they export; and, 'tis said, the French have had the same favour shewn them: They make even money pay five per Cent. on importation, except that which is sent for the redemption of captives, and this pays but three per Cent. Wine, Brandy and Spirits pay four Piasters the piece on importation; and the company of the Bastion de France (a little island the French are possess'd of on the coast of Algiers) are allowed to send two vessels to Algiers every year, without paying any duties, 'tis said.

Goods im-
ported.

The merchandizes imported, are wrought Silks, Gold and Silver Stuffs, Damasks, Linnen and Woollen Cloths, Spices, Copper, Bras and Tin-ware, Quick-silver, Arms, Powder and other Ammunition; Sails and naval stores, Cochineal, Copperas, Sugar, Cotton, Galls, Brazil-wood, Red-wood, Alums, Vermillion, Wine, Brandy, Spirits, Opium, Gums, Paper, dried Fruit, and other less considerable articles.

Goods ex-
ported.

In return for which, the Europeans receive Wax, fine Wool, Ostrich-feathers, Skins of wild Beasts, Dates and Christian slaves: Nor is there any kind of merchandize, but what may be met with here sometimes, when they bring in rich prizes.

and naval
stores.

The English Consul, says LAUGIER DE TASSY, is the only Merchant of that nation at Algiers, and carries on a more advantageous trade than any other person; for he furnishes the Dey with powder, bullets, bombs, arms, anchors, cordage, and all manner of naval stores, and takes in return corn and oil, which are of great service sometimes to the British garrisons of Port-Mahon and Gibraltar; and, 'tis said, no other nation is suffer'd to carry any corn out of the country: But there is more than one reason for this indulgence, and for keeping fair with the English; for they do not only furnish the Government of Algiers with such things as are most wanted there; but, if there should happen to be another rupture with England, the Algerines would not be able to stir out of their ports for our Cruisers from Port-Mahon and Gibraltar: They will therefore ever have as much respect for Britain, as for any power in Europe, while we retain those two places.

The found-
ation of
the Turk-
ish govern-
ment at
Algiers.

That famous, or rather infamous, Pirate BARBAROSSA, laid the foundation of the Turkish dominion at Algiers, and was the first that styl'd himself King of it: Of which usurpation I meet with the following account. The Moors of Spain, having been driven from that country in the year 1492, and transported to the coast of Barbary, took all opportunities of retaliating the injury that was done them, and revenging themselves on the Spaniards, by taking their merchant-ships, and plundering the towns on the coasts; which they were very successful in for some years, being well acquainted with the country; and they found means, in these excursions, to surprise and carry multitudes of people into captivity: Whereupon Cardinal XIMENES, prime Minister to FERDINAND V. King of Arragon, in order to restrain these outrages, fitted out a fleet in the year 1505; on which having embark'd a body of land-forces, under the command of PETER, Count of

Navarre, he besieg'd and took the town of Oran on the coast of Barbary, then inhabited by Moors who had been driven from Grenada and Valentia. The Count afterwards made himself master of Bugia, and several other towns upon the same coast, together with the little island that lies before the bay of Algiers; whereby he prevented the Moors shipping going in or out of that port, and gave the town apprehensions of falling suddenly under the dominion of the Spaniards.

In this distress Prince SELIM, then Sovereign of Algiers, having heard of the fame of BARBAROSSA, the successful Turkish Corsair, sent to desire his assistance against the Spaniards: The Pirate was cruising in the Mediterranean, when he received the invitation; and, glad of the opportunity, sent away 18 gallies, and 30 small barks to Algiers, marching thither by land himself with such forces as he could assemble on a sudden. The Algerines, receiving advice of his approach, march'd out of town with Prince SELIM at their head, to welcome their Deliverer; and, having conducted him to Algiers, amidst the loud acclamations of the people, he was lodg'd in the Prince's palace. But their joy was not long-liv'd; for the Pirate, who, for many years had made no scruple of seizing whatever came in his way, immediately form'd a design of making himself Sovereign of Algiers; and, having found means to assassinate Prince SELIM privately, caused himself to be proclaim'd King, massacring all those he imagin'd might oppose his designs: Whereupon most of the natives abandon'd the place, and left the usurper in the peaceable possession of the city; but, upon his promising them his protection, and the enjoyment of their ancient laws and liberties, they returned to their habitation, and acknowledged him their Sovereign. They soon found themselves, however, under the dominion of a barbarous tyrant, who, after he had fortified the place, and secured his possession, treated them no better than slaves.

This revolution happen'd at Algiers in the year 1516; and the son of Prince SELIM, flying to Oran for protection, prevail'd on the Spaniards the year following to fit out a strong fleet, with an army of 10000 landmen on board, to assist him to recover his right, promising to acknowledge the King of Spain for his Sovereign, if he succeeded: But the Spanish fleet being arrived near Algiers, was dispers'd or shipwreck'd in a violent storm, and most of their forces drown'd, cut in pieces, or made slaves by the Turks. BARBAROSSA, puff'd up with this success, continued to treat the Moors, both in town and country, with greater insolence than ever, which induced the rest of the Moorish Princes to enter into a confederacy against the usurper; and, having chosen the king of Tenez their General, and assembled 10000 Horse, and a good body of Foot, they took the field, in order to lay siege to Algiers. BARBAROSSA, having intelligence of their motions, march'd out to meet them with no more than 1000 Turkish musketeers, and 500 Moors he could confide in, and had the good fortune to defeat the numerous forces of his enemies; who, being without fire-arms, were soon disorder'd by his musketeers, especially their horse, on whom they most relied: After which, the Conqueror enter'd the city of Tenez, the King being fled to Mount Atlas, and caused the Inhabitants to proclaim him their King.

There happen'd, about the same time, an insurrection in the kingdom of Tremesen, which lies still more to the westward; and the rebels hearing of the surprizing successes of BARBAROSSA, invited him

CHAP.
IX.

him to come and deliver them from the oppressions they pretended to have suffer'd under their native Sovereign, a message extremely acceptable to the ambitious Turk, who, having sent for a reinforcement of troops, and his artillery from Algiers, immediately advanced towards Tremesen; and, engaging that King in the plain of Aghad, obtained a complete victory, to which his artillery and small arms very much contributed, the Moors having neither the one or the other, but still fought with their old weapons, lances, bows and swords. The King of Tremesen, it seems, escaped out of the battle, but his traitorous subjects afterwards murder'd him, and sent his head to the Conqueror; who thereupon enter'd the city of Tremesen in triumph, and was proclaim'd King. The citizens acknowledg'd him their Sovereign, and took the oath of allegiance to BARBAROSSA, who now saw himself master of three kingdoms within the space of a year, which he had acquired with the assistance of a handful of men only; but as Tremesen was in the neighbourhood of Oran, he justly apprehended the Spaniards would not long permit him to enjoy his conquests in quiet. He enter'd therefore into an alliance with MULEY HAMET, King of Fez, the most powerful of the African Princes, who was no less an enemy to Spain than himself; and, thus supported, he did not doubt but he should be able to defend the extensive territories he had conquer'd against all the power of the Christians: And he might have judg'd right, possibly, if his ally, the King of Fez, had been as ready to oppose the efforts of the Spaniards, as he was. But CHARLES the Vth, coming to take possession of the throne of Spain about this time, and being implor'd by the prince of Tremesen, to assist him in the recovery of his father's kingdom out of the hands of BARBAROSSA, he sent over 10000 men from Spain, under the command of the governor of Oran; who immediately took the field, and, being join'd by a good body of Moors and Arabs, march'd towards Tremesen. Whereupon BARBAROSSA immediately sent to his ally, the King of Fez, to hasten to his assistance, and march'd in person, with 1500 Turkish musketeers, and 5000 Moorish horse, to attend the motions of the Governor of Oran, 'till he should be join'd by the King of Fez; but, being hemm'd in by the Spaniards, and endeavouring to break through them in the night-time, he was cut in pieces with all his Turkish infantry. Whereupon the Governor of Oran continued his march to Tremesen, and, the citizens opening their gates to him, the young Prince was restored to his throne. Some days after the battle, the King of Fez arriv'd in the neighbourhood of Tremesen, with an army of 20000 men; but, hearing of the success of the Spaniards, he return'd with more haste into his country than he came: Whereby the Spaniards had an opportunity of recovering both Tenez and Algiers, if they had followed their blow, and might with ease have expell'd the Turks from the coast of Barbary at that time; but the Governor of Oran contented himself with what he had done, and sent back the forces to Spain that had been employ'd in this expedition, at a time when the Turks of Algiers had given themselves over for lost. But, finding the Spaniards made no preparations to attack them, they proclaim'd CHEREDIN, the brother of BARBAROSSA, their King, who met with no disturbance 'till the year 1619, when he understood there was a general conspiracy of the Moors and Arabs, to free themselves from the Turkish yoke, and recover their ancient liberties: And, as he was conscious he was too weak to resist their united

forces, especially if they shou'd be join'd by the Spaniards, whom he apprehended to be at the bottom of this conspiracy, he dispatch'd an express to SELIM, the then Grand Signior; representing, that all Africa wou'd soon fall under the dominion of the Spaniards, if the Turks shou'd be driven from Algiers; and desiring he wou'd send him a strong reinforcement of troops, promising to resign his kingdoms to the Porte, and that he would act for the future, as Basha, or Viceroy, to the Grand Signior.

The Ottoman Emperor accepted CHEREDIN's offer, and sent 2000 Janizaries to his assistance; publishing a proclamation at the same time, that all Turks who should resort to Algiers, should enjoy the same privileges there, as the Janizaries did at Constantinople; whereupon all people of desperate fortunes, and whose crimes had render'd them obnoxious to the Government, immediately enter'd themselves in the service of CHEREDIN BARBAROSSA; and, with these reinforcements, he was soon in a condition to defeat all the conspiracies of the Moors, and render himself absolute master of that part of Barbary: He also subdu'd the island the Spaniards had possess'd themselves of at the mouth of the bay of Algiers, and by a mole join'd it to the continent; and, having erected a strong fortress on the island, he enlarg'd his piratical fleet, and so infested the coasts of Spain and Italy, that a merchant-ship could not stir out of any port without falling into the hands of his Corsairs. He also made frequent descents upon the coasts, carrying multitudes of Christians into slavery; and this, at the time when CHARLES the Vth, then Emperor of Germany and King of Spain, was at the height of his glory.

This Prince, now Sovereign of the best part of Europe, incens'd to see his dominions insulted, and his subjects daily carried into slavery by these rascally Pirates, and being incited to extirpate them by Pope PAUL III. as enemies not only to the Christian faith, but to all mankind; the Emperor, in the year 1541, having assembled a fleet of 500 sail, including transports and galleys, embark'd with an army of 20000 men and upwards, in Spain; and arriving before the bay of Algiers the latter end of October, landed about two thirds of his army, and summoned the place; which was upon the point of surrendering to him, when a sudden storm happen'd, in which great part of his fleet was shipwreck'd, his provisions all destroy'd, and such heavy rains at the same time fell on the shore, that his forces could no longer keep the field; whereupon he found himself oblig'd to abandon the enterprize, and reembark what forces he had left, having lost, at least, one third of them, either by shipwreck or the sword of the enemy, in his retreat; tho', had this enterprize been undertaken sooner in the year, in all probability it had succeeded, and CHARLES the Vth had added Africa to his empire, which was already extended over the best part of Europe and America.

But I should have taken notice, that some little time before this memorable enterprize of CHARLES the Vth, the Grand Signior had prefer'd CHEREDIN BARBAROSSA to the honourable post of Captain Basha, and commander in chief of all the territories of Algiers; but thought fit to appoint HASAN Aga, the Eunuch, Basha of the town of Algiers, probably to be a check upon CHEREDIN, and prevent his setting up again for himself. And, after the death of BARBAROSSA II. the Porte govern'd the kingdom of Algiers by their Basha's (as other provinces of that empire are govern'd) till the

CHAP.
IX.

CHAP. IX. 17th century, when the Janizaries, or militia of Algiers, 'tis said, represented to the Grand Signior, that his Basba's tyranniz'd over the country, squandered away the soldier's pay, and rendered the government of the Turks so odious there, that the Spaniards and Moors were about to unite against them, and would infallibly drive the Turks from the coast of Barbary, if that Government was not better regulated: They desired therefore, that they might elect one of their officers, with the title of Dey, to be their Governor; promising thereupon, to raise supplies sufficient to maintain their forces, which would save the Porte an immense charge; and that they would however always acknowledge the Grand Signior for their Sovereign; in which proposal, it seems, the Porte acquiesced. They elected a Dey, and under the government of such magistrates of their own electing they remain at present; but in no part of the world there are such frequent instances of the people's deposing and murdering their Princes, scarce any of them dying a natural death. They reign with absolute authority for a few years, months, or weeks, and sometimes a few hours puts an end to their dominion and their lives; nor are the Algerines, at present, any otherwise subject to the dominion of the Grand Signior, than as they acknowledge him the head of their religion: His orders are very little regarded in their territories.

It is amazing that this large kingdom of Algiers should be kept under the most slavish subjection by a body of 12000 Turks only, composed of the vilest and most abandoned wretches on the face of the earth; being chiefly such who, to avoid the punishment due to their crimes, have fled from Constantinople, and other Turkish towns and provinces in the Levant: none of the better sort of Turks ever resorting hither. And when the usual number of their militia happens to be lessened by mortality, or the being made slaves to the Christians, they send to the Levant, to pick up all the Banditti and Desperadoes they can meet with to recruit their piratical troops; taking also the renegado Christians, and the sons of the soldiery, which they have by Moorish or Arabian wives, into that body; for no Turkish women ever came to Algiers, looking upon it, as it really is, a nest of Pirates and Robbers, insolent daring villains, who are only fit for the conversation of people like themselves. Neither Moors or Arabs are ever admitted into this militia, lest they should endeavour to free their country from this insupportable tyranny of the Turks, and drive out their domineering masters. And though the son of a Turk and a Moorish and Arabian wife is admitted into their militia, these are never suffered to enjoy any preferment or post in the Government; it being suspected they may entertain too great a regard for their friends and relations by the mother's side.

To every private soldier of this body, it seems, they give the title of Effendi, or lord; and indeed these lordains demand a respect from the natives equal to that of Princes; and out of them are elected their Dey's or Kings, their Aga's, their Beys or Viceroy's. The Governors of towns, and all officers of state, and this militia, are exempted from all taxes and duties whatever, seldom punished for any crimes unless those against the State: Nor is any justice to be obtained against them, where the native Moors, Arabs, Christians or Jews, are parties: These are forced to submit to all manner of injuries and affronts from the soldiery. They

fly the streets, if they see a Janizary coming, or stand close up to the wall in the most respectful posture, till those high and mighty robbers pass by them.

While the Dey is successful, pays the soldiers duly, and does not attempt to invade their privileges, no Prince is obey'd with more alacrity by his troops; they refuse no hazards in his service: But if things go never so little amiss, the fault is immediately charged upon the Dey, and it is well if he be not sacrificed to their fury; which makes most of their Princes so cautious, as not to enter upon any thing of consequence, without the concurrence of the Divan, or great Council of the soldiery.

Those Janizaries who are unmarried, have much the greatest privileges: They are lodged in spacious houses provided by the Government, attended by slaves, and have the privilege of buying their provisions one third under the market-price, and a great allowance of bread every day, besides their pay; but the married men are excluded from all these advantages, being obliged to find their own houses, and their own provision for their families out of their pay: One reason for discouraging the soldiers marrying, is supposed to be, because the Government is entitled to all the estates and effects of all those that die or are carried into slavery without children: But the principal is, that the married men are supposed to have more regard to the natives with whom they intermarry, than the unmarried soldiers; and for the same reason, the sons of the married Janizaries are not allowed the privileges of the natural Turks, or ever preferred to any post in the Government, as has been observed already; which are such discouragements to their taking wives, that scarce any Janizaries marry, unless the renegadoes that are admitted into that body, who are not very numerous: However, all of them are allowed to purchase female slaves, and keep as many concubines as they please, without any restraint.

The greatest crime here, next to treason, if it be not held a branch of it, is the expressing any compassion or tenderness for the natives: However, they employ armies of Moors in several parts of the country, who assist in oppressing their fellow-subjects, and levying the tributes the Dey imposes. And notwithstanding the tyranny the Turks exercise over the Moors and Arabs; yet if any Christian power makes an attempt against their country, they now seem ready to unite their forces against such invaders, as dreading the government of Christians more than the usurpations of those of the same faith.

But to be a little more particular as to the election of the Dey: He ought, by their constitution, to be chosen by the Turkish militia, without one dissenting voice. When the throne is vacant, they assemble at the place, and the Aga of the soldiery demands who shall be their Dey; whereupon every one calls out for the person he is best affected to; but till all agree in the choice, they are directed to name others, till they pitch upon one who is universally approved; and it is not uncommon for them to draw their sabres, and for the strongest to force the rest to agree with them: In which contentions, many are killed or wounded. And there are instances of a powerful faction electing another Dey, while the former has been living, and murdering the reigning Dey as he sat upon his tribunal: And in this case, the usurper seldom fails to murder all the great officers and members of the Divan that oppose him.

CHAP. IX.

The election of the Dey, further treated of.

CHAP.
IX.

HALY Dey, who was plac'd upon the throne on the murder of IBRAHIM Dey, surnam'd The Fool, ann. 1710, caus'd no less than seventeen hundred persons to be murder'd the first month of his reign, whom he apprehended to be in a different interest. When the Dey happens to be kill'd, his women are plunder'd of all they have, and reduced to their primitive state, and his children have nothing more allow'd them than the pay of a private soldier, and excluded from all preferment in the State: But if the Dey dies a natural death (which rarely happens) they suffer his women to remain possess'd of what he leaves them. HALY Dey had the good fortune to reign eight years, viz. from 1710 to 1718, and died in his bed at last: However, he was no sooner given over by the Physicians, but a powerful faction made choice privately of a successor before he was dead; and the moment HALY expired, proclaim'd MAHOMET Dey, who was before High-Treasurer, and he was immediately invested with the royal robes: And thereupon, all the officers of State and the soldiery kiss'd his hand, and congratulated him on his accession, knowing it would have been fatal to them to have insisted on another election; though it has happen'd, that a Dey has been no sooner chosen and placed upon the throne, but he has been murder'd there by the opposite party. There were, it seems, some few years since, no less than six Deys assassinated in four and twenty hours, whose tomb still form a circle without one of the gates of Algiers.

The war
between
the Eng-
lish and
the Alge-
rines.

The English Merchants, as well as those of other nations, have suffer'd very much, by the depredations of the Algerines. Sir WILLIAM MONSON, in the reign of King JAMES I. burnt some few of their ships; Admiral BLAKE more in the year 1635; and Sir THOMAS ALLEN, in 1668, lay before their town, 'till he compell'd them to make peace; but they broke it again in the following year. In 1670, Captain BEACH forced seven of their frigates on shore, and burnt them. Sir EDWARD SPRAGGE, in 1671, took and destroy'd nine of their ships of war; and at several times, 'tis computed, the English may have destroy'd forty or fifty of these rovers; but one ship is no sooner lost, than they fit out another; and, 'tis said, not less than three or four hundred English vessels fell into their hands in a few years. The English and Dutch liad agreed, a little after the restoration of King CHARLES II. to fall upon the Algerines with their united fleets; and a squadron of each nation sailed to the Streights for that purpose: But, when they arrived there, the Dutch Admiral treacherously separated from the English, and went and destroyed their settlements on the coast of Guinea and in the West-Indies, without any provocation; whereby the Hollanders appear'd to be a more dangerous kind of Pirates than the Turks of Algiers, inasmuch as the Dutch robb'd us, while the two nations were at peace, and at a time when they had just enter'd into a confederacy with us; while the Algerines were so fair, as to declare themselves our enemies, giving us an opportunity to prepare for our defence. In 1682, the Algerines were so harass'd by the squadrons the English sent from time to time into the Mediterranean, that they thought fit to make peace with us, which they have kept pretty well ever since: While the treacherous Hollander suffer'd sufficiently many years after, by the depredations of the Algerines, who never kept any peace they made with the Dutch two years together, 'till very lately, and that they obtain'd by the mediation of the good-natured forgiving English, as has been observ'd al-

ready, or they had been in a state of war with those rovers to this day, and perhaps would have been forced to have relinquish'd their Turkey trade; which, in that case, must have devolved upon us.

The substance of the principal articles of peace, made by Admiral HERBERT in the reign of King CHARLES II. anno 1682, with the Basha and Dey of Algiers, were:

CHAP.
IX.
Articles of
peace con-
cluded
with Al-
giers, ann.
1682.

That the ships; belonging to Great-Britain, might come to any port in the kingdom of Algiers; and traffick there, paying the usual custom of ten per Cent.; and for powder, arms, ammunition, iron, timber and planks for shipping, cordage, and all other naval stores, no duty was to be paid.

That as well the ships belonging to Great-Britain, as those of Algiers, might freely pass the seas, and traffick, without any search, hindrance or molestation from each other; and that all persons and passengers, of what country soever, with their money, goods and moveables, to what people or nation soever belonging, on board the said ships, should be wholly free, and not be stopp'd, taken, or plunder'd, or receive any damage whatever from either party.

That the Alger ships of war, meeting any British merchant-ships out of the seas belonging to his Majesty's dominions, might send on board one single boat, with two sitters only, besides the ordinary crew of rovers: And that only the two sitters should enter such ship without leave from the Commander thereof; who, upon producing a pass under the seal of the Admiralty of England or Scotland, should be permitted to proceed freely on his voyage, and the said boat should immediately depart: And, in case any British man of war should meet with any ship of Algiers, if the Commander of such ship should produce a pass firm'd by the Governors of Algiers, and a certificate from the English Consul residing there, such ship of Algiers should be suffer'd to pass freely.

That no Algerine Commander should take out of any British ship any persons whatever, to carry them to be examin'd, or on any other pretence; or should use torture or violence to any persons that should be on board a British ship.

That no British ship, wreck'd on the coast of the kingdom of Algiers, should be seiz'd, or its crew made slaves; but the Algerines should use their best endeavour to save both men and goods.

That no ship of Algiers should serve the Corsairs of Sallee, or any other power at war with Great-Britain, and be made use of against his Majesty's subjects.

That no ship of Algiers should cruise in sight of Tangier, or any other country or place belonging to his Majesty, or disturb the peace or commerce of the same.

That if any ship of Tunis, Tripoli, or Sallee, or of any other place, should bring any ships, or goods, belonging to his Majesty's subjects, into the territories of Algiers, they should not be permitted to be sold there.

That if a British man of war should bring a prize to any place on the coast of Algiers, it might be freely sold or disposed of there, without paying any custom; and, if the Commander wanted any provisions, or other things, he might buy them at the market-price.

When any British man of war should appear before Algiers, proclamation should be made to secure all Christian captives; after which, if any Christian whatever should escape to such ship of war, they should not be requir'd: Nor the British Consul,

or

CHAP. IX. or the Commander of such ship, or any other subject of Britain, be oblig'd to pay any thing for such Christians.

After the ratification of the said treaty, no British Subject should be bought or sold, or made a slave in Algiers, on any pretence; and the King of England, or his subjects, might, at any time, redeem such as were slaves at Algiers at the time of this treaty.

If any subject of Britain dies at Algiers, the Government shall not seize his money or effects, but suffer his heirs or executors to enjoy them; and if he die without will, the English Consul shall possess himself of the goods and money of the deceased, for the use of his heirs and kindred.

That no British Merchants, trading to, or residing at Algiers, shall be oblig'd to buy any merchandise against their wills; nor shall any of their ships be oblig'd to carry goods, or make a voyage to any place, against their consent: Nor shall the English Consul, or any British Subject, be oblig'd to pay the debts of any other of his Majesty's Subjects, unless bound for them by a publick Act.

That no British Subject, in the territories of Algiers, shall be liable to any other jurisdiction, but that of the Dey, or Divan, except differences between themselves, which shall be determin'd by the Consul only.

That if any British Subject happen to kill, wound or strike a Turk or Moor, he shall be punish'd in the same manner, and with no greater severity, than a Turk ought to be (guilty of the same offence); and, if he escape, neither the British Consul, or any of his Majesty's Subjects, shall be question'd or troubled for it.

That the English Consul shall enjoy entire freedom and safety in his person and estate; shall be permitted to choose his own Terjiman (Interpreter) and Broker, to go on board ships in the road; to have the liberty of the country, and be allow'd a place to pray in: And that no man shall do him any injury by word or deed.

That if any war should happen between the King of Great Britain, and the kingdom of Algiers, the English Consul, and all his Majesty's Subjects residing there, shall, at all times, both in peace and war, have liberty to depart to their own country, or to any other, in any ship or vessel of what nation soever, with their effects, families and servants.

That no subject of Britain, being a passenger, and coming or going with his baggage to or from any port, shall be molested, tho' he be on board a ship or vessel in enmity with Algiers: Nor shall any Algerine passenger, on board any ship in enmity with Great-Britain, be molested in his person or goods he may have on board such ship.

That when any British Man of War, with his Majesty's flag at the main-top-mast-head, shall come to an anchor in the road of Algiers, the Dey and Regency shall cause a Salute of twenty-one cannon, and such ship shall answer it with the same number.

That, after the signing these articles, all injuries and damages, sustain'd on either part, shall be forgotten, and this peace shall continue in force for ever; and, for all damages committed on either side, before notice of this peace, satisfaction shall be made, and whatever remains in kind shall be instantly restored.

In case any thing shall be committed hereafter, contrary to this treaty, it shall subsist notwithstanding, and such contraventions shall not occasion a breach of the peace; and, if the fault was com-

mitted by private men, they alone shall be punish'd as breakers of the peace, and disturbers of the publick quiet: And our faith shall be our faith, and our word our word.

Confirm'd and Seal'd, in the presence of Almighty God, April the 10th; of JESUS, 1682; of the Heigira, 1093; Abirr, 11.

This treaty has been renew'd several times; in April 1686, by Sir WILLIAM SOAME, Bart. in his voyage to Constantinople, whither he went Ambassador, from King JAMES II. to the Grand Signior. It was renew'd again, in 1691, by THOMAS BAKER, Esq; and, in 1700, by Captain MUNDEN, and ROBERT COLE, Esq; then Consul of Algiers, jointly with some additional Articles (viz.)

I. The peace, made in 1682, is confirm'd, and more particularly the eighth article; wherein it is express'd, That no ship, belonging to Algiers, should cruise in sight of any port or place belonging to Great-Britain, or any way disturb the peace or commerce of the same: Nor shall any Algerine vessel enter the English channel.

II. No passes shall be requir'd from any English ship 'till the last of September 1701: But, after that time, if any English ship shall be seiz'd, not having a pass, the goods in such ship shall be prize: But the master, men and ship shall be restor'd, and the freight immediately paid to the master.

III. Whereas Captain MUNDEN has complain'd, that he was affronted some years past by some rude sailors at the Mole: It is promised, that at all times hereafter, when any British Man of War shall come to Algiers, order shall be given to an officer to attend at the Mole all day during their stay, to prevent any such disorder; and, if any disorder shall happen, the offender shall be punish'd with the utmost severity.

In the Reign of Queen ANNE, anno 1703, Admiral BYNO, the late Lord Viscount Torrington, renew'd the said peace with MUSTAFA Dey, and the two following articles were added (viz.)

I. That whereas the subjects of England, by the said articles, were to pay ten per Cent. custom for such goods as they should sell at Algiers: That from thence-forwards they should pay but five per Cent.; and for powder, arms, ammunition and naval stores, they should pay nothing (as was stipulated by the first treaty.)

II. All prizes taken by any subject of Britain, and all ships built and fitted out in her Majesty's plantations in America, that have not been in England, shall not be molested, tho' they have no passes: But a certificate, under the hand of the commanding Officer, that shall take such prizes; and a certificate, under the hands of the Governors or Chiefs of such American colonies or places where such ships were built or fitted out, shall be sufficient passes.

In the year 1716, Admiral BAKER, being order'd to renew the treaties with Tunis, Tripoli and Algiers, visited the two former in person; but deputed Captain CONINGSBY NORBURY, Commander of the Argyll; and Captain NICHOLAS EATON, Commander of the Chester, in conjunction with Mr. THOMAS THOMPSON (who then acted as Consul in the Absence of his brother SAMUEL THOMPSON, Esq;) to ratify the former treaties with Algiers, and conclude the following articles, (viz.)

I. If any demands or pretensions shall be depending between the subjects of either party, they shall be amicably redress'd, and full satisfaction made.

II.

CHAP.
IX.

II. That as the island of Minorca and city of Gibraltar have been yielded and annex'd to the Crown of Great Britain; from this time the said island and city shall be deem'd, by the Government of Algiers, part of the British dominions, and the inhabitants thereof look'd upon as his Majesty's natural subjects; and with their ships and vessels, wearing British colours, and furnish'd with proper passes, shall be permitted to trade freely in any part of the dominions of Algiers, and have the same liberties and privileges as any other subjects of the British nation: Nor shall any of the cruisers of Algiers, cruise within sight of the island of Minorca and city of Gibraltar.

III. That if any English ship shall receive passengers and goods on board belonging to the kingdom of Algiers, the English shall defend such passengers and goods, as far as lies in their power, and not deliver them to their enemies, the said passengers and goods being register'd in the books of the British Consul.

CHAP. X.

*The present state of Tunis and Tripoli.*CHAP.
X.Situation
of Tunis.

THE kingdom of Tunis is bounded by the Mediterranean sea, on the north; by the same sea and Tripoli, on the east; by mount Atlas, on the south; and by the river Guadilbarbar, which separates it from the kingdom of Algiers, on the west; lying between 30 and 37 degrees and a half north latitude, and extending about 200 miles from west to east.

Rivers.

The chief rivers are, 1. The Guadilbarbar, already mention'd, which rising in mount Atlas, runs northwards, and discharges itself into the Mediterranean near the island of Tabarca, separating the kingdom of Tunis from that of Algiers.

2. The Capes, or Capita, which rises also in the mountains of Atlas, and runs north-east, falling into the sea near the town of Capes.

3. Megerada, which rises in mount Atlas, and running northwards, divides the kingdom of Tunis almost in two equal parts, discharging itself into the Mediterranean near the town and island of Goletta.

Chief
towns.

The chief towns are, 1. Cairoan, situated on the river Megerada, latitude 32, said to be the first town the Saracens built in this country, and most remarkable at present for being the burying-place of the Mahometan Princes and Great men.

2. Urbs, situated in a fine plain, on a river that falls into the Guadilbarbar, latitude 35, about 150 miles south-west of Tunis; chiefly remarkable at present for the marble pillars, images, and other Roman antiquities found here.

3. Africa, or El Melidia, situated on the Mediterranean, in latitude 35, 90 miles south-east of Tunis, said to be the Adrumetum of the Romans.

4. Sufa, or Ruspina, situated partly on a flat, and partly upon the ascent of a rock on the Mediterranean, 25 miles to the eastward of Tunis: It lies in ruins at present, and is said to contain more antiquities than any town in the kingdom: Here is a small harbour, where the galleys and small ships belonging to Tunis frequently lie.

Tunis
city.

5. The city of Tunis, the capital of the kingdom, situated on a fine plain near a spacious lake, in 36 degrees and a half north latitude, almost over-against the island of Sicily, and but a few miles from the place where the famous city of Carthage stood.

It is about three or four leagues distant from the Mediterranean, a large, populous city, and a place of some trade; the walls about a league in circumference, but of no great strength. The Basna's palace, the mosques and bagnio's are the most remarkable things in it. The houses of the better sort of people are built about little squares, adorn'd with pillars, galleries and fountains; but have no other light than what they receive from the doors that open into the squares; and the roofs of the houses are flat and terrass'd, as in other Mahometan countries. When CHARLES V. took it in the year 1535, it is said to have contained an hundred thousand men, besides women and children; but this, I presume, must comprehend all such Moors as fled thither for protection on this invasion of the Christians: Certain it is, the numbers are not near so great at present.

6. Goletta, situate on a little island of the same name, three or four leagues to the eastward of Tunis, may be looked upon as the port-town to that capital. It is defended by two castles; one of them built by CHARLES V. who took Goletta before he advanced to Tunis. It was held by the Christians till 1574, and was of great use for restraining the excursions of the Turkish Corsairs or Rovers, after they made themselves masters of Tunis again.

7. Carthage, now a small village, situate near Cape Carthage (a promontory in the Mediterranean) supposed to have obtained its name from being situated near, or on part of the ground whereon the city of Carthage stood, latitude 36 degrees 40 minutes, three or four leagues north-east of Tunis. Here are still some ruins of marble and other stones, and several arches of the Aqueduct standing, that conveyed water to Old Carthage from a hill 30 miles distant: But I shall enlarge further on the description of Ancient Carthage, when I come to give the history of that empire.

8. Byferta, said to be the Utica of the Antients, is situated in 37 degrees north latitude, on a fine lake near the sea, about 30 miles to the northward of Carthage; said to be one of the best harbours the Tuniscens have for their galleys; but not capable at present, of receiving ships of any great burthen.

9. Porto Farino, situated on the Mediterranean, about the midway between Byferta and Carthage; latitude 37.

The kingdom of Tripoli, in which I shall include Barca (for if Barca be not subject to the Basna of Tripoli, it is subject to no body) is bounded by the Mediterranean on the north, by Egypt on the east, by Nubia and Beledulgerid on the south, and by the kingdom of Tunis on the west; extending along the Mediterranean from the north-west to the south-east (that is, from Tunis to Egypt) at least 1000 miles, and is about 200 miles broad where broadest, but in others scarce 100, lying between latitude 30 and 33 and a half.

There are no rivers in this country worth mentioning. That part of it contiguous to Tunis is tolerably fruitful; but all the rest to the eastward, as far as Egypt, is only a parched barren desert. The chief towns taken notice of by Geographers, are, 1. Old Tripoli; 2. New Tripoli; 3. Zaara; 4. Tachore; 5. Macellat; 6. Elhama; and 7. Mahara.

New Tripoli, however, is the only town of any note; which is situated in a sandy plain near the Mediterranean sea, latitude 33, about 60 leagues south-east of Tunis. It is a populous town, and surrounded with a wall and outworks; but the fortifications

CHAP.
X.

Tripoli.

towns

Tripoli ci-

CHAP. X. tifications very mean. Its greatest strength are in the desperate Pirates that inhabit it; consisting of the same sort of people as inhabit Algiers and Tunis, very formidable to the honest trader by sea and land. The Government of the country resembles that of Tunis; the Dey being very much under the influence of the Basha the Grand Signior sends thither, who levies annually a very considerable tribute on the natives of this country (as the Basha of Tunis does on the natives of that kingdom) which is remitted to the Porte: However, in all cases where the Basha does not interpose, the Dey may be looked upon as Sovereign of Tripoli.

And as the Government of Tunis and Tripoli is the same with that of Algiers (only in that one instance, that the Dey in the two former, is under some subjection to the Basha; whereas the Dey of Algiers acknowledges no superior :) So are the religion, laws, and customs of the people of Tunis and Tripoli the same with those of Algiers. The governing part are Turks, natives of the Levant, and Renegadoes, clothed like other Turks, in vests and turbants; their vests frequently made of English cloth, and their turbants of silk or linnen: Nor is the cloathing of the Moors, who live in towns, very different from theirs. But the Arabs have scarce any cloathing, more than a cloth about their waists, and ramble from place to place perpetually, to find herbage and water for their cattle: And therefore, not to trouble my readers with a repetition of these articles, I shall confine myself in treating of Tunis and Tripoli, to the three following particulars.

Bagnio's. 1. Their bagnio's, which were not mentioned in treating of Algiers; 2. The produce of their soil and their trade; and 3. The modern history of these countries.

1. As to their baths, there are in Tunis, Algiers, and Tripoli, a great number of bagnio's mightily frequented by the Turks, as well upon a religious account, as for health and pleasure; their religion obliging them to wash before they enter their temples, or perform their devotions. And to these bagnio's foreigners also resort, where they are well accommodated, sweated and rubbed for a very moderate consideration. These bagnio's differ in their dimensions, and the beauty of their building, according as they are frequented by the better, or lower rank of people; but their form and management are much the same in all. A gentleman is first brought into a handsome large room, where he is undressed, and a towel tied about him; from whence he is led into another room, moderately warm, and, after some little time, into the grand hall (covered with a cupola) in the middle whereof is the bath. The floor is paved with white marble, as are the little-rooms or closets in the sides of it, where people are washed and rubbed: The person who comes to be bathed, is first set down upon a marble bench that runs round the hall, and is soon sensible of an extraordinary heat, which makes him sweat plentifully; then he is carried into one of the side rooms or closets of a moderate heat, where a linnen cloth being spread upon the floor, and his towel taken off, he lies down at his full length, perfectly naked; then two lusty slaves, as naked as the patient, come in, and kneeling down, wash and rub his arms, legs, and every part of him with a flesh-brush, taking off all the scurf and roughness of the skin; then they wash him all over again, and after that dry him with clean towels. They also rub the hairy parts (if they are

not directed otherwise) with the powder of a certain earth, which immediately fetches off all the hair; and this serves instead of shaving: Then they wash and dry the party again, pair his nails, squeeze and mould his flesh, and stretch and pull his limbs with that violence, that his bones crack again, and those who are not used to it, would be apt to think them all dislocated. This is looked upon to be exceeding wholesome; but if a gentleman don't like this rough management, he may be more gently dealt with. The women have their several baths, where they are attended by she-slaves, and no man is permitted to enter these, under the severest penalties, upon any pretence whatever: And indeed persons of distinction always have bagnio's for themselves and their women, in their own houses.

As to the produce and traffick of Tunis and Tripoli: These countries breed abundance of Camels and fine Horses, and produce Corn and Olives plentifully. In Tripoli they have exceeding fine wool, and in Tunis a good manufacture of Soap; and as Mulberry-trees thrive prodigiously in both kingdoms, no country is more proper for silk, though very little cultivated; the reason whereof may be, that the Turks encourage scarce any manufactures, and can come by these a much easier way than by breeding Silk-worms; namely, by robbing honest Merchants that traffick in those seas. However, the Europeans do trade with the people of Tunis and Tripoli for Corn, Oil, Wool, Soap, Dates, Ostrich-feathers, skins of wild and tame Beasts; but one of the best branches of their commerce here, is Slaves; the European Christians, taken by their piratical ships, they set very high ransoms upon, or force them to serve at sea and land in all manner of employments and drudgery. They have also some traffick for Negroe-slaves to the southward. The Camels they usually sell in Egypt, and their fine Horses to the French: But they get much more by their piracies than by trade; and indeed this furnishes them with every manufacture of Europe, as has been observed already, which the Jews, who are very numerous here as well as in the rest of the towns of Barbary, know how to make their advantages of, by trafficking with such goods in the country, or exporting them again to places where there is a demand for them.

The Turks have been masters of Tunis ever since the year 1532, when HEYRADIN BARBAROSSA, Dey of Algiers, a brother and successor of BARBAROSSA I. obtained the dominion of this kingdom in much the same manner as his brother acquired that of Algiers. The people of Tunis, it seems, invited him thither to deliver them from the oppression they suffered (or pretended to suffer) under the administration of their lawful Prince: Whereupon HEYRADIN having made a voyage to the Porte, and procured a large fleet and a strong reinforcement of Janizaries, from thence made a descent near Goletta, the port-town to Tunis, and advancing towards the city MULEY HASSAN, their King thought fit to quit his capital without striking a stroke, and suffer BARBAROSSA to take possession of it. The usurper remained pretty quiet in his new acquired dominion for about three years: But the deposed Prince applying himself to the Emperor CHARLES V. imploring his assistance to restore him to his throne, and representing also of what dangerous consequence it would be, to suffer the Turks to settle at Tunis, which lay so near Italy and Sicily; his imperial Majesty embarked in person, in the year 1535, with a considerable army,

CHAP. X. Produce and traffick of the country.

Modern history of Tunis and Tripoli.

CHAP. X. and make a descent on the coast of Tunis, where he took the castle of Goletta by storm, and the city of Tunis thereupon open'd her gates to him, BARBAROSSA abandoning the town when he found himself too weak to resist the numerous forces of the Christians. Before the usurper left Tunis, he had order'd some renegadoes to set fire to the gunpowder, and blow up all the Christian slaves which were lodg'd near that magazine; but in this he was not obey'd, and the Emperor, 'tis said, on taking of the city, set at liberty no less than twenty thousand Christian slaves, which these pirates had carried into captivity during the three years they were masters of the place.

His imperial Majesty having restor'd MULLEY HASSAN to his throne, reembark'd his troops, leaving only a strong garrison of Christians in the castle of Goletta: But MULLEY, it seems, was again depos'd by his rebellious subjects the Moors, and forced to take refuge a second time in the Emperor's court. Some few years after, the Turks retook both Goletta and Tunis, and still remain possess'd of them, the Tuniseens being always in a state of war with Spain and Italy: Those coasts have ever since been miserably infested by them, and multitudes of the natives carried into captivity. They are also frequently at war with the rest of the nations of Europe, and make prize of all they meet with; but the English had the good fortune to clap up a peace with them in the year 1682, which has been renew'd from time to time; and, in the year 1716, the following Articles were agreed on, which are still in force.

Articles of peace and commerce between his most sacred Majesty GEORGE, by the grace, &c. and the most excellent Lords ALI Basba, HASSAN BEN ALI Bey, CARA MUSTAFA Dey, the Aga and the Divan of the most noble city of Tunis, and the whole body of the Militia of the said kingdom, renew'd and concluded anno Domini 1716, by JOHN BAKER, Esq; Vice-Admiral, &c.

Peace
with
Tunis.

I. **T**HAT all former grievances and losses and other pretensions between both parties, shall be void and of no effect, and from henceforward a firm peace for ever; free trade and commerce shall be, and continue between the subjects of his most sacred Majesty GEORGE, King of Great-Britain, &c. and the people of the kingdom of Tunis, and the dominions thereunto belonging: But that this article shall not cancel, or make void any just debt, either in commerce, or otherwise, that may be due, from any person or persons, to others of either party; but that the same shall be liable to be demanded, and be recoverable as before.

II. That the ships of either party shall have free liberty to enter into any port or river belonging to the dominions of either party, paying the duties only for what they shall sell, transporting the rest without any trouble or molestation, and freely enjoy any other privileges accusom'd; and the late exaction, that has been upon the lading and unlading of goods at Goletta, and the Marine, shall be reduced to the ancient customs in those cases.

III. That there shall not be any seizure of any ships of either party at sea, or in port; but that they shall quietly pass, without any molestation or interruption, they displaying their colours: And, for prevention of all inconveniencies that may happen, the ships of Tunis are to have a certificate, under the hand and seal of the British Consul, that

they belong to Tunis; which, being produc'd, the English ship shall admit two men to come on board them, peaceably to satisfy themselves they are English; and, altho' they have passengers of other nations on board, they shall be free, both they and their effects.

IV. That if an English ship shall receive on board any goods or passengers, belonging to the kingdom of Tunis, they shall be bound to defend them and their goods, so far as lies in their power; and not deliver them unto their enemies: And the better to prevent any unjust demands being made upon the Crown of Great-Britain, and to avoid disputes and differences which may arise, all goods and merchandizes, that shall from henceforward be shipp'd by the subjects of this Government, either in this port, or any other whatsoever, on board the ships or vessels belonging to Great-Britain, shall be first enter'd in the office of Cancellaria, before the British Consul residing at the respective ports, expressing the quantity, quality and value of the goods so shipp'd, which the said Consul is to certify in the clearance given to the said ship, or vessel, before she departs; to the end, that, if any cause of complaint should happen hereafter, there may be no greater claim made on the British nation, than by this method shall be proved to be just and equitable.

V. That if any of the ships of either party shall, by accident of foul weather or otherwise, be cast away upon any coast belonging to either party, the persons shall be free, and the goods saved, and deliver'd to their lawful proprietors.

VI. That the English, which do at present, or shall at any time hereafter, inhabit in the city, or kingdom of Tunis, shall have free liberty, when they please, to transport themselves with their families and children, tho' born in the country.

VII. That the people, belonging to the dominions of either party, shall not be abused with ill language, or otherwise ill-treated; but that the parties, so offending, shall be punish'd severely according to their deserts.

VIII. That the Consul, or any other of the English nation residing in Tunis, shall not be forced to make their addresses, in any difference, unto any court of justice, but to the Bey himself, from whom only they shall receive judgment; this, in case the difference should happen between a subject of Great-Britain, and another of this Government, or any other foreign nation: But, if it should be between any two of his Britannick Majesty's subjects, then it is to be decided by the British Consul only.

IX. That the Consul, or any other of the British nation, shall not be liable to pay the debts of any particular person of the nation, unless obliged thereunto under his hand.

X. That as the island of Minorca in the Mediterranean sea, and the city of Gibraltar in Spain, have been yielded and annex'd to the crown of Great-Britain, as well by the King of Spain, as by all the several Powers of Europe engag'd in the late war: Now it is hereby agreed, and fully concluded, that, from this time forward for ever, the said island of Minorca, and city of Gibraltar, shall be esteem'd, in every respect, by the Government of Tunis to be part of his Britannick Majesty's own dominions, and the inhabitants thereof to be look'd upon as his Majesty's natural subjects, in the same manner, as if they had been born in any part of Great-Britain; and they, with their ships and vessels, wearing the British colours, shall be permitted freely to trade and traffick in any part of the kingdom of Tunis, and shall

OF TUNIS AND TRIPOLI.

CHAP. shall pass without any molestation whatsoever, either on the seas, or elsewhere, in the same manner, and with the same freedom and privileges as have been stipulated in this and all former treaties, in behalf of the British nation and subjects.

XI. And the better and more firmly to maintain the good correspondence and friendship, that hath been so long and happily establish'd between the Crown of Great-Britain, and the Government of Tunis; it is hereby agreed and concluded by the parties before mention'd, that none of the ships or vessels belonging to Tunis, or the dominions thereof, shall be permitted to cruise, or look for prizes of any nation whatsoever, before or in sight of the aforesaid city of Gibraltar, or any of the ports of the island of Minorca, to hinder or molest any vessels, bringing provisions and refreshments for his Britannick Majesty's troops and garrisons in those places, or give any disturbance to the trade or commerce thereof; and, if any prize shall be taken by the ships or vessels of Tunis, within the space of ten miles of the aforesaid places, it shall be restored without any dispute.

XII. That all the ships of war belonging to either party's dominions shall have free liberty to use each other's ports for washing, cleaning or repairing any of their defects, and to buy and to ship off any sort of victuals alive or dead, or any other necessaries, at the price the natives buy at in the market, without paying custom to any officer: And whereas his Britannick Majesty's ships of war do frequently assemble and harbour in the port of Mahon in the island of Minorca; if at any time they, or his Majesty's troops in garrison there, should be in want of provisions, and should send from thence to purchase supplies in any part of the dominions belonging to Tunis, they shall be permitted to buy cattle alive or dead, and all other kind of provision, at the prices they are sold at in the market, and shall be suffer'd to carry them off without paying duty to any officer, in the same manner as if his Majesty's ships were themselves in the port.

XIII. That in case any ships of war, belonging to the kingdom of Tunis, shall take, in any of their enemy's ships, any Englishmen serving for wages, they are to be made slaves; but, if Merchants or Passengers, they are to enjoy their liberty and effects unmolested.

XIV. That in case any slave in the kingdom of Tunis, of any nation whatsoever, shall make his escape, and get on board any ship belonging to the dominions of his sacred Majesty the King of Great-Britain, &c. the Consul shall not be liable to pay the ransom, unless timely notice be given him to order that none such be entertain'd; and then, if it appears that any slave has so got away, the said Consul is to pay to his patron the price for which he was sold in the market; and, if no price be set, then to pay 300 dollars, and no more.

XV. And, the better to prevent any dispute, that may hereafter arise between the two parties, about salutes and publick ceremonies, it is hereby agreed and concluded, that whenever any Flag-officer of Great-Britain shall arrive in the bay of Tunis, in any of his majesty's ships of war, immediately upon notice given thereof, there shall be five and twenty cannon fir'd from the castles of Goletta, or other the nearest fortification belonging to Tunis, according to custom, as a royal salute to his Britannick Majesty's colours, and the same number shall be return'd in answer thereto by his Majesty's ships; and it is hereby stipulated and

agreed, that all ceremonies of honour shall be allow'd to the British Consul, who resides here, to represent, in every respect, his Majesty's person, equal to any other nation whatsoever, and no other Consul in the kingdom to be admitted before him in precedence.

XVI. That the subjects of his sacred Majesty of Great-Britain, &c. either residing in, or trading to the dominions of Tunis, shall not for the time to come, pay any more than three per Cent. custom, on the value of goods or merchandize, which they shall either bring into, or carry out of this said kingdom of Tunis.

XVII. It is moreover agreed, concluded and establish'd, that, at whatsoever time it shall please the Government of Tunis to reduce the customs of the French nation to less than they pay at present, it shall always be observ'd, that the British customs shall be two per Cent. less than any agreement that shall for the future be made with the said French, or than shall be paid by the subjects of France.

XVIII. It is moreover agreed, concluded and establish'd, that in case any British ship or ships, or any of the subjects of his Majesty of Great-Britain, shall import, at the port of Tunis, or any other port of this kingdom, any warlike stores; as Cannons, Muskets, Pistols, Cannon-powder or Fine-powder, Bullets, Masts, Anchors, Cables, Pitch, Tar, or the like; as also provisions (viz.) Wheat, Barley, Beans, Oats, Oil, or the like; for the said kinds of merchandize, they shall not pay any sort of duty or custom whatever.

We, the Parties before-mention'd, having seen and perused the preceding Articles, do hereby approve, ratify and confirm the several particulars therein mention'd, and they are to remain firm for ever, without any alteration: In testimony of which, we do hereunto set our hands and seals, in the presence of Almighty God, in the noble city of Tunis, the 30th day of August, O. S. and in the year of our Lord Jesus Christ 1716, being the 26th day of the moon Ramadam, and the year of the Hejira 1128.

(L. S.) J. BAKER (L. S.) (L. S.) (L. S.)

CHAP. XI.

The present state of the African islands.

THE islands of Africa still remain to be describ'd; of which the principal are, 1. Badmandel; 2. Zocotara; 3. The islands of Comorro; 4. Prince Maurice's island, or the Mauritius; 5. The island of Bourbon; and, 6. Madagascar; all which lie in the Indian ocean, eastward of the continent of Africa.

On the south-west part of Africa lie, 1. The island of St. Helena; 2. Ascension; 3. St. Matthew; 4. Annabon; 5. St. Thomas; 6. Prince's island; and, 7. The island of Fernando Po.

On the north-west part of Africa lie, 1. The islands of Cape Verd; 2. The Canary islands; 3. The islands of Madera; and, 4. The Azores.

The island of Bab, or Babelmandel, olim Diosdorus, lies at the entrance into the Red-sea, and forms one side of the famous streight of Babel, or Babmandel: It is situated in 13 degrees north latitude, and is about five miles in circumference. The Ethiopians and Arabians formerly contended with great fury for the possession of it, being a place of the last importance, as it commanded the entrance into the Red-sea, and preserv'd a communication

CHAP. XI.

Islands east of Africa.

Islands south-west of Africa.

Islands on the north-west part of Africa. Babmandel.

CHAP.
XI.

cation between Ethiopia and Arabia; but since the Turks have possess'd themselves of both shores, the island is in a manner deserted, being a sandy barren soil, and affording scarce any sustenance for man or beast.

Zocotora.

The island of Zocotora, or Socotra, is situated in the eastern ocean in 12 degrees north latitude, 30 leagues to the eastward of cape Gardesoy, being about 25 leagues long, and 18 broad. There is but one town in the island, where the Shiek, or Sovereign resides; the rest of the inhabitants live in cottages dispers'd about the country. There are two pretty good harbours on the coast, where European ships formerly used to put in, when they were disappointed of their passage to India by the monsoons; but this seldom happens now, our Mariners are so well acquainted with the winds and seasons in this part of the world. The people of this island are a mixture of Pagans and Mahometans, and have scarce any foreign traffick. Their usual food is milk, dates, roots, and some flesh: The country affords scarce any merchandize fit for exportation, unless it be Frankincense, Aloes, and the gum call'd Dragons-blood.

Comorro
islands.

The islands of Comorro are five in number, and lie between the coast of Zanguebar, and the north-end of the island of Madagascar, from 10 to 15 degrees of south latitude: That which is most frequented, and consequently best known to the Europeans, is the island of Johanna, where ships touch for refreshments in their passage to Bombay, and the Malabar coasts of India. This island lies in 12 degrees and an half north latitude, and is 30 miles long, and 15 broad. The people are Negroes of the Mahometan religion, extremely hospitable, especially to the English. They live under a monarchical form of government; from which, it seems, the females are not excluded. They have great plenty of black Cattle and Goats; of Fowls, Rice, Potatoes, Yams, Honey, Wax, Bananoes, Tamarinds, Lemons, Oranges, Pine-apples, Cocoa-nuts, and other fruits. And I find the women, as in other parts of Africa, are employ'd in husbandry, and other laborious works, while the men indulge their ease. They are a very plain, inoffensive people; but do not abound in wealth, and scarce know the use of arms, or what war means. Neither do their Kings take state upon them, but converse familiarly both with their subjects, and foreigners. They have but two towns; to one whereof our Mariners have given the name of King's-Town, from its being the residence of their Kings; and to the other Queen's-Town, some of their Queens having made it the seat of their Government. These towns are built with stone and timber; but the rest of their houses are only mean cottages dispers'd all over the country: Their usual food is Rice boil'd, Meat, Milk, Roots, and Cocoa-nuts; and the Milk of the young Cocoa-nuts serves them for drink, as the shells do for cups. They are under strange apprehensions of mischief from the Devil, and burn him in effigy once a year, 'tis said: They seem also to abhor the place where any one happens to die; either out of a dread of departed spirits, the universal foible of the common people; or, as others suggest, because they look upon the place where any man dies to be polluted; but, after some time, they return to the place again, and inhabit the rooms where their friends happen'd to draw their last breath.

The rest of the islands of Comorro are much about the same dimensions, inhabited by the same

kind of people, and produce the like plants and fruits; and therefore it is perfectly unnecessary to enter upon a particular description of them.

The next island I am to describe, is that of Prince Maurice, or the Mauritius, belonging to the Dutch, who gave it this name in honour of their Stadtholder Prince Maurice, under whose administration they made themselves masters of it. This island is situated in 20 degrees south latitude, 100 leagues east of Madagascar; being of an oval form, and about 50 leagues in circumference, abounding in woods of various kinds, particularly Ebony. There are also abundance of very high mountains, from whence their rivers fall in torrents. The Dutch have a fort, and a garrison of 50 men in the island; besides which, there may be three or fourscore families of Hollanders, who keep abundance of Negroe slaves that are employ'd in husbandry, and other laborious work. The Dutch found this island uninhabited, and consequently uncultivated; nor was there any other cattle upon it but Deer and Goats; the Dutch have now introduc'd almost all the plants of Asia and Europe, and well stock'd the island with cattle and poultry: Rice and Pulse, Sugar-canes and Tobacco also are rais'd here, but in no great quantities; nor does the soil seem proper for corn or wine. The Hollanders touch here in their passage from the Cape to Batavia; and, as neither of these colonies abound in good timber, it is probable they are supplied with it from the Mauritius; for, 'tis said, they have a great many saw-mills erected on the rivers in this island; but the reason the Dutch first possess'd themselves of the Mauritius, was for a baiting-place between Europe and India, having no other place to touch at in that long voyage, before they were masters of the Cape of Good Hope.

I come, in the next place, to treat of the island of Bourbon, call'd England's Forest by the English, who first discover'd it. This island is situated in 21 degrees south latitude, about 40 leagues south-west of Mauritius. It is of an oval figure, and about 30 leagues in circumference; finely diversified with mountains and plains, forests, and champain-fields, has plenty of wood and water, and a fruitful soil, except one part of the island, which has been burnt up and render'd barren by a volcano, or subterraneous fires. The Portuguese first discover'd it, anno 1545, and stock'd it with Hogs and Goats, as if they intended to have made a settlement here; but afterwards deserted it again. Captain CASTLETON, an English Commander, touch'd here in the year 1613, and was so taken with the beauty of the island, that he gave it the name of the English Forest: But our East-India Company did not think it worth while to fix a colony here. The French afterwards took possession of it in the year 1654, and gave it the name of Bourbon, and left some few people and slaves there, who afterwards came away in an English ship; however, the French still lay claim to the island, tho' they make little or no use of it, there being no harbour upon the coast, or any thing to induce them to visit it, but the fresh provisions they meet with here, on their voyage to and from India; such as black Cattle, Hogs, Goats, Tortoises, tame and wild Fowls, Oranges, Lemons, and other fruits, roots and herbs.

The largest of the African islands, and indeed of the whole world, except that of Borneo, is that of Madagascar, call'd by the Portuguese St. Laurence, from its being discover'd on St. LAURENCE's day, anno 1506; tho' others say, it obtain'd this name from

island.

CHAP. from LAURENCE ALMEIDA (son of ALMEIDA, the Portuguese Viceroy of the East-Indies) who discovered it: But however that be, Madagasc, or Madagascar, is the name the natives give it, and by which it is most commonly known at this day.

XL

The island of Madagascar is situated between the 12th and 26th degrees of south latitude, 40 leagues east of the continent of Africa, being about 1000 miles in length from north to south, and generally between 2 and 300 miles broad; only towards the north it grows much narrower, and terminates in a point: It is a fruitful country, abounding in cattle, corn, fish, fowl, herbs, roots and flowers; and almost all manner of animals and vegetables, that are to be found on the neighbouring continent of Africa may be met with here; and there are scarce any plants of Asia or Europe, except the fine spices, but will flourish here, as the French inform us, who made the experiment at their settlement of Fort Dauphin. As to the face of the country; it is universally agreed, that it affords a pleasing variety of hills and valleys, woods and champaign, and is well water'd with springs and rivers; and that there are several good harbours upon the coast: But still it is found not to produce any kind of merchandize; which, for quantity and quality, can induce any one European nation to attempt the conquest of it, or fix any considerable colonies here. The Portuguese, English, Dutch and French, have successively endeavour'd to discover something that might turn to account: They were long amus'd with hopes, that there were gold and silver mines in the island; but there seems now to be little hopes of finding these tempting minerals, or the precious stones that our voyage-writers talk so much of, in any quantity. We purchase scarce any thing here but Negroes slaves, which the natives barter with the European nations for cloathing, hard-ware, tools or toys; and here the shipping, bound to and from India, sometimes furnish themselves with water, fresh provisions and fruits: The natives, especially in the inland country, are generally Negroes, like those on the neighbouring continent; but there are both White men and Malatto's upon the coast, who speak Arabick, and therefore are supposed to come from Arabia, as well as because their religion is a mixture of Mahometism, Judaism and Paganism: But, tho' they retain circumcision, and some other Mahometan rites, those who have visited the island, relate, they have no mosques or temples, or any regular publick worship, tho' they acknowledge a deity, and perform some acts of adoration.

The country is still divided amongst several petty princes or monarchs, which would make it an easy conquest, did their soil produce any thing to incite the avarice or ambition of the European powers to attempt it; and here, as on the continent, the several tribes being frequently at war with each other, make slaves of their prisoners, whom they barter away, and exchange, with such merchants as visit their coasts, for cloathing, strong liquors, and such utensils and necessaries as they want: But I don't find they wear any other cloathing, than a piece of Cotton, Calicoe, or Linnen cloth about their waists, adorning their arms with bracelets, their necks with necklaces, and their hair with some glittering trifles. Their arms are still bows and arrows, darts and lances, with a shield for their defence: They seem terribly afraid of fire-arms: Their houses are only round little huts, 30 or 40 of which form a village: There is not any thing that can be call'd a town in the whole country.

VOL. III.

They go a fishing in their seas and rivers in canoos, made of the bodies of large trees hollow'd; and they have also larger boats, 'tis said, of boards sew'd together with cordoage made of the Cocoa-nut-tree, but no ships.

CHAP. XI.

The places where the Europeans have attempted to establish settlements in Madagascar, are either at the bay of St. Austins, on the south-west part of the island; or at Fort Dauphin, on the south-east part of the island. The Portuguese, English and Dutch, have successively sent detachments to the bay of St. Austins, to explore the country, and then abandon'd it again; and the French, on the other side of the island, built Fort Dauphin, placed a garrison there, and penetrated far into the country, proposing not only to make themselves masters of this island, but of the navigation of the Indian seas; but they seem at length to be convinc'd, that their project was impracticable, and only make use of Fort Dauphin at present, as a place of refreshment, in their voyages to and from India.

It was once expected, that the Pirates would have made a settlement in this island, and usurp'd the dominion of it, having six or seven sail of ships, with which they used to infest the Indian seas, and carry their prizes into a place of security, on the north-east part of Madagascar, where they possess'd themselves of a harbour of difficult access, and defended from storms by the little island of St. Mary's, which lies before it in 17 degrees south latitude.

The Court of England, about the year 1700, sent a squadron of four men of war, commanded by Commadore WARREN, to drive the Pirates from thence; but he, finding it impossible to come at them, publish'd a proclamation, in pursuance of his instructions, offering a pardon to all that would come in (except AVERY their leader); but not a man came over to him. The Commadore afterwards proceeded to Fort St. George in the East-Indies, where the writer of these papers saw him. This gentleman used his utmost diligence to meet with the Pirates in the seas of India, but to no purpose; and, having left one or two of his ships on the shoals near Malacca, return'd with the rest to England: However, his expedition had this good effect, that the Pirates durst not stir out from Madagascar; and, finding they were so narrowly watch'd, they agreed to divide what they had got, and disperse themselves. Two of them were afterwards taken by the Dutch at Malacca; and, being sent to Fort St. George, were brought over to England in the Fowland, being the same ship the author came home in the year 1701: What became of AVERY himself I could never learn; but 'tis probable he is dead, or remains conceal'd in the island of Madagascar to this time; for he can expect no mercy from any of the Powers of Europe, if he should fall into their hands; but, as for his being in such circumstances, as to lay the foundation of a new state or kingdom in this island, this report possibly deserves but little credit: We should have heard more of him after so many years elaps'd, if he had made any figure there.

I shall now repass the Cape of Good Hope, and take a view of the islands on the south-west part of Africa; and the first we meet with in the Atlantick ocean, in sailing from the Cape, is St. Helena, so named by the Portuguese, who discover'd it on St. Helen's day, in the year 1502. This island is situated in 16 degrees south latitude, about 600 leagues north-west of the Cape of Good Hope, almost in the mid-way between the continents of Africa and America, but nearer to that of Africa, from whence

29 A

CHAP. XI. it is distant about 1200 miles: The winds blowing always from the south-east a moderate gale, it is an exceeding pleasant voyage from the Cape to St. Helena, and performed in less than three weeks, without handing a sail, or giving the least trouble to the seamen. But there is no sailing to this island directly from the northward, the winds always blowing from the south-east in these seas. When a ship therefore is sent from England to St. Helena, it first sails as far southward as the Cape of Good Hope, and then returns to St. Helena: I question whether three ships ever made the island in going directly from Europe, since it has been discovered. The island is about 21 miles in circumference, and high land, for it may be discerned at sea above 20 leagues distance: It consists indeed of one vast rock, steep on every side as a church-steeple, and looks like a castle in the middle of the ocean, whose natural walls are of that height, that there is no scaling them, or indeed any landing on the island, but at a small valley, called Chappel-valley, in a bay on the east-side of it, which is defended by a battery of forty or fifty great guns, planted even with the water; and the waves dashing perpetually on the shore, it is at all times difficult landing even here. There is also one little creek besides, where two or three men may land at a time; but this is now defended by a battery of five or six guns, and rendered inaccessible. There is no anchorage any where about the island, but at Chappel-valley bay; and as the wind always sits from the south-east, if a ship overshoots the island never so little, she cannot recover it again.

A little beyond the landing-place in Chappel-valley, is a fort, where the Governor resides with the garrison; and in the same valley there is a pretty town, consisting of forty or fifty houses, built after the English way, whither the people of the island resort when any shipping appears, as well to assist in the defence of the island, if they happen to be enemies, as to entertain the seamen, if they are friends: For the Governor has always sentinels on the highest part of the island to the windward, who give notice of the approach of all shipping, and guns are thereupon fired, that every man may resort to his post. It is impossible for any ship to come in the night-time, but what has been discovered the day before, and preparations made for her reception, if an enemy.

Notwithstanding the island on every side appears to be a hard barren rock, yet on the top it is cover'd with a fine staple of earth a foot or a foot and a half deep, which produces all manner of grain, grass, fruits, herbs, roots, and garden-stuff: And the country, after we have ascended the rock, is prettily diversified with rising hills and plains, adorned with plantations of fruit-trees, and kitchen-gardens, among which the houses of the natives are interspersed; and in the open fields are herds of cattle always grazing, some of which are fatted to supply the shipping that touches here, and the rest furnisheth their dairies with milk, butter, and cheese: They abound also in Hogs, Goats, Turkeys, and all manner of poultry; and their seas are well stored with fish. The greatest misfortune is, that amidst all this affluence of other things, they have neither bread nor wine of their own growth; for tho' the soil is extremely proper for Wheat, yet the rats, which harbour in the rocks and cannot be destroyed, eat up all the seed before the grain is well out of the ground: And though the Vines flourish and afford them Grapes enough, yet the latitude is too hot for making wine: As I have ob-

CHAP. XI. served already, there is no country within the Torrid Zone, where good wine is produced; neither cold nor very hot countries agree with this liquor.

All the wine they spend therefore, they have from the Canaries, the Madera's, or the Cape, which is brought to them in European shipping, as well as their flour and malt: And their very houses are some of them brought ready framed from England, there being no timber on the island, trees not taking deep root here for the rock that lies so near the surface. However they have under-wood enough for their necessary uses, in this warm climate.

Besides Grapes, they have Plantains, Bananas-figs, Lemons, and such other fruits as hot countries usually produce; and they make shift to raise Kidney-beans, and some other kinds of pulse in their gardens; though they cannot preserve their grain from the Rats: And, to supply the want of bread, they eat Potatoes or Yams.

There were upon the island, when I was on shore there, in the year 1701; about two hundred families, most of them English, or descended from English parents; though there were some French refugees amongst them, brought thither to cultivate their vines, and teach them to make wine; but in this, it seems, the heat of the climate prevented their succeeding, as has been observed already. Every family has its house and plantation on the higher part of the island, where they look after their cattle, their Hogs, Goats, and poultry, fruits, and kitchen-gardens: They scarce ever come down to the town in Chappel-valley, unless it be once a week to church, or when the shipping arrives, when most of the houses in the valley are converted into punch-houses, or lodgings for their guests, to whom they sell their cattle, poultry, fruits, or garden-stuff. But the inhabitants are not suffered to purchase any merchandize of the ships that touch here: Whatever they want of foreign growth or manufacture, they are obliged to buy at the Company's ware-house, where they may furnish themselves twice every month with Brandy, European, or Cape wines, Batavia Arrack, Malt, Beer, Sugar, Tea, Coffee, China and Japan ware; Linnen, Calicoes, Chints, Muslins, Ribbands, Woollen-cloth and stuffs, and all manner of cloathing; for which they are allowed six months credit. The coin chiefly current here, is Spanish dollars, or English money.

There is no place out of England, where the natives have such fresh ruddy complexions, and robust constitutions, as we meet with here. The children and descendants of white people, in any latitude among the Tropicks, look like a piece of dough-paste, without any manner of colour: But the natives of St. Helena have generally a good mixture of red and white, attended with a good degree of health; which may be ascribed to the following causes. They live on the top of a mountain always open to the sea-breezes that constantly blow here: They are usually employed in the most healthful exercises of gardening and husbandry, and their island is frequently refreshed with moderate cooling showers, and there are no fens or salt-marshes about it to annoy them. They are used also to climb the steep hill between the town in Chappel-valley and their plantation, which is so steep, that they are forced to have a ladder in the middle of it, from thence called Ladder-hill; and this cannot be avoided without going three or four miles about; so that they seldom want air or exercise, the great preservers of health. As to the genius and tem-

Persons of the natives of St. Helena.

CHAP. XI. *The genius and temper of the people.* temper of the natives; they seem'd to me the honestest, the most inoffensive and hospitable people I had met with of English extraction, having scarce any tincture of avarice or ambition. I asked some of them, if they had no curiosity to see the rest of the world, of which they had heard so many fine things; and how they could confine themselves to a spot of earth, scarce seven leagues in circumference, and separated from the rest of mankind? To which they answer'd: They enjoy'd all the necessities of life in great plenty: They were neither parch'd with excessive heat, or pinch'd with cold: They lived in perfect security, in no danger of enemies, of robbers, wild beasts, or rigorous seasons, and were happy in a continued state of health: That as there were no rich men amongst them (scarce any Planter being worth more than a thousand dollars) so there were no poor in the island; no man hardly worth less than four hundred dollars, and consequently not oblig'd to undergo more labour than was necessary to keep him in health.

That, should they transport themselves to any other country, they understood their small fortunes would scarce preserve them from want, and they should be liable to innumerable hazards and hardships, which they knew nothing of here, but from the report of their countrymen: And indeed there is but one inconvenience that I can conceive the natives of St. Helena are liable to; and that is, the oppression of their Governor, which has sometimes been their case; and this is not easy to be redress'd, as the inhabitants have no opportunity of making their grievances known to those who are able to relieve them. However, as far as I could learn, they are generally govern'd with an equal and impartial hand; and while they are so, St. Helena to me is a paradise, compar'd with any other part of the world. The reader will pardon me, therefore, that I have dwelt so long upon this little spot of earth, and the rather as it is inhabited by one of the best colonies of our countrymen, who still retain the old English hospitality and sincerity, the unaffected simplicity and benevolence our country is so remarkable for; and yet are endow'd with courage and skill sufficient to defend their natural fortification (whose walls are rocks of a surprizing height, and whose moat is the vast Atlantick ocean) against all the Powers of the known world.

A certain diminutive writer has indeed charg'd the females of that island with some gallantry with the officers of our East-Indians that go ashore there; but, I believe, there is less of this practis'd at St. Helena, than in any other port-town whatever: Nor did any person ever suffer here by the sharpening and pilfering tricks of the inhabitants, as the sea-faring men and passengers do in almost every other island belonging to foreigners; especially those of the Spaniards and Portuguese, where those that lie on shore, scarce ever escap'd being robb'd, and are sometimes murder'd: On the contrary, I question whether there be any town either in England or out of it, where there are fewer disorders and outrages committed than at St. Helena. Here, tho' the people appear with an air of freedom not known in other governments, yet an exact order and discipline is observ'd, and an universal quiet and satisfaction seems to reign in this fortunate island.

The Portuguese, who discover'd it in 1502, stor'd it with Hogs, Goats and Poultry, and used to touch at it for water and fresh provisions in their return from India; but I don't find they ever planted a colony here; or if they did, having deserted it afterwards, the English East-India company took pos-

session of the island in the year 1600, and held it 'till 1673, without interruption, when the Dutch took it by surprize. However, the English, commanded by Captain MUNDEN, recover'd it again within the space of a year, and took three Dutch East-India ships that lay in the road at the same time. The Hollanders had fortified the landing-place, and planted batteries of great guns there to prevent a descent; but the English being acquainted with a small creek where only two men could go a-breast, climb'd up to the top of the rocks in the night-time, and, appearing the next morning at the backs of the Dutch, they threw down their arms, and surrendered the island without striking a stroke. But this creek has been since fortified, and a battery of great guns planted at the entrance of it; so that there is now no place where an enemy can make a descent with any probability of success.

The island of Ascension lies in 8 degrees south latitude, and 200 leagues and upwards north-west of St. Helena. This also was discover'd by the Portuguese, on Ascension-day, whereupon they gave it the name it bears: But I don't find that they, or any other nation, have yet thought it worth the planting. The island is 8 or 10 leagues in circumference, some of it pretty high land, but very barren. There is scarce any wood, fruit-trees, plants, or herbage upon it: However, the European shipping usually call here in their way from India, and refresh their half-starv'd crew with the flesh of Tortoises; for abundance of these animals frequent that island, and the Sailors going on shore in the night-time, will turn two or three hundred of them on their back before morning, and are so barbarous, sometimes, as to turn a great many more than they use, leaving them to die and stink on the shore; for the creature can never get up again if he is once turn'd upon his back on level ground: The flesh is white, and looks like veal, being a very great refreshment to our Seamen, after they have fed a year or two upon salt meat, and perhaps have little or none of that left by that time they arrive here. The ship I came home in, had neither meat nor biscuit for a considerable time before we made the island of Ascension, nothing but Rice for the sailors to eat, who were mightily rejoiced therefore when they approach'd that island. But the Captain however refused to come to an anchor here: He saw fires upon the shore, and fancied some Pirates had made them to draw us in, and therefore made the best of his way for England; where we had not been long arriv'd, but we heard it was the famous DAMPIER and his crew, that made those fires upon the Ascension, as a signal of their distress, having been cast away upon that island, and lost their ship; and they were, some few days after, taken up by an English man of war who came that way, and brought to London, after they had been out several years in attempting insignificant discoveries; for I take DAMPIER to have been a man of no great judgment, and but meanly qualified for such an enterprize, by the account he gave of his voyage; and indeed the charges the Government was at in equipping him out for this expedition was entirely thrown away, for want of some person of more skill and experience to conduct the design.

The island of St. Matthew is situated in two degrees of south latitude, 100 leagues north-east of Ascension, and is about 8 leagues in circumference. This island also was discover'd by the Portuguese, who planted it and kept possession of it for some time,

CHAP. XI.

These Tortoises have fins instead of feet, and are three times as big as a land Tortoise.

Dampier cast away on this island.

CHAP.
XI.

time, but have since deserted the island, and it now remains uninhabited, having very little to invite other nations to settle there, unless it be a small lake of fresh water.

Islands in
the Gulph
of Guinea.

The next four islands I proposed to take notice of, viz. Annabon, St. Thomas, Princes Island, and Fernando Po, are situated in the Gulph of Guinea, between Congo and Benin, and having been all discover'd by the Portuguese, are still in possession of that nation.

Annabon
island.

Annabon is situated in 2 degrees of south latitude, 200 miles to the westward of Congo, being about 10 leagues in circumference, and mountainous. The name of Annabon, or happy Year, was given it by the Portuguese, who discover'd it on New-year's day, 1571. The Portuguese have still the government and propriety of the Island; but most of the inhabitants are Negroes, brought hither from the continent of Africa, and their descendants. There are also a mingled breed, call'd Malottos, and some Portuguese: The island abounds in Cattle, Hogs, Poultry, Oranges, Cocoa-nuts, and such other fruits as are usually found in hot countries, with Indian Corn and Rice; and there is a convenient road for ships on the lee-side of the island.

St. Tho-
mas's
island.

The island of St. Thomas is situated just under the Equator, between 40 and 50 leagues to the westward of the continent of Africa, and 30 north-east of Annabon, being of a round figure, and about 40 leagues in circumference; discover'd by the Portuguese the same year 1571, on St. THOMAS's day. This is the most considerable island in the Gulph of Guinea: It is well supplied with wood and water, and there is a high mountain in the middle of it, almost always cover'd with a cap of clouds. The heat and moisture of the air render it extremely unhealthful to northern constitutions; but the Portuguese Negroes and Malottos who inhabit it, 'tis said, live to a good old age: They have plenty of Indian Corn, Rice and Fruits, and make a good deal of Sugar. And among other exotic plants the Portuguese have introduced here, is that of the Cinnamon-tree; but, 'tis said, they are afraid of planting this and the other fine spices in any quantity in these islands, lest the Dutch should come and take their country from them; for the Hollanders, it seems, would make the world believe, that no nation can have a right to the fine spices but themselves; tho' they acquir'd them by treachery and violence, driving the Spaniards, Portuguese and English from them by the most unjust and barbarous practices that ever any people were guilty of. The Spaniards, it seems, claim'd all the discoveries in the West, by virtue of a grant from the Pope; and the Portuguese those of the East, by the like authority: But the Dutch, by an uncommon strain of insolence, piratically seiz'd the Spice-islands; and to this day, by high and mighty violence, actually exclude all other nations from them, to the everlasting reproach of the English, and the rest of the European nations, who tamely suffer'd themselves to be expell'd by that encroaching people. The chief town upon the island, is call'd St. Thomas, and sometimes Pavosan; containing five or six hundred houses, and is the See of Bishop.

Princes
island.

Princes island is situated in 2 degrees of north latitude about 40 leagues north-east of St. Thomas, and as much to the westward of the continent of Africa, and is said to be the least of the islands in the Gulph of Guinea. It affords Rice, Indian-corn, plenty of fruits, roots and herbs; they have no want of Cattle, Hogs or Goats; but what they abound in most is Sugar-canes.

The island of Fernando Po, is situated in three and a half degrees of north latitude, 10 leagues to the westward of the continent, being about 30 miles long and 20 broad; and as it is inhabited by the same sort of people, so the soil produces much the same kind of plants, corn and fruits, as the rest of the islands in the Gulph of Guinea do. The Portuguese usually call at some of them for refreshments in their voyages to and from India, and in their passage from Brazil to Africa. The Dutch finding them conveniently situated for trade, and affording plenty of provisions, twice attempted to drive the Portuguese from St. Thomas, and easily made themselves masters of the island; but losing almost all their Officers, Seamen and Soldiers, engag'd in those expeditions, by malignant fevers, were oblig'd to abandon it again, and the Portuguese still remain in the peaceable possession of these islands; the unhealthfulness of the climate being their best protection against the avarice and ambition of the greedy monopolizing Hollanders.

guese from
these
islands.

The islands of Cape Verd, so named from their being situated over-against that Cape in Negroe-land, tho' they lie upwards of 120 leagues to the westward of it, were discover'd by ANTONY NOEL, a Genoese, in the service of Portugal, anno 1460, and are about twenty in number; but some of them only barren rocks uninhabited: The chief of them are Bravo, Fogo, St. Jago, Mago, Bonavilla, Sal, St. Nicholas, St. Lucia, St. Vincent, St. Cruz, and St. Antonio, situated between 14 and 19 degrees of north latitude. The largest of them, St. Jago, is of a triangular figure, 50 or 60 leagues in circumference, rocky and mountainous; but the valleys produce Indian-corn, Cocoa-nuts, Oranges, and such other fruits, plants and roots as are common to hot countries: and here we are supplied, in our voyage to India, with Hogs, Goats and Poultry in great abundance. Their seas also so abound with fish, that I have seen as many dragg'd to shore at one haul, as would fill two boats. Hither the English shipping usually resort for water and fresh provisions, in their voyages outward bound to the East Indies: They come to an anchor in a bay beneath a ruinous fort, situate on a high rock, near which there is a pretty large village of Portuguese Malottos and Negroes; but the chief town, which is a Bishop's see, and the residence of the Governor, or Viceroy, as some title him, is three or four leagues from thence. None of their towns or forts are of any great strength: And tho' there are men enough upon the island, and particularly abundance of Negroes of a good stature, arm'd with swords, daggers, and lances, who look upon themselves to be no ordinary Cavaliers; I question if an hundred Grenadiers would not be a force sufficient to subdue the whole island, if it was thought worth the while. The Portuguese, who reside here, are such as necessity or poverty has driven hither, and live a lazy indolent life, subsisting on the fruits and other produce of the country. Some have represented them as a treacherous and thievish generation; but from the usage I met with amongst them, I must say they do not seem to deserve that character in general: for my part, I look'd upon the Portuguese here, to be a harmless inoffensive people, and, without any apprehension of danger, went ashore, at St. Jago with two or three friends, and lay in one of their villages all night, where we were entertain'd with all the good humour and hospitality imaginable, at a private house. After we had supp'd, a carpet was spread for us to sleep on: They sung and play'd upon their country

Cape Verd

Verd
islands.

CHAP. XI. country musick, and in all things shew'd themselves so ready to oblige us, that I could not help retaining the good opinion I at first conceiv'd of them; tho' Governor PITTS, and the Officers of the ship, reprov'd us very sharply for lying on shore, telling us, it was a thousand to one, but our throats had been cut before morning; and indeed, as to the Negroes, we had some instances afterwards of their being given to thieving and pilfering what they could get: but I look upon it, we were pretty safe under the protection of their masters, the Portuguese.

Great caution to be used when we go on shore in foreign countries.

'Tis true, our Seamen too often get drunk, and abuse the inhabitants where they land; and then the next Europeans that come on shore are ill-treated, and perhaps made prisoners, or murder'd by way of retaliation. A friend of mine, Mr. ALEXANDER, and a dozen more, were cut in pieces on going ashore in another East-India voyage, without giving any offence to the people; but this was certainly to revenge some outrages that had been committed by others, or to defend themselves against some mischief they might apprehend from the boat's crew. I was myself in the extremest danger from the Negroes here, upon a difference that arose concerning a little matter we were trafficking for; twenty of them, at least, drew their ponyards, and were about to strike, when one, who seem'd to have some authority amongst them, perswaded them to desist, and accommodated the matter, otherwise I had receiv'd as many wounds as CÆSAR in the senate: But this made me very cautious ever after, of giving the natives, where we came, any provocation, or trusting myself too much in their power: And, indeed, it behoves every man to be very much upon his guard, that visits distant countries: We may escape nineteen times, and miscarry the twentieth: And there is no concluding, that people may be trusted in a second voyage, because we have met with good usage from them in a former. We don't know what provocations they may have had from other travellers in the mean time; or in what light their Priests, or other designing people, may have represented us: We know there are Mahometans, that think they do honour to their Prophet, by insulting and murdering of Christians: And there are Roman catholick Priests that teach their votaries we are infidels, and deserve to be extirpated from off the face of the earth. At these very islands of Cape Verd, the people were surpriz'd to find we believed in JESUS CHRIST; their Priests having assured them, we were as great enemies to Christianity, as Turks or Jews: and, under such prejudices, we must not wonder at any ill usage we meet with from the natives.

West-India ships take in Salt at Sal and Mago.

Grampus, or Whales, about Cape Verd islands.

I have observ'd already, that our outward bound East India ships touch at the island of St. Jago for water and fresh provisions: It may be proper to observe also, that abundance of English ships call at the islands of Sal and Mago, in their way to our plantations in America for Salt; but I don't know any thing else these islands are remarkable for, unless it be a volcano in one of them; which from thence has obtain'd the name of Hogo: And I must not forget the great number of Grampus's, a species of Whales, we met with here, 70 or 80 foot in length. These lay very quietly close by our ships while we were at anchor under St. Jago, and might easily have been taken, if we had been prepared for such sport. Give me leave to mention another particular in this voyage to the Cape Verd islands, and that is, the sudden alteration of

the weather we experienc'd here. We sail'd out of the Thames the 30th of January, 1678-9, being an extream cold winter, the river full of ice; and within the space of a month arriv'd at St. Jago, in 15 degrees of north latitude, where we found it so warm, that the men all lay naked upon their chests, not being able to endure any cloaths on: And when we came ashore, we found groves and gardens of ever-green and ripe fruits; a serene air, and every thing almost that could afford delight to people just arriv'd from a frozen region. The sudden change from a cold to a warm country, from winter to summer, from naked trees destitute of leaves and fruit, and a land cover'd with snow and ice, to a place where Oranges and all the fruits of the earth display'd their beauties, and were ready for gathering, was such an agreeable change in a little more than the compass of three weeks, that it exceeded any metamorphosis that is to be met with in the most romantick relations. An unusual gaiety seem'd to possess all the ship's company; nothing but mirth and good-humour reign'd amongst us; even our surly Tars seem'd transform'd into sociable creatures.

I come in the next place to describe the Canaries, The Canaries, anciently call'd the Fortunate Islands, being seven in number, and situated between the 27th and 29th degrees of northern latitude, and between the 12th and the 21st degrees of western longitude, reckoning from the meridian of London; the most easterly of these islands lying about 50 leagues west of Cape Non, in the empire of Morocco.

They are said, by some, to be call'd Canes, or Canaries, from the great number of Dogs found here when they were discover'd: Others derive the name from the Canaanites, the ancestors of the Carthaginians, who are supposed to have first planted them, and given them the name of their mother country; but whether either of these ought to be accepted, is much to be doubted: I look upon them to be uncertain guesses, that we have very little foundation for; and therefore proceed to the description of the particular islands. And first of Ferro, the most westerly island of the Canaries, Ferro, situate in 27 degrees odd minutes north latitude, and, 'till lately, made the first meridian by most nations. It is about seven or eight leagues in circumference and high land, but has some fruitful valleys that afford plenty of corn, good pasture, sugar-canes and fruits, but there are no springs or rivers; all the fresh water the natives have, is preserv'd in cisterns, or fetch'd from the neighbouring islands: The romantick story of a tree here, that sheds incredible quantities of water, has been long exploded.

2. The island of Palma, situated 10 or 12 leagues north-east of Ferro, and about the same dimensions, but remarkable for affording large quantities of the best wine of all the Canaries, usually call'd Palm-Sack.

3. Gomera, another small island, about 10 leagues to the eastward of Ferro, said to abound in corn and delicious fruits, but affords very little wine.

4. Teneriffe, situate in 28 degrees north latitude, about 20 leagues to the eastward of Ferro, and is about 40 leagues in circumference: This island affords corn, wine and fruits, in great abundance, tho' 'tis pretty much encumber'd with rocks and mountains; of which the most remarkable is, the famous Pico of Teneriffe, supposed to be one of the highest mountains in the world: Some writers have made it 15 miles, others 5 miles high perpendicular; but

The height of the Peak.

CHAP.
XI.

but those, who make it about two miles in perpendicular height, seem to come nearest the truth. Certain it is, that the upper part of it, which is in the form of a sugar-loaf, and white, may be seen plainly above the clouds, at 120 miles distance. I think I can affirm, I have seen it thus far at least, as distinctly as if I had been at the top of it. When the ship lay close to the island, indeed the clouds intercepted our sight of the top; but after more than four and twenty hours sail from it, with a brisk gale of wind, whether it was from the purity of the air, or other causes, we all saw it with the naked eye, as plainly as if it had lain within half a mile of us.

Some English gentlemen, that had the curiosity to visit this amazing mountain, relate, that they set out from Oratavia, one of the principal towns in the island; and that, having passed over several rugged hills and sandy plains, they came at length to the foot of the Peak, where they found vast pieces of rocks and stones, that seemed to have tumbled down from the upper part of it: That having ascended the mountain about a mile, they were obliged to quit their horses, and climb up the hill on foot: And having traversed a steep black rock about a mile, they found the top of the rock as flat as a pavement; and here the air was so cold, that they were forced to keep great fires all night. The next morning they travelled from the black rocks up that part of the mountain call'd the Sugar-loaf, which is exceeding steep, and the soil a deep white sand, which made it very difficult travelling: That when they came near the top of the Peak, the wind was very high, and a continual breathing of a hot sulphureous vapour issued from the hill, which scorched their faces, and made them sore. That on the top of the Peak was a large basin or caldron, as 'tis usually called, about a musket-shot over, and four yards deep; the brim whereof, on which they stood, not above a yard broad: That within this vase were small loose stones, mixed with sulphur and sand, that sent out a hot suffocating steam: That from the Peak, they had a clear view of the Grand Canary, Palma, Gomera, and even of Ferro, which is 20 leagues distant from the Peak. They relate, that there was a great deal of snow and ice about two thirds of the way up, but at the very top none at all, which is ascribed to the heat that issues from the caldron and adjacent earth. They met with no trees, shrubs or bushes, in their passage, only some Pines. Others, who have had the curiosity to view the Peak, tell us, that in the first day's journey, they came to a lodge about two thirds up the hill, and rested there all night: That the second day, they went up to the top of the Peak, and returned to the same lodge; and that the third day, they came back to the city of Oratavia, from whence they set out, making the whole journey an adventure of three days spent in continual labour and fatigue, and no small hazard, in passing so suddenly from excessive heat, at the bottom of the hill, to extreme cold on the black rock; and then again into the hot steams that issued from the top of the mountain.

The Peak
supposed
to be rais-
ed by an
earth-
quake.

In Dr. SPRAT'S history of the *Royal Society*, he gives us an account of a Merchant, who was also a Physician, and had lived upon this island twenty years, who declared it as his opinion, that the whole island, being mightily impregnated with brimstone, did formerly take fire, and blow up most part of it, there appearing several mountains of huge stones, calcined and burnt about the island, especially in the south-west part of it; and these, he thinks, were

raised out of the bowels of the earth, at the time of that conflagration. He adds, that the greatest quantity of sulphur, lying about the centre of the island, occasioned the raising of the Peak to the present height; for these calcined rocks lie 3 or 4 miles round the bottom of it: That from the Peak, to the south-west, almost as far as the shore, are still the tracts of the rivers of Brimstone and melted oar that ran that way; and have so ruined the soil where they flowed, that it will produce nothing but Broom: That some of the calcined rocks resemble Iron oar, some Silver, and others Copper oar: That in the south-west part of the island are high mountains of a bluish earth, and stones which have a yellow rust on them, like that of Copper and Vitriol; and that there are several springs of vitriolate water here. This Physician relates also, that while he was at Teneriffe, a vulcano broke out in the island of Palma, which occasioned a violent earthquake in Teneriffe, where they heard the noise of flaming Brimstone, and that it resembled thunder: That they saw the fire very plainly in the night-time for six weeks together. Certain it is, that about Christmas 1704, several vulcano's burst out in this island of Teneriffe, which did not only occasion a most terrible earthquake, but whole towns were swallowed up, or overturned, with many thousands of people in them, by those torrents of sulphur and metallick oar that issued from those vulcano's, and the finest country in the world, great part of it by that means converted into a barren desert.

The chief towns in Teneriffe are, 1. St. Christopher's of the Lake; 2. Oratavia, already mentioned; and, 3. Santa Cruz.

St. Christopher's is, by some styled the capital of the Canary islands, and the seat of the Viceroy. It stands partly on the side of a hill, and partly on a plain, and is a pretty large compact town, having two parish-churches, and several convents, hospitals and chappels: The houses of people of condition have large gardens and orchards of Palms, Oranges, and Citrons, and other fruits belonging to them, and the whole country about it abounds with vineyards: On one side of the town is a fine plain of 3 or 4 leagues in length; and on the east a lake, from whence it receives its name, and it is constantly refreshed with fine cooling breezes from the sea.

Oratavia is a port-town on the north-west part of the island, said to be a place of the greatest trade; and, on that account, the residence of the foreign Consuls and Merchants: It has one parish-church, and several convents and chappels, and is a town of the best trade in the island.

Santa Cruz is a little town, situated in a bay on the east-side of the island, defended by two forts, and several batteries of great guns; which could not, however, prevent Admiral BLAKE'S destroying 16 Spanish galleons, lying here in the year 1657, then looked upon to be one of the most hardy enterprizes that ever was executed, no Sea-officer before him having attempted to attack a fleet under the protection of castles and batteries on shore, though nothing was more frequent in the late wars with France and Spain.

5. The island, called the Grand Canary, lies about 13 or 14 leagues south-east of Teneriffe, between 27 and 28 degrees of north latitude, and is about 50 leagues in circumference, being a more level and a more fruitful country than that of Teneriffe. The chief town is called Palma, and by some

CHAP.
XI.

CHAP. XI. some Canaria, and is situated a little distance from the sea, in the north part of the island, said to be a large, clean, pleasant town; and to enjoy a serene temperate air: It is the residence of the Governor, the see of a Bishop, and has a beautiful cathedral, richly adorned, besides several other churches and convents; the country about it abounding in corn, wine, fruits, cattle, game, fine pastures, fish and fowl. Their fields also afford a great variety of flowers, and their groves echo with the musick of those birds we so much admire here, and from this island called Canary-birds, being preferable to those of the same kind in Germany, though the latter are more likely to live in England, as they come from a climate not so warm as that of the Canaries.

6. Forte Ventura, or the island of Good Fortune, situated between the Grand Canary and the continent of Africa, a long island, stretching from west to east, but very narrow. It abounds in corn, fruits, cattle, fish and fowl, but chiefly in Goats, which serve them for food, and they drive a great trade with their skins; but I find this island affords little or no wine.

7. Lancerota lies a little to the northward of Forte Ventura, and is said to produce plenty of all things but wine: It is one of the least of the Canaries, and has no town of any note in it: That which is the most considerable, bears the same name with the island. Besides these, there are some other small islands in these seas, particularly one call'd the Salvages, in 30 degrees; but travellers have not thought them worth a particular description.

These islands were very properly called, the Fortunate islands, by the antients; for, by the concurrent testimony of travellers, there never was a richer soil, or a more agreeable situation: There is nothing desirable in life, but what is to be met with in the terrestrial paradise; corn, wine, and oil, flesh, fish and fowl, abound in them, and that the most exquisite in every kind. As to the richness of their wines, they are not to be paralleled, as every one can testify, who has ever tasted of the genuine Canary and Palm-sack; and of these, 'tis computed, they do not send less than ten thousand hogheads annually to Great-Britain.

But this is not all: The natives of these islands generally enjoy a clear serene sky and temperate air; for, tho' they lie in a warm climate, they are so constantly refreshed with breezes from the sea, that the noon-day heats are very tolerable, and their evenings and mornings inexpressibly pleasant. They are never sensible of pinching cold, or rigorous seasons. The poorest people here know no want of cloathing, firing, fruits, or wine: And if fields, covered with a variety of beautiful and fragrant flowers, and the musical notes of those birds, which all the world admire, afford an agreeable pleasure; these are what every native of the Canaries enjoy, and without any expence or trouble to procure them.

But still it must be confessed, there are some things to be met with even here, that are a great alloy to this seeming happiness. They that have seen or heard of those terrible volcano's and earthquakes, those rivers of brimstone, and melted oar, that have swallowed so many towns and villages, must ever live in dread of the direful catastrophe: The more pleasant and delightful the present scene appears, the quicker must their apprehensions be of the terrible destruction these islands are ever subject to: And, perhaps, there is no part

of the earth that appears very desirable, but has something to balance the pleasure it affords; and put us in mind that we are not to expect unmix'd or durable pleasures on this side the grave: The beauties of the creation are sufficient indeed to convince every man, that God can make us exquisitely happy: But the uncertain tenure, by which we hold all we enjoy in this world, is also sufficient to inform us, we must look for happiness somewhere else.

These islands, it is generally believ'd, were first discover'd and planted by the Carthaginians; and it is held by some, that the Romans also were well acquainted with them: But of this I make some doubt; for certain it is, the people of these islands had no manner of communication with the continent for many hundred years; and it is evident the Romans, who never minded navigation or forcing commerce, neglected many of the Carthaginian plantations and settlements, even upon the continent of Africa, and much more those in distant islands. The Romans either despised traffick, or had no genius for it. The distant parts of the world had not so long remain'd strangers to each other, if the Romans had not unfortunately destroy'd the Carthaginian state, and discouraged all remote discoveries. We are taught, indeed, to look upon the Romans as a great people; but what did their greatness consist in? Was it not in carrying war and devastation into every country? in putting fetters upon the rest of mankind, and destroying all manner of commerce? Instead of applying themselves to the improvement of trade and manufacture, they enrich'd themselves by rapine and robbery, plundering the industrious part of mankind of what they had acquir'd by their labour and ingenuity. But to return. It is a further argument, that the Romans were never acquainted with the Canary islands; that they lay conceal'd or unknown to the rest of the world for several centuries after the decline of the Roman empire; and, on their being discover'd again in the 15th century, there were found no Roman antiquities: Nor had the customs and manners, or language of the inhabitants, any resemblance to those of the Romans. Their custom of preserving their dead friends in caves, and keeping them from generation to generation entire and uncorrupted, would much rather incline us to believe they descended from the Egyptians, or some other people of Africk: But however that be, JOHN, King of Castile, having intelligence that there were such islands, it seems, employed JOHN DE BETANCOUR, a French gentleman in his service, to take possession of them, about the year 1405, who succeeding in this expedition, the propriety of three of them was conferr'd on BETANCOUR by that King, and he resided there all his life-time as Sovereign of the Canaries; but the posterity of BETANCOUR afterwards reconvey'd them to the Crown of Castile; and, when they were found to be of consequence, the King of Castile procur'd a grant from the Pope of them, and the Spaniards remain in possession of them to this day.

The Madera islands are situated between 32 and 33 degrees of north latitude, and in 16 degrees of western longitude, about 100 leagues north of the Canaries, and as many to the westward of Sallee, in the kingdom of Fez.

The largest of them, call'd Madera by the Portuguese, from its being cover'd with wood when it was discover'd, is about 40 leagues in circumference, consisting of fine rising hills and fruitful valleys, well watered by the rivulets that fall from the mountains; tho' abounding much more in wine than corn;

tain Ma-
sham of
Bristol.

corn; for of wine, they annually export to the West-Indies, or Europe, several thousand hog-sheads; but of corn, they have frequently a very great scarcity: They make several sorts of wine, one call'd Malmsey, a very rich wine; a white sort; and a third like Tent, not fit to be drank unmix'd; but of these they have no great quantities. The Madera wine we usually drink, and which this island yields most of, is a pale wine of the colour of Champagne, or good Small-beer, and is not very strong. The climate here is more temperate than that of the Canaries; but they do not enjoy so clear a sky, or that plenty of corn and fruits: However, in one respect they are to be preferr'd to the Canaries, that they are not so subject to vulcano's and earthquakes; and, 'tis said, no venomous animal will live here. The chief towns are Funchal, Santa Cruz, and Manchico. Funchal, the capital, is situated in a bay, at the south-east part of the island: It is the seat of the Governor, a bishoprick, and has a cathedral and three parish-churches in it, besides several convents and chappels, of which the Jesuits (who seem to influence all affairs in these islands) is much the most beautiful and magnificent: So bigotted are the Roman Catholics here, that they will not allow a Protestant any burial, without paying very dear for the permission, as our Merchants and Factors, who reside here, have experienc'd: And however pleasant the Canary islands and Madera may be, the Inquisition, that reigns in both, must make them no very desirable residence for any, but those who can resign their consciences and understandings entirely to the direction of the Jesuits. The vulcano's of the Canaries are not more terrible to the natives, than these Fathers, arm'd with the authority of the Inquisition, are to the Protestants that reside amongst them. 'Tis certain, we meet with better quarter among Turks and Pagans, than we do amongst bigotted Roman Catholics: And 'tis observ'd, that the further they are removed from Rome, the more zealous and cruel they are. In Rome, and the great towns of Italy, we converse with all manner of liberty and freedom, and are scarce in any danger of the Inquisition; but where the Jesuits find themselves remote from the seat of the Government, and in a manner out of the eye of the world, there is not a more insupportable tyranny upon the face of the earth than those are subject to that refuse to submit to their usurp'd dominion over the consciences of men. But to return from this digression. The town of Santa Cruz is situated on the north-east part of the island, and that of Manchico on the south-west; but I meet with no further description of them: The rest of the natives live at their plantations and vineyards, that are dispers'd all over the country, and make it look like one continued garden.

This desirable island, according to the most of our English writers, was discover'd by one ROBERT MANCHIN, or MASHAM, a native of Bristol, and Captain of a merchant-ship of that port, in the year 1344; but the story is told so many different ways, and has so much the air of a romance, that I cannot give much credit to it; tho' I could not avoid mentioning the tale, because it is found in every author almost that has written of this country. Some relate that this Captain had a beautiful mistress at Bristol, whose relations being against his marrying of her, they agreed to go over to France together; but were driven by distress of weather to this island, where the Captain and his Mistress being on shore, their ship was forc'd to sea in a storm, and taken by the Moors of Morocco, who made the

crew slaves; and that some of the English Seamen giving an account of the adventures to a Portuguese Pilot, who was then also a slave in Morocco, and afterwards redeem'd, the Court of Portugal, upon information, fitted out some ships, and took possession of the island, where they found a tomb or monument that Captain MASHAM had erected to the memory of his Mistress, who died before him: Others relate, that the Lady was the Captain's wife, that she fell sick and was buried here, and that afterwards the Captain himself, being taken prisoner by the Moors, acquainted a Portuguese Pilot with the discovery he had made himself; who, upon his return home, put the Court of Portugal upon fitting out a fleet to take possession of the island. But however that was, it seems to be agreed, that the Portuguese did not plant this island, or send any colonies thither till the year 1425 (which was above fourscore years after the pretended discovery of it by Captain MASHAM) and that when they came thither, they found the island cover'd with thick woods, and without inhabitants; but burning down the woods, the ashes render'd the soil exceeding fruitful and proper for vineyards, which have been cultivated with great care and industry ever since: Corn also, 'tis said, yielded at first an encrease of sixty or seventy bushels for one; but after the virtue of the ashes, with which the ground was at first so well improv'd, was spent, it yielded but indifferent crops of grain, and of late years there is often a scarcity of it in the island.

The next in magnitude, of the Madera islands, is Porto that of Porto Sancto, situate 6 or 8 leagues N. E. of Sancto. Madera Proper. It is about 5 or 6 leagues in circumference, abounds in the same kind of wine and fruits as the former. There are several other small rocks or islands lie about it, which go under the name of the Madem's; but I don't find they are either inhabited or cultivated. The Madera's still remain under the dominion of the Portuguese.

The last islands I shall describe here, are the Azores, or Western Islands; not that they are properly African, but rather European islands; but, lying in the same sea with the Madera's, and belonging to the Portuguese as the former, they may very properly be describ'd here, especially since they were omitted in the second volume of *Modern History*, which treats of the present state of Spain and Portugal.

The Azores, sometimes call'd the Tercera's, and at others the Western Islands, are nine in number, situated between the 36th and the 40th degrees of latitude, and between the 23d and 32d degrees of west longitude, 300 leagues to the westward of Portugal, and upwards of 300 leagues to the eastward of Newfoundland; and, consequently, lie almost in the mid-way between Europe and America: They stretch from east to west, St. Michael's and St. Mary's lying the most easterly. St. Michael's is the largest of all the Azores, being about 30 leagues in circumference. This island, like the rest, is pretty mountainous, but produces plenty of corn, fruits, cattel, fish and fowl, and they have a thin sort of wine: Their greatest wants are Oil and Salt. This island was plunder'd, and several Spanish and Portuguese ships taken here, in the wars between England and Spain, in the reign of Queen ELIZABETH, particularly by the Earl of CUMBERLAND, and afterwards by the Earl of ESSEX, in the year 1589, when the latter plunder'd the enemy of four thousand dollars, besides a great deal of rich merchandize; and Sir WALTER RALEIGH also brought home a considerable booty from hence in the same war.

CHAP.
XI.The
Azores.Situation
of the
Azores.St. Mi-
chael's.

CHAP. XI. St. Mary's is a small island to the southward of St. Michael's, and produces much the same animals and vegetables.

Tercera, said to be so named from its being the third island in the passage from Portugal to America, is esteemed the chief of all the islands, on account of its having a tolerable good harbour, and being the seat of the Governor, tho' it is not so large as that of St. Michael's, being not more than 18 or 20 leagues in circumference: It is pretty much encumber'd with rocks and mountains; but affords, however, plenty of good corn, pasture, and an excellent breed of cattle; and has also pretty many vineyards. The chief town, the capital of all the islands, is call'd Angra, and situated on a bay of the sea, that forms the harbour on the south-side of the island, being defended by a castle situated on a rock at the entrance of the bay. This is said to be the only tolerable harbour in these islands; and here the Portuguese fleets constantly call, in their passage to and from their plantations in Brazil, Africa and India, and meet with plentiful supplies of provisions, which is the only reason of their keeping them; for I don't find they have any kind of merchandize to export, but corn or cattle, which they barter with their countrymen, that call here for cloathing and other necessaries. Angra is a Bishop's see, as well as the seat of the Viceroy or Governor. The islands of Gratiôsa, St. George, Pico and Fayall, lie south-west of Tercera; but have nothing in them that deserves a particular description, unless it be, that Pico received its name from such another peak or pyramidal mountain as has been describ'd in Teneriffe, and is supposed to have been rais'd by the like means, namely by earthquakes, to which these islands are subject, as well as the Canaries.

The most westerly of all the Azores, and the least, are the two islands of Flores and Corvo, which were long uninhabited after the rest were planted: Nor would the Portuguese ever have posses'd them, but to prevent other nations getting them into their power, and disturbing their enjoyment of the rest; for there is very little upon these islands to invite any nation to settle there, unless a fine surface, adorn'd with a variety of beautiful flowers, from whence the most southerly of them obtained the name of Flores. The air of these islands is said to be very warm by some, and by others very sharp. If I may judge of it, from what it seemed to be the latter end of April, in our return from the East-Indies, it is exceeding cool. The cold blasts that came off of them, had a very extraordinary effect upon our ship's company: They shiver'd, and wrapp'd themselves up, as in the depth of winter; and, tho' a little before our Seamen appeared to have fresh hale complexions, they lost them on a sudden, and appeared of a dead yellowish cast, as if they had the jaundize: But possibly the having sailed so long in the Torrid Zone, made us the more sensible of the alteration of the air; and indeed we were so softened by living in a hot climate, that we never enjoyed ourselves after we came into the latitude 40. It was the middle of May, when we arrived in England; and tho' every body had left off fires, and began to complain of heat, we were ready to starve with cold: Nor did this extreme tenderness wear off for several years. Give me leave to make another observation on my voyage to and from India; and that is on the uncertainty our best Seamen are under in long voyages: We had some of the most skilful artists on board, and those that had gone the same voyage several times; and yet it was common

Those who come from India very sensible of cold in the latitude of 40.

The mistakes of the most skilful Seamen in long voyages.

with them to be mistaken 100 miles and more in their accounts. We had not been out much above a fortnight, when one morning, to our great surprise, we found ourselves between the Grand Canary and Teneriffe; and we might as well have been cast away on one of those islands, for no-body dream'd we had been within 40 leagues of them: Indeed, we had been driven over the Bay of Biscay in a storm, and it continued dark weather, with hard gales of wind afterwards, so that we could take no observation by the sun; and nothing is so deceitful, as the log, in stormy weather; for the wind drives it after the ship, and there is no guessing what way she makes. But we were still more mistaken, when we came near the coast of India: Those, who pretended to most skill in navigation, assured us, we were not within 100 leagues of the island of Ceylon, when we plainly smelt the Cinnamon groves upon it in the night-time, and the next morning saw the island with the naked eye; but this also happened at a time when we had cloudy weather, and could have no observation, and we had seen no land after we had pass'd the Cape of Good Hope, from whence we took our departure for India. This the reader, I hope, will not look upon as a useless digression in treating of the African islands, which lie so much in our way to and from the East-Indies.

CHAP. XI.

CHAP. XII.

The ancient History of Africa.

I Proceed in the next place, to give an abstract of the ancient history of Africa, according to my method in treating of other parts of the world.

CHAP. XII.

The ancient history of Egypt has been already Egypt first given in the first volume of *Modern History*. The next people that made a figure in Africa, were the Phenicians or Canaanites: There is no doubt but all the north coast of the Mediterranean, as far as the Atlantick ocean, was first peopled from Egypt, to which it lay contiguous; for it is agreed by all, that when the Phenicians arriv'd on the African coast, after they were driven out of their country by Joshua and the Israelites, they found inhabitants there before them, and entered into treaties with that people, obtaining leave of them to traffick and settle in that part of the country where Carthage afterwards stood, now call'd the kingdom of Tunis, and by the Romans Africa Proper.

Hither the Tyrians or Phenicians first sent a colony, that built the town of Utica. The foundation of Carthage, by another colony of Tyrians or Phenicians, is supposed to be much later (viz.) about the year of the world 3120, 135 years before the building of Rome, and 883 before CHRIST.

Carthage is generally held to have been built by Dido, or ELISHA, a Tyrian Princess, who fled from her brother PYGMALION, King of Tyrus, to Africa, on the following occasion: She had married a near relation, call'd ACERBAS, and sometimes SICHÆUS, who was very rich; and PYGMALION, as the story goes, caused him to be assassinated, in order to possess himself of his great wealth: But his sister Dido defeated his principal design; for, having provided several ships to carry her off, she fled, with all her late husband's effects, to Africa, before PYGMALION had an opportunity of getting them into his hands; and very probably made choice of this part of Africa to reside in, because there was a colony of Tyrians settled at Utica already. But, however that was, she purchased lands

The story of Dido.

CHAP. XII. lands here of the natives, on which she built a city, calling it Carthada, Carthage, or the New town (as the word signifies in the Phenician or Hebrew languages) in opposition to Utica, which had been built some time before by her countrymen, and in this respect might be called, the Old town. The remaining part of the story (in which I doubt there is a mixture of romance) informs us, that JARBAS, King of Getulia, afterwards made love to Dido, and threaten'd war in case she refused to marry him: But she, having made a vow to SICHÆUS, her first husband, never to marry again, prepared her funeral pile; and ascending it, when JARBAS came again to make his addresses to her, she drew a ponyard, and gave herself a mortal wound, as the only means she had left to put an end to his detested courtship. But whatever of novel there may be in this, there is no doubt to be made, that VIRGIL exercised his poetical vein, when he made his hero ÆNEAS cotemporary with Dido; the destruction of Troy being generally held to have happened three hundred years before the building of Carthage.

The first wars of Carthage.

With the Africans.

The first wars Carthage was engaged in, 'tis said, were occasioned by their refusing the annual tribute they had agreed to pay the Prince of the country, when they obtained leave to build their city; but in this they had such ill success, that the Africans obliged them to enter into new engagements to pay it: However, upon receiving fresh supplies and reinforcements from Tyre, their mother-country, they were not only enabled to dispute the tribute again with the Africans, but to carry their arms still farther.

With the Cyrenians.

Their next wars were with the city of Cyrene, which stood between Carthage and Egypt, in that part of the country now called Barca. Carthage and Cyrene, it seems, were at a variance about the limits of their respective territories, which occasion'd a war between the two states; till at length both sides agreed, that their bounds should be ascertain'd in the following manner; viz. That two men should set out at the same hour from either city, and wherever they happened to meet, that should be the boundary of their several States: The two Carthaginians, pitched upon for this service, were brothers, named PHILÆNI, who being swifter of foot than their adversaries, the Cyrenians pretended there was foul play, and would not stand to the agreement, unless the two brothers, as an evidence of their fair dealing, would be content to be buried alive in the place where they met; which, 'tis said, they consented to, and the Carthaginians erected a pillar upon the spot, and two altars, on which they sacrificed and paid divine honours to the heroic brothers: But whether we are to give entire credit to this story or not, certain it is, two altars were erected and remained many years on the borders of the two states, which were called "The altars of the PHILÆNI:" And we may observe, both from sacred and prophane history, that nothing was more common among the ancients than the erecting altars, and sacrificing upon them at the conclusion of a treaty, or on any memorable event; and therefore 'tis probable the substance of the story is true, whatever foundation there may be for that part of it relating to the burying the two brothers alive near these altars. This war being ended, the Carthaginians carried their arms to the west-ward, and subdued all the nations as far as the Atlantick ocean, or made them tributary to their state; so that they were in reality Sovereigns of all the northern coast of Africa, to the westward of Cyrene or Barca;

Their wars with the Mauritians and Numidians.

and, in the opinion of some writers, of the west coast of Africa, as far as Cape Verd, which lies in 15 degrees north latitude: Nor were the conquests of the Carthaginians confined to the continent of Africa; they made themselves masters of Sardinia, and the Baleares, or the islands of Majorca, Minorca, and Ivica, from whence they found an easy passage into Spain, where they were first invited by the city of Cadiz, an ancient colony of the Tyrians their countrymen. This city, it seems, was at war with the Spaniards, and, being hard pressed, called in the Carthaginians to their assistance, who not only defended their allies, but carried on an offensive war in the Spanish territories; and that people, being divided into several little kingdoms and states, became an easy conquest to their enemies; great part of South Spain became subject to the Carthaginians, and even the city of Cadiz, that call'd them in, was obliged to submit to their dominion; the usual fate of those who introduce armies of foreigners into their country.

They conquer Sardinia, and the islands of Baleares.

They carry their arms into Spain.

The time when the Carthaginians first attempted to make conquests in Sicily, is not exactly known: But it appears from a treaty they made with the Romans, the same year Kings were excluded from that Government, and Consuls instituted, that the Carthaginians were then in possession of part of Sicily, as well as of Africa and Sardinia; and, by this treaty, the Romans agreed not to sail further westward than the fair promontory near Carthage, which the Carthaginians, even then, insisted on, as being under an apprehension the Romans might one day encroach upon their territories, and give them some disturbance.

Their wars in Sicily.

About 264 years after the building of Rome, and 484 years before CHRIST, the Carthaginians enter'd into an alliance with XERXES, King of Persia, against Greece. And while XERXES marched with a prodigious army to attack the Greeks upon the continent, the Carthaginians transported an army of three hundred thousand men into Sicily (if the numbers be not enlarged) in expectation of reducing the remainder of the Grecian cities in that island under their dominion: But this great army was defeated and cut to pieces, 'tis said, on the same day that memorable action happened at Thermopylæ, where three hundred Spartans disputed the passage into Greece, with that numerous army of Persians commanded by XERXES, and put a stop to his progress, tho' most of them lost their lives in the defence of that pass.

Their confederacy with Xerxes against Greece.

The Carthaginians made another attempt to subdue the Grecian cities in Sicily, in the 336th year of Rome, and met with great success, being upon the point of taking Syracuse, the capital of the Grecian cities in Sicily, when the plague broke into their army, and destroyed the greatest part of them, the remainder perished by the swords of the Syracusians, which occasioned an insurrection in Africa; no less than two hundred thousand of the malecontents laid siege to Carthage itself; but the rebels being destitute of provisions, and disagreeing about the command of this body, soon dispersed, and deliver'd the Government from the ruin that threatened them.

An insurrection of the Africans suppressed.

In the year 400, after the foundation of Rome, we meet with another treaty between that city and the Carthaginians, for their mutual defence: And about the same time the Carthaginians made further attempts to reduce the Grecian cities in Sicily; but TIMOLEON coming with a body of Corinthians to their assistance, obtained a victory over them, and again defeated their design: After which, AOCATHOLES, the Syracusan General, carried the

Carthage and Rome in alliance.

A further attempt to reduce the Grecian cities in Sicily.

war

CHAP. XII. war into Africa, and, in confederacy with some of the African Princes, laid siege to Carthage, and bid fair for the total subversion of their State. While the Carthaginians were in this distress, it was that an Ambassador arriv'd from Tyre, to negotiate for a reinforcement of troops, to enable them to defend themselves against ALEXANDER the Great, who not long after laid that city in ashes, and destroy'd every man in the place; and all that the Carthaginians was to do for their mother city, was to remove the women and children, send them from Tyre, and afford them a refuge in their country. In the mean time, the Carthaginians looking upon the calamities that beset them to proceed from the wrath of heaven, for some omissions in their religious worship, and particularly in not sacrificing a certain number of children of the best quality annually to SATURN, as their superstition requir'd, and substituting the children of slaves and poor people, purchased for that end, in their stead: To appease the anger of that god, therefore, they sacrificed two hundred children of the best rank; and three hundred persons more, 'tis said, offer'd themselves voluntarily to be sacrificed, to atone for the pretended neglect. This is a farther evidence, that the Carthaginians were descended from the Canaanites or Phenicians, who used to sacrifice their children to MOLOCH, particularly in their distress; sacred history taking notice of a King that sacrificed his eldest son upon the walls, when the city he was Sovereign of, was in danger of being taken. But to return to the history. Notwithstanding this bloody sacrifice of so many children and innocent men, the affairs of the Carthaginians grew still more desperate; BOMILCAR their General, taking advantage of the distress of the State, in order to raise himself to the Sovereign power, fomented an insurrection within the city while their enemies press'd them from without: But they had, at length, the good fortune to disperse the rebels by offering a pardon to all that would return to their duty; and BOMILCAR being thereupon deserted, was crucified, and put to the most exquisite torture: And while he hung upon the cross, 'tis said, he reproach'd the Government with breach of faith, in punishing him after they had proclaim'd an indemnity; and with ingratitude, in putting to death many of their bravest Generals, after a long series of eminent services; which, it seems, was frequently done, if success did not attend their arms, unless the General prevented the disgrace by being his own executioner; of which there are also several instances in the history of Carthage.

A rebellion in Carthage suppress'd.

The Greeks abandon Africa.

An alliance between Carthage and Rome, against Pyrrhus. Pyrrhus oblig'd to abandon both Italy and Sicily.

This rebellion being fortunately suppress'd, a misunderstanding happen'd about the same time, between AGATHOCLES the Grecian General, and his African allies: Whereupon he rais'd the siege of Carthage, and transported himself to Sicily; after which, the Carthaginians recover'd all the places they had lost, and establish'd their empire again over the African Princes. And now Sicily, as well as Italy, being threaten'd with an invasion by PYRRHUS, King of Epirus, the Carthaginians renew'd their confederacy with the Romans for the preservation of their territories in that island. PYRRHUS, however, made a descent with his forces in Sicily, and reduc'd all the towns belonging to the Carthaginians, except Lilybæum; but this place making a vigorous defence, and the Romans gaining some advantages over the force of PYRRHUS in Italy, he was forced to abandon all his conquests in Sicily, and return thither: Nor was he able to restore his affairs on the continent, being afterwards defeated

in several engagements there by the Romans, and oblig'd to quit that country also.

CHAP. XII.

And now the Romans, having no enemies in Italy, began to think of enlarging their empire by foreign conquests. It is very probable they had for some time cast their eyes on the fruitful island of Sicily, separated from the continent by a narrow strait, and only waited for a pretence to invade it; when some Sicilian rebels seizing on the important city of Messina, and offering to deliver it up to the Romans, that people, notwithstanding their mighty pretences to honour and justice, did not scruple to break through their alliance with the Carthaginians, and send over a reinforcement of troops to support those rebels which occasion'd that war between the Romans and Carthaginians, usually call'd "The first Punick war," begun Ann. M. 3738; after the building of Rome, 488; and before CHRIST, 266 Years.

The Romans assist the Sicilian rebels against the Carthaginians.

The first Punick war.

As the Roman people made arms their profession, and, from the infancy of their State, had been engaged in warlike contests with their neighbours, they are universally acknowledg'd to have been excellent Soldiers. We find, in the Sicilian war, the Carthaginians were not able to keep the field against them, but retir'd into such strong towns as were situated near the sea, which they could relieve from time to time with their fleets, the Romans having yet no shipping to oppose them; and thus the war was like to prove endless. The Carthaginians abounded in wealth as well as shipping, and were able to defend the maritime places against the whole power of the Romans, who found themselves exhausted both of men and money by the continuance of the war, while Carthage rather grew rich by trafficking with every nation.

The Romans, therefore, saw it absolutely necessary to dispute the dominion of the sea with Carthage; without which, they found their foreign conquests must remain at a stand; and, collecting naval stores from every quarter, offer'd the highest rewards and encouragements to such Ship-builders as would afford them their assistance: And, as they were at that time possess'd of several cities and port-towns in Sicily, and in alliance with many Grecian States, such crowds of workmen offer'd their service, and their own people used such application and diligence, that within a very few months, they built or hired a fleet almost as numerous as that of the Carthaginians, and engaged abundance of foreign Mariners in their service: But, still conscious that the Carthaginians must have a considerable advantage of them by their skill and dexterity in sailing, whenever they came to an engagement they contriv'd a machine or engine, by which they might grapple with the enemy's ships, and deprive them of all advantages of their sails. This, it seems, was a great piece of timber, arm'd with hooks and chains, which they let down with pulleys into the enemy's ships on approaching them, and which it was impossible for a vessel to disengage itself from, without mastering the ship's crew that attack'd her.

The Romans build a fleet.

Their machine for grappling with the enemy's ships.

Thus prepar'd, the Romans, under the Command of DUTILLUS, put to sea with an hundred and twenty gallies (the only shipping of those days) and being met by the Carthaginian fleet, consisting of an hundred and thirty vessels, commanded by HANNIBAL their Admiral, near Myla, they soon came to a close engagement; for the Carthaginians looking upon the Romans as a very contemptible enemy at sea, advanc'd towards them with an assurance of victory: And the Romans, on the other hand,

CHAP. XII. hand, having no hopes but in their new invented grapples, made equal haste to join battle.

The Carthaginians were a little surprized to see the Romans advance so resolutely, and still more when they began to play their engines; but when they found themselves so fastened to the enemy's ships, that they could make no use either of oars or sails, but were forced to fight as upon firm land; they were confounded and dispirited, and the Romans gain'd an easy victory over them, taking no less than fourscore sail, and among them the Admiral's galley, HANNIBAL himself narrowly escaping in his Boat.

Their first naval victory over the Carthaginians.

This victory was the more acceptable to the Romans, as it was in a manner unexpected. They were overjoy'd at the success of their fleet, and immediately decreed their Admiral DULLUS a naval triumph; which was the first of that kind that had been seen in Rome. They also erected a Rostral pillar to his honour, with an inscription containing the particulars of the engagement. (These pillars were styl'd Rostratae, from the heads or beaks of ships that adorn'd them.) But to return to our history. The Carthaginians were so discourag'd by this defeat, that they suffer'd the Romans to lord it in the Mediterranean for two years without controul: But being informed, that their enemies were about to bring the war home to their own doors, and make a descent on the coast of Africa, they exerted themselves once more, and equip'd a fleet consisting of an hundred and fifty galleys, mann'd by an hundred and fifty thousand men, with which they put to sea in order to recover the dominion of the Mediterranean: But being met by the Romans, who, according to their accounts, had not so many galleys by twenty, they received another memorable defeat; no less than sixty of their vessels being taken by the Romans, who, on their side, had twenty-four galleys destroy'd; which shews, that this victory was not obtain'd so easily as the former; tho' the Romans had now more experience in maritime affairs, and probably had more Grecian Mariners in their service. The Carthaginians were better provided against the grappling-irons of the enemy in this fight than in the last, which made their loss the less; for no stratagem in war, has that effect the second time as it has the first: The novelty and surprize the engine gave on the first trial, contributed, no doubt, in a great measure, to the defeat of the Carthaginians.

The Romans obtain a second naval victory over the Carthaginians.

Remarks on this success of the Romans.

Before I proceed further in this history, give me leave to take notice of the partiality of the Roman Historians, and of such Grecians romaniz'd, as have wrote the history of these wars; who insinuate, that the Romans themselves, without foreign assistance, in the space of a few months, built and mann'd that fleet with which they obtain'd the first victory over the Carthaginians; when it is evident, from their own writings, that the Romans were then in possession of the best part of the island of Sicily, and in alliance with several Grecian States, that would, no doubt did, furnish them with great part of the Ships and Mariners in their service. It is pretended, indeed, to serve a turn, and reflect the greater honour on the Roman State, that there was at that time no other naval power but that of Carthage: But the very same writers, in other parts of their works, take notice, that the Greeks in Sicily, assisted by their countrymen on the continent, had often engaged the Carthaginians at sea with success, before the wars happen'd between them and Rome. It does not seem so strange and miraculous, therefore, that the Romans, in confederacy with the Syracu-

sians and other Grecian cities (who were alone a match for the Carthaginians) should, when united with them, gain an advantage of the Carthaginian fleet. But to proceed. The Romans, after their second naval victory, embark'd a numerous army under the command of M. AILIUS REGULUS, and L. MANLIUS their Consuls, who had commanded as Admirals in the last sea engagement, and made a descent on the coast of Africa: Whereupon the Carthaginians quitting the field, and retiring into their strong towns, the Romans laid siege to Clypea, one of their sea-ports, and took it; after which, they ravag'd all the open country, and took twenty thousand prisoners, besides vast flocks and herds of cattle; of which, advice being sent to Rome, the Senate order'd, that REGULUS should remain in Africa with a body of fifteen thousand foot, and five hundred horse, with forty galleys to attend his motion, and that the rest of the fleet and army, with the other Consul, should return to Italy: Such a contempt did the Romans entertain for the Carthaginians at this time, that they thought an army of fifteen thousand men sufficient to make head against all the forces of that State: And with these, did REGULUS venture to form the siege of Adis, one of the strongest fortresses in Africa, and actually defeated an army sent to the relief of the place. He afterwards made himself master of near two hundred towns, and among the rest, of Tunis, situated within 2 or 3 leagues of Carthage; and the Numidians invading the Carthaginian territories at the same time, they were reduc'd to the last extremity, and offer'd the Roman General very advantageous terms of peace: But he, puff'd up with his success, 'tis said, would hear of no other conditions than their being made a province of Rome; insolently telling their Ambassadors (as 'tis said) That they "ought either to conquer like brave men, or learn to submit to the victor."

CHAP. XII.

The Romans invade Africa.

The Romans overrun that country.

Carthage desires peace.

Regulus rejects their offers.

The fable of a monstrous Serpent.

During this treaty, according to LIPPY, the Roman army encountered a monster of a Serpent in passing a river, which terrified them more than all the forces of the Carthaginians; several Soldiers being devour'd by this terrible animal, whose skin, 'tis said, no dart could penetrate; and it was long before they could destroy him with stones thrown from their military engines; adding, that the river was dy'd with the blood of this Serpent when he was kill'd; and that the stench of his dead carcase so infected the air, that the army was oblig'd to remove their camp; and that the skin of the creature being sent to Rome, was 120 foot long: A relation which it is impossible for any man to give entire credit to; and yet, perhaps, we ought not to reject every part of the story. It is very probable from the creature's being found on the banks of a river, and having an impenetrable skin, that, instead of being a Serpent, it was a Crocodile; which is an amphibious animal, and his scales impenetrable by darts or arrows: But instead of being 120 foot in length, I must beg leave to reduce it to 20 foot, the usual length of a full-grown Crocodile, and omit the Figure of 1, which was very probably inserted by mistake: Besides there are several undeniable instances of a Crocodile's devouring a person whole, but not one of a man's being swallow'd by a Snake; which has the least throat, in proportion, of any animal whatever, except a Whale.

To return to our history. REGULUS refusing to grant Carthage any other terms than those of an absolute submission to Rome; they prepared for a vigorous defence, and, having received a small reinforcement of troops from Greece, under the com-

Regulus defeated and made prisoner by the Carthaginians.

CHAP. XII. command of XANTIPPUS, a celebrated Spartan General, they took the field, and, giving battle to the Romans, entirely defeated them: REGULUS, with five hundred more, were made prisoners; about two thousand escaped to Clypea, and all the rest were killed on the spot; the greatest execution being done by the Elephants, of which the Carthaginians had an hundred in their army.

The Romans, having received this defeat in Africa, sent no more forces thither, notwithstanding they obtain'd a third victory over the Carthaginians at sea, and took an hundred and fourteen of their ships: They contented themselves with bringing off the two thousand Romans that had retired out of the battle to Clypea. In the mean time the Carthaginians permitted REGULUS to go to Rome and propose an exchange of prisoners, upon his taking an oath to return and surrender himself again if he did not meet with success. And here the Roman historians take an opportunity of applauding the courage and sincerity of REGULUS beyond measure; and, from him, would have us make an estimate of the resolution and veracity of his countrymen. They tell us, that notwithstanding REGULUS knew he must undergo the greatest torments on his return to Carthage, if he did not succeed in this negotiation, and must never see his family or his country more; he advised the Senate not to consent to an exchange of prisoners; for that it would be an ill example to shew so much favour to their troops, who had cowardly surrender'd themselves prisoners to the enemy; that they were unworthy the compassion of their country: And for himself, who was in the decline of life, his loss was nothing, if compar'd with the number of the Carthaginian Generals and Officers, in the flower of their age, who were in their hands, and might be capable of doing Rome abundance of mischief if they were permitted to return home. And the Senate agreeing with him in that opinion, REGULUS return'd to Carthage, where he was crucified, and underwent the most exquisite tortures, if we may credit some writers.

The story of the cruelties exercised on Regulus very doubtful.

But I find it is very much doubted, whether the facts on which the Roman historians lay the greatest stress in this relation are true; for that POLYBIUS, esteemed the best author that writes of these wars, says not one word of the sufferings of REGULUS after his return to Carthage: And DIODORUS SICULUS, another historian, speaking of the captivity and death of REGULUS, only says, that his wife was incens'd when she heard of his death, because she thought it might be occasioned by ill usage, and therefore incited her sons to revenge their father's fate on two noble Carthaginian captives the Senate had put into her hands to exchange against her husband: And that one of them was actually kill'd by the severities exercis'd upon him; which the Senate express'd their abhorrence of, and took the survivor out of her custody, which, it is presumed, they would not have done, if REGULUS had suffer'd those tortures which their historians and poets feign: And indeed, 'tis conjectur'd by some, that the wife of REGULUS invented these stories, to excuse her cruelty to the captives under her power; and that they obtain'd credit on very slender evidence, since they tended to asperse the Carthaginians, with whom the Romans had a perpetual national quarrel. Another thing that weighs with me, is, that REGULUS is made to say in his speech to the Senate, That "the Roman captives did not deserve their compassion, because they had surrender'd cowardly to their enemies"; whereas it appears,

VOL. III.

that the Romans fought it out to the last, and did not surrender 'till all but five hundred of them were cut in pieces, and these in the company, and very probably by the command, of that very General, when he found all further resistance vain, and to no purpose. Besides, it must be the most impolitick thing in the world, to torture their prisoners, while so many prisoners of the first quality of their own people remain'd in the hands of the Romans, on whom their enemies might have gratified their revenge. But this is not the only partial relation we meet with in the Roman historians, framed to calumniate their enemies, and reflect honour on their nation.

The war in Sicily was still carried on with great vigour on both sides; notwithstanding the Romans obtain'd a great victory there, and took above an hundred and twenty Elephants from the Carthaginians in one engagement. They defended Lilybæum, and some other port-towns for several years; but finding themselves at length over-power'd, AMILCAR, surnamed BARCAS, the Carthaginian General in that island, was order'd to make the best terms he could; and accordingly he concluded a peace with Rome, A.M. 3762, upon the following terms, (viz.) "That the Carthaginians should evacuate Sicily, and no more make war upon the Syracusians, or their allies: that they should release all the Roman prisoners that they had taken, without ransom, and pay them three thousand two hundred Euboic talents of silver (something more than half a million sterling) within the space of ten years." And thus ended the first Punick or Carthaginian war, which had lasted four and twenty years.

Articles of peace between the Romans and Carthaginians.

The Carthaginians treasure being pretty much exhausted by so many years expence, and the vast losses they had sustain'd, and being still oblig'd to pay prodigious sums to the Romans, they were very backward in paying and disbanding the mercenary troops in their service; but, putting them into quarters of refreshment on their return from Sicily, desir'd they would be content with a bare subsistence, 'till the State was in a condition to discharge them; and even propos'd, 'tis said, their accepting a part of their pay instead of the whole; which incens'd the Soldiery to that degree, who expected to have been dismiss'd with honour, and to have return'd to their respective countries after so many years of hard service, that it occasion'd a general mutiny amongst them: They assembled to the number of twenty thousand men, and, having taken possession of Tunis, invited the rest of their brethren to join them. The States of Carthage, now too late seeing their error, deputed GISO, one of their most popular Generals, to offer the malecontents any manner of satisfaction; and, tho' their demands appear'd very high, he was upon the point of concluding a treaty with them, when SPENDIUS and MATHO, two of the most active mutineers, despairing of a pardon, represented to the multitude, that there was no trusting to their Governors on these occasions: If they once laid down their arms, they must expect to be called to a severe account: There was no medium between death and victory, as the case stood. Which seditious harangue, had such an effect upon the multitude, that they immediately broke off the treaty, chose SPENDIUS and MATHO their Generals, and, having seiz'd the treasure that GISO brought with him to pay off the army, made him and his attendants prisoners: And, not long after, all the towns in Africa, except Utica and Hippacra, declared for the rebels; to which they were provok'd by the heavy taxes they had long borne, and of which they

The wars of the Carthaginians with their mercenary forces in Africa.

20 D

CHAP. XII. could not hope to see an end, while the state was obliged to make such large payments to foreigners as well as other domestick creditors.

The Carthaginians, on the other hand, having still a reserve of treasure, armed all their citizens, and took other mercenaries into their pay; and, constituting the celebrated AMILCAR (BARCAS) their General, compell'd the rebels to raise the siege of Utica, which they had invested: AMILCAR, afterwards, defeated a considerable body of the rebels forces, making great numbers of them prisoners; but instead of exercising the severity that was expected upon the captives, he endeavoured to reclaim them by an unexampled clemency, listning many of them in his own troops, and suffering the rest to return to their dwellings. The Chiefs of the rebels fearing this gentle usage might occasion a general defection of their forces, incited them to commit such barbarous actions as might make them despair of ever being reconciled to the State; and particularly upon torturing GISGO the General, and the rest of the prisoners they had in their hands, whom they put to the most cruel deaths, under pretence of their holding a correspondence with Carthage. Utica and Hippacra also revolted at the same time, and sacrificed their Governors to their fury, which encourag'd the rebels to lay siege to Carthage; but they were forced to raise it by AMILCAR, who also defeated a great body of their forces, and, cutting off their provisions, reduced them to the fatal necessity of eating one another: Whereupon the multitude compelled their Chiefs to enter into a treaty with AMILCAR, who agreed, That upon surrendering their arms, they should be suffered to return home, except ten of them, who were to be left to the mercy of the State. But the Carthaginians refusing to confirm the treaty, the rebels resolved to sell their lives as dear as they could, and a battle ensuing, most of them were cut in pieces, or trodden under foot by the Elephants: Part of the rebels, however, made good their retreat to Tunis, which they determined to defend to the last extremity. Whereupon AMILCAR investing the place, caused SPENDIUS, one of their Chiefs, and several other prisoners he had taken, to be crucified in sight of the town: On the other hand MATHO, the other Rebel Chief, who commanded in Tunis, having in a sally surpriz'd HANNIBAL, one of the Carthaginian Generals, and several of his men, ordered them to be crucified on the walls, by way of retaliation, in the sight of AMILCAR and his army. But MATHO himself being soon after taken, together with the town of Tunis, he paid dear for all the treachery and barbarity he had been the occasion of, suffering the most exquisite torments before he was put to death. Thus an end was put to the African war, one of the cruelest that ever was known in any age, after it had lasted three years and upwards: This war was not finished, when the Carthaginian mercenaries in Sardinia mutined also for their pay, and calling in the Romans to their assistance, actually expelled their masters from that island. And when the Carthaginians sent forces thither to recover it again, the Romans declared, they should look upon such acts of hostility as a declaration of war against their State; and, taking advantage of the low circumstances the Carthaginians were then in, compelled them not only to make a cession of that island to Rome, but to pay them two hundred talents for a confirmation of the peace, which the Carthaginians, on their part, had never violated. This is another notorious instance, that the Ro-

man faith was no more to be relied on than Punic honour, when interest prompted them to break through their treaties.

Nor were the Carthaginians insensible of the outrage that was done them by the Romans, in protecting their rebel troops, and taking their country from them: From this time, therefore, they made preparations to recover the losses they had sustain'd, and revenge the repeated affronts they had receiv'd from that haughty nation.

And, as it was necessary in the first place to secure their territories in Spain, and form alliances with the Princes in Gaul as well as Spain, before they could think of attacking the Romans, AMILCAR, father of the celebrated HANNIBAL, was constituted Viceroy of the European dominions, who subdued several Princes that had entered into an alliance with the Romans, and brought over others to the side of Carthage by his insinuating address: But while he was thus employed in promoting the interest of Carthage, he was unfortunately killed in an engagement with the enemy. To him succeeded ASDRUBAL, his son-in-law, who was no less successful in enlarging the Carthaginian territories in Spain than his predecessor; and built the town of New Carthage, or Carthagena, in Spain, almost over-against Old Carthage: Nor were the Romans idle all this time, but endeavoured to draw over the Gauls and the Spaniards to their party; and, in a manner, secured all that part of Spain to the eastward of the river Ebro in their interest. At length the two States of Rome and Carthage came to the following agreement, (viz.) That the river Iberus, or Ebro, in Catalonia, should be the boundary between the Carthaginians and Romans, and their respective allies; only the city of Saguntum, on the west-side of the Ebro, being in alliance with the Romans, was included in this treaty.

ASDRUBAL, having acted as General in Spain with great honour eight years, was assassinated by one of the Gauls, who had received some affront from him. Whereupon HANNIBAL, the son of AMILCAR, now about three and twenty years of age, having serv'd in Spain some years under ASDRUBAL, was constituted General on that side. This great man, for some time, kept his army in perpetual action by invading and reducing such of the Spanish Princes as were not in alliance with Rome: But having formed a design of humbling that proud State, he afterwards laid siege to Saguntum, on pretence of their encroaching on the Carthaginian allies.

The Saguntines, apprehensive of their danger, immediately dispatched an express to Rome, imploring speedy succour; but the Romans contented themselves with sending a deputation to HANNIBAL, requiring him to raise the siege, and, in case he refused, ordered their Ambassadors to go to Carthage and complain of this hostility: But while they spent their time in fruitless negotiations, HANNIBAL took the city by storm, and gave the plunder of it to his soldiers, which was very considerable: However, some writers relate, that the principal inhabitants, before the enemy entered the town, burnt themselves, their wives and children, together with all the rich effects, in one common fire, rather than fall into the hands of the Carthaginians. But however that was, the Romans immediately demanded that HANNIBAL might be delivered up to them, for having violated the peace between the two nations. And when the Senate of Carthage justified the conduct of their General, the Romans

C H A P. XII. declar'd war against them: And thus began the second Punick war, in the year of Rome 535, being 201 years before CHRIST.

The second Punick war.

Hannibal begins his march for Italy.

He passes the Alps.

His army mightily diminish'd.

He takes Turin by storm.

The Gauls join him.

Hannibal defeats P. Scipio.

HANNIBAL assembled an army of an hundred thousand men the following spring, and declar'd his intentions of marching through Gaul directly to Italy; and accordingly, leaving his brother **ASDRUBAL** with fifteen thousand men in Spain, he began his march from Carthage; but spent most part of this summer, in making alliances with the Princes of Gaul, or subduing such of them as opposed the enterprize, and did not arrive at the foot of the Alps, which divides France from Italy, 'till the middle of October, when his army appears to have been so lessen'd by the detachments he had made, or the losses he had sustain'd, that it scarce amounted to forty thousand men; tho' it does not appear that the Romans once attempted to obstruct his march, no not at the passage of the Alps, which took him up fifteen days. Perhaps they imagin'd, that **HANNIBAL** had no further view than to enlarge the Carthaginian empire, by adding to it that part of Spain to the eastward of the Ebro, or perhaps some part of Gaul. And this seems the more probable, because they made great preparations to dispute East-Spain with him; and were surpriz'd when they heard he had pass'd the Rhone. It is said also, that the marching an army over the Alps was, 'till that time, held to be impracticable; which might be a further reason for their making no provision to receive him on that side. But to return to the history. **HANNIBAL**, having pass'd the Alps, and muster'd his army in the plains of Piedmont, found it still more diminish'd. He had here but twelve thousand African foot, eight thousand Spaniards, and six thousand horse, most of them Numidians, in all, six and twenty thousand men; a small army to invade the most powerful nation then in being. Having given his army some refreshment after their fatigues in passing the Alps, he propos'd an alliance with the Gauls, who then inhabited Piedmont, which being slighted, he laid siege to their capital city (Turin) and took it by storm in three days, giving the plunder of it to his soldiers. Whereupon all the neighbouring Gauls came in and made their submission, and several of their Princes enter'd into a confederacy with the State of Carthage, which gave him an opportunity of recruiting and encreasing his army to forty thousand men and upwards, and provisions were afterwards brought to his camp in great plenty. The Romans, finding the Carthaginian army daily encreased by the addition of fresh forces from Gaul, order'd **P. SCIPIO** the Consul to advance with all diligence, and give the enemy battle; and the other Consul **SEMPRONIUS**, was commanded to return from Sicily, whither he had transported his army with an intention to have made a descent in Africa from thence.

P. SCIPIO hereupon pass'd the Po, and advanc'd within sight of the Carthaginian army, which lay encamp'd on the banks of the Tesin: And as both sides had their reasons for coming to a speedy engagement; the Carthaginians, to encourage their new allies, and confirm them in their interest; and the Romans, to prevent the enemy's penetrating into their country, and making it the seat of war; a battle soon after was fought, wherein **P. SCIPIO** receiv'd a dangerous wound, and his army was defeated; which the Romans imputed chiefly to the superiority and dexterity of the Numidian horse, which surrounded their troops, and fell upon them in flank and rear. **SCIPIO**, however, made good

his retreat over the Po, and, by breaking down the bridges on that river, put a stop to the pursuit of the enemy for some time. **SCIPIO**, it seems, was once taken prisoner in this battle, but released by the bravery of his son **SCIPIO**, afterwards surnamed **AFRICANUS**, then seventeen years of age.

And now **SEMPRONIUS**, the other Consul, having join'd **SCIPIO**, and their united army amounting to about forty thousand men, another battle was fought in the middle of winter near Placentia, in which the Romans were again defeated by falling into an ambuscade which the enemy had prepar'd for them, and the Consuls, with their broken troops, consisting of about ten thousand men, retreated into Placentia; but, by the hardships of this winter's campaign, **HANNIBAL**, 'tis said, lost great numbers of his Horses, and all his Elephants but one, on which he himself usually rode. **HANNIBAL** also lost one of his eyes about this time, occasion'd, as 'tis said, by the constant fatigue and hardships he underwent night and day in this rigorous season.

Early the next spring, **HANNIBAL** attempted to pass the Appennine mountains, with a design to have penetrated as far as Rome, before his enemies were recover'd from their consternation; but the snows were yet so deep, and the weather so tempestuous on those mountains, that he was compell'd to return with his army to Placentia, where he fought another battle with **SEMPRONIUS**, in which neither side gain'd any great advantage; tho', 'tis probable, the Carthaginians had the advantage; for **CN. SERVILIUS** and **C. FLAMINIUS** being chosen Consuls, **HANNIBAL** soon after advanced into Tuscany, and having drawn the Consul **FLAMINIUS** into an ambuscade near the lake of Thrasymene, obtain'd another victory over the enemy, the Consul, **FLAMINIUS**, being kill'd upon the spot with the greatest part of his forces; only six thousand of them made their retreat in a body, and these were oblig'd to surrender prisoners the next day. In this battle sixteen thousand Romans were slain, and only ten thousand run-aways made a shift to escape by different ways to Rome.

As to the Latins, who were made prisoners in this battle, **HANNIBAL** gave them their liberty, and was so happy in cultivating a friendship with this people, and the rest of the allies of Rome, that he was enabled to support himself many years in Italy, when scarce any supplies or reinforcements were sent him from Carthage.

HANNIBAL, after the victory of Thrasymene, march'd his troops into that fine country, call'd the Campania of Rome, which he plunder'd from one end to the other, and laid in a good stock of provisions against the ensuing winter; but, as he was retiring with his booty, the celebrated **FABIUS**, now constituted Dictator (a General of the most consummate prudence and conduct, who would never engage an enemy, but where he had a manifest advantage) surrounded the Carthaginians in an enclosed country, and possess'd himself of all the passes, so that it appear'd almost impossible for them to extricate themselves. But **HANNIBAL** surmounted this difficulty, 'tis said, by the following stratagem: He caus'd torches and firebrands to be fastened to the horns of two hundred Oxen, and ordering them to be driven up the adjacent mountains in the nighttime; the Romans imagin'd, that the enemy's army was making their retreat that way; and quitting the passes to follow them, **HANNIBAL** gain'd an opportunity of getting out of those defiles.

The Romans raise great forces to drive Hannibal out of Italy.

The battle of Cannæ.

The great loss of the Romans.

Hannibal censur'd for not pursuing his victory.

The next year, being the third campaign after HANNIBAL's entering Italy, the Romans determin'd to make one grand effort to drive the enemy out of their country; when (TERENTIUS VARRO and L. ÆMILIUS PAULUS being Consuls) they raised eight legions instead of four, their usual number, consisting of five thousand foot and four hundred horse each: To which were added about ten thousand horse, and forty thousand foot of their allies, making in all near an hundred thousand men; whereas the Carthaginians were not computed to amount to more than forty thousand men: Which superiority, 'tis said, gave VARRO, one of the Consuls, such an assurance of victory, that he declared, before he left Rome, he would fall upon the enemy wherever he found him, and put an end to the war at once. Accordingly, on a day when it was his turn to command (for the Consuls commanded alternately) coming up with HANNIBAL's army, which he found drawn up in battalia, on a fine plain near Cannæ, he gave the signal of battle, and a very fierce encounter followed, in which the Romans received a memorable defeat; which is generally ascrib'd to two causes, the goodness of the Carthaginian horse, and the dust that drove in clouds in the faces of the Romans: For the sagacious HANNIBAL, 'tis said, observing that the wind Vulturnus rose from the south-east constantly at a certain hour every day, and that the plain, on which the engagement happen'd, was a deep sand, he drew up his forces in such a manner, as to have the wind in his back, and consequently in the faces of his enemies, who were blinded and disorder'd by the dust, not being able to discern friends from foes. But to whatever cause this important victory is to be ascrib'd, Rome never received so great an overthrow: For ÆMILIUS, one of the Consuls, was kill'd on the spot; as were two Quæstors, one and twenty Military Tribunes, several others that had been Consuls or Prætors, fourscore Senators, and between forty and fifty thousand Officers and Soldiers besides, according to those who speak most modestly of the loss; and above ten thousand more, that had been left to guard the camp, surrender'd themselves prisoners immediately after the battle. 'Tis related, that HANNIBAL sent to Carthage a bushel (some say three bushels) of gold rings, which were taken off the fingers of the Roman Nobility and Knights that fell in this engagement: Nor was this victory obtained without loss, there being kill'd of HANNIBAL's infantry six thousand five hundred, of which four thousand were Gauls, and fifteen hundred Spaniards and Africans; but he did not lose above two hundred horse. VARRO, the surviving Consul, fled with seventy horse only to Venusia, and about four thousand more escaped to other towns.

HANNIBAL is censur'd by some writers, for not advancing immediately to Rome on the obtaining this victory, it being suggested that that city would probably have surrender'd in the consternation they were in on the loss of this battle. But HANNIBAL was certainly a better judge of the matter, than any of those that take upon them to censure him: Nor is it to be conceived how any man, who was not upon the spot, and acquainted with the circumstances of the case, should be able to pass judgment on his conduct, especially if it be consider'd, that few Generals (much less Historians) are qualified to correct so great a proficient in the art of war.

And indeed, at this distance of time, a man of ordinary sense may suggest a great many things, that will sufficiently justify the conduct of that

General in this particular: As that his army required some rest and refreshment after so obstinate an engagement: That, as between six and seven thousand of his men were killed in the battle, according to the usual way of computation, there must be twice as many wounded; and consequently he had not above twenty thousand effective men remaining, with which it was scarce practicable to invest a city of that magnitude, and so completely fortified as Rome then was, especially if we reflect, that its inhabitants are supposed to amount to above a million of souls: That their Nobility, Gentry, and Citizens, were all bred to arms from their infancy, and most of them had no other profession. If we consider Rome in this light, it is not to be supposed, that they would have been so terrified at the approach of twenty thousand men, as to have surrendered immediately; and, if they had not, it is still more absurd to suppose, that twenty thousand men could have reduced such a city.

HANNIBAL therefore, instead of attempting what he knew to be impracticable, made use of his present good fortune to influence the allies of Rome to join him; and marching to the southward, Capua, and most part of what is now called Naples, with several towns of Sicily, declared for him, and renounced their alliance with the Romans; which gave him an opportunity of importing corn, and other provisions from Sicily, for the use of his army during the winter, which would otherwise have been reduced to great distress, all the country about Rome having been destroyed: HANNIBAL also dispatched his brother MAGO to Carthage with the news of his victory, and to desire a further reinforcement of troops to complete the conquest of Italy. In the mean time, he sent his army into winter-quarters in the Campania of Rome and Naples, taking up his own residence in the city of Capua; which is severely censured also by some writers, who tell us, that his army was so softened and enervated, by living luxuriously this winter in that charming country, that they had no longer the air or resolution of soldiers, but became perfectly effeminate, and unfit for the fatigues of war; which is surely the most ridiculous charge that ever was brought against a General, and shews how unqualified studious men sometimes are to pass a judgment on military affairs.

Can any man believe, that a Soldier's lying in a warm lodging, and eating and drinking well two or three months in the winter season, should make him less fit for service than he was before? Did not the Officers and Soldiers of the Allies, as well as those of France, do the same thing every winter during the two last long wars? And yet I believe no man will pretend they were the less fit for action the ensuing campaign: Want and hardship frequently destroy the Soldiers in a rigorous winter; but 'tis very seldom they are hurt by too great plenty.

Besides, we find HANNIBAL had a double reason to quarter his army in the Campania of Rome and Naples; first, to keep both Naples and Sicily firm to his interest; and, secondly, that he might receive supplies from those countries, which were not exhausted by the marches and counter-marches of the respective armies, as the more northern parts of Italy had been. The reader will forgive my dwelling on these particulars, when he reflects how gentlemen are taught to declaim against this great man, for quartering his army in a plentiful country, and not storming Rome immediately after the battle of Cannæ.

CHAP.
XII.

But his conduct seems rather to deserve applause.

Hannibal treats with the towns of Naples and Sicily.

He quarters his army in the Campania of Rome and Naples.

For which he is also unjustly censured.

CHAP.
XII.

I shall not relate every action between the Romans and the Carthaginians; only observe, that as HANNIBAL expected his brother ASDRUBAL with a greater reinforcement from Spain, to enable him to finish the conquest of Italy; so the Romans sent large detachments thither under the command of CNEIUS and PUBLIUS SCIPIO, to put a stop to ASDRUBAL's march; which they did for some years, but were afterwards both defeated by the Carthaginians, and lost their lives in that service: Whereupon ASDRUBAL, in the eleventh year of the war, marched with an army of seventy thousand men and upwards, through France into Italy, passed the Alps, and advanced as far as Placentia, in order to join HANNIBAL; but, while he was engaged in the siege of that city, the Romans intercepted an express he had sent to that General; and being thereby fully acquainted with the number and condition of ASDRUBAL's troops, the two Consuls suddenly united their forces, and fell upon him before HANNIBAL had any notice of their motions. ASDRUBAL was killed in the battle, with upwards of fifty thousand of his men, according to the Romans account of the action; and HANNIBAL, who just before expected to have finished the conquest of Italy this campaign, now found it difficult to maintain his ground in that country: However, he did not yet despair; but, sending for fresh reinforcements from Spain and Africa, so disposed of his troops, that he might be able to wait their arrival: And, it seems, he took care to post his army in such a manner, and was so much superior to any of the Roman Generals in point of military skill, that, though their forces were double the number of the Carthaginians, they found the driving him out of Italy impracticable. Whereupon they determined to increase their army in Spain, and appointed PUBLIUS CORNELIUS SCIPIO (the son of PUBLIUS SCIPIO, who lost his life there a little before) General of their forces on that side, proposing by that means to put a stop to the Carthaginians making any further levies there, and recruiting HANNIBAL's army from thence.

SYPHAX, an African Prince, apprehending himself ill used by the Carthaginians, about this time, offered to enter into an alliance with the Romans; whereupon SCIPIO went over to Africa, and signed a treaty with him, and he proved very useful to this General in the Spanish war for some time: But the Carthaginians finding means to reconcile SYPHAX to them, he afterwards became one of the most formidable enemies the Romans had; however, this loss was amply made up by the revolt of MASINISSA (a much more potent Numidian Prince) to the Romans, by whose assistance SCIPIO reduced all the places belonging to the Carthaginians in Spain. That which gave SCIPIO the greatest advantage in Spain, I perceive, was MAGO's marching from thence to Italy, in the 13th year of the war, with a great reinforcement of troops, to join HANNIBAL; for that General foresaw, if he subdued Rome, that Spain, and all other places the Romans possessed themselves of, must return again to the obedience of Carthage. SCIPIO, on the other hand, believing, that the readiest way to relieve his country, was to make Africa the seat of war, transported his army thither; and, being joined by MASINISSA and his Numidians, gained a memorable victory over the Carthaginians, and SYPHAX their confederate, who was made prisoner in the engagement. SCIPIO afterwards took the important town of Utica: Whereupon the Carthaginians thought fit to make the Roman General some overtures of

peace. But SCIPIO, elated with his successes, would grant them no other terms, but those of withdrawing their forces out of Italy; never intermeddling again in the affairs of Spain; delivering up all their shipping, except twenty vessels, to the Romans; paying down fifteen thousand talents, with some less material articles. And the Carthaginians seemed to acquiesce in them, only desiring they might have a truce, 'till they could send to Rome, and try to get some alteration of the terms in their favour; and in the mean time sent orders to HANNIBAL to evacuate Italy, and return home: Which, it seems, he received with the utmost regret; for, being joined by MAGO, he looked upon himself, at this time, to have been in a condition to have completed the conquest of Italy, and probably had effected it, if the Carthaginian army in Africa had stood upon the defensive, and not received that terrible defeat, when SYPHAX was made prisoner. HANNIBAL, however, thought fit to obey his masters, and return, quitting that fine country he had been contending for near sixteen years, and abandoning his allies, the Gauls, as well as the Italians who had joined him, to the mercy of the Romans, which gave him a most sensible mortification; inasmuch that, 'tis said, he was scarce master of himself, when he embarked his troops.

During the cessation of arms (as the Romans relate) a great fleet of theirs happening to be driven on the coast of Carthage, many of their ships were taken by the enemy, and carried into that port; which being reclaim'd by SCIPIO (after the arrival of HANNIBAL) that State refused to restore them. Whereupon hostilities were again renewed; and a battle being fought not long after, SCIPIO obtain'd a complete victory by the assistance of MASINISSA: HANNIBAL, however, made good his retreat to Carthage, having lost twenty thousand men in the engagement. The Romans afterwards continued their march to invest that capital, and in their way were met by Deputies from Carthage with fresh overtures of peace; and were content, after some debate, to submit to the following mortifying terms.

That they should deliver up all their ships to the Romans, except ten: That they should deliver up all their allies that were in Carthage, as well as all deserters and prisoners: That they should deliver up their Elephants, and tame no more: That they should not make war out of Africa, nor in it, without the leave of the Romans: That they should restore to MASINISSA all that he, or his ancestors had been possessed of: That they should pay ten thousand Euboic talents of silver at fifty annual payments, and give an hundred hostages for performance of these conditions; in consideration whereof, the Romans granted they should remain a free people, governed by their own laws, and enjoy all the towns and territories they possessed in Africa before the war.

Upon the conclusion of this treaty, the Carthaginians deliver'd up five hundred ships to SCIPIO, which he burnt in view of the town. He also struck off the heads of the Chiefs of their Italian allies, and hang'd up all the deserters: After which, he return'd to Rome with his army, where a most magnificent triumph was decreed him, together with the surname of AFRICANUS. And thus ended the second Punick war, after it had lasted seventeen years. On the conclusion of this peace, HANNIBAL was employ'd in reducing some parts of Africa that had revolted from Carthage: But the Romans, still jealous of his being at the head of an army, requir'd he should be recall'd, and not inter-

meddle with military affairs. Whereupon returning to Carthage, he was constituted Prætor; and the reformation of the civil government, and of the treasury, was committed to his care: In which charges he acquitted himself no with less honour than he had obtain'd in the field. But his enemies charging him with holding a correspondence with ANTIOCHUS, King of Syria, against the Romans, the Senate of Rome sent a deputation to Carthage, requiring that General should be deliver'd up to them: Whereupon he embarked suddenly for Phœnicia, from thence he went to the Court of ANTIOCHUS, and prevented his being seiz'd; for the Carthaginians would have delivered up HANNIBAL and half their Nobility, rather than have hazarded another war with the Romans. HANNIBAL was at first received with great marks of esteem by ANTIOCHUS, who was then entering into a war with the Romans; but he afterwards entertain'd a jealousy of this great man, and meeting with ill success in that war, in order to procure the better peace of Rome, he stipulated to deliver up his guest to the Romans; which HANNIBAL receiving timely notice of, retir'd to the island of Crete; and carrying a considerable treasure with him, was in danger there of being murder'd for it by those inhospitable islanders, from whom he made his escape by an ingenious stratagem.

He afterwards fled for refuge to the Court of PRUSIAS, King of Bithynia, who being then engag'd in a war with EUMENES, King of Pergamos, HANNIBAL was exceeding useful to him: However, upon the application of the Romans, PRUSIAS promised to deliver up HANNIBAL to them; which, when the old General understood, he put an end to his life by drinking a glass of poison, being then seventy years of age. The same year also died his great rival SCIPIO, in a kind of voluntary banishment; being obliged to fly his country, to avoid malicious impeachments, notwithstanding the important services he had done the Roman State. But to return to Carthage: The Romans not only obliged that State to restore to MASINISSA all the territories he possessed before the war, but conferred on him also those of SYPHAX, with which, however, his ambition was not satisfy'd, but he seiz'd several cities belonging to the Carthaginians: Whereupon they appeal'd to the Romans, who promised to redress the injury; but under-hand encourag'd MASINISSA in his encroachments, in order to keep the Carthaginians low, and prevent that State's rising to its former grandeur; and observing, at length, that notwithstanding all oppressions and discouragements, Carthage still encreas'd in wealth and power, it was determin'd by the Romans, absolutely to destroy their State, and raze the city, they so much dreaded, to the ground: They remember'd, with horror, how HANNIBAL, for sixteen years, had ravag'd their country, and brought them to the brink of ruin, and could not be easy while Carthage was in being. For many years were speeches made in the Roman Senate against the imprudence of suffering that State to rise again; and it is observ'd of CATO, that he scarce ended a speech in relation to that debate for many years, without these memorable words, *Delenda est Carthago*: Carthage must be destroy'd. Nor was that State ignorant of what was intended against them. They endeavour'd, therefore, by the most abject submissions to avert their ruin; but all to no purpose: The Romans assembled a numerous army, which was transported to Africa, under the command of L. MARTIUS and M. MANLIUS NEPOS, their Consuls; who having wheedled them to

deliver up all their arms and engines of war, under pretence of granting them the peace they demanded, the Roman Generals then informed them, That it was the pleasure of the Senate they should evacuate Carthage, and remove to some other part of their territories, at a distance from the sea, for they were commanded to destroy their city; which throwing the Carthaginian Ambassadors into the utmost consternation, they only desired they might return to the city and consult their principals, before they gave a peremptory answer. This request the Roman Generals thought fit to indulge them in, not imagining, after they had parted with their arms, they would think of defending themselves: But the Carthaginians, being now reduced to despair, and resolving to hazard their lives, and all that was dear to them, rather than see their city destroy'd, fell immediately to forging of new arms, and providing all manner of instruments of war; insomuch, that when the Romans approach'd the city, they found it would be a work of some time to reduce it: And indeed, the first year very little was done towards taking the town, several brisk sallies being made, in which the Romans suffer'd much.

The following year SCIPIO, grandson, by adoption, of the celebrated SCIPIO AFRICANUS, who put an end to the second Punick war, being elected Consul, and commanding the Roman army before Carthage, batter'd the town with great fury, and gave the besieged little rest. However, they held out two years more against all the power of the Romans, and the stratagems of their ablest Generals; but the third year, the city was taken by storm, when SCIPIO resign'd every thing to the plunder of the Soldiers, except the plate and ornaments of the temples; and afterwards commanding it to be set on fire in several places, it continued burning for seventeen days, and orders were given by the Senate of Rome, that it should never be built or inhabited again; and that the cities also should be razed that had continued in the interest of Carthage during this war. Dreadful imprecations also were made against those who should rebuild Carthage; to avoid which, 'tis said, when AUGUSTUS CÆSAR erected the new town, to which was given the name of Carthage, it was built upon another spot of ground near the former; and this afterwards arriv'd to be a noble populous city, the capital of Africa, and so remained for 700 years, till destroy'd by the Saracens; but not comparable either in dimensions, strength, or beauty, to the old town; of which we meet with the following particulars relating to the description of it.

That it was situated on three hills in a peninsula, almost surrounded by the sea, and was in reality three towns united in one; the whole 22 miles in circumference, and contained two harbours within its works; one for their men of war, and another for the merchant-ships; and that it was on all sides surrounded by rocks: That on the isthmus, towards the continent, stood the citadel, called Byrsa, defended by a triple wall, and towers at proper distances: That the walls were two stories high, built upon arches, and that in the lower arches were kept three hundred Elephants, with their provisions and warlike accoutrements: In the upper arches were store-houses and stables for four thousand horse, and barracks for twenty thousand foot: That the city, properly so called, lay almost round the citadel, and was named Megara; and the harbour, which was a Megara double one, as has been observed already, being divided by a little island, called Cothon, was inhabited chiefly by Seamen: That the whole town contained

Carthage was destroy'd 609 years after the building of Rome, and before CHRIST 146 years.

Carthage destroyed about 146 years before Christ.

The genius and temper of the Carthaginians.

And now, before I dismiss the history of the Carthaginians, it may be proper to enquire into the genius and temper, the religion and policy, of that once famous nation.

The character which the Romans, their enemies, give of them, is not to their advantage; nor can it be expected it should: They charge them with craft, covetousness and treachery; inasmuch, that Punick faith was become a proverbial phrase at Rome: They will not allow this people one good quality, except industry. But it appears, however, that they had a mighty genius for navigation and foreign countries, made more discoveries, and settled more colonies, than all the nations in the world besides; and one would think the Romans might have allowed them courage in military skill, when they suffered so much from these talents, and could never think themselves safe, till Carthage was destroy'd: As they were a trading people, they might put up many affronts, rather than engage in war, which must interrupt their commerce; but, when they found themselves oppressed, and did exert themselves, Spain, Italy, and Sicily, as well as Africa, were witnesses of the bravery and conduct of their Generals; and the noble defence of their capital for three years after the Romans had treacherously seiz'd their arms, sufficiently manifests, that they were not so dispirited upon every misfortune, as to neglect their defence, as the Roman authors insinuate: And indeed they appear to me to have been a brave, wise, frugal and diligent people. 'Tis true, their great commerce, and active genius, render'd them the most powerful nation in Africa; and they had an ambition of keeping the neighbouring powers under their subjection; but this is no more than what all other people in the like circumstances have done, especially the Romans: And this may be observed in favour of the Carthaginians, which cannot be said of the former, that they improved the trade and manufactures of every country where they came, and supplied one part of the world with what the other wanted; whereas the Romans destroy'd all trade and commerce, and subsisted chiefly on the spoils of others.

Religion of the Carthaginians.

The religion of the Carthaginians appears to have been the same with that of the Canaanites or Phœnicians, from whom they descended: They worshipped a multitude of deities, as Monsieur ROLLIN observes from the preamble of a treaty they concluded with PHILIP of Macedon; wherein it is recited to be made, In the presence of JUPITER, JUNO and APOLLO: In the presence of the Demon or Genius of Carthage: In the presence of HERCULES, MARS, TRITON and NEPTUNE, and all the confederate gods of Carthage: In the presence of the sun, moon, and earth, rivers, meadows, waters, &c. But the gods chiefly invoked by them, were the MOON (called Cælestis, and sometimes Urania) and SATURN, called Molock in sacred history; to which last they sacrificed their children, sometimes burning them in fires, and at others in a brazen statue of SATURN, heated for that purpose, founding at the same time drums and trumpets, that they might not hear their cries; and it was looked upon as a piece of heroism in their mothers to assist at these sacrifices with dry

They sacrifice their children to Saturn.

eyes, and even without a groan or sigh, the sacrifice not being thought acceptable to SATURN; if offered with any reluctance. But, as the longest custom could not perfectly eradicate the horror these unnatural rites created, they were usually contented with making their children pass through the fire; in which, however, they sometimes perished: And still, in any great distress, they actually burnt them, making choice of the finest and noblest youths their nation bred.

In a dubious battle, or in expectation of a city's being taken and stormed, they have sacrificed children, to this infernal fury, from morning till evening; a cruelty so detested by the rest of mankind, that we find Princes, in their treaties with this nation, insisting, they should offer no more human sacrifices: And this was probably one of those horrid crimes for which the Canaanites, their ancestors, were extirpated; and which brought down that terrible ruin on the Carthaginian State.

The chief Magistrates in this common-wealth, were the two Suffetes, said to resemble the Roman Consuls, and sometimes styled Kings: They were elected annually, it seems; but it does not appear by whom. These assembled the Senate, and presided in it, and had sometimes the supreme command in military, as well as civil affairs; and, when they resigned that office, they were Prætors of course, and thereby retained a very great authority, even that of calling both the Judges and Officers of the publick revenues to an account, and of proposing new laws. The Senate consisted of men of the first quality; but whether they sat there by election or inheritance, or what their numbers were, does not appear any further, than that several hundreds enjoyed this dignity. The Senate was the last resort in all appeals; here laws were framed; Ambassadors had their audience, and resolutions taken as to peace and war: But, when the Senate could not agree, the matter was brought before the People, or rather a representative of the people; but by whom appointed or elected does not appear.

CHAP. XII.

The government of Carthage. The Suffetes.

The Senate.

The People.

There was also another member of this State, called the tribunal of one hundred, though it consisted of an hundred and four persons elected out of the Senate. These were empowered to call their Generals to account, whose power for a great while was almost unlimited; and of these hundred, were five that formed a kind of secret committee, and acted very arbitrarily. They had also a power to fill up all vacancies that happened in the council of an hundred, or in their own number.

The council of one hundred.

Of five.

No person was admitted to any post in this Government, who had not an estate that might be supposed sufficient to set him above all temptations to do a mean thing, or betray his trust: Nor was any one suffered to purchase a place, it being presumed, that those that bought would sell again, and reimburse themselves perhaps by some failure in their duty. As to the rest of the Powers of Africa, who had been tributaries to Carthage, namely MASSINISSA, SYPHAX, and their successors, Kings of Numidia, and JUBA, and the rest of the Princes of Mauritania, who had called in, and assisted the Romans in destroying Carthage; these were for some time suffered to enjoy a kind of independency; but at length, with the rest of the then known parts of Africa, became subject to Rome, and received the Christian religion very early. There were several hundred bishopricks in Africa in the 3d and 4th centuries, of which the Archbishop of Carthage was Primate; the celebrated ST. AUSTIN, TERTUL-

The Saracens conquer Africa and Spain. The north of Africa now under the dominion of the Emperor of Morocco, the Dey of Algiers, and the Beys of Tunis and Tripoli.

LIAN and ST. CYPRIAN, with many other Prelates renowned in ecclesiastical history, adorned this church: But the Vandals, a barbarous northern people, with their neighbours the Suevi and Alans, having forced their way into France and Spain, and being afterwards driven from thence by the Goths, another northern nation, transported themselves from Spain into Africa, about the year of our Lord 427 (GENSERIRAS being their King) and subdued great part of the country possessed by the Romans. The Vandals appear to have been Christians indeed, but of the Arian sect; and therefore expelled all the orthodox Christians. They had the dominion of this part of Africa till the year 534, when BELISARIUS, the Emperor JUSTINIAN'S General, obtained a compleat victory over GILIMAR their last King, and thereby recovered all the Roman provinces. Whereupon JUSTINIAN made Africa a Præfecture; whereas formerly it used to be subject to the Præfectus Prætorio of Italy, and it remained united to the Roman empire. OTHMAN, the third Caliph of the Saracens, in the year 1647, subdued all the north of Africa from the Red sea to the Atlantick ocean. The Saracens afterwards conquered almost all Spain; and both there, and in Africa, erected abundance of petty kingdoms. Those in Africa were at length almost all reduced under the dominion of the Emperor of Morocco, the most potent of all the Saracen Sovereigns in Africa: But since the erecting the kingdom of Algiers by the Turks, in the manner already related, the empire of Morocco is reduced into very narrow bounds, extending no farther along the Mediterranean, than from the streights of Gibraltar, to the river Mulvia: All the rest of the Barbary coast, from thence to Egypt, is subject to the Turks of Algiers, Tunis or Tripoli.

A further continuation of the history of Africa.

Guinea.

THE next grand division of Africa, I am to review, is that of Guinea, which is generally held to extend from the mouth of the river Senegal, situate in 15 degrees 30 minutes north latitude, and 16 degrees west longitude, to the south-east as far as Cape Negro, situate in 18 degrees south latitude, and 11 degrees east longitude: but then we must include Congo and Angola. In the former edition of this work, indeed, I extended the coast of Guinea but from 10 degrees north latitude to 4 degrees north latitude; but observing since, that the same merchants trade both to the north and south of those limits, and deal in almost the same articles, it seems very proper to stile the whole coast, from the river Senegal in the north, to Cape Negro in the south, the Guinea Coast. The most northerly settlements the Europeans have in this tract, are those of the French, situate near, or in the river Senegal, in 15 degrees 30 minutes north latitude. The next are those of the English, in the river Gambia, situate in 13 degrees 20 minutes north latitude; and further south were heretofore other settlements belonging to the royal African company, in the river Sherbro, situate in 7 degrees 30 minutes north latitude. The coast from the river Sherbro, round Cape Palmas, to the river Ancober, near Axim, is about 250 leagues in length, and commonly called the Windward Coast, on which there is no settlement or factory of any European nation. From the river Ancober eastward to Acra, is about 50 leagues: this part is usually called the Gold Coast, on

which are several English and Dutch forts and factories. From Acra eastward, to Jaqueen, is about 60 leagues, in which the only places where the English, French, and Dutch, had factories, were Whidaw and Jaqueen; and this is called the Slave Coast. From Jaqueen to the bay of Benin, and so round to the Callibars, Camarone, and Cape Lopez, 1 minute south of the line, is 300 leagues, in which long tract is no settlement of any European nation. The coasts of Congo and Angola, to the southward of Cape Lopez, extend to Cape Negro, in 18 degrees south latitude, as has been observed already. I proceed now to review the state of the said several countries on the south-west of Africa, to which the Europeans trade.

The French are absolute masters of the mouth of the river Senegal, which lies in 15 degrees 30 minutes north latitude, in which they have several forts and factories, as they have also on the sea-coast to the north and south of that river, and for a great while monopolized the trade of that gum, which from the river Senegal obtained that name; but the English royal African company begin now to share the gum trade with them, having found a way to the woods where it is produced, from their settlements in the river Gambia.

And here it is necessary to observe in the first place, that the river Gambia, in most of our maps, is called the river Niger; and the Senegal seems to be a branch of that river; and that the source of the river Niger is placed upwards of two thousand miles east of the mouth of it; whereas it is evident to me, that the Senegal and Gambia are two distinct rivers, running from east to west almost parallel to each other, and that neither of them are navigable above 600 miles, which is not more than 300 miles by land, if we make the usual allowances for the winding of rivers: from whence we may very well conclude, that those who pretend to have penetrated into the heart of Africa by these rivers, have never travelled above three or four hundred miles from the sea-coast.

Mr. Moor relates, that sailing into the mouth of the river Gambia, the shores appeared very beautiful, being for the most parts clothed with woods, and between the woods pleasant green rice grounds: that James Island, the chief settlement belonging to the royal African company, lies ten leagues up the river, almost in the middle of it, being three miles from the nearest shore: that at low-water, the island is about three quarters of a mile in circumference, upon which there is a square fort of stone, regularly built, with four bastions, upon each whereof are seven cannon mounted, which command the river all round. Under the walls of the fort, facing the sea, are two round batteries, and on each of them four large cannon mounted; and between those are nine small guns mounted for salutes.

In the fort are some very good apartments, in which the governor, chief merchants, factors, writers, and ensign, lie; and under some of these apartments are very good storehouses.

One officer, one serjeant, two corporals, one gunner and gunner's mate, and thirty soldiers, are by establishment the garrison of this fort; but sickness, occasioned chiefly by the excessive drinking of distill'd liquors, often reduces it to a very weak condition, till such time as recruits can be raised in England, and by the company sent

CHAP.
XII.

sent over hither. The soldiers, and tradesmen, and other servants, lie out of the fort in barracks, built as the fort is, with stone and mortar. The whole is surrounded with pallisadoes, and the river forms an excellent mote, being three miles wide in the narrowest part. There are also other barracks, built opposite to those of the soldiers, for the use of the company's castle-slaves and black servants. Under them are store-houses, and under those of the soldiers are slave-houses.

This fort preserves the right of trading to the river Gambia for the company, and consequently for the subjects of England.

Besides the fort, there are several factories up the river, settled for the convenience of trade. They are all under the direction of the governor and chief merchants at this fort, to whom the factors remit all their trade. For this purpose the company have here 3 or 4 sloops, of about thirty tun each, and about the same number of long-boats: some of them are constantly employed in fetching provisions and water from the main, for the use of the garrison, and the rest are employed in carrying goods up to the factories, and bringing from them slaves, elephants teeth, wax, or whatever trade they have, down to James Fort, from whence most of it, except slaves, is sent home by the governor and chief merchants to the company in England.

According to the same writer, the mouth of the river Gambia lies in 13 degrees 20 minutes north latitude, and 15 degrees 20 minutes west longitude, and is formed by some broken islands on the north, and by Cape St. Mary's on the south. On the north-side of the river, the first kingdom is that of Barra, which extends twenty leagues along the river; and in this country the African company have two factories, one at Gillsfree, over against James Fort, and the other at Colar, upon a river of the same name, which discharges itself into the Gambia, eight leagues above James island.

The next kingdom is Gadibu, which extends twenty leagues. Further east, on the north-side of the river, is the kingdom of Sanjally, which extends fourteen leagues. In this kingdom the African company have their chief factory of Joar, being about two miles distant from the river.

Next to Sanjally lies the kingdom of Barsally, extending about fifteen leagues along the river, to which most of the other kingdoms are tributary; and beyond Barsally lies the kingdom of Yany, which extends eighty leagues further up the river. And the last kingdom on the north-side of the river, to which our author travelled, is that of Wolly, which extends seven leagues beyond Yany. In this kingdom the company have the Factory of Fatatenda, which is about five hundred miles from the mouth of the Gambia. Here the river is as wide as the Thames at London-bridge; and hither sloops of forty tuns come up with their cargoes, and the tides rise three or four foot.

On the south-side of the river, the first kingdom we meet with is that of Cumbo, which commences at Cape St. Mary's, and extends eleven leagues to the east-ward of it, affording plenty of neats, cattle, goats, and fowls; and here the company have a small factory, which purchases provisions for the garrison at James Fort.

The next kingdom on the south-side is Fonia, extending seven leagues, in which the company have two factories employed in buying up elephants teeth and bees-wax. The next country

to Fonia is Caen, extending twenty three leagues along the river, in which is a large town called Tancrowall, where the company have a factory, near which lives SIGNIOR ANTONIO VOSS, a famous black Portuguese, who trades largely with the English separate traders, and sometimes with the company. He is reckoned to be worth 10,000 l. sterling; he has got a vast number of house-slaves (*viz.* slaves who live with him as servants, a grandeur much used both by the Portuguese and Spaniards) which he keeps for service and breed, and are esteemed by him almost as much as his own children. And, as he has got a great many canoes, he sends his own men-slaves with them to all ports of trade up the river, and by that means engrosses a great deal of trade, inasmuch that he has commonly a great many slaves, and good quantities of elephants-teeth, and bees-wax, by him, by which he turns a penny with the separate shipping, and is well skilled in his way of bartering, he being thoroughly master of the prime cost in England of all sorts of goods, taking always care to keep his warehouse well stock'd with goods, and has the upper-hand vastly of some of his neighbours, who are sometimes obliged to stand still half a year together, for want of goods to trade with.

Tancrowall is divided into two parts; one belonging to the Portuguese, and the other to the Mundingoes; the former living always in large square houses, the latter in round huts made of a good fat binding clay, which soon hardens: they are twenty feet diameter, and about eight feet high; over them there is a covering like a bee-hive, made either of straw or palmetto leaves, so well fitted that the rain cannot penetrate them, nor the heat of the sun strike through them: they very much resemble some ice-houses in England.

This town of Tancrowall is the residence of a priest, who is yearly sent over from St. Jago. Here is also a church, where, during the priest's stay, is mass almost every day. Here are a great many other Portuguese, who have among them several canoes, which they send up the river to trade once or twice a year, by which means they have made this town a place of great resort, and the richest in the whole river. It is pleasantly situated by the water-side, about half a mile in length, with a woody hill behind, that runs some miles along the river-side, about half a mile from it: between which and the river is pleasant walking in a dry season.

Next to Caen lies the country of Jagra, famous for husbandmen and laborious people, by which means it abounds with corn and rice. In this country is Elephants-Island, being four or five miles long, full of trees and marshy. This kingdom extends itself above twelve leagues; and then begins the country of Yamina, which abounds in corn and fowls; in it is a large pleasant island, and another small island, almost in the middle of the Gambia, called Sea-Horse-Island, full of trees and marshy ground, and abounding in sea-horses, from whence it takes its name. This country extends about fourteen leagues; and then we come to Eropina, a petty kingdom, extending about fourteen leagues along the river side: after which begins Jemarrow, governed by an Emperor, who is a Mundingoe: here the company have a settlement near a large town called Brucoe, which is inhabited by people of the Mundingoe race, but strict followers of Mahomet. About half a mile below this town is a ledge of

rocks dry at low-water, which reaches from the northern shore five sixths of the way over the river, and leaves so narrow a channel under the south shore, that it is very dangerous for large ships to pass it; and our sloops are obliged to take the opportunity of slack-water to go through this place, which is called Pholey's Pass. In the same Empire, about nine miles above Pholey's Pass, are a great many rocks, near a town called Dubocunda, which reach from the south-side two thirds across the river; and about three miles above this is another ledge of rocks, dry at low-water; but there is a deep channel on the north-side. This country runs about thirty-two leagues along the river, and then begins Tomany, which is a very large country, consisting of more towns than any other which I have known on the whole river. The company have a factory at a small town called Yamyamacunda, which makes a considerable trade in dry goods, provided it is well supplied: a little below the town, in the middle of the river, are some rocks, but never dry; and over-against the factory, on the north-side the river, about half a mile from it, is a standing lake about two miles long, which abounds in fish. This country extends up the river-side about twenty-six leagues, and is governed by a Mundingoo, by name HUME BADGY.

Above Tomany begins Cantore, in which is a town called Colar, six miles beyond which is the farthest I have been; all beyond is little known to white people. Colar I believe is about five hundred miles from Cape St. Mary's, the south part of the entrance into the Gambia river.

The sea-horse, the crocodile, and other animals, for which the Nile is famous, abound in the river Gambia, which overflows its banks also every year, as the Nile does, but some months later.

These countries, on the banks of the Gambia, are inhabited by several races of people, viz. Mundingoes, Jolloiffs, Pholeys, Floops and Portuguese: the most numerous are called Mundingoes, as is likewise the country where they inhabit: they are generally of a black colour, and well set. When this country was conquered by the Portuguese, which was about the year fourteen hundred and twenty, some of that nation settled in it, who have cohabited with the Mundingoes, till they are now very near as black as they are; but, as they retain a sort of bastard Portuguese language, called Creole, and as they christen, and marry, by the help of a priest, sent yearly over hither from St. Jago, one of the Cape de Verd Islands; they reckon themselves still as well as if they were actually white, and nothing angers them more than to call them negroes, that being a term lately appropriated to slaves.

On the north side of the river Gambia, and from thence in-land, are a people called Jolloiffs, whose country is vastly large, and extends even to the river Senegal. These people are much blacker, and much handsomer than the Mundingoes; for they have not the broad noses and thick lips, peculiar to the Mundingoes and Floops. In short, all the countries hereabout, says the same writer, (and I have seen vast numbers of people from each) cannot come up to the Jolloiffs for blackness of skin, and beauty of features.

In every kingdom and country on each side of the river, there are some people of a tawny colour, called Pholeys, much like the Arabs, which language most of them speak; tho' they

have a vulgar tongue besides, called Pholey. They live in hoards, or clans, and built towns, but are not subject to any Kings of the country, tho' they live in their territories; and, if they are ill treated in one nation, they break up their towns, and remove to another. They have chiefs Government of their own, who rule with so much moderation, that every act of government seems rather an act of the people than of one man. This form of government goes on easily, because the people are of a quiet disposition, and so well instructed in what is just and right, that a man who does ill is the abomination of all, and none will support him against the chief.

In these countries the natives are not fond of lands, they desire no more than what they use; and as they do not plough with horses or cattle, they can use but very little: therefore the Kings are willing to give the Pholeys leave to cultivate lands, and live in their countries. They plant near their houses tobacco and cotton, which they fence in together; beyond that are their corn fields, of which they raise the four kinds, usual all over this country; that is to say, Indian corn, or maize, which grows in a great head, and is the food of the natives of America, as well as Africa: besides which, they have rice, and the larger and the lesser Guinea corn. In Gambia is no wheat, barley, rye, oats, or any other European grain; but there is a kind of pulse between the kidney-bean and pea, and potatoes, and yams. The larger Guinea corn is round, and about the size of the smallest pease: they sow it by hand, as we do wheat and barley; it grows to nine or ten foot high, upon a small reed; the grain is at the top, in a large tuft. The lesser Guinea corn is called by the Portuguese, mansaroke: this likewise is sowed by hand, and shoots to the same height upon a large reed, on the top of which the corn grows on the head like a bulrush: the grain itself is very small, and like canary seed in shape, only larger. --- These are all the bread-kind that are used in Gambia; and, indeed, the natives make no bread, but eat the flour of the various grains, as thickeners, to liquids. The Indian corn they mostly use when green, parching the ear upon coals, and then it eats like green pease: they boil their rice chiefly as the Turks do: by beating the Guinea corn in wooden mortars, they make flour, as they do sometimes of rice and Indian corn. The natives never bake cakes or bread for themselves (as I said before) but those women, who wait on the Europeans, have learned to do both.

The Pholeys are the greatest planters in the country, tho' they are strangers in it. They are very industrious and frugal, and raise much more corn and cotton than they consume, which they sell at reasonable rates, and are very hospitable, and kind to all; so that a Pholey town in the neighbourhood, is by the natives reckoned a blessing: and their behaviour has gained them such general reputation, that it is universally looked upon infamous to violate the laws of hospitality towards them. As their humanity extends to all, they are doubly kind to people of their own race; inasmuch, that if they know of one of them being made a slave, all the Pholeys will redeem him. And as they have plenty of food, they never suffer any of their own nation to want, but support the old. The blind and the lame, equal with the others, and

Pholeys further described.

as far as their ability goes, assist the wants of the Mundingoes, great numbers of whom they have maintained in famines. The same writer adds, they are very rarely angry, and I never heard them abuse each other; yet this mildness does not proceed from want of courage, for they are as brave as any people of Africa; and the Jolloiffs, nay even the King of Barfally, does not dare to meddle with them. They use their arms very dextrously, which are the lance, a sagay, or dart, bows and arrows, short cutlasses, which they call fongs, and guns upon occasion. They settle commonly near some Munding town, there being scarce one of any note or bigness (especially up the river) but what there is another of these Pholeys not far from it. They are strict Mahometans; none of them (unless here and there one) will drink brandy, or any thing stronger than water and sugar.

They breed cattle, and are very dextrous in managing them; so that the Mundingoes leave theirs to their care: The whole herd belonging to towns feed all the day in the savannahs, and after the crop is off in the rice grounds. They are watched by some herdsmen, who prevent their going into the corn, or running into the woods. They have a place near each town for the cattle, in the middle of which they raise a stage about eight foot high from the ground, and eight or ten foot wide: and over it a roof of thatch, with the sides all open. They drive great numbers of stakes in rings round the stage, and every night they duly bring up the cattle, who are so tame, and well accustomed to it, that they come up with ease: Each beast is tied separate to a stake with a strong rope, which they make of the bark of trees. After the cattle are tied they milk the cows, and four or five men stay upon the stage all night, with their arms, to guard them from the lions, and other wild beasts. The calves they wean from the cows, and keep in a common pen, which is made with so strong and high a fence round it, that no wild beast can pass it. In the morning they again milk the cows, and then let them go into the savannahs, as usual.

They are great hunters; they kill lions, tigers, and other wild beasts, and often go twenty or thirty in a company to hunt elephants, whose teeth they sell, and whose flesh they smoke dry, and eat, keeping it several months together. The elephants (as they say) generally go a hundred or two hundred in a drove, and do great mischief; not only to the small trees, which they pull up by the roots, with their trunks, but likewise to the corn: To prevent which, the natives, on notice or suspicion of their coming, make fires all round their corn to keep them out; for if they get once in, they will with their broad feet trample it down for perhaps half a mile together.

The Pholeys are very particular in their dress, and never wear any other than white cotton clothes, which they make themselves: They are always clean, especially the women; their houses are built in a regular method, a good way distant from each other, to avoid fire, forming very good streets and passages, a thing which the Mundingoes do not regard. They are great admirers of large white and yellow beads, which last are called by their own name, viz. Pholey beads.

These are almost the only people, high up the river, of whom beasts are purchased: We used to

purchase a cow for an iron bar; but of late some of the masters of the sloops in this river have raised the prices; so that now we are obliged to give sometimes two iron bars for one beast.

On the south-side of this river, over-against James-Fort, in the empire of Fonia, and but a little way inland, are a sort of people called Floops, Floops described. who are in a manner wild: They border close upon the Mundingoes, and are bitter enemies to each other. Their country is of a vast extent; but they have no King among them. Each of their towns is defended by stakes drove all round, and filled up with clay: They are independent of each other, and under the government of no one chief; notwithstanding which they unite so firmly, that all the force of the Mundingoes (though very numerous) cannot get the better of them.

Gambia river is navigable for sloops two hundred leagues, the tides reaching so far from the mouth of it. The sides of the river are for the most part flat and woody for about a quarter of a mile inland, in some places not so much; and within that are pleasant open grounds, which they use for their rice, and in the dry season it serves their cattle for pasture. River Gambia described. Inland it is generally very woody; but near the towns there is always a good large space of cleared ground for corn. The soil is mostly sandy, with some clay, and a great deal of rocky ground. Face of the country. Near the sea, and the lower part of the river, are no hills to be seen; but high up the river are some lofty mountains, from the top of which are pleasant prospects. The hills are of iron-stone; and though they are sometimes little else but a continued hard rock, yet are they full of trees. In every kingdom there are several lords of soils, commonly called Kings of the towns where they dwell. It is their privilege to have all the palm-trees and ciboa-trees, inasmuch that no one durst cut any leaves, or draw any wine from them, without their previous knowledge and consent. The men who have the liberty of drawing wine, give two days produce in a week to the lord of the soil, as an acknowledgement; and white men are obliged to make a small present to them before they can have liberty to cut ciboa-leaves, or grafs, to cover a house.

The most general language is Munding, by which name the country people are called. If you can speak that language, you may travel from the river's mouth up to the country of Joncoes (alias merchants) so called from their buying every year a vast number of slaves there, and bringing them down to the lower part of this river, to sell to the white people: Which country I believe cannot, by all report, be less than six weeks journey from James-Fort.

The next language mostly used here, is called Language-Creole, a bastard sort of Portuguese, scarce understood in Lisbon; but it is sooner learnt by Englishmen than any other language in this river, and is always spoken by the linguists, which serve both the separate traders and the company.

The Arabick is spoken by the Pholeys, and by most of the Mahometans of the river, though they are Mundingoes.

The chief trade of this country is gold, slaves, Produce and traffick. elephants-teeth, and bees-wax. The gold is of a very good quality, and finer than the sterling Gold. They bring it in small bars, big in the middle, and turned round into rings, from ten to forty shillings each. The merchants, who bring

bring this and other inland commodities, are blacks of the Munding race, and are called in Munding Joncoes. They are very unwilling to tell much of the inland countries; all that I could gather from them concerning their gold, was, that it is not washed out of the sand, but dug out of mines in the mountains, the nearest twenty days journey from Cower.

Slaves.

The same merchants bring down elephants-teeth; and in some years slaves, to the amount of two thousand, most of which they say are prisoners taken in war: they buy them from different princes, who take them: many of them are Bumbrongs and Petcharies, nations each of them of different languages, and are brought from a vast way inland. Their way of bringing them is tying them by the neck with leather thongs, at about a yard distance from each other, thirty or forty in a string, having generally a bundle of corn, or an elephant's tooth, upon each of their heads. In their way from the mountains they travel through very great woods, where they cannot for some days get water; so they carry in skin-bags enough to support them for that time. I cannot be certain of the number of merchants who follow this trade; but there may be perhaps about an hundred, who go up into the inland country with the goods which they buy from the white men, and with them purchasing in various countries, gold, slaves, and elephants teeth. They use asses as well as slaves in carrying their goods; but no camels nor horses.

Besides the slaves which the merchants bring down, there are many brought along the river. These are either taken in war, as the former are, or men condemned for crimes, or else people stolen, which is very frequent. The companies servants never buy any of the last, if they suspect it, without sending for the alcade, or chief men of the place, and consulting with them about the matter. Since this slave-trade has been used, all punishments are changed into slavery: there being an advantage on such condemnations, they strain for crimes very hard, in order to get the benefit of selling the criminal. Not only murder, theft, and adultery, are punished by selling the criminal for a slave, but every trifling crime is punished in the same manner.

Several of the natives have many of their slaves born in their families: there is a whole village near Bruce of two hundred people, who are all the wives, slaves, or children of one man. And tho' in some parts of Africa they sell their slaves born in the family, yet in the river Gambia they think it a very wicked thing; and I never heard of but one that ever sold a family slave, except for such crimes as would have made them to be sold had they been free. If there are many family slaves, and one of them commits a crime, the master cannot sell him without the joint consent of the rest; for if he does, they will all run away, and be protected by the next kingdom to which they fly. The slaves sold in the river, besides those brought by the merchants, may amount in a year to above one thousand, more or less, according to the wars upon the river.

Ivory.

The third great merchandize of the river is ivory, or elephants-teeth, got either by hunting or killing the beasts, or pick'd up in the woods. It is a trade used by all nations hereabouts; for whoever kills an elephant, has liberty to sell him and his teeth: but those traded for in this river, are generally brought from a good way inland,

and a great many of them by the merchants. I never saw a full-grown elephant, so shall not speak concerning them; but the teeth I have had some experience in. Some are found in the woods; but whether they are of elephants long dead, or whether the elephants shed their teeth, I have not been able to learn: but I have known men bring in teeth which they have found in the woods, without any skull or bones fixed to them. The biggest tooth I ever saw, weighed 130 lb. The larger they are, the more valuable by the pound. One tooth which weighs an hundred pounds, is worth more than three teeth which weigh 140 pounds. Many of them are broken pointed; these are considerably less in their value. Some are white, others are yellow; but the difference of colour makes no difference in price.

The fourth branch of trade is bees wax, which may be much increased. The Mundingoes make bee-hives of straw in the shape of ours, and fix a bottom-board into the hive, thro' which there is a hole for the bees to go in at; they then sling them by wyths to boughs of trees.

A bar is a denomination given to a certain quantity of goods of any kind, which quantity was of equal value among the natives to a bar of iron when this river was first traded to. Thus a pound of fringe is a bar, two pounds of gunpowder is a bar, an ounce of silver is but a bar, and one hundred gun-flints is a bar; and each species of trading goods has a quantity in it called a bar: therefore their way of reckoning is by bars, or crowns, one of which does not sometimes amount to one shilling sterling; but that happens according to the goods they are in want of, sometimes dear, sometimes cheap. These five articles, viz. spread-eagle dollars, chrystal beads, iron bars, brass pans, and arrangoes, are called the heads of the goods, because they are dearest. When you agree with the merchants for slaves, you always agree how many of the heads of the goods you shall give him upon each slave, which is three or four, if the slaves are worth forty or fifty; but when slaves are dearer, as they oftentimes are at eighty bars per head, then you must give five, and sometimes six, of the heads upon every slave; and there is an assortment made of the goods by bars of different species, which come out to the price of the slaves. The men and women used to be much dearer than boys and girls; but there have been so many vessels in the river of late years for young slaves, to carry to Cadiz and Lisbon, that there is scarce any difference between the price of young slaves and grown ones.

A bar defined.

Young slaves as dear as full-grown here.

The French have a factory at Albreda, on the north-side of the river Gambia, a mile or two below James-Fort. Whenever their factors want to go up the river above James-Fort for wood, or any thing else, which they cannot so well be provided for below, they are obliged to ask leave of our governor, who seldom or never denies them, but puts a man on board, to see that they do not make any trade; neither are they allowed to go above Elephants Island, which is about thirty leagues above James-Fort.

French factory.

The rainy season commonly begins with the month of June, and continues till the latter end of September, and sometimes the beginning of October: the first and last are the most violent generally. The wind comes first, and blows excessive hard for the space of half an hour or more, before any rain falls; insomuch that a vessel may be

Air and seasons.

be suddenly surprized and overfet by it; but then a perfon may fee it a good while before it comes; for it looks difmal, and very black, and the lightening breaking out of the black clouds as they move slowly towards you, makes it appear awful. During the rainy feafons, the fea-breezes feldom blow, but inftead of them, eafterly winds right down the river, which in the months of November, December, January, and February, do generally blow very frefh, efpecially in the day-time.

Four months in the year are unhealthy, and very tedious to thofe who are come out of a colder climate; but the perpetual fpring, where you commonly fee ripe fruit and bloffoms on the fame tree, makes fome amends for that inconvenience. The air is very pleasant and refrefhing, but it has fomething fo very peculiar in it, that the keys in your pockets will ruf.

The moft exceffive heat is generally about the latter end of May, a fortnight or three weeks before the rainy feafon begins.

The Jolloiffs make the fineft cotton cloths, and that in large quantities: Their pieces are generally twenty-feven yards long, and never above nine inches wide: they cut them to what length they pleafe, and few them together very nearly, to make them ferve the ufe of broader cloths: They make them up into pairs, one about three yards long, and one and a half wide, to cover their foulders and body; the other almoft of the fame width, and but two yards long, to cover from their waift downwards. Such a pair is the clothing either for a man or woman; they only differing in the manner of wearing. I have feen a pair of cloths fo fine and fo bright died, as to be worth thirty-nine fhillings fterling. Their colours are either blue or yellow, fome very lively; the firft is dyed with indico, the latter with barks of trees.

Clothing.

The common people wear a cloth round their middles, which comes down about their knees, and another cloth over their right foulder (the men having generally one arm bare, which the women have not) and the women's clothes are generally down as low as the fmall of their legs. They are very proud of their hair; fome wear it in tufts and bunches, and others cut in croffes quite over their heads: The men commonly wear caps made of cotton-cloth, fome plain, and fome with feathers and goats-tails. The women generally wear handkerchiefs tied round their heads, leaving their crowns bare; and for want of handkerchiefs, they ufe flaps of blue and white cotton-cloth. Others will let their hair hang down on each fide of their heads, plaited like horfes manes, on which they ftring coral, and for want of it pipe-beads. A great many of them (efpecially up the river) wear on the crowns of their heads, a good number of fmall horfe-bells.

Towns.

Their towns are numbers of houfes ftanding together without any order: The huts are generally fourteen or fifteen yards in circumference, built with mud and binding clay, and covered with long grafs or ciboa-leaves, commonly called palmetto. Their doors are very fmall, and do not go upon hinges, but are let into the houfe-wall. They generally keep their houfes very clean; but I cannot fay fweet, by reafon of their ftinking fifh and other things which they keep in them.

Furniture.

Their furniture confifts in a fmall cheft for clothes, a mat raifed upon fticks from the ground

to lie on, a jar to hold water, a fmall calabafh to drink it, with two or three wooden mortars, in which they pound their corn and rice, a bafket or two to fift it in when beat, and two or three large calabafhes, out of which they eat it with their hands. They are not very careful of laying up a ftore againft a time of fcarcity, but chufe rather to fell what they can, and in the time of famine they can faft two or three days without eating (which I myfelf know to be true, there being a very great famine in the year one thoufand feven hundred and thirty-two, efpecially high up the river, where I then was;) but then they are always fmoking tobacco, which ferves to amufe them.

A difh of crocodiles eggs is much admired by Food. them; but their ufual food is crofcoofh, being corn beaten in a wooden mortar, and fifted thro' a fine bafket, till it is about as fine as coarfe flour: Then they put it into an earthen pot full of holes like a cullender, which is luted to the top of an earthen pot, in which is boiling water, and fometimes broth in it, the ftream of which cures and hardens the flour; and when it is done, they mix them together, and eat them with their hands. Fifh dried in the fun, or fmoaked, is a favourite difh of theirs; but the more it ftinks, the more they like it. There is fcarce any thing which they do not eat; large fnakes, guanas, monkeys, pelicans, bald-eagles, alligators, and fea-horfes, are excellent food. And their liquor is palm-wine, ciboa-wine, honey-wine (which is not unlike our mead) brandy, and rum: But when they can get the two laft, they drink but a fmall quantity of the others.

The King of Barfally and his fubjects are Ma- Religion of Barfally. hometans; notwithstanding which both the King and his officers drink to very great excefs when he vifits the Englifh factories; but when he is fober, and not quite fuddled, he frequently prays; and fome of his people will fooner die than drink ftrong liquors. His habit refembles that of other Kings in this country, being a garment like a fuplice, which comes no lower than the knees; a pair of breeches of the fame fort of cloth, about feven yards wide, gathered round the middle: He wears no ftockings, but always a pair of flippers (except when he rides) a fmall white cotton-cap, and commonly a pair of gold earrings. His people, as well as himfelf, wear always white clothes and white caps; and, as they are exceeding black, it makes them look very well. The Tyrants. prefent King is a tall man, very paffionate, and fometimes, when any of his men affront him, he does not fcruple to fhoot them, at which I am told he is very dextrous: and fometimes, when he goes aboard a company's floop at Cohone (his own town and place of refidence) he is for fhooting at all the canoes which pafs by him, killing perhaps one man or two frequently in a day. He has got a great many wives, but never brings above two or three abroad with him: He has feveral brothers, to whom he feldom fpeaks, or permits them to come into his company; and when they do come, they pull off their caps and garments, and throw duft upon their foreheads, as every one does who comes into the King's prefence (except white men.) As foon as the King dies, his brothers or fons go to fighting for the crown, and whoever is the ftrongeft is made King.

This King is potent, and very brave: His dominions are large, and divided into feveral parts,

over which he appoints governors, called boomeys, who come every year to pay homage to him. These boomeys are very powerful, and do just what they please with the people; and altho' they are feared, yet they are beloved.

Other Kings generally advise with their head people, and scarcely do any thing of great consequence without consulting with them first; but the King of Barially is so absolute, that he will not allow any of his people to advise with him, unless it be his chief slave, called Ferbro, viz. (master of the horse) who carries the King's sword in a large silver case, of great weight, and who gives orders for what things the King wants to have, or to be done; and in battle he is the leader of his men.

The King's usual way of living, is to sleep all day, till towards sun-set; then he gets up to drink, and goes to sleep again till midnight; then he rises and eats, and if he has any strong liquors, will sit and drink till day-light, and then eats and goes to sleep again. When he is well stocked with liquor, he will sit and drink for five or six days together, and not eat one morsel of any thing in all that time. It is to that insatiable thirst of his after brandy, that his subjects freedoms and families are in so precarious a situation; for he very often goes with some of his troops by a town in the day-time, and returns in the night, and sets fire to three parts of it, placing guards at the fourth, to seize the people as they run out from the fire: He ties their arms behind them, and marches them to the place where he sells them, which is either Joar or Cohone.

His subjects, however, are very merry fellows, Mr. Moor assures us, and will dance to a drum, or a ballifeu, sometimes four and twenty hours together, dancing now and then very regularly, and at other times in very odd gestures, striving always to outdo one another in nimbleness and activity.

They are very subject to scold one with another, which they call fighting; for if two persons abuse each other very heartily, they call it a great fight, and are generally a good while before they come to blows; which however does sometimes happen, and then they do fight in earnest, either with knives, sagays, or cutlasses, whichever they are provided with; and they very often kill one another; but when that happens, the murderer flies to another kingdom, and that King always protects him, and looks upon him kindly, and always treats him as one of his own subjects.

Some people, as has been intimated already, have a good many house-slaves, which is their greatest glory; and they live so well and easy, that it is sometimes a very hard matter to know the slaves from their masters or mistresses; they very often being better clothed, especially the females, who have sometimes coral, amber, and silver, about their hands and wrists, to the value of 20 or 30 shillings sterling.

The natives are not so disagreeable in their behaviour as some are apt to imagine; for when I went through any of their towns, they almost all came to shake hands with me, except some of the women, who having never seen any white men, ran away from me as fast as they could, and would not, by any means, be persuaded to come near me. Some of them invited me to their houses, and brought their wives and daughters to salute me, and sit down by me, always finding things about me to gaze at and admire; such as

boots, spurs, gloves, clothes, or wig, each of them being to them subjects of discourse and admiration.

The girls would have people think they are very modest, especially when they are in company; but take them by themselves, and they are very obliging; for if you will give them a little coral, or a silk handkerchief, you may take what liberty you please with them. But those who pretend to be of the Portuguese religion, and therefore call themselves christians, are somewhat more reserved than the Mundingoes are. But notwithstanding their religion, and christianity too, if any white man has a fancy to one of them, and is able to maintain them, they will not scruple to live with him in the nature of a wife, without the ceremony of matrimony.

The men commonly wear swords slung over their right shoulder, others carry sagays or spears about three yards long; others have bows and arrows, but all of them wear knives slung by their sides; and indeed I have observed that they are very dextrous at using whatever sort of weapon they carry.

Their manner of salutation is, shaking of hands; but generally, when the men salute the women, they, instead of shaking their hands, put it up to their noses; and nothing can affront them so much as to salute them with your left-hand. When a man has been a day or two from home, the wife salutes him on her knees at his return; and in the same posture she always brings him water to drink.

When a person brings you eggs or fowls to buy, it is imprudent to kill or make use of them before the person you buy them of is actually gone away; for it seems it was a custom in this country (and not yet entirely disused) that whatever commodity a man sells in the morning, he may, if he repents his bargain, go and have the things again, on paying back the money, any time before the setting of the sun.

It is customary, when factories are settled, to put them, and the persons belonging to them, under the charge of people of the nearest large town, who are obliged to take care of it, and to let none impose upon the white men, or use them ill; and if any body is abused, they must apply to the alcade, the head man of the town, and he will see justice done you.

This man is up the river called Tobaubo Manfa, which is in English, The white man's King. But in most parts of the river he is called alcade, and hath a great power: For every town almost having two common fields of cleared ground; one for their corn, and the other for their rice; the alcade appoints the labour of all the people, he being in the nature of a governor. The men work the corn ground, and the women and girls the rice ground: As they all equally labour, so the alcade equally divides the crop among them.

When a child is born, they dip him over head and ears in cold water three or four times in a day; and as soon as they are dry, they rub them over with palm-oil, particularly the back-bone, small of the back, elbows, neck, knees, and hips. When they are born they are of an olive-colour, and sometimes do not turn black for a month or two.

I do not find that they are born with flat noses; but if it be the mother's fancy to have it so, she will, when she washes the child, pinch and press down the upper part of its nose.

Large

Large breasts, thick lips, and broad nostrils, are by many reckon'd the beauties of the country. One breast is generally larger than the other.

The children go naked till they are eight or nine years old; and some of them are pinked in their faces and breasts for ornament.

They give away their daughters when they are very young; some as soon as they are born, and the parents can never afterwards break the match: but it is in the man's power never to come and take his wife, unless he pleases; and unless he is so generous as to give her leave, she cannot marry any other. They generally take their wives very young, when they are obliged to pay the parents of the wife two cows, two iron bars, and two hundred cola, a fruit that comes a vast way inland.

When the man takes home his wife, he makes a feast at his house, to which every body that is willing comes without the form of an invitation; for they don't use much ceremony that way, and there they play and dance for three or four days successively, the woman being brought upon mens shoulders to her husband's house, with a veil over her face, which she keeps on till she has been in bed with her husband; during which they dance and sing, beat drums, and fire their small arms.

Every man is allowed to take as many wives as he pleases; some have no less than a hundred. If they are found lying with any other men but their husbands they are liable to be sold for slaves: they are turned off at pleasure, and he makes her take all her children with her, unless he has a mind to keep any of them himself.

It is usual to see the women abroad the same day, or the morrow after they are delivered; about a month afterwards they name the child, which is done by shaving its head, and rubbing it over with some oil.

Some short time before the rainy season begins, they circumcise a great number of boys about twelve or fourteen years of age; after which they put on a peculiar habit, each kingdom being different in their dress.

When people die, all their friends and acquaintance come and cry over them a day or two, as the Irish do, and bury them in the room in which they die, or else very close to it. Those of the relations that are not upon the spot, do, out of respect to the deceased, cry and howl as much at an hundred miles distant, as tho' they were actually with the deceased at the time of his decease.

I don't find that the African company have now any fort at Sherbro-river, or in the river Sierra Leon, or indeed on any parts of the coast between the rivers Gambia and Sherbro; but there are some private traders, Portuguese and others, who have settlements on this coast, and trade with the natives, and such European shipping as arrives annually upon the coast for gold, ivory, slaves, &c.

Mr. ATKINS, in his remarks on the Guinea Coast, observes, that there are about thirty private traders settled on the river Sierra Leon. That they all keep Gromettas (Negro servants) which they hire from Sherbro river, at two accys or bars a month. The women keep house, and are obedient to any prostitutions their masters command. The men servants work in the boats and periagoes, which go a trading in turns, with coral, brass, pewter, pans, pots, arms, English

spirits, &c. and bring back from the Rio-Nunes, slaves and teeth, and from Sherbro, cam-wood for dyers; a sloop or two is the most that is loaded from the latter place in a year, and that with difficulty, being obliged to go far up the river, narrow and beset with mangroves, which makes it sickly.

That they purchase chiefly ivory and slaves, and when the slaves are brought hither, they chain three or four of them together, committing them to the care of the Gromettas, till they have an opportunity of selling them, which they do for about fifteen pounds a good slave, allowing the purchaser forty or fifty pound per cent. profit on his goods.

As these slaves are placed under lodges near the owner's house, for air, cleanliness, and customers better viewing them, I had every day the curiosity of observing their behaviour, which with most of them was very dejected. Once, on looking over some of old CRACKER's slaves, I could not help taking notice of one fellow among the rest, of a tall strong make, and bold stern aspect. As he imagined we were viewing them with a design to buy, he seemed to disdain his fellow-slaves for their readiness to be examined; and, as it were, scorned looking at us, refusing to rise to stretch out his limbs, as the master commanded; which got him an unmerciful whipping from CRACKER's own hand, with a cutting manatea-strap; and he had certainly killed him, but for the loss he must have sustained by it: all which the Negro bore with magnanimity, shrinking very little, and shedding a tear or two, which he endeavoured to hide, as tho' ashamed of it. All the company observing his courage, wanted to know of CRACKER how he came by him; who told us, that this same fellow, called captain TOMBA, was a leader of some country villages, that opposed them and their trade at the river Nunes, killing his friends there, and firing their cottages. The sufferers this way by the help of my men (says CRACKER) surprized, and bound him in the night about a month ago, he having killed two in his defence before they could secure him; and from thence he was brought hither, and made my property.

The country about Sierra Leon is so thick spread with wood, that you cannot penetrate a pole's length from the water-side, unless between the town and a fountain, from whence they fetch their water, without a great deal of difficulty. They have paths, however, thro' these woods to their plantations; which, tho' but a mile or two from the town, are frequently the walks of wild beasts.

The shores hereabouts, like those of Sweden, are rocky, and without any colour of earth almost; yet produce large trees, the roots spreading on the surface: the chief of these are the palm, the cocoa, and the cotton-tree.

Other vegetables for food are rice, yams, plantanes, pine-apples, limes, oranges, papais, palm-nuts, wild roots, and berries.

This is their common sustenance, the gift of providence without their care; they might abound, but prefer ease and indolence; he is the greatest man among them, who can afford to eat rice all the year round. Kid and fowl they have some, and these were all the domestick animals I saw.

The

The Negroes here are well-limbed, clean fellows, flat-nosed, and many with exomphalos's, the effect of bad midwifry, or straining in their infancy to walk; for they are never taught, but creep upon a mat on all fours, till they have strength to erect themselves; and notwithstanding this, are seldom distorted. These do not circumcise, but the slaves brought from the northward are frequently so.

The women are not nigh so well shaped as the men; childing, and their breasts always pendulous, stretches them to so unseemly a length and bigness, that some, like the Egyptians, I believe, could suckle over their shoulders. Their being employed in all labour makes them robust; for such as are not Gromettas, work hard in tillage, make palm-oil, or spin cotton, and when they are free from such work, the idle husbands put them upon brading and fetishing out their woolly hair, being prodigious curious in this sort of ornament, and keep their wives thus busied several hours every day.

Their houses are low little huts, not quite so bad as many in Yorkshire, built with wooden stockades set in the ground, in a round or square form, thatched with straw; and for furniture, they have a mat or two to lie down upon, two or three earthen or wooden dishes, with a spoon, all of their own making. They are idle, principally for want of arts and domestick employments; for the women plant, and gather in their corn and fruits, and do every thing without door but hunt and fish.

Whole towns shift their habitations, either when they do not like their neighbours, or in expectation of greater conveniencies elsewhere, soon clearing ground enough for what building and culture they propose. Seignior JOSEPH, a Christian Negroe of this place, has lately, with his people, left a clean well-built town, and removed further up the river. Their huts are mostly orbicular, forming a spacious square area, and in this the doors are paved with cockle-shells; two or three crosses are erected, and round about it are lime-trees, papais, plantanes, pine-apples, and a few bee-hives. And in the middle of the area is a large tree, with five hundred hanging nests at least upon it. This is a small familiar bird, that builds upon the extreme slenderest twigs of a tree, hanging like fruit; and thus secure their young against monkeys, parrots, squirrels, and other creatures of prey.

Panyarring is a term for man-stealing along the whole coast: here it is used also for stealing any thing else; and by custom (their law) every man has a right to take as much from another, as he can prove afterwards at the Palaaver court, he hath been defrauded of by any person at that place.

Cabaceers are the principal trading men at all towns; their experience, or courage, having given them that superiority: and these gentlemen usually come off to our ships with some English title and certificate, the favour of former traders to them for their honesty and good service.

Their dress is little more than a clout to cover their nakedness; but both sexes take delight in twisting their woolly hair into ringlets with gold, or glittering stones, and shall bestow a great deal of time upon it.

The women are fondest of what they call fetishing, or dress, setting themselves out to attract the good graces of the men. Some make a streak round their foreheads of white, red, or yellow; others make circles round their arms and bodies, and in this frightful figure please. The men also have their ornaments, consisting in bracelets, or marilla's, about their wrists and ancles, of brass, copper, pewter, or ivory; the same again on their fingers and toes: a necklace of monkeys teeth and ivory sticks in their ears.

At Sesthos, most of our windward slave-ships stop to buy rice, exchanged at about two shillings per quintal. The river is about half the breadth of the Thames, a narrow entrance, only for boats, on the starboard side, between two rocks, which on great swells and winds, make the shooting of it dangerous.

The town is large, and built after a different model from those we have left: they run them up (square or round) four foot from the earth: at that height is the first and chief room to sleep in. In the middle of it is a fire-place for charcoal, that serves a double purpose (viz.) driving off insects and vermin, and drying their Indian corn. Of the upper loft they make a storehouse, that runs up pyramidal thirty foot, making the town at distance appear like a number of spires, each standing singly.

This, and every town hereabouts, had a Palaaver room, a publick place of meeting for the people to transact the business of the society. They are large, and built something like our lodges for carts, with a raised floor four foot from the ground; here they meet without distinction, king and subject, smoking from morning to night. At this place it is common to bring your traffick, brass pans, pewter and basons, powder, shot, old chests, &c. and exchange for rice, goats, and fowls. Two or three pipes, a charge of powder, or such a trifle, buys a fowl; a two pound bason buys a goat.

From hence our author proceeds to the company's capital, or settlement of Cape Coast, or Cape Corfe Castle. This factory consists of merchants, factors, writers, miners, artificers, and soldiers; and excepting those of the first rank, he says, all the rest are a company of white Negroes, who are intirely resigned to the governor's commands, according to the strictest rules of discipline, and are punished (garrison fashion) on several defaults, with mulcts, confinement, the dungeon, drubbing, or the wooden horse; and for enduring this, they have each of them a salary sufficient to buy canky, palm-oil, and a little fish to keep them from starving: For though the salaries sound tolerably in Leadenhall-Street, from fifty pounds to ninety pounds per annum a factor, fifty pounds an artificer; yet in the country, the general pays them in crackra, a false money, which is only current upon the spot, and disables them from taking any advantage of buying necessaries from ships casting down; so that for the support of nature, these thin creatures are obliged to take up all necessaries of the company; and, in effect, by it assign over their liberty, none being admitted to depart till he has adjusted all accounts. When the man is too sober to run in debt, there are acts of mismanagement, or loss of goods under his care, to be charged as wanting. They are all liable also to be mulcted for drunkenness,

ness, swearing, neglects, and lying out of the castle; even for not going to church (such is their piety.) And thus by various arbitrary methods, their service is secured *durante bene placito*.

The same method he takes with the town Negroes, who, inconsiderate wretches, are continually scoring up for goods or drams, and thus become pawns to the company, i. e. liable to be sold when the general thinks fit.

Though the general has but one vote in business, he influences the rest, who sign whatever he proposes. He disposes also of preferments to the factors and writers, who as they please or displease, may be continued or removed. Those who are employed at a distance from the fort, are allowed a commission in trade, additional to their pay; so in some of the outer forts (such as Accra or in a ship) they make considerable profits, while at others again, Anamaboe or Dixcove, they find a great deal of trouble, wet lodging, scarcity of provision, and no profit; and as these last out-number the good, I observed most of our factors to have dwindled much from the genteel air they brought, wear no cane or snuff-box, have lank bodies, a pale visage, their pockets sown up, or of no use, and their tongues tied. One cause of their slenderness indeed, is a scarcity of provision, little besides plantain or small fish, Indian corn, and a great deal of canky to be bought at market. Poor F—— was a youth well recommended, and lived as long as he could. I had once some business in his office, when a Negro woman came bawling about his ears for a plantain he had stole from her: he would fain have concealed the meaning of her musick, but at length I understood it was the only morsel he had eat for three days past, one night's debauch, and several mulcts, having run him out of pocket. The next occasion I had of inquiring after him, I heard, that being too narrowly watched in this illegal traffick, he pined with a vacuum of the guts, and died, leaving this advice to his countrymen, rather to run a remote hazard of being hanged at home, than chuse a transportation hither.

The general does not feel this want; for although here be a scarcity of neat cattle, kid, or fowl (nobody having any besides himself) he supplies this want from other parts, by their own trading vessels, and dathes from masters of ships and neighbouring nations; and for vegetables, he has a large garden, first planted by Sir DALBY THOMAS, a former governor, abounding not only with theirs, but fruits of English growth, and intirely for his own use.

The factory have every now and then a large demand for salt, made and brought hither from Accra. The sale appears like a fair in the castle; and many of those Negroes, whose ivory or gold would not purchase half a bushel, I was told had travelled some hundred miles; they chusing to go in bodies when seed-time is over, as a better protection from wild beasts, and their wilder countrymen, who frequently made incursions from several parts of the coast, and seize them for slaves, when few and defenceless.

We sailed from Cabo Corso, and touched in our passage (says the same writer) at Anamaboe, Montford, Barku, Shallo, Accra, R. Volta, the Papau Coast, and arrived at Whydah, July the 4th, where we made a stay of three weeks.

At Anamaboe our private ships finish their sailing, few or none being got downward till you reach Whydah.

V O L. III.

At Montford, Shallo, and thereabouts, they make up the deficiency of rice and corn for the voyage, the country appearing fruitful, and with a better aspect than any of those we have passed to windward, intermixed with hills and vales at every league almost a town, many corn-fields, salt-pans, and other marks of industry, particularly about Accra.

At Accra, the English, French, and Dutch have each a factory and fort, and make there great quantities of salt, supplying the windward and the inland provinces, where it is always a precious commodity.

Before we reach hither, we pass by a considerable high mount, which has been seen to smoke like a volcano; from whence, and being the haunt of rapacious wild beasts, they call it Devil's Hill. But the most danger to travellers here, is from a prodigious number of apes (some five feet long) and monkeys that inhabit it, who will attack single passengers, and drive them for refuge into the water, of which these creatures are very fearful. At some places the Negroes have been suspected of bestiality with them, and by the boldness and affection they are known under some circumstances to express to our females, but more from their near resemblance to the human species, would tempt one to suspect the fact; although by the way, this, like other hebridous productions, could never go farther. Our carpenter got one on board from these parts, as near the likeness of a child, without being one, as perhaps was ever seen; a flat and smooth visage, little hair, no tail, would taste nothing but milk or gruel sweetened, and that with difficulty, moaning continually in a tone like an infant; in short, the moans and aspects were so shocking and melancholy, that after two or three months keeping, it was stunned and thrown over-board.

The Ourang Outang, taken now and then in some parts of Guinea, and at the island of Borneo in East-India, has been thought a human savage. Captain FLOWER brought home one from Angola in 1733, disembowelled and preserved in rum; it lived a few months with him, had a smooth visage, little hair, genitals like the human, would frequently walk on its hind legs voluntarily, would sit down in a chair to sip or drink, in the same manner they did; always slept sitting with his hands upon his shoulders, not mischievous like others, and had his hands, feet, and nails more resembling ours.

The river Volta is remarkable for the rapidity of its stream, making a very great sea upon the bar, and carrying itself off for some way unmixed: at two leagues it is only brackish; from hence begins the Papau coast, low and woody.

The whole track from Sierra Leon is without gulphs or bays, of near an equal depth of water at the same distances, little elevation, except at great rivers, where the tides are regular, as with us at home; seldom without breezes. When a storm or tornado happens, they are always off shore; no dews perceptible on board ships in the nights, though large at shore, and a constant misty horizon.

There is a return of vernal and autumnal rains through the whole coast: the former, whether on this or the other side the equator, are longer and more incessant: they begin on this side at Sierra Leon in May, at the Gold Coast and Whydah in April, preceded by south and south-east winds. On the other side of the Line again, the vernal

20 H

raips

rains fall at Cape Lopez in October, at Angola in November, &c. And as these seasons are attended with clouds, the air is cooler, and therefore by the stewed inhabitants denominated winter.

Tornadoes, by the Spaniards called *travadoes*, are in no part of the world so frequent as at Guinea. They are fierce and violent gusts of wind, that give warning for some hours, by a gradual lowering and blackening of the sky to windward, whence they come accompanied with darkness, terrible shocks of thunder and lightening, and end in rains and calm. They are always off shore, between the north and north-east here, and most easterly at the Bites of Benin, Calabar, and Cape Lopez; but although they are attended with this favourable property of blowing from the shore, and last only three or four hours, yet ships immediately at the appearance of them, furl all their sails, and drive before the wind.

We have sometimes met with these tornadoes two in a day, often one; and to shew within what a narrow compass their effects are, ships have felt one, when others at ten leagues distance have known nothing of them: nay, at Anamaboe (three or four leagues off) they have had serene weather, while we have suffered under a tornado in Cape Corso road; and vice versa. A proof of what naturalists conjecture, that no thunder is heard above thirty miles. One we felt the afternoon of taking ROBERTS the pirate, that seemed like the rattling of ten thousand small arms within three yards of our heads; it split our main top-mast, and ended as usual, in excessive showers, and then calm: the nearness is judged by the sound instantly following the flash. Lightening is common here at other times, especially with the shutting in of evening, and flashes perpendicularly, as well as horizontally.

Air-mattans, or harmattans, are impetuous gales of wind from the eastern quarter, about Midsummer and Christmas: they are attended with fogs, last three or four hours (seldom thunder and lightening, as the tornadoes) and cease with rain; are very dry, shrivelling up paper, parchment, or pannels of escrutores, like a fire. They reach sometimes the Gold Coast, but are frequentest, and in a manner peculiar to the Bite of Benin.

Mr. ATKINS, speaking of the trade of the Guinea Coast, observes, that from the river Gambia, in 21 degrees 13 minutes north, to Angola, about 9 or 10 degrees to the south, the Portuguese were the first Europeans that settled, and built forts here, tho' now the least concerned in it: what remains of theirs is to the southward, on the river Congo, at Loango de St. Paul, and on islands, where they keep priests to teach their language to the natives, and baptize without making christians.

The African company, in its flourishing condition, gained annually to England 900,000 l. whereof in teeth, camwood, wax, and gold, only 100,000 l. and the rest in slaves, which, in the infancy of their trade, were in very great demand over all the American plantations, to supply their own wants, and carry on a clandestine commerce with the Spanish West-Indies. On computation, Barbadoes wanted annually 4,000 Negroes; Jamacia 10,000; Leeward Islands 6,000; and because the company could not supply this number, having only imported 46,396 slaves, between the years 1680 and 1688, interlopers crept in, and contended for a share.

From this time the company visibly decayed; infomuch, that in eight following years they only imported to the West-Indies 17,760 slaves, and the separate traders, in that time, 71,268.

Finding their trade under great disadvantages, tho' private traders were obliged to pay them ten per cent. they resolved to make the best share they could in this money, by lessening their expence about the forts: they accordingly withdrew all supplies from the garrison, leaving them to subsist by their own management, or starve; Charles-Fort, at the mouth of the river Gambia, having only twelve men, was taken by a privateer of eight guns in 1709. Sierra Leon had but thirteen men; Sherbo four; and these were not any charge to the company, being possessed by such, as having a long time resided in that service, by help of those fortifications, were capable of doing something for themselves; and so the private traders, by degrees, got entirely quit of this duty, the reason in a manner ceasing for which it was at first allowed.

About 1719, their affairs seemed to revive again, under the auspices of the duke of Chandos, who became a very great proprietor in their stock, and promised from his figure and interest, a renewal of their privileges: more ships were employed than for many years past; but whether it were their too large expence, or corruption of their chief officers, who too often in companies think they are sent abroad purely for their own service, or both, they soon felt, that without a separate act, they were incapable of contending with private traders; they applied to parliament for relief, and now support their forts by an annual allowance from the government of 10,000l.

Those who are the favourers of companies suggest, that if that trade be allowed, it seems better for the publick, that some rich and powerful set of men should have such exclusive powers to encourage and enable them to maintain forts and garrisons, to awe the natives, and preserve the trade from being engrossed by our dangerous rivals here, the French and Dutch, which, as we relinquish it, falls to them, and gives them an opportunity of fixing what price they please upon goods imported from thence.

The company's trade wanting that encouragement, every year grows worse: they buy dearer than in times past, on the Coast, and sell cheaper in the West-Indies; the reason at Guinea is a great scarcity of slaves, and an improved knowledge in the trading negroes, who dispose of them. On the other side, our colonies are now pretty well glutted with slaves, and their call consequently not nigh so large: 20,000 in a year, perhaps, furnishes all our plantations; and tho' more are imported by private traders, it is in order to transport them again to the Spanish West-Indies, where tho' the *Assiento* ships are of late years only indulged by treaty, all others being liable to confiscation, and the people to slavery, if taken by the Spanish guard de costa, yet the prospect of gain inciting, they still find means to continue on, and maintain a forcible traffick for them, under the protection of their guns. This clandestine method, by the way, hurts the South-Sea company, beating down the price of their slaves, who cannot so well afford it, because bought and brought there at a greater charge.

I now proceed to our method of trade. Private trading ships bring two or three boats with them

them upon this coast for dispatch; and while the mates go away in them, with a proper parcel of goods and instructions, into the rivers and by-places, the ship is making good her trade at others near hand.

The success of a voyage depends, first, on the well sorting, and on the well timing of a cargo. Secondly, in a knowledge of the places of trade, what, and how much, may be expected every where. Thirdly, in dramming well with English spirits, and conforming to the humours of the negroes. Fourthly, in timely furnishing proper food for the slaves. Fifthly, in dispatch; and lastly, the good order and management of slaves, when on board; of each a word or two.

First, on the timing of a cargo: this depends at several places much upon chance, from the fanciful and various humours of the negroes, who make great demands one voyage for a commodity which they perhaps reject next, and is in part to be remedied, either by making the things they itch after pass off those they have not so much mind to, or by such a continual traffick and correspondence on the coast, as may furnish the owner from time to time with quick intelligence, to be done only by great merchants, who can keep employed a number of ships; that, like a thread, unites them in a knowledge of their demands, and a readier supply for them, as well as dispatch for their master's interest, by putting the purchases of two or three ships into one. The late Mr. HUMPHREY MORRICE was the greatest private trader this way; and, unless Providence had fixed a curse upon it, he must have gained exceedingly.

Secondly, of the sorting: this may be observed in general, that the windward and leeward parts of the coast are as opposite in their demands as is their distance. Iron bars, which are not asked for to leeward, are a substantial part of the windward cargoes: crystals, oranges, corals, and brass-mounted cutlasses, are almost peculiar to the windward coast --- as are brass-pans from Rio Sesthos, to Apollonia; ---- cowreys (or bouges) at Whidah; ---- copper and iron bars, at calabar; --- but arms, gunpowder, tallow, old sheets, cottons of all the various denominations, and English spirits, are every where called for. Sealing-wax and pipes are necessary in small quantities; they serve for dasthees, (presents) and are a ready purchase for fish, a goat, kid, or a fowl.

Where the company's factors are settled, as at Gambia, and along the greatest part of the Gold Coast, they influence the trade something against private ships; so also at Sierra Leon, some separate traders live, who voyage it with boats into the adjacent rivers; and most of what a ship can purchase, is thro' their hands: but those from London seldom strike higher upon the coast than Cape Mount, Montzerado, and Junk, falling from thence down to leeward, many of the places, in their course, being rendered dangerous, from the tricks and panyarrs the traders have first practised upon the negroes; a mutual jealousy now keeping each side very watchful against violence. We trade on board the ship, often keeping our sailors in close quarters abaft, because few, while the slaves are viewing and contracting for at the fore-part; at night also keeping a good watch, some of these negroes attempting now and then to steal with their canoes athwart your hawse, and cut the cable. Captain CUMMINS at Whidah they stranded in 1734.

They again are often diffident of coming nigh us, and will play for hours together in their canoes about the ship, before they dare venture. In this windward part, I have before observed, they have a superstitious custom of dropping with their finger a drop of sea-water into their eye, which they are pleased when answered in, and passes for an engagement of peace and security; and yet, after all this ceremony, they will sometimes return to shore; if hardy enough to come on board, they appear all the time shy and frightened, and from the least appearance of a panyarr, jump all over-board. Downwards to Bassam, Assinee, Jaquelahou, Cape le Hou, Jaque a Jaques, Cape Apollonia, and Three Points, or where they have possibly gained a knowledge of the English factories, there is a better understanding and security: These are places that sell off a number of slaves, managed, however, wholly on board the ships who anchor before the town, hoist their ensign, and fire a gun; or when the natives seem timorous, do it by their boats coasting along the beach, and pay at some of them a small duty to the chief cabiceers.

When a ship has gathered up all this trade, she makes up the deficiency of her freight at Anamaboo, three leagues below Cape Corso, where they constantly stop, and are sometimes two or three months in finishing. It is a place of very considerable trade in itself; and besides, the company have a house and factor, keeping always a number of slaves against those demands of the interlopers, who they are sensible want dispatch, and therefore make them pay a higher price for it than any where on the whole coast, selling at six ounces and a half a slave (in exchange for goods) tho' the poor creatures look as meagre and thin as their writers.

Giving way to the ridiculous humours and gestures of the trading negroe, is no small artifice for success. If you look strange, and are niggardly of your drams, you frighten him; SAMBO is gone; he never cares to treat with dry lips; and as the expence is in English spirits of two shillings a gallon, brought partly for that purpose, the good humour it brings them into, is found discounted in the sale of goods.

A fifth article is, the wholesome victualling and management of slaves on board.

The common, cheapest, and most commodious diet is with vegetables, horse-beans, rice, Indian corn, and farine, or flour, the former ships bring with them out of England; rice they meet to windward about Sesthos; Indian corn at Momford, Anamaboo, &c. and further supplies of them; or farine, at the islands of St. Thomas and Prince's, matters governing themselves in purchasing, according to the course they design to steer.

This food is accounted more salutary to slaves, and nearer to their accustomed way of feeding, than salt flesh. One or other is boiled on board at constant times twice a day into a dab-a-dab (sometimes with meat in it) and have an overseer, with a cat-of-nine-tails, to force it upon those that are sullen and refuse.

When there was that great trade for slaves at Whidah, the commanders, with their surgeons, always attended on shore, where they purchased them, in what they called a fair and open market.

The mates kept on board, receiving from time to time their master's directions, as to the goods wanted,

wanted, and to prepare the ship for the reception and security of the slaves sent him; where this is a rule always observed, to keep the males apart from the women and children, to hand-cuff the former; Bristol ships triple such as are sturdy with chains round their necks; and to keep your own men sober, and on a barricado'd quarter-deck; tho' the natural cowardice of these creatures, and no other prospect upon rising, but falling into the hands of the same rogues that sold them, very much lessens the danger: Nevertheless, it is adviseable at all times to have a diligent watch on their actions, yet (abating their fetters) to treat them with all gentleness and civility.

When we are slaved, and out at sea, it is commonly imagined the negroes ignorance of navigation, will always be a safeguard; yet, as many of them think themselves bought to eat; and more, that death will send them into their own country, there has not been wanting examples of rising and killing a ship's company distant from land, though not so often as on the coast: But once or twice is enough to shew, a master's care and diligence should never be over till the delivery of them. Some negroes know well enough, that their preserving one white man may answer their purpose in an exchange: However, generally speaking, we allow greater liberty in our passage; as conducive to their health, we let them go at large on the ship's deck, from sunrise to sun-set; give such as like it pipes and tobacco, and clean and air their dormitories every day.

Slaves differ in their goodness; those from the Gold Coast are accounted best, being cleanest limbed, and more docible by our settlement than others: But then they are, for that very reason, more prompt to revenge, and murder the instruments of their slavery, and also apter in the means to compass it.

To windward they approach in goodness, as is the distance from the Gold Coast; so as at Gambia, or Sierra Leon, to be much better than at any of their interjacent places.

To leeward from thence, they alter gradually for the worse; an Angolan negroe is a proverb for worthlessness, and they mend (if we may so call it) in that way, till you come to the Hot-tentots, that is, to the southermost extremity of Africa.

I have observed how our trading is managed for slaves, when obliged to be carried on board the ship. ----- Where there are factories (as at Gambia, Sierra Leon, the Gold Coast, Whidah, Calabar, Cabenda, and Angola) we are more at large; they are sold in open market on shore, and are examined by us in like manner as our brother trade do beasts in Smithfield; the countenance and stature, a good set of teeth, pliancy in their limbs and joints, and being free of venereal taint, are the things inspected, and governs our choice in buying.

The bulk of them are country people, stupid as is their distance from the converse of the Coast-negroes; eat all day, if victuals is before them, or if not, let it alone without complaint; part without tears with their wives, children, and country, and are more affected with pain than death: yet in this indocile state, the women retain a modesty; for though stripped of that poor clout which covers their privities (as I know the Whidahs generally do) they will keep squatted all day long on board, to hide them.

Whidah slaves are more subject to small-pox and sore eyes; other parts to a sleepy distemper; and to windward, exomphalos's. There are few instances of deformity any where; even their nobles know nothing of chronical distempers, nor their ladies of the vapours. Their flattish noses are owing to a continual grubbing in their infancy against their mother's backs, being tied within the tomee, whether upon travel, or business, for a year or two, the time of their sucking.

Ivory is purchased in teeth, or screvelio's. The teeth are large, weighing from thirty to an hundred weight, and worth double the other at home; these selling for ten or twelve pound, when the other do not for above five pound a hundred.

The screvelio's are small, from fifteen down to four pound weight; among these last are sold us to windward, the teeth of the hippopotamus, or sea-horse, caught in the rivers Nunes and Gambia, about sixteen inches long, a white ivory, but so brittle, as not to be easily worked.

The rule upon the coast is, that when four will weigh an hundred weight, they shall be all accounted teeth, and paid for as such, though one or two of them be never so small; for the more teeth increase in their weight, the better the ivory, and makes amends for the smallness of the other.

At Gambia the points of them are often found broken, from the elephants grubbing against rocky ground: At other times you see them flawed, or they are light in proportion to their bigness; circumstances to abate their value.

I have been often ruminating how the trading Negroes come by these elephants teeth, and find they exchange our European commodities with the inland natives for them; but whether they again shoot the elephants, or find their teeth in travelling through the woods and deserts, is uncertain. Their rivers and canoes, indeed, help to extend their knowledge a vast way through the country; and there are some accounts that tell us, the negroes situated upon these rivers (like the Americans) make excursions, or voyages, for a month or two from their habitations.

Mr. PLUNKET, of Sierra Leon, and others, of above twenty years experience in those parts, have informed me, that elephants move and change their pasture in very large herds; that they have seen droves upon the banks of the Gambia, of a thousand and fifteen hundred together; that they are bold, forage less than horses, and look out much better: From the circumstance of number, and boldness of their march (said to be in a line) they seem secured from any attacks of the timorous natives, who must come very near, or their skin is impenetrable by fire-arms. Besides, ivory was the trade of Guinea before the use of them: To which I may add, the weighty teeth come to sale in less number than the screvelio's, altogether persuading me they are not shot, but that the larger size are teeth of elephants which have died naturally, and which being grown to their utmost perfection and solidity, withstand a very considerable elapse of time, without decay or mouldering; and that the screvelio's are probably such as are shed when young, or as bucks do their horns, which the natives, by practice, know where to look for.

Gold is either fetish, in lumps, or in dust. The fetish gold is that which the negroes cast into various shapes, and wear ornaments to their ears, arms, and legs, but chiefly at their head, entangled very dexterously in their woolly hair; it is so called

called from some superstition (we do not well understand) in the form, or in their application, and commonly mixed with some baser metal, to be judged of by the touch-stone and skill of the buyer you employ.

The lump or rock-gold, is in pieces of different weights, pretended to be brought out of mines. I saw one of these, which Mr. PHIPS had at Cape Corso, weighing thirty ounces; they are always suspected to be artificial, and by the cunning fellows in trade cast so, to hide some baser mixture of silver, copper; or brass; wherefore it is not safe trusting to the antique dirty look, but to cut or run it for satisfaction.

Dust-gold is the common traffick; the best comes hither from the neighbouring inland kingdoms of Dinkira, Akim, and Arcana, and is got (we are told) out of the river sands.

Masters of ships customarily hire a native at so much per month, for this part of the trade; he has a quicker sight at knowing, and by practice readier at separating the drossy and false gold, with which the true has ever some mixture, to impose on unskilful people. This impure stuff is called brackra, a pin or brass dust, current upon the gold coast among themselves, but is a gross cheat in traffick; some of it is very bad.

Captain SNELGRAVE makes the following observations on the Guinea trade: He says, as soon as the natives perceive a ship on their coast, they make a smoke on the sea-shore, as a signal for the ship to come to an anchor, that they may come and trade with the people aboard. As soon as we are at an anchor, they come to us in small boats, called canoes, being made of a single tree, and bring their commodities with them.

Along the greatest part of this coast, the Europeans have been cautious of venturing on shore amongst the natives, they being very barbarous and uncivilized.

However, the trade on this part of the coast has been exceedingly improved within these twenty years past. It consists in negroes, elephants teeth, and other commodities, which the natives freely bring on board our ships, except when any affront has been offered them; which, to the great scandal both of English and French, has too often been done; namely, by their forcibly carrying away the traders under some slight pretence of having received an injury from them. And this has put a stop to the trade of the particular place where it has happened for a long time; and innocent people, who have come there to trade in small vessels, have suffered for their countrymen's villany; several, in my time, having been surprized by the natives, and the people destroyed out of revenge.

On the gold coast, the first and most westerly European settlement, was the fort of Frederickburgh, belonging to the Brandenburgians, or Prussians; who, by sickness, or the frequent mutinies of the garrison, being forced to abandon it, the negroes took possession of it; and the Dutch attempted to recover it from them, under pretence they had purchased the fort of the Brandenburgians. The Dutch lost forty men in the attack, and were bravely beaten off by the black governor, who now reigns lord of this part of the country, demanding a duty from all ships that touch here. He was formerly a servant to the Brandenburgians; and where the Europeans acknowledge his authority, he treats

them with great humanity. The Dutch have ten or twelve forts and factories upon this coast, and the English as many. The chief of the Dutch forts is that of d'Elmina, so named by the Portuguese, who erected it, from the gold mines they supposed to be in the neighbourhood of it.

This is the largest, and best fortified settlement upon the gold coast; and two or three leagues to the eastward of it stands the principal English fort of Cape-Coast-Castle, which is of a quadrangular form, defended by four bastions, strong enough to resist the attacks of the negroes, tho' it would make but a mean figure in Flanders.

There is a great deal of dull hazy weather on this coast; their rainy season begins in April or May, and continues to September; and, as most of our factories lie on the sea coast, from whence there ascends stinking fogs, the coast is very unhealthful. The pleasantest and most healthful season is, when the sun is at the greatest distance from them. The most violent storms and tornadoes happen during the rainy season, usually in July or August, when no ships can live upon the coast; and it is very difficult going on shore, at all times there runs so great a surf. The country forms an agreeable landscape from the sea, consisting of hills and valleys, woods, and champaign fields, and is tolerably fruitful, where it is cultivated.

As the negroe traders bring their gold from distant places, so they do the slaves they furnish us with; and having agreed with the European merchants for the price of them, and the price of the goods they are to take in exchange, a ship is soon dispatched, if they deal fairly; but, if a merchant delivers his goods before he has his slaves, they will sometimes make him wait a great while, and, perhaps, put hard conditions upon him. It is computed by late travellers, that there are annually exported from the whole coast of Guinea seventy thousand slaves, and upwards, by the English, Dutch, French, and Portuguese; but the country where the greatest number of slaves were purchased, till very lately, was the kingdom of Whidah, or Fidah, for that reason usually called the Slave Coast.

Captain SNELGRAVE gives the following relation of the conquest of the kingdom of Whidah by the King of Dahome.

Sabee, the chief town of the kingdom of Whidah, is situated about seven miles from the sea-side. In this town the king allowed the Europeans convenient houses for their factories, and by him we were protected in our persons and goods, and when our business was finished, were permitted to go away in safety. The road where ships anchored, was a free port for all European nations trading to those parts for negroes. And this trade was so very considerable, that it is computed, while it was in a flourishing state, there were above twenty thousand negroes yearly exported from thence; and the neighbouring places, by the English, French, Dutch and Portuguese.

The land was well stocked with people, the whole country appeared full of towns and villages; and being a very rich soil, and well cultivated by the inhabitants, it looked like a garden.

den. Trade having flourished for a long time, had greatly enriched the people, which, with the fertility of their country, had unhappily made them so proud, effeminate, and luxurious, that tho' they could have brought at least one hundred thousand men into the field, yet so great were their fears, that they were driven out of their principal city by two hundred of their enemies, and at last lost their whole country to a nation they formerly contemned.

The King of Dahome, a far inland prince, who for some years past had rendered himself famous by many victories gained over his neighbours, sent an ambassador to the King of Whidah, requesting to have an open traffick to the sea-side, and offering to pay him his usual customs on negroes exported, which being refused, he resented the affront, and invaded the most northern province of the kingdom of Whidah, of which a great lord, named APPRAGAH, was hereditary governor, who forthwith sent to the King for his assistance: but thro' the interest of his enemies at court, who wished his destruction, he was refused; so having made a little resistance, he submitted to the King of Dahome, who received him very kindly.

The conquest of APPRAGAH gave the King an easy entrance into the heart of the country, but he was obliged to halt there by a river, which was about half a mile to the northward of the principal town of the Whidahs, called Sabee, the residence of their King: Here the King of Dahome encamped for some time, not imagining he could have found so easy a passage and conquest as he met with afterwards. For the pass of the river was of that nature, it might have been defended against his whole army by five hundred resolute men; but instead of guarding it, these cowardly luxurious people, thinking the fame of their numbers sufficient to deter the Dahomes from attempting it, kept no set guard. They only went every morning and evening to the river side to make fetiche, as they call it; that is, to offer sacrifice to their principal God, which was a particular harmless snake they adored, and prayed to on this occasion, to keep their enemies from coming over the river.

In the mean time the King of Dahome sent to the Europeans, then residing at Whidah, to assure them, if they stood neuter, and were not found in arms, they should receive no damage in their persons or goods, in case he proved conqueror; and he would ease their trade, and remove divers impositions laid on it by the King of Whidah: on the contrary, if they appeared against him, they must expect his resentment. They would gladly have retired from Sabee to two mud-walled forts, belonging to the English and French African companies, which are within three miles of the sea-side; but finding it would have been resented by the King of Whidah, as a discouragement to his people, they were obliged to remain in the town, never suspecting the inhabitants would have ran away in that cowardly manner they did, or that they should share the fate of war with them.

The pass of the river being left wholly to the care of the snakes, whom the enemy little feared, and they having observed for several days, that the Whidahs kept no set guard there, it encouraged the King of Dahome's general to send two hundred of his soldiers to ford the river; which having done without opposition, and being bold

fellows, they marched towards the town of Sabee, sounding their musical instruments. This was about three o'clock in the afternoon, and the outguards of the town were almost all asleep; but being roused by the noise of the enemies musick and shouts, they fled into the town, reporting, that all the Dahome army was got over the river; which soon reaching the King's ear, he immediately fled with all his people, making no resistance. I was informed by the white people then in the English and French forts, that about five o'clock the same afternoon, they saw such numbers of people flying from all parts of the country towards the sea-side, that it was very surprizing: for the fields were covered with them many miles round, and their black colour made them the more conspicuous in a clear sun-shiny day, on a fine flat champaign country. The King, with a great number of his subjects fled to an island on the sea-coast, which was parted from the main land by a river, having ferried over in canoes; but a great many, that could not have the same benefit, being hurried on by their fears, were drowned in the rivers, in attempting to swim to the islands lying near Popoe, which was the next neighbouring country to their own, on the sea-coast to the westward, and where they might have been secure from their enemies, had they escaped. Moreover, many thousands of these poor people, that sheltered themselves up and down the country among the bushes, perished afterwards by sword and famine.

But to return to the Dahome soldiers: when they first came to Sabee, it seems they marched directly to the King's court, where not finding him, they set it on fire, and then sent their general word what had happened, who brought the whole army over the river that evening. He was in such a surprize at his good fortune, that he could hardly believe what he saw; and the white gentlemen were as much amazed to see the great cowardice of these people, who had vapoured so highly, and as ignominiously quitted the town, without opposing their enemies in the least, leaving them intirely in the power of the conquerors, with all their own riches. The day after the taking the town of Sabee, the white men taken prisoners were sent into the country to the King of Dahome, who then lay encamped with another army about forty miles off, in the kingdom of Ardra; some hammocks being provided for the principal white people, which is the usual way of travelling in this country for gentlemen, either white or black.

Some few days after their arrival in the King of Dahome's camp, the Europeans were set at liberty, and suffered to return to the English and French forts, the principal gentlemen being presented with slaves; and the King assured them, as soon as his affairs were settled he should encourage trade, and have a particular regard to their interests.

SNELGRAVE relates, that he arrived at Whidah in the latter end of March 1726-7, about three Weeks after this conquest, and found that fine country, lately exceeding populous, now destroyed by fire and sword; that the slaughter of the inhabitants was a most moving spectacle, their fields being in a manner covered with their carcases.

From

From the road of Whidah, SNEGRAVE failed to Jaqueen, a port about seven leagues to the eastward of it; this people having submitted to the King of Dahome, and then under his protection.

The King of Dahome hearing of captain SNEGRAVE's arrival on the coast, with an intent to trade, invited him to his camp, which then lay about forty miles up the country, whither the captain went, being furnished with horses, hammocks, servants, and all manner of accommodations for his journey. The day after his arrival at the camp, he had an audience of his negroe Majesty, of which the captain gives the following account, (viz.)

The King was in a large court pallisadoed round, sitting (contrary to the custom of the country) on a fine gilt chair, which he had taken from the King of Whidah. There was held over his head, by women, three large umbrellas, to shade him from the sun; and four other women stood behind the chair of state with fuzes on their shoulders. I observed the women were finely dressed from the middle downward (the custom of the country being not to cover the body upward of either sex;) moreover, they had on their arms many large manelloes or rings of gold of great value; and round their necks, and in their hair, abundance of their country jewels, which are a sort of beads of divers colours, brought from a far inland country, where they are dug out of the earth, and in the same esteem with the negroes as diamonds among the Europeans.

The King had a gown on flowered with gold, which reached as low as his ancles, an European embroidered hat on his head, with sandals on his feet. We being brought within ten yards of the chair of state, were desired to stand still: the King then ordered the linguist to bid us welcome; on which we paid his Majesty the respect of our hats, bowing our heads at the same time very low, as the interpreter directed us. Then I ordered the linguist to acquaint the King, "That on his Majesty's sending to desire me to come up to his camp, I forthwith resolved on the journey, that I might have the pleasure of seeing so great and good a King as I heard he was, relying entirely on the promises his messenger had made me in his Majesty's name." The King seemed well pleased with what I said, and assured us of his protection and kind usage. Then chairs being brought, we were desired to sit down, and the King drank our health, and then liquor being brought us by his order, we drank his Majesty's. After this, the interpreter told us, "It was the King's desire we should stay some time with him, to see the method of paying the soldiers for captives taken in war, and the heads of the slain."

It so happened, that in the evening of the day we came into the camp, there were brought above eighteen hundred captives, from a country called Tuffo, at the distance of six days journey.

The king at the time we were present ordered the captives of Tuffo to be brought into the court; which being accordingly done, he chose himself a great number out of them to be sacrificed to his Fetiche, or guardian angel; the others being kept for slaves for his own use, or to be sold to the Europeans. There were proper officers who received the captives from the sol-

diers hands, and paid them the value of twenty shillings sterling for every man, in cowries (which is a shell brought from the East-Indies, and carried in large quantities to Whidah by the Europeans, being the current money of all the neighbouring countries far and near) and ten shillings for a woman, boy, or girl. There were likewise brought by the soldiers some thousands of dead people's heads into the court; every soldier, as he has success, bringing in his hand one, two, three, or more heads hanging in a string; and as the proper officers received them, they paid the soldiers five shillings for each head: Then several people carried them away in order to be thrown on a great heap of other heads that lay near the camp, the linguist telling us his Majesty designs to build a monument with them, and the heads of other enemies formerly conquered and killed.

SNEGRAVE afterwards went to see the manner of sacrificing their enemies. Our guard, says he, made way for us through the crowd, till we came near four small stages, which were erected five feet from the ground; we stood close to them, and observed the ceremony, which was performed in the following manner:

The first victim we saw was brought to the side of the stage; it was a comely old man, between fifty and sixty years of age; his hands were tied behind him, and in his behaviour he shewed a brave and undaunted mind, nothing like fear appearing in him. As he stood upright by the stage, a feticheer, or priest, laid his hand on his head, saying some words of consecration, which lasted about two minutes: Then he gave the sign of execution to a man that stood behind the victim, who, with a broad sword, immediately struck him on the neck with such force, that the head was severed at one blow from the body; whereupon the rabble gave a great shout. The head was cast on the stage, and the body, after having lain a little while on the ground, that the blood might drain from it, was carried away by slaves, and thrown into a place adjoining to the camp. The linguist told us, the head of the victim was for the King, the blood for the Fetiche, or God, and the body for the common people. We saw many other persons sacrificed in this lamentable manner, and observed, that the men went to the side of the stages bold and unconcerned; but the cries of the poor women and children were very moving.

I told an officer, "I wondered they should sacrifice so many people, of whom they might otherwise make good advantage by selling them." He replied, "It had ever been the custom of their nation, after any conquest, to offer to their God a certain number of captives, which were always chose out from among the prisoners by the king himself; for they firmly believed, should this be omitted, no more success would attend them: And he argued for the necessity and usefulness of their doing it, from the large conquests they had made within a few years, without any defeat." Then I asked him, "Why so many old men were sacrificed in particular." He answered, "It was best to put them to death; for being grown wise by their age and long experience, if they were preserved, they would be ever plotting against their masters, and so disturb their country; for they never would be easy under slavery, having been the chief men in their own land; moreover, if they should be spared, no European would buy them on account of their age." I then observed

to him, "That I had seen several handsome young people sacrificed, whom I was sure the Europeans would gladly have bought." He replied, "They were designed to attend in the other world the King's wives, whom the Tuffoes, their countrymen, had slain."

In the evening we passed by the place where the sacrificed bodies were thrown; there were two great heaps of them, consisting of four hundred persons who had been chosen out by the king that very morning.

He adds, That a black prince who accompanied him to the king's camp, informed him afterwards, that the sacrificed bodies had been taken away in the night by the common people, who had boiled and feasted on them as holy food. This story induced us, says SNELOGRAVE, to send for our linguist, and take a walk to the place where we had seen the carcases the evening before, and, to our great surprize, we found they were all gone; thereupon asking the interpreter what was become of them, he replied smiling, "The vultures had eaten them up." I told him, "that was very extraordinary indeed, to swallow bones and all;" there being nothing remaining on the place but a great quantity of blood; so he confessed the fetichers, or priests, had divided the carcases among the people, who had eat them in the manner they had been told. And though no doubt this will appear incredible to many, says SNELOGRAVE; yet I desire they will only make this one reflection, That those who could be so cruel as to sacrifice their fellow creatures, might probably carry their barbarity a degree farther.

However, as I relate nothing for matter of fact, says he, but what I was an eye-witness to; so I shall leave the reader to give what credit he pleases thereto: But as a farther confirmation of their being cannibals, I shall relate what I afterwards learned from one Mr. ROBERT MOOR, who was a person of great integrity, and at that time surgeon of the Italian galley. This ship came to Whidah whilst I was at Jaqucen, and captain JOHN DABOE, the commander, being indisposed, sent Moor to the king of Dahome's camp, with presents for his majesty. There he saw very strange things, especially human flesh sold publicly in the great market-place. As I was not in the market during that time I was in the camp, I saw no such thing; but I don't doubt but that I should have seen the same, had I gone into that place, for there were many old and maimed captives brought from Tuffo (besides those sacrificed) which no Europeans would have bought.

In the character SNELOGRAVE gives us of the king of Dahome, he says, I had a good opportunity of taking an exact view of him. He was middle-sized and full-bodied, and, as near as I could judge, about forty-five years old; his face was pitted with the small-pox; nevertheless, there was something in his countenance very taking, and withal majestick. Upon the whole, I found him to be the most extraordinary man of his colour that I had ever conversed with, having seen nothing in him that appeared barbarous, except the sacrificing of his enemies, which a Portuguese gentleman told me he believed was done out of policy; neither did he eat human flesh himself.

He adds, that the King promised to send him slaves sufficient to freight his ship down to Jaqucen; and that he would take but half the duties the European merchants used to pay, and made him a present of several slaves, with cows, goats,

sheep, and other provisions for his journey: And within two or three days after his arrival at Jaqucen, the slaves that had been promised him were sent thither; but he did not meet with such good usage however from the Dahome officers, as he might have expected from the promises the King had made him: That on the first of July, 1727, he sailed from the road of Jaqucen for the West-Indies, having six hundred negroes on board.

He concludes with informing us, that all the country of Whidah was so depopulated and ruined by the King of Dahome, upon some attempts the Whidahs made to recover their liberties, that there is no prospect of trade reviving there for many years.

As to the history of the conquest of the kingdom of Whidah by the King of Dahome, and the loss of the slave trade on that coast; I find all that have gone that voyage since the year 1727, agree with Mr. SNELOGRAVE in the main, only it is remarkable that not one of them charge the nation of the Dahomes with being cannibals, or devourers of their own species: But himself and some of them give us very substantial reasons to believe that the charge is not well grounded; particularly Mr. ATKINS, who observes, that the people supposed to be cannibals, generally inhabit countries very remote, and little known to us; and that travellers who report these things, usually do it upon hear-say, or upon reasons that are not conclusive, and against later experience.

That what SNELOGRAVE relates of the King of Dahome's putting to death several captives, sacrificing them to his gods, or to the manes of his friends, or for some political reasons, is very far from making good the charge.

And as to that part of the story where SNELOGRAVE says he saw the carcases of hundreds of those prisoners who were put to death, lying on heaps, and that the next day there was nothing of them to be found; and what he relates of his linguist, telling him first that the carcases were devoured by vultures, and then that they were eaten in the night-time by the people, Mr. ATKINS answers,

1. That there is all the reason in the world to believe the carcases were buried, or that some of the bones or offal would have been seen about the places where they were eaten the next day; and suggests, that the linguist observing his master SNELOGRAVE to be very credulous, and inclined to believe they were eaten, humoured him in this opinion, and concurred with his notions by way of compliment.

2. That nothing is so common as for people to believe their enemies; whom they dread, especially if they know little of them, to be savages, or monsters of men. And the conquering Dahomes might be so far from undeceiving the people of Whidah in this particular, as to confirm them in the frightful notions they had entertained of them, in order to keep them in subjection.

3. SNELOGRAVE himself relates, that the King of Dahome never eat human flesh, which is very strange, if his people did; whether we suppose the prisoners were sacrificed to his gods; or that human flesh was esteemed a fine dish in that country. In either of these cases it is natural to suppose, the prince would have partaken of the banquet or sacrifice, with his officers and people.

4. If these prisoners were designed to be eat, one would have thought they would have made choice

Remarks
on SNELO-
GRAVE'S
narrative.

choice of the youngest and fattest, as was usual where other animals were intended for a sacrifice, or a festival: whereas he tells us, they took the old, the lean, and the decrepid: Nor would they have thrown them on heaps in that hot country, where a carcase immediately putrefies, but would have dressed and prepared the bodies for cookery as they had been killed.

5. That if human flesh was esteemed such delicious food amongst them, they would not sell their prisoners for slaves; neither would there be such prodigious numbers of people to be found on these coasts, if the neighbouring nations were cannibals, and devoured those they made prisoners.

6. That at Loango, the river Gambia, and in many other parts of Africa, said to be inhabited by cannibals on the first discovery, it appears by later voyages, that there are no such people to be found there.

7. That if this practice was taken up by the Dahomes, as SNEELGRAVE suggests, to terrify their enemies, they would not have eaten the carcasses in the night-time, and in private, but in the day, and in the face of all the world.

And lastly, as to what SNEELGRAVE says Mr. MOOR told him, that he saw human flesh sold by the Dahomes in the market, he answers, if MOOR did not mean human flesh sold alive into slavery, he might mistake it for the flesh of monkeys, which are very large in this country, and frequently eaten here. Mr. ATKINS adds, that he never saw a flesh-market of any sort, on the coast of Guinea, tho' he had been on shore in several places; and that it was usual when a beast is killed there, to distribute the quarters and joints immediately among their neighbours, who do the same in return, because the flesh will not keep.

But the principal objection is, that SNEELGRAVE should take all this upon hear-say, when he himself was upon the spot: That he should not once visit the market all the time he was in the King of Dahome's camp, though he professes himself to be more curious and inquisitive than most travellers are: Perhaps he would not say he had seen these things with his own eyes; because gentlemen, that went the same voyage, might then have given him the lie directly. But here, if all that he has suggested should be found to be false, he could come off by saying, he was deceived himself, by the relation of others, and had asserted nothing positively of his own knowledge.

Mr. ATKINS also observes, that the people of Negroeland eat but little flesh of any kind, much less human flesh; but live chiefly on Indian corn, rice, plantains, palm-nuts, pine-apples, and now and then a little stinking fish, or fowl, by way of sauce, or to give a relish to the rest. It is monstrous, therefore, to suppose that such a people should devour several hundred human carcasses in one night, and so dispose of the bones, that not one of them was to be found next morning.

Loango.

Captain URING gives the following description of the town and country of Loango, the south-east coast of Guinea: He says, the town of Loango is about five miles from the sea-side, situate in a large plain, and a champion country all round it for many miles. It is near eight miles in circumference, very populous, and lies in 4 degrees 40 minutes south latitude, which makes

VOL. III. NUM. CXII.

their days and nights almost equal throughout the year. The air was serene and clear most part of the time we remained there. The chief of their trade is in slaves, tho' they have some elephants teeth, and bees-wax, and have very rich copper mines in the country. I have seen quantities of copper drops, which were pieces of about a pound weight, run from the oar, and are for the most part bought by the Dutch. I was informed that the greatest part of their slaves were brought eight or nine hundred miles out of the country, which they call Poamboe; I take this to be Ethiopia. They used to make excursions nearer home, in strong parties; and where they found any people settled by themselves, and not under the protection of any government, they seized them, and drove them before them, as other people do cattle, till they brought them to a trading town, where they were sold for slaves; and this is as much a trade among them, as selling horses, cows, and sheep, or the like, in other countries. Those slaves which are brought so far out of the country, are generally very ignorant, and dull of apprehension: But those taken nearer the sea-coast are more quick, especially the people of Loango, who are a crafty cunning people, and tolerably ingenious: They are most of them tall, strong, and well-limbed; and all of them are great lovers of brandy and tobacco: They do not make so good slaves as those of the Gold Coast, or Whidah; the reason which is given for it, is, that the people on the Gold coast fare hard for want of provisions, and are capable to go thro' more labour, with less victuals, than the natives of other countries, where they have plenty, as they have in the kingdoms of Angola, Congo, and those countries from whence these slaves are brought. It seldom happens, that any of the towns-people are sold for slaves, except in cases of adultery, or when their great men sell some of their servants for disobedience.

The women do all the drudgery; as planting, reaping, dressing their provisions, carrying burthens, combing their husbands hair, twisting it into several forms, and painting their bodies; they also make mats. Most of the bread eaten amongst them they call cankey, which is made with Indian corn beat small, which they mix with some roots, and boil it in dumplings, and when they take it out of the pot, then they wrap it up in leaves, and it will keep good five or six days.

If any of their great men, or Europeans, have occasion to travel, they are conveyed in hammocks after this manner: They have a long light pole, to which the hammock is fastened near the end, and two men taking it up, one before and the other behind, will carry a lusty man a round pace, several miles, without resting. When they go long journeys, they have six men, who take turns to carry, and are so dextrous, that they never stop when they change, but shift, keeping on their usual pace. There is no such easy way of travelling as this; the person sitting or lying in the hammocks, as he thinks fit, and they have a piece of callicoe thrown over the pole, when they have a mind to keep the sun from them.

The houses of the inhabitants are low, the sides of them made with cane wattled together with twigs, and covered with leaves or branches of trees, of which they have many convenient for that purpose, and consist mostly of two or three rooms, the innermost of which is particularly for the women. Most of them have small yards,

29 K

yards, inclosed in the same manner as the walls of their houses, where are generally growing plantain, banana, and other trees, the fruits of which serve them for food, and the branches are convenient to shade them from the sun when they have a mind to take the fresh air, which makes the town look very agreeable. Some of their great men, and the chief of their merchants, have cane walls of about ten or twelve foot high, which form a walk about eight foot wide, and reaches near forty yards from the houses, but with so many windings and turnings, that you go five times that distance before you come to their habitations; which is all the grandeur I observed in their buildings. I have been entertained with palm-wine and fruit at many of their houses. The chiefest of the common peoples food is cankey, potatoes, and other roots; the better sort eat fowls, and stewed fish. Their fish is dressed thus: they take five or six fresh masouge, and put them into an earthen pot, with a little water and palm-oil, and a great deal of bird pepper, and some salt; over the fish they lay three or four pieces of small sticks a-crofs, and then fill the pot with green plantains, and cover it close, the fume of the pot stews the plantains: this is esteemed an excellent savoury dish. I was prevailed on to taste it, but it was so hot of the pepper, that I could not get the taste of it out of my mouth for several hours. There is very little difference in the apparel of the men and women, both wearing a fathom of cloth about their waists, which is tucked in in such a manner, that the corner almost touches the ground, hanging on the left side. In the mornings and evenings the women have a fathom to wrap round their shoulders, which I did not observe the men made use of.

Their money they call mucates, being certain pieces of cloth made of silk grass by the women, about the bigness of a sheet of paper, and passes as current coin; they sew several of them together, which make a fathom, and was what they clothed themselves with before the Europeans traded with them. They value our goods by an imaginary coin, something in the nature of the Portuguese manner, of counting by rees, of whom I suppose they learned it. A piece of blue bafts is valued at a thousand, a piece of painted calicoe at six hundred, a piece of neconees six hundred, a guinea stuff three hundred, a paper baul three hundred, a small kegg of powder three hundred, a gun three hundred, and so of the rest. Annabases and brass pans, pewter, basons, guns and powder are much esteemed with them: they are very fond of small black beads and coral, to make bracelets. We had also knives, tapseels and charcoles with a small quantity of scarlet and blue broad-cloth, which the natives wear in small rings tied round their waist for ornament. We bought men slaves from three thousand six hundred to four thousand, and women, boys, and girls, in proportion. We reckoned a man slave at fifty shillings prime cost of the goods in England. There was in the town a large Portuguese factory, and in the road a large Dutch ship, and two English ships besides ourselves, or we should have purchased slaves much cheaper. I had almost forgot to mention an ornament which the women wear about their ankles, which is large brass rings of five or six pound weight. They have a market every day, where provisions and goods are sold; it begins very early in the morning, and lasts about three hours: they have plenty of Indian

corn, kidney-beans, calavances, pindas, and gub-a-gubs, which last are in shape and taste like our white pease, with this difference, one grain being as big as four or five; they grow on a vine which runs upon the ground, and every single grain is covered with a distinct shell. They have great numbers of plantain and banana trees, as they have of palm trees of several sorts, from whence they draw great quantities of palm-wine, and extract a great deal of oil from the fruit, which they both eat and anoint themselves with, and sell to the Europeans. They have also large cotton trees of a prodigious size. Pine apples are so plenty here, I have bought ten for a knife which cost in England about two pence. They have some limes; but I saw no lemons, and but very few oranges, and those bitter, sour, and ill-tasted. They have plenty of dunghill fowls; but I saw neither turkey nor duck in the country, no black cattle, nor hogs, and but one sheep. The men have their drinking-bouts of palm-wine, which is the only liquor the country affords besides water: they let it stand two days after it is taken from the tree, in which it ferments, and grows sour, and has some spirit in it, which exhilarates them, and makes them merry: they'll sit at these drinking-bouts twelve hours together, till they get drunk. I have tasted it, but found it very disagreeable; but when it is first taken from the tree, it has a very pleasant taste.

The kingdom of Algiers is situated between 30 ^{Algiers} (or according to some 32) and 37 degrees north ^{kingdom.} latitude, and between 1 degree west and 9 degrees east longitude; being bounded by the Mediterranean on the north, by Tunis on the east, by mount Atlas, which separates it from Biledulgerid, or Numidia, on the south, and by the river Mulvia, which separates it from the empire of Morocco on the west, being about six hundred miles in length from east to west, but the breadth very uncertain, some bounding it by mount Atlas, and others taking in part of that mountain.

It is watered by several rivers, which rising in mount Atlas, run to the northward and discharge themselves into the Mediterranean; the largest whereof is the Malvia, or Malva, which forms its western boundary, of which Dr. SHAW gives the following description, viz. The Malvia is a large and deep river, which empties itself into the Mediterranean sea, over against the bar of Almeria in Spain, and lies about fifty-four miles to the south-west by west of cape Hone and two hundred and forty from the Atlantick ocean. Small cruising vessels are admitted within its channel, which by proper care and contrivance, might be made more commodious for vessels of greater burthen, and as navigable as it was heretofore. The sources of this river are a great way within the Sahara, at the distance of eight hundred miles from the sea, according to ABULFEDA, and the course of it, contrary to that of most other rivers of this country, lieth almost the whole way in the same meridian.

This country is generally mountainous, but the most considerable chain of mountains are those on the south, which extend from east to west, and go under the name of mount Atlas. And these, Dr. SHAW informs us, are not always of that extraordinary height or bigness, which have been attributed to them by antiquity. Those parts of them which I have seen, says the doctor, are rarely, if ever equal, to some of the greater mountains of our own island: and I question, whether they can any where stand in

in competition, either with the Alps or the Apennines. If we conceive a number of hills, usually of the perpendicular height of four or five, or six hundred yards, with an easy ascent, and several groves of fruit and forest trees, rising up in a succession of ranges one behind another; and if to this prospect we here and there add a rocky precipice of a superior eminence, and difficult access, and place upon the side, or summit of it a mud-walled *Dashkrath*, or village of the Kabyles, we shall then have a just and lively idea of these mountains.

At present, the same writer informs us that the whole country is divided only into three provinces, viz. That of Tlemsan on the west. 2. Of Titterie on the south; and 3. Constantina, on the east of Algiers.

1. The province of Tlemsan, or Tremesen, according to Dr. SHAW, extends from the confines of Morocco eastward along the Mediterranean sea to the river Ma-saffran, being upwards of two hundred miles, the whole being almost equally distributed into mountains and valleys, but is almost destitute of fountains and rivers, as well as wood. Notwithstanding which, it has ever been esteemed more fruitful than the eastern part of the kingdom. The most considerable river in this province is the Shelliff, which rises in the mountains of the south, and running first north-east, and then to the westward, falls into the sea at Cape Ivy or Jibbel Dis.

The chief towns are, (1.) Tremesen, or Tlemsan, situate in 35 degrees north latitude, some few minutes east of London, lying about sixty miles south of the Mediterranean, formerly a rich populous city, and capital of the kingdom of the same name, but is not very considerable at present.

(2.) Oran, or Warran, situate on the coast of the Mediterranean, in 34 degrees 40 minutes north latitude, 40 minutes east longitude.

2. The province of Titterie, or the middle province, extends fifty miles to the westward of Tlemsan, being bounded on the east by the river Booberach, which separates it from Constantina. This is not so mountainous as the western province, especially towards the sea-coast, which is a fine rich champaign country in many places. In this province stands the city of Algiers, the capital of the kingdom, situate in 36 minutes 40 degrees north latitude, and 3 degrees 20 minutes east longitude. It lies on the side of a mountain, and rising gradually from the shore, appears to great advantage as we approach it from the sea. The walls are three miles (Dr. SHAW says, a mile and half) in circumference, strengthened on the bank side by bastions, and square towers between them. The port is of an oblong figure, a hundred and thirty fathom long, and eighty broad. The eastern mound of it, which was formerly the island, is well secured by several fortifications. The round castle (built by the Spaniards whilst they were masters of the island) and the two remote batteries (erected within this century) are said to be bomb-proof, and have each of them their lower embrasures mounted with thirty-six pounders: but the middle battery, which appears to be the oldest, is of the least defence. Yet it may be observed, as none of the fortifications I have mentioned are assisted either with mines or advanced works, and as the soldiers who are to guard and defend them cannot be kept up

to any regular courses of duty and attendance, that a few resolute battalions, protected even by a small squadron of ships, would have no great difficulty to make themselves quickly masters of the very strongest of them.

The hills and valleys round about Algiers are every where beautified with gardens and country seats, whither the inhabitants of better fashion retire during the summer season. The country seats are little white houses, shaded by a variety of fruit-trees, and ever-greens, whereby they afford a gay and delightful prospect towards the sea. The gardens are well stocked with melons, fruit, and pot-herbs of all kinds; and, what is chiefly regarded in these hot climates, each of them enjoys a great command of water, from the many rivulets and fountains which every where distinguish themselves in this situation. The fountain water made use of at Algiers, universally esteemed to be excellent, is likewise derived thro' a long course of pipes and conduits from these sources. The town contains, according to the same writer's computations, two thousand Christian slaves, fifteen thousand Jews, and one hundred thousand Mahometans, of which only thirty at most are renegadoes.

The naval force of the Algerines hath been for some years in a declining condition. If we except their row-boats and brigantines, they had, A. D. 1732, only half a dozen capital ships from thirty-six to fifty guns, and at the same time had not half that number of brave and experienced captains. A general peace with the three trading nations, and the impossibility of keeping up a suitable discipline, where every private soldier disputes authority with his officer, are some of the principal reasons why so small a number of vessels are fitted out, and why so few persons of merit are afterwards willing to command them. Their want likewise of experience, with the few engagements they have been lately concerned in at sea, have equally contributed to this diminution of their naval character. However, if by proper discipline and encouragement, they should once more assume their wonted courage and bravery, they have always in readiness such a quantity of naval stores, as will put them in a capacity of making considerable augmentations to their fleet; tho' even at present, we find them troublesome enough to the trade of Europe.

In the southern part of this province is the highest mountain in Barbary, called Jurjura, being part of that chain of hills which go under the name of Atlas. It is at least eight leagues long, lying nearly in a north-east and south-west direction. It appears to be from one end to another a continual range of naked rocks and precipices, and secures, by its rugged situation, a number of Kabyles from becoming tributary to the Algerines.

3. The province of Constantina is situated between the river Booberak, which separates it from Titterie on the west, and the river Zaine, which divides it from the kingdom of Tunis on the east, and is almost equal to the two former provinces, being upwards of two hundred and sixty miles in length, and more than a hundred in breadth. The tribute likewise collected by this viceroy, is much greater than that of the other two: inasmuch, as the Titterie bey brings only every year into the treasury above twelve thousand dollars, and the western bey forty or fifty thousand;

sand; whereas there is paid in by the viceroy of this province never less than eighty, and sometimes one hundred thousand.

The sea-coast of this province, from the Booberak to Boujehah, and from thence almost entirely to Bona, is mountainous and rocky, answering very appositely to the title of the high or lofty.

The chief towns of this province are, (1.) Bugia, formerly the capital of a kingdom of the same name, situate on a hill near the mouth of the river, about twenty leagues east of Algiers, the port being formed by a narrow neck of land running out into the sea. It is a fortified town, built upon the ruins of a large city, and a great part of the old wall still remaining, which is carried up to the very top of the mountain; and besides a castle on the hill, which commands the city: there are two more at the bottom of it for the security of the port; but these, it seems, were not able to defend the ships in the river's mouth, when they were attacked by Sir EDWARD SPRAAG, the English admiral, in the year 1671; for he took and destroyed nine Algerine men of war in this harbour.

(2.) Constantina, the capital of the province, the antient Cirta, situated on the river Rummel, upwards of ninety miles to the southward of Bugia, of which Dr. SHAW gives the following description. The greatest part of the town hath been built upon a kind of peninsular promontory, inaccessible on all sides except towards the south-west. This I computed to be a good mile in circuit, lying a little inclined to the southward, but ending to the northward, in a precipice of at least a hundred fathom perpendicular. In this direction we have a beautiful landscape, arising from a great variety of vales, mountains, and rivers, which lie before it to a great distance. To the eastward our prospect is bounded by an adjacent range of rocks, much higher than the city; but towards the south-east the country is more open, entertaining us with a distant view of the mountains of Seedy-Rougeise, and of those of Ziganeah. In this direction the peninsular promontory (as I have called it,) is separated from the neighbouring plains by a deep narrow valley, perpendicular on both sides, thro' which the Rummel conveys its stream, and over which there was formerly a bridge of excellent workmanship.

The neck of land to the south-west, near which stood the principal gate of the city, is about the breadth of half a furlong, being entirely covered with a series of broken walls, cisterns, and other ruins, which are continued quite down to the river, and carried on from thence over a slip of plain ground, that runs parallel with the deep narrow valley already described. Such was the situation and extent of the antient Cirta. But the present city hath not the same dimensions, being confined to that part of it which I have called the peninsular promontory.

Besides the general traces of a diversity of ruins, scattered all over this place, we have still remaining near the centre of the city, that particular set of cisterns, which I judge received the water brought thither from Phyl-geah, by an aqueduct. They are about twenty in number, making an area of fifty yards square. The aqueduct is still in a more ruinous condition than the cisterns: however, the fragments which have

continued down to this time, sufficiently demonstrate the publick spirit of the Cirtesians, in erecting a structure, that would require such an immense quantity of materials.

Upon the brink of the precipice to the northward, there are the remains of a large and magnificent edifice, where the Turkish garrison is lodged at present. Four of the bases, each seven foot in diameter, with their respective pedestals, are still in their places, and seem to have appertained to the portico. They are of a black stone, little inferior to marble; hewn, in all probability out of that very range of rocky precipices upon which they are founded.

Among the ruins to the south-west of the bridge, upon the narrow strip of land just now described, we have the greatest part of a triumphal arch, called the [Cassir Goulah] castle (as they interpret it) of the giant, consisting of three arches, the middlemost whereof is the most spacious. All the mouldings and frizes are curiously embellished with the figures of flowers, battle-axes, and other ornaments. The Corinthian pilasters erected on each side of the grand arch, are panelled like the side posts of the gates of the city, in a gusto, as far as I have observed, peculiar to Cirta; but the pillars of the same order, which supported the pediment, are broken down and defaced.

Barbary, according to Dr. SHAW, enjoys a ^{Air and} wholesome temperature of air, neither too hot ^{seasons.} in summer, nor too sharp and cold in winter. The winds are generally from the sea, i. e. from the west (by the north) to the east. Those from the east are common at Algiers from May to September, at which time the westerly winds take place, and become the most frequent. Sometimes also, particularly about the æquinoxes, we very sensibly experience that force and impetuosity, which the antients have ascribed to the Africus, or south-west wind, called La-betch by the mariners of these seas. The southerly winds, which are usually hot and violent, are not frequent at Algiers. They blow sometimes for five or six days together, in July and August, rendering the air so excessively suffocating, that during their continuance, the inhabitants are obliged to sprinkle the floors of their houses with water.

The winds from the west, the north-west, and the north, are attended with fair weather in summer, and rain in winter. But the easterly winds, no less than the southerly, are for the most part dry, tho' accompanied with a thick and cloudy atmosphere in most seasons.

It is seldom known to rain in this climate during the summer season; and in most parts of the Sahara, or desert on the south of Algiers, particularly in the Jereed, they have rarely any rain at all.

The first rains fall some years in September, in others a month later; after which dry. the Arabs break up their ground, and begin to sow wheat, and plant beans. This commonly falls out about the middle of October, but the sowing of barley, and the planting of lentils and gravancos, is a fortnight or three weeks later, or not till the end of November. If the latter fall in the middle of April, (as they usually do) the crop is reckoned secure, the harvest following in the latter end of May, or in the beginning of June, according to the preceding quality of the seasons.

Two

Two Bushels and a half of wheat, or barley, are judged here to be sufficient to sow as much ground, as a pair of oxen will plow in one day, which I have always found to be a little more or less equal to one of our acres. I could never learn, that any part of Barbary afforded yearly more than one crop, one bushel yielding ordinarily from eight to twelve, tho' some districts, I have been informed, afford a much greater increase.

Corn of Barbary.

There is but one kind of wheat and barley cultivated in this country. In some districts, where they have a command of water during the summer season, the natives cultivate rice, Indian corn, and particularly a white sort of miller, which the Arabs call drah, and prefer to barley for the fattening of their cattle. Oats are not cultivated at all by the Arabs (the horses of this country feeding altogether upon barley) neither is bigg (or winter wheat) so much as known in this climate.

The Moors and Arabs continue to tread out their corn, after the primitive custom in the east. After the grain is trodden out, they winnow it by throwing it up into the wind with shovels, lodging it afterwards in mattamores, or subterraneous magazines.

Pulse.

Beans, lentils, and garvancos, (the latter of which is the cicer, or chick pea) are the chief pieces of pulse that are cultivated in these kingdoms. Pease, till of late, were known in the gardens only of the several christian merchants. They are sown with the first rains, and blossom in the latter end of February, or the beginning of March. Beans are usually full podded at that time, and being boiled up with oil and garlick, are the principal food of persons of all distinctions during the spring. After them, lentils and garvancos begin to be gathered.

Food.

Roots.

Of roots, pot-herbs, and the fruits of this country, there is not only a great plenty and variety, but a continuance or succession, at least of one kind or other, throughout the whole year.

Fruit.

There are great numbers of palm-trees in this country, also almond-trees, apricots, plumbs, cherries, mulberries, apples, pears, peaches, nectarines, pomegranates, prickly pears, olives, walnuts; but no hazel filberts, gooseberry or currant trees.

Wine.

The grape ripens towards the latter end of July, and is cut for the vintage in September. The wine of Algiers, before the locusts in the years 1723-24, made such vast destruction of the vineyards, was not inferior to the best hermitage, either in briskness of taste, or flavour. But since that time it is much degenerated, having not hitherto recovered its usual qualities, though, perhaps, it may still dispute the preference with the wine of Spain or Portugal. The lemon (and sometimes the Seville orange) tree, is always in a succession of fruit and blossoms; but the China, as it is commonly called, is a foreigner, and beareth only towards the latter end of autumn.

Gardens.

As to their gardens, there is nothing laid out with method, beauty, or design; the whole being only a medley and confusion of trees, with beds of cabbages, turnips, beans, garvancos, &c. nay, sometimes of wheat and barley dispersed among them. Fine walks, parterres, and flower-plats, would be to these people the loss of so much profitable soil; as planting in order and regularity, the study of soil and composts, or the

aiming at any new improvements and discoveries, would be so many deviations from the practice of their ancestors, whose footsteps they follow with the utmost reverence and devotion.

The soil which supports these vegetables, is soft for the most part of such a loose and yielding texture, that an ordinary pair of oxen is sufficient in one day to plough an acre of the stiffest sort of it. The colour of it is not always the same; for in the plains of Zeidoure, it is blackish, whilst in those of Elmildegah, &c. it inclineth to be red: though all of them are equally fruitful, and impregnated alike with great quantities of salt and nitre.

In the salt-petre works of Tlemsan they extract six ounces of nitre from every quintal of the common mould, which is there of a dark colour; and at Doufan, Kairwan, and some other places, they have the like quantity from a loamy earth, of a colour betwixt red and yellow. The banks of several rivers, to the depth sometimes of two or three fathom, are studded in summer time with nitrous and saline knobs and exudations, which, besides the depth of the soil, shew us likewise, how well it is saturated with these minerals. For to this grand and inexhaustible fund of salts, we may in a great measure attribute the great fertility for which this country has always been remarkable, and still continueth to be so, without any other manuring than the burning in some few places of the stubble. Though it is somewhat extraordinary, that the province of Bizacium, which was formerly held in so much repute for its fertility, should be at present the most barren and unprofitable part of these kingdoms.

It appears farther, that the salt is the chief and prevailing mineral of these kingdoms, as well from the several salt springs, and mountains of salt, as from the great number of salinas shibkaks, that are, one or other, to be met with in every district.

The salt pits of Arzew lie surrounded with mountains, taking up an area of about six miles in compass. They appear like a large lake in winter, but are dry in summer, the water being then exhaled, and the salt left behind cristallized. In digging they pass through different layers of this salt, whereof some are an inch, others more, in thickness; in proportion, I presume, to the quantity of saline particles the water was impregnated with before their respective concretions. This whole area is made up of a succession of such similar strata heaped one upon another: and in the same manner are the Salines betwixt Carthage and the Gulletta, those of the Shott, and of other places, either bordering upon, or lying within the Sahara.

Jebbel Had-dessa is an entire mountain of salt, situated near the eastern extremity of the lake of Marks. The salt of it is of a quite different quality and appearance from that of Saline, being as hard and solid as stone, and of a reddish or purple colour. Yet what is washed down from those precipices, by the dews, attaineth another colour, becoming as white as snow, and losing that share of bitterness which is in the parent rock-salt. The salt of the mountains near Lworaiah and Jibbel Minis, is of a grey or blueish colour, and, without submitting to the like accidental purification, as at Had-dessa, is very agreeable to the palate; the first, especially, being sold at Algiers for a penny an ounce.

Of the like quality and flavour is the salt of the lake of Marks (called likewise Bahurah Pharuone) and of other lesser plains of the same nature. These are usually called shibkah, i. e. saltish plats of ground, being commonly overflowed in winter (at the same time they appear like so many extensive lakes) but are dry all summer (when they may be taken for the like number of bowling-greens prepared for the turf.) Some of these shibkahs have a hard and solid bottom, without the least mixture of gritty mould, retaining the salt that lieth cristallized upon them after rain. But others are of a more ouzy, absorbent nature, seldom preserving any saline incrustations upon the surface.

Baths and
hot springs

Besides the salt springs and rivulets already mentioned, these countries abound in hot and sulphureous springs and baths.

Some of these waters are little more than lukewarm; others of more intense heat, and very proper to bathe in, while the hammam meskouten, and the upper bath at Mereege, are much too hot for that purpose; the former boiling a large piece of mutton very tender in a quarter of an hour.

Earth-
quakes.

Besides the hot mineral effluvia that are continually discharged by the thermæ, there still remains below the surface some vast and inexhaustible funds of sulphur, nitre, and other inflammable bodies, of which the frequency and violence of the earthquakes, ann. 1723, and 1724, shook down a number of houses, and closed up the course of several fountains: But by one of these violent concussions, ann. 1716, a large patch of ground at Wamre, lying in an easy descent, with a well, a few trees, and a farm-house about, glided all down together for the space of a furlong, till they were, one or other of them, stopped by the channel of the Harbeene. Several of the breaches, together with some pieces of the house, turned upside down, and lying a distance from each other, are to this day standing monuments of this catastrophe. I was likewise informed, that the like accident happened at the same time in some of the mountainous districts near Boujeiah and El-Khadarah. The great shock in ann. 1724, was perceived from Miliana to Bona, the air being then very clear and temperate, and the quicksilver standing at the greatest height, whilst upon enquiry, other concussions were only found to be local, or of small extent; the quicksilver in these cases observing no certain period, and the air being, as at other times, either calm or windy, hazy or serene.

Earthquakes, during my stay at Algiers, fell out generally a day or two after a great rain, at the end of the summer, or in the autumn. The cause perhaps may arise from the extraordinary constipation or closeness of the surface at such times, whereby the subterraneous steams will be either sent back or confined; whereas the whole country being full of deep chinks and chasms, the inflammable particles have an easier escape.

Minerals.

Lead and iron are the only metals that have yet been discovered in Barbary; the latter white and good, but in no great quantity. Their lead ore is very rich, and might be obtained in large quantities, if their mines were under a good regulation.

Animals.

Besides the horse, the mule, the ass, and camel, used in Barbary for riding and carrying burthens, Dr. Shaw mentions another animal, called the kumrah, a little serviceable beast of

burthen, begot betwixt an ass and a cow, being single hoofed like the ass, but the tail and head (except the horns) like a cow, and a skin sleeker than that of the ass.

The black cattle of this country are generally very small and slender, the fattest of them when brought from the stall, rarely weighing above five or six quintals, or hundred weight; neither is their milk in proportion to their size: For notwithstanding the rich herbage of this country, from December to July, the butter hath never the substance or richness of taste with what our English dairies afford us in the depth of winter. ANDY Bashaw, the late Dey of Algiers, was no less surprised than his ministers, when admiral CAVENDISH, a few years ago, acquainted him that he had a Hampshire cow aboard the Canterbury, (then in the road of Algiers) which gave a gallon of milk a day; a quantity equal to what half a dozen of the best Barbary cows would yield in the same time. The Barbary cattle likewise have another imperfection, that they always lose their calves and their milk together.

The sheep and goats contribute also to the dairies of this country, it being chiefly of their milk that the Moors and Arabs make cheese. Instead of runnet, they make use (in the summer season particularly) of the flowers of the great-headed thistle, or wild artichoke, to turn the milk, putting the curds thus made, into small baskets of rushes, or palmetta leaves, and binding them afterwards and pressing them. I have already seen many of these cheeses above two or three pound weight, being usually of the shape and size of a penny loaf. They have no other method of making butter than by putting their milk or cream into a goat's skin, which being suspended from one side of the tent to the other, and pressed to and fro in one uniform direction, quickly occasioneth that separation which is required of the unctuous wheyey parts.

Besides the great variety of cattle of this country, we may observe farther, that each species are very numerous and prolific. Several Arabian tribes can bring into the field only three or four hundred horses, at the same time that they are possessed of more than so many thousand camels, and triple again that number of sheep and black cattle. The Arabs rarely kill any of their flocks, living chiefly upon their milk and butter, or else upon what they get in exchange for their wool.

Of cattle that are not naturally tame and domesticated, these kingdoms afford large herds of the neat kind, called bekker el wash by the Arabs. This species is remarkable for having a rounder turn of body, a flatter face, with horns bending more to each other than in the tame kind: These are of the size of the red deer, with which they agree in colour.

Among their wild beasts are the lion and panther: The tyger is not a native of Barbary.

The dubbah is an animal about the bigness of a wolf, but of a flatter body, and naturally limps upon the hinder right leg.

Besides these animals, it has others in common with other countries, as red and fallow deer, the gazel, or antelope, the bear, the ape, the ichneumon, the porcupine, the hedge-hog, the fox, the ferret, the weasel, besides the mole, the rabbit, the hare, and the wild boar, which are every where in great numbers. The lion is supposed to prey chiefly upon the latter, which notwithstanding hath sometimes been known to defend itself

itself with so much bravery, that the victory hath inclined to neither side, the carcases of them both having been found, lying dead together all in a gore, and mangled to pieces.

Locusts. The locusts, which I saw in the years 1724 and 1725, says Dr. SHAW, were much bigger than our common grasshoppers, having brown spotted wings, with legs and bodies of a bright yellow. Their first appearance was towards the latter end of March, the wind having been for some time southerly; and in the middle of April, their numbers were so vastly increased, that in the heat of the day they formed themselves into large bodies, appeared like a succession of clouds, and darkened the sun. About the middle of May, when their ovaries were turgid, each of these bodies began gradually to disappear, retiring into the Metijah, and other adjacent plains, to deposit their eggs. Accordingly, in the month following, their young broods began gradually to make their appearance, and it was surprising to observe, that no sooner were any of them hatched, than they immediately collected themselves together, each of them forming a compact body of several hundred yards square, which marching afterwards directly forward, climbed over trees, walls, and houses, and eat up every plant in their way, and let nothing escape them. The inhabitants, to stop their progress, made trenches all over their fields and gardens, and filled them with water; or else placing in a row great quantities of heath, stubble, and such like combustible matter, they set them on fire on the approach of the locusts. But all this was to no purpose, for the trenches were quickly filled up, and the fires put out by infinite swarms succeeding one another, whilst the front seemed regardless of danger, and the rear pressed on so close, that a retreat was impossible. A day or two after one of these bodies was in motion, others were already hatched to glean after them, gnawing off the young branches, and the very bark of such trees as had escaped before with the loss only of their fruit and foliage: so justly hath the inspired writer compared them to a great army, and observed, That the land is as the garden of Eden before them, and behind them a desolate wilderness.

Having in this manner lived near a month upon the ruin and destruction of every thing that was green or juicy, they arrived at their full growth, and threw off their worm-like state, by casting their skins. To prepare themselves for the change, they clung by their hinder feet to some bush, twig, or corner of a stone, when immediately by an undulating motion, used upon the occasion, their heads would first appear, and soon after the rest of their bodies; after which they lay in a languishing condition: but as soon as the sun and air has hardened their wings, and dried up the moisture that remained upon them after the casting of their sloughs, they returned again to their former voracity, with an addition both of strength and agility: but they continued not long in this state, before they were intirely dispersed, as their parents had been before, after the laying of their eggs; and as the direction of the marches and flights of them both was always to the northward, it is probable they perished in the sea, a grave which, according to these people, they have only in common with other winged creatures.

These insects, sprinkled with salt and fry'd, are in taste not much unlike the river cray-fish.

Africa produces few monsters, according to the same author. The natural and ordinary course of things is much the same in Barbary as in other places, each species, as far as I could be informed, keeping inviolably to itself; for if we except the mule and the kumrah (which are procreated from animals, under the direction of mankind; and therefore not so properly left to themselves) few I presume, if any other instances, can be fairly urged in favour of the old observation, That Africa is always producing some new monsters.

Arts and sciences. Arts and sciences are little known or encouraged in Barbary. Besides their koran, and some other enthusiastick comments upon it, very few books are read or inquired after by those few persons of riper years, who have both time and leisure for study and contemplation. All that variety of learning which they formerly either invented themselves, or adopted into their own language, may be reduced at present to a few sheets of blundering geography, or to some tiresome memoirs of the transactions of their own times; for such branches of history as are older than their prophet, are a medley only of romance and confusion.

Upon my arrival at Algiers, says the same writer, I made it my business to be acquainted with such persons as had the character of being learned and curious; and though it is very difficult (as well from their natural shyness to strangers, as from a particular contempt they have for christians) to cultivate any real friendship among them; yet in a little time I could find the chief astronomer, (who had the superintendence and regulation of the hours of prayer) had not trigonometry enough to project a sun-dial: that the whole art of navigation, as it is practised at Algiers and Tunis, consisted in nothing more than what is called the pricking of a chart, and distinguishing the eight principal points of the compass. Even chymistry, formerly the favourite science of these people, is no farther applied at present than the distilling of rose-water.

There are not indeed wanting several persons **Physick.** who prescribe in physick, play upon a variety of musical instruments, and are concerned in other actions and performances which seem at least to suppose some skill in nature or mathematics; yet all this is learnt merely by practice, long habit, and custom, assisted for the most part with great strength of memory, and quickness of invention: **Natural parts.** for no objection can be made against the natural parts and abilities of these people, which are certainly subtle and ingenious, only time, application, and encouragement are wanting to cultivate and improve them.

Few persons will either admit of advice or medicine, believing in strict and absolute predestination, whilst others, who are less superstitious, prevent the assistance of both, by their ill conduct and management, leaving all to the strength of nature, or else to magar-eah, as they call charms and enchantments. **Charms.**

Neither numeral arithmetick, or algebra, are known to one person in twenty thousand, notwithstanding their forefathers, if we may judge from the name, seem to have been the inventors of the one, as they have given to all Europe the characters of the other. However, the merchants, besides being frequently very dextrous in the addition and subtraction of large sums by memory, have a singular method of numeration: by putting their hands into each other's sleeve, and there touching

touching one another with this or that finger, or with such a particular joint of it (each of them denoting a determined sum or number) they will transact affairs of the greatest value, without speaking to one another, or letting the standers-by into the secret.

Musick. These people play upon several instruments of musick; but as they do not write down their compositions, nor aim at any contrast or variety of parts, it may be disputed, whether even this branch of the mathematicks is to be considered as a science among them. For the musick of the Bedowens rarely consists of more than one strain, suitable to their homely instruments, and to their simple invention. The arabebbah, as they call the bladder and string, is in the highest vogue, and doubtless of great antiquity; as is also the gaspah, which is only a common reed open at each end, having the side of it bored with three or more holes, according to the ability of the person who is to touch it: Though the compass of their tunes rarely or ever exceed an octave; yet sometimes, even in this simplicity of harmony, they observe something of method and ceremony. For in their historical cantatas especially, they have their preludes and symphonies, each stanza being introduced with a flourish from the arabebbah, whilst the narration itself is accompanied with the softest touches they are able to make upon the gaspah. The tar, another of their instruments, is made like a sieve, consisting (as the tympanum) of a thin rim, or hoop of wood, with a skin of parchment stretched over the top of it. This serves for the bass in all their concerts.

The musick of the Moors is more artful and melodious, and they have a much greater variety of instruments than the Arabs; for, besides several sorts of flutes and hautboys, they have the rebeb, a violin of two strings, which is played upon with a bow: The a-oude, a bass double stringed lute, bigger than our viol, which is touched with a plectrum, with several smaller gittars (or quetara's, according to the pronunciation) of different sizes, each of them tuned an octave higher than another. And notwithstanding they learn all by ear, passing quickly from one measure to another, and hastening the time, (as the musicians term it) in them all; yet there is always great uniformity and exactness observed throughout all their performances. I have often observed twenty or thirty persons together, proceed in this manner from one air to another, during the space of a whole night (the usual time of their entertainments) without making the least blunder or hesitation.

Buildings of the Moors. As to the form of the Moorish houses; they are built about cloystered courts, with fountains often playing in the middle of them, and galleries over them. Their doors are large, their chambers spacious, and their pavements marble: From the porch, on each side of which are benches (where the master of the family usually receives visits, and dispatches business, few persons being admitted further) we proceed to the square court on festival days, where the company are entertained; and this is sometimes sheltered from the heat and inclemencies of the weather, by an umbrella or veil, expanded upon ropes from one side to the other.

In the cloysters and galleries are large rooms of the length of the court, which people of fashion

hang with velvet or damask from the middle of the wall downwards; the rest is adorned with the most ingenious wreathings and devices in stucco and fret-work. The ceiling is generally of wainscot, either very artfully painted, or else thrown into a variety of pannels, with gilded mouldings and scrolls of their koran intermixed. The floors are laid with painted tiles, or plaister of terrace: But the eastern nations making no use of chairs (either sitting cross-legged, or lying at length upon these floors,) they have them constantly spread over with carpets, which sometimes are most beautifully designed, and of the richest materials. For their further ease likewise and convenience, there is a row of damask or velvet bolsters ranged along each side of the floor. At one end of which chamber there is a little gallery, raised four or five foot above the floor, with a balustrade in the front of it.

The top of the house, which is always flat, is covered with a strong plaister of terrace, and surrounded by a wall or battlements.

The Bedowens, or Arabs of Africa, live in tents called ithymas, from the shade they afford, or beetel shar, houses of hair, from the matter they are made of, being of an oblong figure, not much unlike a barn. They pitch their tents in a circular form; and this portable village is called a dou-war. Each tent consists but of one room, divided by curtains and carpets into several apartments, according to the number of the family. They have no other beds but mats, or bed-clothes but the blankets they wrap about them in the day-time.

Tents of the Arabs.

As to the Kabyles, or inhabitants of the mountains, these live in dishkra's, or thatched cottages, with clay-walls, and their villages are denominated gurbica. Each of these cottages consists but of one room, in which also they house their calves and kids; the people and their young cattle living much alike.

Buildings of the Mountain-eers or Kabyles.

The Arab women make the clothing and furniture for the family, particularly their hykes, or woollen blankets; and the webs of goats hair for their tents.

Clothing and furniture.

One of these hykes is usually six yards long, and five or six feet broad, serving the Kabyle and Arab, for a complete dress in the day, and for his bed and covering in the night. It is a loose but troublesome kind of garment, being frequently disconcerted, and falling upon the ground; so that the person who wears it, is every moment obliged to tuck it up.

The burnoose, which is a cloke or mantle, is also made by those women. Many of the Arabs go bare-headed, binding their temples with a narrow fillet, to prevent their hair being troublesome; but the Moors and Turks, and wealthier Arabs, wear caps and turbants.

Some of the Arabs wear under their hykes a close-bodied frock or tunick, girt about their bodies when they are at work; for then they actually throw off their hykes and mantles. The Turks and Moors wear linnen under their tunicks, but the Arabs in general wear nothing but woollen.

Neither are the Bedowens or Arabs used to wear drawers, a habit which the citizens of both sexes do constantly appear in, especially when they go abroad to receive visits. The virgins are distinguished from the matrons, in having theirs made of needle-work, striped silk or linnen, just

as TAMAR's garment is described, 2 SAM. xiii. 18. But when the women are at home, and in private, then they lay aside their hykes, and sometimes their tunicks; and instead of drawers, bind only a towel about their loins. A Barbary matron, in her undress, appears exactly in the same manner that SILENUS doth in the Admiranda.

We are to observe further, with regard to the habits of the Moorish women, that when they appear in publick, they always fold themselves up so close in their hykes, that, without the addition of a veil, there is very little to be seen of their faces. But in the summer months, when they retire to their country seats, they walk abroad with less caution and reservedness; and upon the approach of a stranger, let only their veils fall over their faces. They all affect to have their hair hang down to the ground, which they collect into one lock, upon the hinder part of the head, binding and plaiting it afterwards with ribbons. Where nature hath been less liberal, there the defect is to be supplied by art, and foreign hair interwoven with the natural. After their hair is plaited up in this manner, they proceed to dress their heads, by tying close together, above the lock I have described, the several corners of a triangular piece of linnen, wrought into a variety of figures by the needle. Persons of better fashion, wear above this a farmah, as they call it, which differs not much in shape from the former head-dress, but is made of thin flexible plates of gold or silver, variously cut through, and engraved in imitation of lace. A handkerchief of crape, gauze, silk, or painted linnen, bound close about the farmah, and falling afterwards, without any order, upon the lock, completes the head-dress of the Moorish ladies.

But none of these ladies take themselves to be compleatly dressed, till they have tinged the hair and edges of their eye-lids with the powder of lead-ore. The sooty colour, which is in this manner communicated to the eyes, is thought to add a wonderful gracefulness to persons of all complexions.

Manufac- Carpets are another branch of the trade and **tures.** manufactories of this country. They are made of much coarser materials, and are not so beautifully designed as those of Turkey; but being cheaper and softer, they are preferred by these people to lie upon. At Algiers and Tunis there are looms for velvet tafetas, and several kinds of wrought silks. A coarse sort of linnen is likewise made all over these kingdoms, tho' Sufa is noted for producing the finest. The greatest part of the manufactures I have mentioned are consumed at home; some of which are so small and inconsiderable, particularly the silks and linnen, that the deficiencies are frequently made up from the Levant, and Europe. It may be further observed, that these parts of Barbary send very few of their commodities to foreign markets. Oil, hides, wax, pulse and corn, are the general produce; but the first are either in such small quantities, or so much wanted at home, that corn may be reckoned the chief, and indeed the only branch of trade for exportation. Before the loss of Warran, I have known our merchants ship off some years, from one or other of the ports of these kingdoms, seven or eight thousand ton. There is likewise so great a consumption of oil among the natives them-

selves, that in the kingdom particularly of Algiers, it is seldom permitted to be shipped off for Christendom. Greater quantities indeed are produced near Tunis and Sufa, but then the Moorish merchants alone are allowed to buy it; obliging themselves, at the same time, to dispose of it at Alexandria, Damietta, or some other ports of the Mahometan dominions.

Commodities of all kinds are sold very cheap in this country. We can have a large piece of bread, a bundle of turneps, a small basket of fruit, &c. for the six hundredth and ninety sixth part of a dollar, i. e. of three shillings and six-pence of our money. Fowls are frequently bought for three half-pence a piece, a sheep for three shillings and six-pence, and a cow and a calf for a guinea. It is happy likewise for these people, that they can have one year with another, a bushel of the best wheat for fifteen or eighteen pence. For the inhabitants of these countries, no less than the eastern people in general, are great eaters of bread; it being computed, that three persons in four live entirely upon it, or else upon such compositions as are made of barley and wheat flour.

In cities and villages where there are publick ovens, the bread is usually leavened; but among the Bedoweens, as soon as the dough is kneaded, it is made into thin cakes, which are immediately baked upon the coals.

Besides several different sorts of fricasees, and of roast, boiled, and forced meats (the first and last of which are always made very savoury) the richer part of the Turks and Moors mix up a variety of dishes with almonds, dates, sweet-meats, milk, honey, &c. I have seen at some of their festivals, more than two hundred dishes, whereof forty at least were of different kinds; but among the Bedoweens and Kabyles, there are neither utensils nor conveniences for such entertainments; two or three wooden bowls, a pot and a kettle, being the whole kitchen furniture of the greatest emeer. However, all the orders and degrees of these people, from the Bedoween to the Bashaw, eat in the same manner, washing first their hands, and then sitting cross-legged round a mat, or low table, upon which their dishes are placed. They make no use of a table-cloth, each person contenting himself with a share of a long towel that lies round the mat. Knives and spoons are little in use, for the food being well roasted and boiled, requires no carving. Cuscassowe, pilloe, and other dishes likewise, which we should reckon spoon meats, are served up in the same manner with all their other sorts of food, no better than lukewarm; so that the whole company dipping their fingers together in the dish (making use of their right hand only) take what portion of it they can conveniently dispose of for a mouthful, making it first into little balls, or pellets, in the palms of their hands. No sooner is any person satisfied than he rises up, and washes himself, without paying the least regard to the company, whilst another that very moment takes his place; the servant sometimes (for there is no distinction of tables) succeeding his master. When they sit down to these meals, or eat and drink at any other time; and, indeed, when they enter upon their daily employ, or undertake any business whatsoever, they always pronounce, with the greatest seriousness and reverence, the word Bismillah, i. e. (in the name of God) using Alham-

dillah, i. e. (God be praised) after nature is satisfied, and their affairs are attended with success. The Turks and Moors are early risers, constantly attending the publick devotions at break of day. Each person employs himself afterwards in the exercise of his proper trade and occupation, till ten in the morning, the usual time of dining; returning again to his business till (Asa) the afternoon prayers, at which time all kind of work ceaseth, and their shops are shut up. The supper commonly follows the prayers of (Magreb) sun-set, and then repeating the same at the setting of the watch, when it begins to be dark, they go to bed immediately after. Some of the graver people, who have no constant employ, spend the day, either in conversing with one another at the Haf-ess in the Bazar, or at the coffee-house: whilst a great number of the Turkish and Moorish youths, with no small part of the unmarried soldiers, attend their concubines with wine and musick into the fields, or else make themselves merry at one of the publick taverns: a practice indeed expressly prohibited by their religion; but what the necessity of the times, and the uncontrollable passions of the transgressors, oblige these governments to dispense with.

The Arabs follow no regular trade or employment; his life is one continued round of idleness or diversion. When no pastime calls him abroad, he doth nothing all the day but loiter at home, smoke his pipe, and repose himself under some neighbouring shade. He hath no relish at all for domestick pleasures, and is rarely known to converse with his wife, or play with his children. What he values above all is his horse, for in this he placeth his highest satisfaction, being seldom well pleased, or in a good humour, but when he is far from home, riding at full speed, and hunting.

Sports...

The Arabs, as well as the eastern nations, are very dextrous at this exercise. I have seen several persons, who could take up a jerrid or dart at full speed from the ground; and there are none of them but can quickly hunt down a wild boar. We have upon one of the medallions of Constantine's arch, a very beautiful representation of this sport, as it is performed to this day by the Arabs, who after they have roused the beast from his retirement, and pursued it into some adjacent plain, endeavour there, by frequent overtaking and turning it, to tire and perplex it; and then, watching an opportunity, either lance at it at some distance, or, coming close by its side, fix their spears in its body. At the hunting of the lion, a whole district is summoned to appear, who forming themselves first into a circle, enclose a place of three, four, or five miles in compass, according to the number of the people, and the quality of the ground that is pitched upon for the scene of this action. The footmen advance first, rushing into the thickets with their dogs and spears to put up the game, whilst the horsemen, keeping a little behind, are always ready to charge upon the first sally of the wild beast. In this manner they proceed, still contracting their circle till they all at last either close in together, or meet with something to divert them. The accidental pastime upon these occasions is sometimes very diverting; for the several different sorts of animals that lie within this compass, being by

this means drove together, they rarely fail of having a variety of agreeable chases after hares; jackalls, hyænas, and other wild beasts. It is a common observation in this country, that when the lion perceives himself in danger, nay sometimes the very moment he is roused, he will seize directly upon the person who is the nearest to him, and rather than quit his hold, suffer himself to be cut in pieces.

Hawking is one of the chiefest diversions among the Arabs, and gentry of the kingdom of Tunis. Their woods afford them a beautiful variety of hawks and falcons. Hawking

The greatest part of the Moorish women would be reckoned beauties, even in Great Britain; their children certainly have the finest complexions of any nation whatsoever. The boys, indeed, by wearing only the tiara, are exposed so much to the sun, that they quickly attain the swarthiness of the Arab; but the girls, keeping more at home, preserve their beauty till they are thirty, at which age they are usually past child-bearing. It sometimes happens, that one of these girls is a mother at eleven, and a grand-mother at two and twenty; and as their lives are usually of the same length with those of the Europeans, there have not been instances wanting among these matrons, of some who have lived to see their children of many generations. Persons of the women.

No nation in the world is so much given to superstition as the Arabs, or even as the Mahometans in general. They hang about their childrens necks the figure of an open hand; which the Turks and Moors paint upon their ships and houses, as an antidote and counter-charm to an evil eye; for five with them is an unlucky number. Those who are grown up, carry always about with them some paragraph or other of their koran, which, as the Jews did their phylacteries, they place upon their breast, or sew under their caps, to prevent fascination and witchcraft, and to secure themselves from sickness and misfortunes. The virtue of these charms and scrolls is supposed likewise to be so far universal, that they hang them upon the necks of their cattle, horses, and other beasts of burthen. They place great confidence in magicians and forceers; and upon some extraordinary occasions, particularly in a lingering distemper, they use several superstitious ceremonies in the sacrificing of a cock, a sheep, or a goat, by burying the whole carcass under ground, or by drinking a part of the blood, or else by burning or dispersing the feathers. For it is a prevailing opinion all over this country, that a great many diseases proceed from some offence or other that hath been given to the Jenoune, a sort of creatures placed by the Mahometans betwixt angels and devils. These, like the fairies of our forefathers, are supposed to frequent shades and fountains, and to assume the bodies of toads, worms, and other little animals, which being always in our way, are liable every moment to be hurt and molested. When any person therefore is sickly or maimed, he fancies that he hath injured one or other of these beings, and immediately the women, who are dextrous in these ceremonies, go upon a Wednesday with frankincense, and other perfumes, to some neighbouring spring, and there sacrifice, as I have already hinted, a hen or a cock, an ewe or a ram, &c.

8cc.

&c. according to the sex and quality of the patient, and the nature of the disorder.

Government of the Arabs.

The Arabs are permitted by the Algerines, to be governed by their own laws and magistrates, without controul, provided they behave themselves peaceably, pay them the eighth part of the produce of their lands, and a small poll-tax, which is annually collected by the Turks. And every dou war, or village, may be looked upon as a small principality, being governed absolutely by the person of the greatest substance in it: the government usually descends from father to son, or to the next heir, except he be an infant, or unqualified to govern, and then the uncle, or some near relation, takes the administration of the government upon him. When one of these governors has the command only of a single dou-war, he is commonly called the sheik; but the ruler or chief person of a tribe, whose authority reaches over several dou-wars, hath the title either of the (sheik el kiber) great lord or elder, or else of (emeir) prince.

Number of Turks in Algiers.

The whole force of Algiers, in Turks and Collogies, is computed at present to be about six thousand five hundred; two thousand whereof are supposed to be old, and excused from duty: and of the four thousand five hundred that remain, one thousand are constantly employed in relieving annually their garrisons, whilst the rest are either to arm out their cruizers, or else form the three flying camps which are sent out every summer, under the command of the provincial viceroys. To the Turkish troops we may join about two thousand Zwowah, as the Moorish horse and foot are called: yet, notwithstanding these are kept in constant pay, and may be supposed to augment the number of soldiers, yet being all of them hereditary enemies to the Turks, they are little considered in the real safeguard and defence of the government. The method therefore that is observed in keeping this large and populous kingdom in obedience, is not so much by force of arms, as by diligently observing the old political maxim, "Divide and command." For the provincial viceroys are very watchful over the motions of the Arabian tribes, who are under their several districts and jurisdictions; and as these are in continual jealousies and disputes with one another, the beys have nothing more to do than keep up the ferment, and throw in at proper times new matter for discord and contention. There are a great many Arabian and African tribes, who in case their neighbours should observe a neutrality, would be too hard for the whole army of Algiers, notwithstanding each Turk valueth himself in being a match for twenty Arabs. When therefore there is any misunderstanding of this kind, the viceroys play one tribe against another, and provided the quarrel proves equal, a few Turks seasonably thrown in, will be more than a balance for the enemy. By thus continually fomenting the divisions, which always subsist among the Arabian princes, and by drawing on afterwards one family to fight against another, these four or five thousand Turks maintain their ground against all opposition.

Way of travelling in Barbary.

In the inland towns and villages of Barbary, there is for the most part a house set apart for the reception of strangers, with a proper officer to attend it. Here persons are lodged and entertained for one night, in the best manner the place will afford, at the expence of the community.

Except at these places, says Dr. SHAW, I met with no khans, or houses of entertainment, throughout the whole course of my travels. To furnish ourselves with tents would have been both cumbersome and expensive; besides the suspicion it might have raised in the Arabs, that we were persons of rank and fortune, and consequently too rich and tempting a booty to be suffered to escape. The unfortunate gentlemen, who were concerned not many years ago in an embassy to Abyssinia, found this to be true, at the expence of their lives.

If, therefore, in the course of our travelling, we did not fall in with the hovels of the Kabyles, or the encampments of the Arabs, we had nothing to protect us from the inclemency, either of the heat of the day, or the cold of the night, unless we met with some accidental grove of trees, the shelfe of a rock, or sometimes, by good fortune, a grotto. At these times, which indeed did seldom happen, our horses were the greatest sufferers: and as they were always our first care, we gathered for them stubble, grass, boughs of trees, and such like provender, before we sat down.

When we are so fortunate in travelling in Barbary, to find out the encampments of the Arabs (for we are not fond of visiting the Kabyles, who are not so easily managed) we are entertained for one night upon free cost: the Arabs, either by long custom, the particular tenure of their lands, or rather, perhaps, from fear and compulsion, being obliged to give the spahees, and those who are with them, the mounah, as they call it, which is a sufficient quantity of provisions for themselves and their horses. Besides a bowl of milk, and a basket of figs, raisins, dates, or other dried fruits, which were presented to us upon our arrival, the master of the tent where we lodged, fetched us from his flock (according to the number of our company) a kid, or a goat, a lamb, or a sheep, half of which was immediately seethed by his wife, and served up with cuscassow; the rest was usually made Kab-ab, and reserved for our breakfast or dinner the next day.

However, the tents of these roving herdsmen, though they may shelter us from the weather, are, notwithstanding, attended with their inconveniencies. For the cold and the dews that we are every night exposed to in the deserts of Arabia, do not incommode us half so much as the vermin and insects of all kinds, which never fail to molest us here. Besides fleas and lice, which, without a miracle, are here in all their quarters, the apprehensions we are under of being bit or stung by the scorpion, viper, or venomous spider, rarely fails in some parts of these countries to interrupt the rest that is so grateful and necessary to a weary traveller. Upon sight, indeed, of one or other of these venomous beasts, a thaleb, or writer, who happened to be one of my spahees, after he had muttered a few words, exhorted us all to take courage, and not be afraid of such creatures, as he had made tame and harmless by his charms and incantations. We are likewise no less offended (from whence we might least expect it) by their kids, calves, and other young cattle, that are tied up every night under the eaves of their tents, to prevent them from sucking their dams. For the cords that are used upon these occasions, being only made of loose spun yarn, the fretful creatures

are

are every moment breaking loose, and trampling over us.

When our company was at any time entertained in a courteous manner (for the Arabs will sometimes part with nothing till it be extorted by force) I used to give the master of the tent a knife, a couple of flints, or a small quantity of English gunpowder, which being much stronger than their own, they have in great esteem, and keep for the priming only of their fire-arms. If the lallah (or lady) his wife, had been obliging also in her way, by making our cuscaffowe savoury and with expedition, she would return a thousand thanks for a skean of thread, a large needle, or a pair of scissars; all of them great rarities, and very engaging presents with these people.

During the excessive heats of the summer, and especially when we were apprehensive of being intercepted by some party of free-booting Arabs, we then travelled in the night; which having no eyes, according to their proverb, few of them dare then venture out, as not knowing the dangers and ambuscades they may possibly fall into.

Our stages, or days journies, were not always the same. For when any danger was apprehended, we then travelled through as many by-paths as our conductors were acquainted with, riding in this manner, without resting sometimes twelve, sometimes fifteen hours together. Nay, in returning from Jerusalem (so vigilant were the Arabs at that time, in distressing the pilgrims) notwithstanding we had the sheek (or saint) of Mount Carmel, with twenty of his servants to protect us, we rested only one hour in two and twenty; for so long we made it in travelling betwixt Sichem and Mount Carmel. But in the kingdoms of Algiers and Tunis, an ordinary day's journey (exclusive of the time taken up in making observations) rarely exceeded eight or nine hours. Our constant practice was to rise at break of day, set forward with the sun, and travel till the middle of the afternoon, at which time we began to look out for the encampments of the Arabs; who, to prevent such parties as ours from living upon them, take care to pitch in places the least conspicuous. And indeed sometimes, unless we discovered the smoak of their tents, observed some of their flocks, or heard the barking of their dogs, it was with difficulty (if at all) that we were able to find them.

In Barbary, where the Arabs are under subjection, I rarely carried along with me more than three spahees, and a servant, all of us well armed; though we were sometimes obliged to augment our numbers, particularly when we travelled among the independent Arabs, upon the frontiers of the neighbouring kingdoms, or where two contiguous clans are at variance: These, and such like harammes, as the free-booters are usually called, must be, I conjecture, what the Europeans mean by wild Arabs, notwithstanding there is no such name peculiar to any one body of them, they being all of them the same, and have all the like inclinations (whenever a proper opportunity or temptation offers itself) of robbing, stripping, and murdering, not strangers only, but also one another.

However, to prevent, as much as possible, the falling into their hands, the greatest safety for a traveller at all times, is to be disguised in the

habit of the country, or dressed like one of his spahees. For the Arabs are very jealous and inquisitive, suspecting all strangers to be spies, and sent to take a survey of those lands, which at one time or other (as they have been taught to fear) are to be restored to the christians.

The horses and camels of these countries keep generally one constant pace; the latter at the rate of two miles and an half, the other of three geographical miles an hour.

Captain URING gives the following description of Carthage and Tunis, viz.

I walked almost all over the ground where the Carthage city of Carthage formerly stood; but there is hardly any appearance that there ever had been a town there, the grass covering the stones almost every where. I was shewed a place where it is said their citadel stood, and another, which I was told, was the place of arms: We saw there pieces of walls lying flat upon the ground; and in that part which is supposed to be the middle of the city, there is a range of 16 cisterns for holding water, which had been all arched over with brick, and a broad walk on each side of them; the arches remained whole over several of them, and three or four of the cisterns were not the least decayed, and had then water in them, tho' the greatest part were ruined. These cisterns were, no doubt, made to hold a store of water, for supplying the inhabitants in case of a siege, and would hold many thousand tons. They had, no doubt, many more besides these for that purpose; they having no fresh water in the town, but what was conveyed thither by an aqueduct near thirty miles out of the country, which was about thirty, or thirty-five foot high; part of which for near one hundred and fifty foot in length, I saw standing, and all the rest was fallen down, where the ruins are to be seen in several places: It was built of a hard stone, something like flint, tho' of another kind. Not far from Cape Carthage the bey has a house and gardens, near which is a well with water; but it being brackish, it was not fit to drink, though it served to water the gardens. The city of Carthage stood upon a point or cape, moderately high, and the sea running on both sides of it, formed almost a peninsula.

The city of Tunis stands at the head of a large lake or lagoon, ten or fifteen miles from the Galleta castles, and about eighteen from the place where Carthage stood. It is about five or six miles round, and is encompassed by a high strong wall, and a dry ditch: In the upper part of the town, on a rising ground, is a castle or citadel, the walls of which are also very high, but has no ditch. The city is watered by a rill rising in a neighbouring mountain, which is conveyed to the town over a deep valley by an aqueduct. There are cannon mounted on the walls; but the fortification is not regular, nor built after the manner of those in Europe; it stands upon a large space of ground, and the strength of it seems to consist only in the height of the walls.

The streets of the city are very irregular, tho' there are in it a great many lofty and well-built houses, which have but few windows on the outside. They have square courts within, which are paved with tile, having galleries supported with pillars two or three stories high, and are contrived for coolness, where the families regale themselves, and take the fresh air.

The

The city is very populous, as we may judge by the number of harlots, which I was assured were not less than fifteen thousand registered. The bey's revenues are chiefly from olive-trees; the owners of which pay a tax of four aspers a year for each tree. They pay also a certain rate for their dates, and other fruits; and there are likewise duties upon all goods imported. Their chief manufacture are caps, which they export in great quantities to Turkey: they export some oil, cotton-yarn, pot-ash and sponges, some corn and beans.

Cuscufu.

Their cuscufu, which is one of their general and best dishes, is made thus: they put flour into a large flat pan, and sprinkle it with water, and taking great pains to shake it to and fro over a slow fire, which separates it, and rolls it into small balls, about the bigness of pigeon shot; when they have prepared a sufficient quantity of it, they put it into a sort of a cullender, which they set over the top of the pot where their flesh is boiling, and it receives the steam thereof, and moistens it; and when their meat is boiled enough, they put it all together into a dish, and eat it.

The ruins of an amphitheatre.

We went to see an ancient building, fifty miles south of Tunis, said to be erected either by the Romans or Carthaginians: we found four fifths of it standing, but it was decayed in several places. It stood upon a large plain, and had been a very fine and large amphitheatre, built with square stones. When it was entire, it was of an oval form, in three circular ranges or walks, arched clear round, and was three stories high, and had about sixty-five windows in every story, with galleries on the inside, which in all would contain at least twenty-five or thirty thousand spectators. When we had viewed the amphitheatre within-side and without, and sufficiently satisfied our curiosity, we ranged about the village, which was built out of its ruins. Several of the inhabitants

invited us into their houses, where we saw their women, who, contrary to the custom of Mahometans, met us, and seemed highly pleased with our company; they were not satisfied with barely seeing our faces, but desired us to unbutton our garments, and surveyed our naked arms and breasts: the men, who stood by, seemed as much delighted as the women; whether they were wives or single women, was unknown to us; but notwithstanding their curiosity, they seemed very modest. The inhabitants of the village were all of the Moorish race, being of the colour of Mulattoes; 'tis very probable they had never before seen any men so white as we were.

In this journey I made what observations I could of the country thro' which I passed; most of the land was a hard, reddish, sandy soil, which bore no grass, and very few shrubs. I do not remember, for ten or fifteen miles together, to have seen any creature, not so much as an insect. Within a few miles of the amphitheatre, there were some shrubs, without any leaves, scattered over a large plain, with a herd of goats browsing upon them; and about midway in our journey, we passed thro' a tolerable village, of about two hundred houses, which was much the best that I saw in the country, where there was a linen manufactory, most of the inhabitants being either spinners or weavers. It was surrounded with olive-trees, and had some small gardens, from whence we had both grapes and figs. We passed by several small sorry villages, not worth naming; but where we saw a green spot, there were also some huts and olive-trees, the greatest part of the country being barren; which I was much surprised to see, this being the ancient Numidia, from whence, history tells us, came such numbers of people; and that they should chuse such a country to live in, or how they could subsist, is very unaccountable.

Soil of Tunis.

THE INTRODUCTION To the HISTORY of AMERICA.

THE continent of America, 'tis probable, extends as far as the Pole on the north, and is bounded by the Atlantic-ocean, which divides it from Europe and Africa on the east; by another anonymous ocean on the south; and by the vast Pacific-ocean, usually called the South-sea, which separates it from Asia, on the west.

The length of America, if we extend it but from 80 degrees north (our furthest discoveries that way) to Cape-Horn, which lies in 57 and a half south, takes up 137 and a half degrees of latitude; which reckoning 60 miles to a degree, as mariners usually do, makes the length of America to be 8250 miles; and, if we allow 70 Miles to a degree, which comes near the truth, the length of America is 9625 miles, but the breadth is not answerable to the length; for what is discovered of North-America, which is of a triangular figure, is not so broad in any place.

The north and south parts are joined by the narrow isthmus of Darien, which divides the North from the South-sea, and is about 60 miles over in the narrowest place, viz. between Porto-Bello and Panama.

But when we thus divide America into North and South, it must not be understood, that the Equator makes this division; for what is denominated South-America, extends 12 degrees odd minutes to the northward of the Equator: And indeed we follow the grand division made by the Spaniards of their American dominions into the Viceroyalties of Mexico and Peru, which are separated by a line drawn from Borto-Bello on the North-sea, to Panama on the South-sea, the province of Terra-firma Proper (more known by the name of Darien) in which Porto-Bello and Panama are comprehended, being reckoned part of Peru or South-America, and the province of Paragua, contiguous to Terra-firma Proper, the most southern province of Mexico, or North-America: So that those maps, which divide North from South-America, by the gulph or river of Darien, and a line drawn from thence to the South-sea, are not relied on; for they place the province of Terra-firma Proper in North-America, whereas, in reality, it belongs to the Viceroyalty of Peru in South-America.

The Spaniards, by virtue of the bull or grant the Pope made them, of all discoveries to the west-

ward of the Azores, looked upon themselves to be entitled to all America formerly, insisting that all other nations were thereby absolutely excluded from any share in that part of the world; and on their arrival in North-America, which went under the name of Mexico, and another of the Inca's in the South, stiled the empire of Peru, they gave the name of Mexico to their northern conquests, and the name of Peru to the southern conquests.

It may be proper also to take notice here, that the sea which separates North-America from Europe, is generally about four or five thousand miles broad; the sea, which separates South-America from Africa, about two or three thousand miles over; and the sea, which separates America from Asia, generally about eight or nine thousand miles over. Having thus described the situation and extent of America, I proceed to enquire into the notions the ancients entertained of the form of the heavens and the earth, and of another continent to the westward of ours.

The ancients generally imagined, that the heavens constituted but one hemisphere, and that the earth was flat and round as a table, serving as a basis or foundation to support the fine vaulted roof over their heads.

The ancients opinion of the form of the heavens and the earth.

Even the Fathers laughed at those Philosophers, who believed the earth to be globular, and surrounded by the heavens equally on every side; and nothing was more exploded by them, than the notion of Antipodes. Is it possible, says LACTANTIUS, that any can be so credulous to believe there are a people, or nation, walking with their feet upwards, and their heads downwards; that trees and corn grow downwards; or that rain, snow and hail ascend to the earth?

And St. AUSTIN says, "We are not to believe what some affirm, that there are Antipodes which inhabit that part of the earth under us; a region, where the sun rises when it sets with us, and the feet of the people are opposite to ours; or that the earth is in the midst of the world, encompassed on all parts, and covered equally with the heavens."

And speaking of the notion some entertained of another continent, he says, "It is not agreeable to reason or good sense, to affirm, that men may pass over so vast an ocean as the Atlantic, from this continent to a new-found world, or that there

"there are inhabitants there, all men being descended from the first man ADAM."

And even ARISTOTLE, and those of the ancients, who believed both the heavens and the earth to be globular, and that there might be another continent; yet look'd upon it to be divided from us by such vast seas, that we could have no communication with it; and that all about the Equator, whether in this, or any other continent, was not habitable, on account of the excessive heats. It seems the ancients in general, were so far from knowing any thing of America, that they knew nothing even of Africa, or the East-Indies, to the southward of the Equator, though they must be acquainted with some parts of Africa and Asia, which lay within the Torrid Zone, on this side of the Equator; for the Upper Ethiopia lies within the Torrid Zone, as does great part of the East-Indies: And Sumatra (which is supposed to be Tabrobane, or Tarshish of the ancients, and whither the fleets of SOLOMON and HIRAM sailed for gold) lies under the Equator; and yet we find PLINY of ARISTOTLE's opinion, and affirming, "That the middle region of the world, where the sun continually runs his course, is parch'd and burnt up with fire." It is exceeding strange, that when men pass'd to the farthest bounds of Africa, beyond the Equator, none ever returned to inform the more northern regions, that those parts were habitable; and that the Greeks and Romans knew no more of Africa, to the southward of the Equator, than they did of the continent of America.

The ancients never sailed round Africa;

The same PLINY, indeed, reports, that HANNO the Carthaginian, sailed round Africa; but this evidently contradicts what he said before, that the countries under the Equator were not habitable. And, indeed, that opinion, that HANNO, or any of the ancients surrounded Africa, must be false, because they would not only then have known that those countries were habitable, but they must have known another hemisphere, have seen a new set of stars, and have seen the sun to the northward of them at noon-day, which were such remarkable discoveries, that if they had been once made, could never have been forgotten; and yet we meet with no mention of these particulars, either in Greek or Roman writers, or the least description of any people or country in Africa, south of the Equator. It seems superfluous therefore to add, that it was scarce possible the ancients could pass these great seas to the southward of the Cape of Good-Hope, in such galleys, and low-built vessels, as were then in use; especially since there are not any harbours, or places of security, about the Cape, that could preserve them from shipwreck, in those seas, which are very seldom free from storms; such as no galleys can live in.

Or knew any thing of America.

But to proceed; SENECA, in his *Medæa*, seems to prophesy, that another world should be discovered beyond the Atlantic-ocean, to the south-west; and this was also the opinion of other great men among the ancients, founded upon that disproportion there appeared to be between the land and water then discover'd. But this shews there was no such continent discovered at that time.

PLATO indeed speaks of a vast island beyond the Atlantic-ocean, equal in dimensions to Asia and Africa, and of several intermediate islands, which render'd the passage short and easy thither; but then he tells us, those islands were long since sunk, and covered with the ocean. If we take

his testimony therefore entire, there was no such land as America known in his days: And indeed his whole relation appears to be no more than poetical fiction; and PLATO's Atlantic-islands, to have no other existence than MORÉ's Utopia.

I proceed, in the next place, to examine the several conjectures concerning the time and manner of peopling America; for all that we know certainly is, that it has been planted many hundred, or rather thousand of years, from the numbers of people found there in the beginning of the fifteenth century.

An enquiry how America was first peopled.

I make no doubt, but that all men, according to the scriptures, descended from ADAM; and had we not the authority of sacred writ for this opinion, yet the resemblance there is between the people of that continent and this, and the religion and customs of the one and the other, demonstrate, that we proceeded from one common stock.

The stature, form and features of the Americans, do not differ from ours; the frame and turn of their minds are the same; they adored the same almighty Being, built temples, and sacrificed to him, as the ancients did; and they retained a tradition, that their continent was gradually peopled from a small number. They used arms of the same form also as the men of our continent did, viz. swords, spears, lances, bows, arrows, slings, and darts: All the difference was, that as they had lost the use of iron, their wooden swords were edg'd with sharp flints, and their spears, arrows and darts pointed with the bones of fish, or other animals. However, it is highly probable, that those countries were peopled very early, because they seem'd strangers to almost every art and science, when the Spaniards came amongst them; and for the same reason, we may be assured no adventurers arrived there in these latter ages, before COLUMBUS.

We know certainly, that part of the western coasts of Africa, and the Canary-islands, over-against, and not far from America, were planted by the Carthaginians, four or five hundred years before the incarnation of our Saviour; that some of their ships carried a thousand souls; and, 'tis probable, when they sent ships to the Canary or Cape Verd islands, to plant colonies, they were crowded with men, women, and children, as ours are, that we send to the plantations at this day. Is it strange then, that some of these ships should be driven to America, by the winds which constantly blow from the eastward, when it is not more than three weeks sail from Africa, or the Canaries, to that continent? If such planters were once driven from their intended port, far to the westward, and they found it impossible for them to return, the wind sitting always directly against them; what could be more rational than to run before the wind, in hopes of making some other land; and, as we suppose them victualled in order to plant and recruit some colony, such adventurers could not have less than three weeks, or a month's provision on board, which was sufficient to support them in such a voyage, where they could suffer no hardships from the climate, which was suitable to African constitutions.

Probably men first arrived there in Carthaginian ships.

If it be demanded how it happened, that no shipping was ever driven thither since the Carthaginian state flourished, it may very truly be answer'd, that no people have ever navigated those seas, since the Carthaginians, 'till very lately; all the discoveries and plantations of the Carthaginians upon

upon the west coast of Africa, and in the Canaries, were lost and ruin'd upon the conquest the Romans made of Carthage; neither did the Romans ever revive that branch of their navigation.

Even the Canaries, that were certainly planted by the Carthaginians, remained unknown for many ages after that state became subject to the Romans; nor did the natives know from whence to derive their original, when the Spaniards made new discovery of those islands in the 15th century.

Another circumstance to induce us to believe they are descended from the Phenicians or Carthaginians, is their imitating them in such of their religious rites, as nature or reason could never have taught them. As to their worshipping the Sun and Moon, this was common indeed to almost all other nations; but their offering human sacrifices seems to have been almost peculiar to those nations. It is observable also, that the Americans adored mountains, woods, seas and rivers, and almost every animal, as the Africans once did, and some of them actually do at this day. But further, if we suppose that America was first peopled by sea, it could be by no other nation but the Phenicians or Carthaginians, no other people having fleets and colonies on the western coasts of Europe and Africa in those early ages.

For as the peopling America by fleets or colonies from China, or any other part of Asia; in the first place, the breadth of the Pacific-ocean, or South-sea, which separates from America, is not less than eight or nine thousand miles, twice the breadth of the Atlantic-ocean, which lies between us and America. 2dly, The winds are always contrary within the latitude of 30 north and south, where the winds constantly blow from east to west, and in higher latitudes are variable. 3dly, It is well known that the Chinese, the only people furnished with shipping in the eastern parts of the world, never affected to make long voyages, or visit remote regions; their navigation was always confin'd to their own seas, and they either knew nothing of distant countries, or despised them too much to take any pains to come at them; and it is very unlikely, that any of their ships should be driven by accident to America, because the sea, that separates Asia from America, is so very wide, and the winds always against those that would sail from thence to America, within the latitude of 30 north and south; and both Japan and California, which lie the nearest each other, of any lands we know in Asia and America, lie in and about the latitude of 30 north.

As for that notion, that the people of the continent went north about to America by land, it scarce deserves mentioning; for we know by our late voyages to the north-east, and to the north-west, that the sea extends more than eighty degrees to the northward; and consequently, if America was peopled either of those ways, those who went thither must travel within 10 degrees of the Pole, which parts are neither passable nor habitable; and if there be any other land which unites their continent to ours, in a less rigorous climate, it must be between the land of Jesso, or Yedso, to the northward of Japan and California, but these are about 80 degrees asunder, and no one has pretended to have discovered any land between them, unless some merry map-makers, who separate them only by the imaginary straight of Anian,

which they make to be little broader than the straight between Dover and Calais, tho' we know certainly, that the land of Jesso and California are several thousand miles asunder, and no man pretends to have discovered any country between the one and the other.

To the southward also, our mariners have failed to near seventy degrees; and consequently, if the two continents are united in that part of the globe, it must be in too rigorous a latitude for men to travel that way by land.

But should it be admitted, that there was a passage by land, either near the north or south Pole, from the old to the new world, it is strange, that no man ever returned again that way from America to us. The passage is probably as easy from thence by land as it is to it; and if it be objected, that the same argument held good against those who suppose America was peopled from hence by sea, this is evidently a mistake, because the winds always sit fair for sailing from Africa to America, and contrary to those that would return from thence. Besides, as it appears the Americans had lost the art of ship-building and navigation, when the Spaniards came amongst them, and never knew the use of the loadstone, there was no possibility they should ever return, or that we should have any knowledge of them. Had they been furnished with shipping, as they were not, it would not have been possible for them to have found the way back to Africa; for, 'till the use of the loadstone, the North or South-seas were very little navigated, if at all: And as well as we understand navigation at this day, we find it very difficult to come back from America without sailing pretty far north or south, where we meet with variable winds, and for the most part westerly; if we were obliged to sail within the Tropics, or indeed within the latitude of 30, our voyages from America would be very long, and very difficult, even to us.

But there remains still a very formidable objection against the peopling of America by the Phenicians or Carthaginians; and that is, that they were destitute of almost all arts and sciences; nay, that they knew nothing of ship-building, or the use of iron, which they must have been acquainted with, if they had derived their original from the Carthaginians. To this it may be answered, that those who were first driven to the coasts of America, might be acquainted with most of the arts the Carthaginians were masters of; but as the first generation was probably worn out, before any iron mines were discovered, and it is possible, that none of those that arrived there might understand the digging, melting, or separating of metals, if such mines had been discovered; it is no wonder, that in an age or two, the use of iron was forgot, and consequently ship-building, and all other manufactures that depended on the use of iron, tho' the arts of spinning and weaving, for which the Tyrians and Phenicians were famous, were retained.

Another circumstance which inclines us to think, that America was peopled by the Africans by sea, and not by land, is, that we found it better peopled in the middle between the Tropics, than it was towards the north or south; whereas, in our continent, the most populous places are, and the most considerable empires have been, within the Temperate Zone, to the northward of the Tropic of Cancer.

Objections against the peopling of America by the Carthaginians answered.

Farther arguments that the Americans derive their original from the Africans.

Had

Had the Europeans or Asiatics gone north about to America, they would probably have first planted those countries that lay nearest the north, or at least those within the Temperate Zone, as most agreeable to them, and suitable to their constitutions; and not have chosen to fix the two great empires of Mexico and Peru within the Torrid Zone, and in a manner desert the rest of the country. It is much more likely therefore, that the inhabitants of Peru and Mexico should derive themselves from the Africans, than from any northern people whatever; because the climate of Peru and Mexico, as has been observed, resembles that of Africa, and is much more agreeable to an African constitution, than to those of more northern latitudes.

As neither the Romans, or any other Europeans, made any attempts to settle colonies in Africa, near, much less beyond, the Equator; it is not to be supposed, that the Americans would have fixed themselves altogether within the Torrid Zone, if they had come from some cold northern clime, like that of Sweden or Muscovy. This therefore is a very strong argument with me, that the first men, that passed into America, went from scorch'd Africa by sea, and not from the frozen countries about either Pole by land.

The objection that animals could not pass by sea considered.

Still I apprehend it may be objected, that tho' men might pass first to America in ships, it can never be supposed that every species of beasts, birds and insects, passed thither the same way. To which I answer, it is equally improbable they should travel thither by the extremities of the north or south Pole; for it cannot be supposed, that such animals as were bred in hot climates, would ever wander into frozen regions; nay, 'tis a question, whether any of them would live in a cold climate, if they were carried thither, and consequently their passage that way must be miraculous, if ever they affected it: Besides, it appears, that many of the hardiest animals, and the fittest for such journeys, such as oxen, mules, and horses, were none of them to be found there, when the Spaniards discovered America; and if other animals went that way, it is strange that horses and mules, the best made for such expeditions of any creatures we know, should none of them have attempted this passage as well as the rest.

On the other hand, if there was such a passage by the extremities of the north and south, how comes it to pass, that several species of animals we find in America, never appeared in our continent: If these at first passed from us to them, how comes it that none of the same species are left here. If any one will be so good to inform me how these animals came into America, I will inform him how the rest came thither. Since the difficulty therefore remains equal, whether we suppose animals passed from the one continent to the other, by sea or land, our being ignorant how the Americans came to have some of the same animals we have, can be no objection to the notion that America was peopled by sea; nay, it seems to strengthen this opinion, that men never passed from this continent to that by the extremities of north and south, inasmuch as neither horses or mules, and some of the rest of the hardiest animals we have, and the best made for travelling, were not found there; for if men could pass that way, it is to be supposed, that those beasts would not have passed that way too; or rather that men would not have made use of

them to ride on, or to carry their baggage, and their wives and children with them.

If it be said, that it was by divine impulse, that the animals of this continent wandered to the other; I answer, If we must resort to a miracle, or supernatural means, to solve the difficulty, we may as well suppose a new creation; for that would be but a miracle. That men might and did pass to America in shipping, has been in a manner demonstrated; how beasts and other animals came thither, I must confess remains a difficulty; for tho' some might pass in ships, we cannot suppose all of them did. But still this does not weaken the opinion, that America was peopled by fleets or single ships of the Carthaginians from the western coasts of Africa; because there are equal, or greater difficulties to encounter, if we suppose men and animals went thither, either by or near the north or south Poles; and there are no other possible ways of their passing to America by land, unless we suppose with PLATO, that some great islands are sunk, that lay between us and America, of which we should certainly have had some other evidence to corroborate his testimony, if there were any such: And indeed from the whole tenor of that essay, it appears, that PLATO was speaking of some imaginary country that never had a real existence. I proceed, in the next place, to give an account of our modern discoveries to the west-ward.

CHRISTOPHER COLUMBUS, or COLON, was a native of some obscure village in the state of Genoa, his father and several of his ancestors, sea-faring people; not in such mean circumstances however, but COLUMBUS was put to school at Pavia, where he was taught arithmetick, navigation, astronomy, drawing and painting, at least sufficient to draw a landskip, or describe the situation of a place: From school, he went to sea, and was in several engagements with the Turks, and Venetians, and other nations; in one of which, the ship he was in, being burnt near the coast of Portugal, he had the good fortune to escape to shore upon a plank, and coming to Lisbon, found several of his countrymen and acquaintance settled in that city, with whom he resided some time, and afterwards made several voyages with the Portuguese to the north and south, and particularly to Guinea on the coast of Africa. While he was in the service of the Portuguese, he married a wife of some quality and fortune, whose father had been concerned in several naval enterprises, and was Governor of Porto Sancto, one of the Madera islands, by which means COLUMBUS came into the possession of his father-in-law's charts, maps, and journals, which gave him the first hint, 'tis said, of making discoveries to the westward: and here it may be proper to describe the person of this great Discoverer.

His son relates, that he was moderately tall and long-visaged; his complexion a good red and white; that he had light eyes; his cheeks were somewhat full, but neither too fat nor too lean; that in his youth, he had fair hair, which turned grey before he was thirty years of age; that he was moderate in eating and drinking, affected a plain modest garb or dress; that he was naturally grave, but affable to strangers, and pleasant frequently among his domesticks; strict and devout in religious matters; and, tho' a sea-man, was never heard to swear or curse; that he applied himself chiefly to the study of cosmography, astronomy and geometry; and from his youth,

appeared to have more than ordinary passion to understand the state of all countries on the face of the globe, and to make new discoveries; which probably was his reason for settling at Lisbon, no nation having push'd their discoveries further than the Portuguese at that time. And here he was perpetually drawing maps and charts, in which he received great encouragement from that enterprising people.

COLUMBUS, 'tis said, had three inducements to believe, that there lay a continent in the Atlantic-ocean, not far to the westward, and that this continent was contiguous to, or rather part of the East-Indies (under which name was then comprehended even China, and all the countries to the eastward of the Ganges.)

1. He observed, that MARINUS had placed the East-Indies 15 hours to the eastward of the west coast of Africa and Europe (which was however a very gross mistake;) and that as there could remain but 9 hours more between this continent and that, in sailing westward, supposing that space to be all sea, which he hoped was a great part of it land, he concluded it would be no very long voyage to the East-Indies by the west: and this, by the way, is the reason why America was called the Indies, because the first discoverer proposed to sail to the East-Indies, through the Atlantic or western ocean; and when the continent of America was first found out, they looked upon it to be part of the continent of India, 'till they discovered that the South-sea, or Pacific-ocean, lay between America and India.

2. A second inducement for his attempting these discoveries westward, was the opinions of several learned men, both ancients and moderns, that there was another continent beyond the western ocean, either very near or contiguous to the East-Indies, and that it was not very far distant from ours: but no man confirmed COLUMBUS more in the opinion of a continent that lay to the westward, than Signor PAUL, a Physician of Florence, with whom he held a constant correspondence while he resided at Lisbon. This Physician, in one of his letters, relates how rich and populous a country China or Cathay was, as they had learnt by some Ambassadors who came from thence to the Pope, and from Merchants that had traded thither by land; that it was full of great towns, yielded gold, precious stones, and merchandize of incredible value; and assures him, that the voyage thither, through the Atlantic ocean, by the west, could not be farther than the voyage from Portugal to Guinea, which (tho' it was a very gross error) gave COLUMBUS great encouragement to attempt that voyage. In short, he computes the distance between Lisbon and China, sailing westward, to be about five thousand miles, in which he was out two thirds: However, so far he was accidentally in the right, that the space between ours and the next continent to the westward, was much thereabouts, and gave COLUMBUS a notion that he should meet with land five or six thousand miles to the westward.

3. A third inducement to this Great man's undertaking this discovery, was the reports of some sea-faring men, who had used those western seas. A Portuguese Pilot, named MARTIN VICENTE, informed COLUMBUS, that being 450 leagues to the westward of Cape St. Vincent, he took up a piece of carv'd wood, which he guess'd came from some island to the westward, the wind having long sat that way: And PETER COREA, who married his wife's sister, assured him, that he saw a

piece of carv'd wood, drove by the westerly winds on Porto Sancto, one of the Madera islands; and that there had been thick canes driven upon those shores, such as did not grow in this part of the world; and when the west winds blew, Pines were frequently driven on the Azores or western islands: Others that had sailed to the westward of the Azores some hundreds of leagues, affirmed they had seen an island in those seas. But his principal encouragement to this undertaking, was, according to some, the sea-charts and journals of a Pilot that died at his house in Lisbon, that appeared to have discovered some land far to the westward; and indeed by his persisting so long in the resolution of sailing in search of a country beyond the Atlantic-ocean, and applying to so many Princes and States for their assistance, and his stipulating for no other pay or reward, than the government of the lands and seas he should discover, one would be inclined to think, COLUMBUS had some certainty, or at least a very high probability, of his succeeding in this attempt; otherwise for a man to venture to sail so many thousand miles upon an ocean, 'till then esteemed boundless, must have been deem'd rather rash temerity, than wisdom. However, his son rejects this story of the Pilot's dying at his house, and leaving him those intimations of a country he had discovered to the westward, as derogatory to his father's honour, who he insists, was the first discoverer of that new world; and no doubt he was the first that discovered it to any purpose, so as to plant colonies, and make settlements there, in these latter ages, which is an honour that might satisfy his descendants. One would think, altho' the discovery was made at first by accident; and indeed, as those seas about the Azores, the Canaries, the Cape Verd islands, and the coast of Guinea, were then constantly navigated by the Portuguese and Spaniards, it is not improbable, that some one of their ships should have been driven a fortnight or three weeks sail to the westward of their design'd course, and discover'd either the islands or continent of America, as 'tis said this Pilot did, who died at the house of CHRISTOPHER COLUMBUS in Lisbon.

But whatever were the Admiral's motives to this undertaking, he chose, it seems, rather to apply to sovereign Princes and States for their assistance, than invite private Adventurers into this project; foreseeing, that if he should himself, or in partnership with others, arrive at the rich countries he proposed to visit, the Prince, whose subjects they were, would claim the sovereignty of such places, and dispose of them to whom he saw fit; or other Princes might fit out fleets after he had found the way to this new world, and deprive him and his fellow-adventurers of the advantage of their discovery. It was extremely prudent therefore in him, to endeavour to engage some sovereign Prince in the design; and, since he could not hope to obtain the dominion of what he should discover, to stipulate for the second place in those happy regions he proposed to come to (viz.) the post of Vice-roy by land and sea, which we find he always insisted on, and obtain'd at length a patent for. He might, no doubt, have been much sooner fitted out by private owners; but then their possession possibly, when they had succeeded in the discovery, would have been more precarious, than their voyage to this new world was at first thought to be. But to proceed: COLUMBUS, having sailed a great while in the Portuguese

Portuguese service, married and settled at Lisbon, and advanced his fortune there, first proposed the finding out a way to the East-Indies by the Western ocean, to king JOHN of Portugal; and gave such substantial reasons for the attempt, that the King seemed to be convinc'd the thing was feasible, tho' he did not approve the terms our Adventurer proposed: Therefore while the affair was negotiating, King JOHN, 'tis said, privately dispatch'd a ship to the westward, with orders to find out if there were any such lands in those seas as COLUMBUS supposed. But whether the Commander wanted courage or capacity for such an undertaking, it seems he returned without meeting any thing to his purpose, and laugh'd at the conjectures of COLUMBUS; at which he was so incensed, that he left Lisbon, and went to Spain, dispatching at the same time his brother BARTHOLOMEW COLUMBUS to HENRY VII. King of England, with charts and maps, that might illustrate his design: but his brother being taken by Pirates, and not making the dispatch that was expected, COLUMBUS opened his design to their Majesties FERDINAND and ISABELLA, King and Queen of Castile and Arragon: And tho' his brother BARTHOLOMEW afterwards reached England, and his proposals were accepted by King HENRY VII. yet COLUMBUS having concluded an agreement with the Court of Spain before he was advertised of his brother's success, England lost the honour and profit of this important discovery.

This affair, it seems was many years negotiating; and probably COLUMBUS had meditated upon it, and weighed the difficulties and hazards of the undertaking, a great while before he communicated it to any man; for he is acknowledg'd by all to have been a man of prudence and temper; and possibly, if he had not obtained some reputation for his knowledge in cosmography and navigation, the Courts he applied himself to, had treated him no better than they usually do a common projector; whereas we find he tells their Majesties FERDINAND and ISABELLA, King and Queen of Castile and Arragon, in one of his Letters, "I have refused to take up with France, England and Portugal, as appears by the letters I have received from those Princes, and which your Highnesses may see in the hands of Dr. VILLALAN, that I may serve your Highnesses."

It appears from our own histories, that his brother BARTHOLOMEW was at the Court of England in the year 1480, and that he had before treated with the King of Portugal, if not with Spain; and I'm apt to think that his proposals were rejected by the Spanish Court at first, which occasioned his applying to England and France; but Queen ISABELLA encouraging the scheme, by the advice of JOHN PEREZ her Confessor, about the year 1484, he seemed from that time to have applied himself wholly to the Spanish Court. However, FERDINAND and ISABELLA being yet engag'd in the wars with the Moors in Spain, he was still delayed 'till the year 1492, when a supply of money was provided, and COLUMBUS entrusted with the equipping and fitting out three small ships for the expedition, in the harbour of Palos. He also obtained a grant from their Majesties to be Admiral of the Western seas, with the same privileges as the Admirals of Castile and Leon enjoyed; that all civil employments, as well as governments in the continent, or world to be discovered, should be wholly at his disposal; and besides the revenue of the posts of Admiral and Vice-roy, he should enjoy

a tenth of all the profits arising by future conquests in those yet unknown lands.

And now COLUMBUS, whom for the future, in imitation of his son, I shall stile admiral, having equipp'd and victuall'd his three ships, of which the chief, called the *St. Mary*, he commanded in person, and the other two were commanded by the Captains MARTIN ALVAZ PIZON and VINCENT PIZON, two brothers. This little squadron, mann'd only with 90 men, and consequently none of the vessels of any great burthen, set sail from Palos for the Canaries, the 3d of August 1492, and arrived at those islands the 12th. One of the ships having received some damage in this passage, the Admiral remained there to refit and take in fresh provisions, 'till the first of September, when he set sail again upon his grand design. He had not sailed a fortnight in this wide ocean to the westward before his men began to murmur at the enterprize, imagining they were sent to certain destruction; for they observed the wind constantly far from east to west, and apprehended there would be no possibility of returning, if they mis'd of the land they were made to expect: But on the 19th, observing some birds fly over their ships, and on the 22d, abundance of weeds driving by them, they began to be better satisfied, and concluded they were not far from land.

However continuing their course still several days farther westward, and meeting with no land, the seamen mutinied to that degree, that they had almost agreed to throw their Admiral over-board, and return home without him; when fortunately for him they saw more birds, weeds, pieces of board, canes, and a shrub with the berries upon it also swim by them, which made them conjecture there must be some islands thereabouts; and indeed had the Admiral inclined a little more to the southward, he would have made either the Caribbee islands, Hispaniola, or Cuba, some time before; for these lay now on the left or larboard side of him; some of them astern or rather on his larboard quarter: For the first lands he made were the Lucayo's or Bahama islands, near the coast of Florida. It was on Thursday, the 11th of October, 1492, about 10 at night, that the Admiral first discover'd a light upon the islands of Guanahania, or St. Salvator, as the Admiral named it, in consideration that the sight of it delivered both him and his men from their fears of perishing. (This island lies 60 degrees west of the Canaries, in 25 degrees north latitude.) About two in the morning, the ship called the *Pinta*, the best sailer of the three, and which therefore usually kept a-head of the Admiral, gave the signal of land, which was first seen with the naked eye, when they were scarce two leagues from the shore, by RODERICK DE TRIANA, one of the common seamen on board the *Pinta*, who had not, however the reward that was promised to the first discoverer, it being adjudged that the Admiral was the first, because he saw a light on the island the night before.

The day appearing, the ships came to an anchor very near the island, which they computed to be about fifteen leagues in length, and found it to be populous, well planted, and watered with a great lake, but generally flat low land, without hills: The natives came down crouding to the shore, and seem'd astonish'd at the sight of the ships; and the Admiral believing there was no great danger to be apprehended from them, went on shore in his boat, with the royal standard, as did

Land first
discovered

the

the other two Captains in their boats, with their colours flying. They no sooner came on shore, but they kneeled down, and gave God thanks for their success, and kiss'd the ground (says the son of COLUMBUS) with tears of joy; after which, the Admiral stood up, and having rear'd the royal standard, called the island by the name of St. Salvator, taking possession of it in the name of their Catholick Majesties, with great solemnity; after which his people recognized him their admiral and Vice-roy, swore to obey him, and begg'd pardon for their perverse untractable behaviour during the voyage.

The Indians, in the mean time, stood gazing at the Spaniards, without attempting to oppose them, while they were thus taking possession of their country; and the Admiral ordered some strings of glass beads, caps and toys of small value, that made a glittering shew, to be distributed amongst the natives; at which they seem'd infinitely pleas'd, and immediately hung the beads about their necks, testifying, by all the signs imaginable, the value they set upon these presents. They were all perfectly naked, of a middle stature, and olive complexion, like those of the Canaries; their features just, only their foreheads of the largest; their eyes black as their hair, which was generally cut short above their ears, though others wore it long and tied up; some of them also had their bodies painted with a kind of vermilion, and others only painted their faces with it. The principal ornament about them was a thin gold plate, in the form of a crescent, which hung from the nose over the upper lip, and their arms were spears pointed with the bones of fish. When the Admiral returned to his ships, they followed him, some swimming, and others in their canoes, a vessel made out of the body of a tree, some of which will hold forty men, and others not more than two. When they came on board, they brought parrots and cotton-yarn, all the merchandize they had, to exchange for European trifles. They seem'd to set a value upon every piece of broken glass or earthen-ware, jumping into the sea, and swimming to shore with such trifles, with abundance of joy. But they admir'd nothing more than the swords, and bright arms of the Spaniards, being at that time perfectly ignorant of the use of iron.

The Admiral demanding, as well as he could by signs, from whence they had their gold plates, they pointed to the south and south-west, where they gave the Spaniards to understand, there were several large countries well replenish'd with that precious metal. The Admiral row'd in his boats about the island, to discover if there was any thing worth his settling there, being followed by the islanders every where, who seem'd to adore him and his people, as if they were come from heaven. From this island he sail'd to another of the Bahama islands, which he call'd St. Mary of Conception; and having view'd this, and several more of these islands, and found nothing to invite him to stay here, he took seven of the natives with him, and set sail for the great island of Cuba, which lies to the southward of the Bahama islands, arriving there on Sunday the 28th of October: Here they found some houses on the shore, but the people all fled up into the mountains on their approach: Whereupon two Spaniards and two Indians were sent up into the country to get intelligence; who, returning again the 5th of November, reported, they travel'd about twelve leagues within the land, that they

came to a town consisting of fifty large timber houses thatch'd, which contained about a thousand people, who came with great respect, and kiss'd the two Spaniards feet, giving them boil'd roots to eat: They entreated them also to remain in their country; and, when they saw them resolv'd to return to their ships, would accompany their guests thither; for the two Indians had inform'd the natives, there was no danger to be fear'd from the Spaniards. There were several other towns the two Spaniards reported they had seen in their journey, where they were hospitably entertained, and said the country was well planted with oaks, pines, palms, and cotton shrubs, and sown with Indian-corn; and they saw great variety of birds, but no beasts, except some few dumb dogs; that the Indians had great quantities of cotton-yarn in their houses, of which they made them hammocks to lie in, and aprons for their women. But it being demand'd of the natives, if they had any gold or precious stones, they pointed towards the east, intimating, that in a great country, call'd Bohio, and which the Spaniards afterwards nam'd Hispaniola, there was plenty of these things. Whereupon the Admiral determin'd to sail eastward, and taking twelve of the natives of Cuba, men, women and children with him, the husband of one of the women, and father of two of the children, who had been carried on board, came in a canoe to the ships, and desired he might also go with them, and not be parted from his wife and children: Whereupon the Admiral order'd him to be taken on board; and setting sail from Cuba the 5th of December, arriv'd the next day at the island of Bohio, about sixteen leagues to the eastward of Cuba; and here observing the country to resemble that of Spain in several particulars, he gave it the name of Hispaniola, which it retains to this day. Having sent some Indians and Spaniards on shore for intelligence, the people at first run away, and abandon'd their houses; but the Indians afterwards informing the natives, that there was nothing to be fear'd from the Spaniards, they returned, and shew'd them all imaginable respect, offering them such food as the country afforded. But what the Spaniards were most inquisitive after, was the place where they had their gold from, observing most of them to wear thin gold plates at their noses as in the other islands; and the people directing them further eastward, the Admiral made no long stay at the west end of the island, but sail'd again along the north coast, in search of that precious mineral. In which voyage, one of their Caciques, or petty Kings of the island, came on board the Admiral, with two or three hundred men, and they made mutual presents to each other: The Indians gave the Spaniards chiefly thin gold plates, and the Admiral return'd them beads, toys, carpets, and little bells. But a night or two afterwards, the Admiral's ship had the misfortune to run a-ground, and could not be got off; so that he had now but one ship left, MARTIN PINSON, Captain of the third, having deserted him at the island of Cuba, and sail'd for Hispaniola, in hopes of discovering the gold mines before the Admiral came thither. The Spaniards had the good fortune to save all their goods that were on board the ship that was cast away, by the assistance of the Cacique and his Indians, whom the Admiral commends as an inoffensive hospitable people, ready to accommodate strangers with every thing: He observes also,

also, that they then went perfectly naked, and were almost as white as the Europeans.

To compensate for the loss of his ship, the Indians brought the Admiral a pretty deal of gold, made into thin plates, or ornaments for the neck or face, and informed him he would meet with a great deal more at Ciboá, in the inland country: Whereupon the Admiral built a fort within a harbour, which he called the Port of the Nativity, with the timber of his wreck'd ship; and leaving in it a garrison of thirty-nine men, with cannon, small arms, ammunition and other necessities, he determined to return to Spain, and give an account of the success of his voyage.

The Admiral sailing further eastward the 4th of January, discovered, two days after, his other ship, commanded by MARTIN PINZON, who came on board him, pretending to have been forced away by stress of weather, which the Admiral did not then think fit to dispute with him, tho' he very well knew PINZON left him upon choice, there having been no bad weather to force him away. PINZON and his men, it seems, had got a pretty deal of gold by bartering with the natives of Hispaniola for trifles; but they agreed to conceal it from the Admiral, on the Captain's having given one half of it among his crew.

The Admiral sending seven of his men on shore again, near the east end of Hispaniola, they met with a stouter race of Indians, about fifty-five in number, arm'd with bows, arrows, and great clubs, but perfectly naked, only their heads adorned with a sort of coronets of beautiful feathers, and their faces painted black, red, or white; their bows were made of yew, and their arrows of a small cane, pointed with a sharp fish's bone: And thus arm'd, appearing ready to fall upon the Spaniards, the latter fir'd their guns, and wounded two or three of them; whereupon the rest of the Indians fled and dispersed. This place COLUMBUS named the Bay or Gulph of Arrows, from the arms of the natives; and here he relates he met with a great deal of cotton and long-pepper.

The admiral departed from the Gulph of Arrows (called Samana by the Indians) towards Spain, the 16th of January, and meeting with a storm the 14th of February, he lost the company of the other ship, commanded by MARTIN PINZON, about 150 leagues west of the Azores: They all expected to have perished in this storm, and went to their prayers; after which they cast lots which of them should go on pilgrimage to our lady of Guadalupe, if they escaped, which fell upon the Admiral himself. Then they drew again, which of them should go to the lady of Loretto in Italy, on their arrival in Europe, which fell to the share of PETER DE VILLA, a mariner of Port St. Mary's; and the storm still increasing, they all made a vow to go bare-foot in their shirts at their landing, to some church of our lady's, and every one made private vows besides for himself. In the account COLUMBUS gave to their Catholick Majesties of this storm, he says, "I had been less concerned at the tempest, had I alone been in danger, for I know I owe my life to the supreme CREATOR; and I have been at other times so near death, that very little was wanting to compleat it. But what infinitely grieved me was, that God was pleased to frustrate this enterprize, intended for the propagation of the Christian religion, and the increase of your Majesties dominions; and what added to my grief, was, the loss of those men, who had so bravely ventured their

lives with me: Nor was it the least of my afflictions, that I had left two sons at school at Cordoua, destitute of friends in a strange country; and it could not be known I had done any service which might incline your Highnesses to remember them: And tho', on the one side, I comforted myself with the belief that God would not permit a thing, which was so much for the advantage of his church, to be left imperfect, when I had, with such application and labour, almost brought it to perfection; yet, on the other hand, I was afraid I was far from meriting so great an honour. In this perplexity, I meditated on your Highnesses good fortune, and considered, that though I were dead, and the ship lost, you might some way reap the fruits of this enterprize: As briefly as I could, therefore, I wrote a narrative in parchment of what I had discovered, in how many days I performed the voyage, and what way I had done it, with the nature of those lands, and of the inhabitants; and that your Majesties subjects were left in possession of what I had discovered; which writing folded up and sealed, I addressed to your Highnesses, promising a reward of 1000 ducats to him that should deliver it to you seal'd, that if any foreigner found it, the promised reward might induce him not to give it to another; then I wrapped the writing in an oil'd cloth, and inclosed that in a ball of wax, which I put into an empty cask; and having bunged the cask up close, threw it into the sea. Another cask, with a copy of the same writing enclosed in like manner, I placed on the highest part of the ship; so that if the ship sunk, the cask might still remain above water.

The Admiral, however, had the good fortune to weather this storm, and, on Friday the 15th of February, made the island of Azores, and the next day, came to an anchor at St. Mary's, where the country people brought on board fresh provisions, and treated them very kindly; and here finding an hermitage dedicated to the Virgin MARY, they agreed to go barefoot, and in their shirts, to the chapel of the hermitage, according to their vow in the storm; and accordingly the Admiral sent one half of the ship's crew to perform their devotions there, determining on their return to go himself thither with the rest of the company: And having waited a whole day in expectation of his men, he understood that they were made prisoners in the island. But giving the Portuguese to understand, that this outrage would probably occasion a war between their Catholick and Portuguese Majesties; and that, if his men were not returned, he would make reprisals, and carry double their number off the islands; they consented, at length, to release the Spaniards, who reported at their coming on board, that the King of Portugal had sent orders to all places under his dominion, that they should secure the person of the Admiral by any means whatever.

The Admiral set sail from the Azores the 24th of February, and soon after met with another terrible storm, not inferior to the former, which drove him, much against his will, into the river of Lisbon in Portugal; however, he was received here, contrary to his expectations, very hospitably. The people of Lisbon crowded on board to see him and the Indians he had brought from the new world; some of them applauding the glorious enterprize, while others cursed the covetousness and incredulity of their Ministers, which had lost them the honour and advantage of the discovery.

The next day, the King of Portugal ordered the Admiral to be furnished with all manner of fresh provisions gratis, and wrote to him, congratulating his arrival, and inviting him to Court; and on his coming on shore, the Nobility and Officers of State were ordered to attend him, and he was admitted to sit covered in his Majesty's presence. But the King intimated, he thought the discovery belonged to him, as the Admiral had resided most of his life in that kingdom: To which the admiral answered, His Majesty did not think fit to listen to the overtures he had made him; that he went out with the King of Spain's commission, and had punctually observed his orders, not to go to the Portuguese mines in Guinea. And now the admiral, it seems, was under some apprehension, that the King of Portugal would detain him; but after two days, his Majesty dismissed the Admiral with great civility, letting him know, that if he chose to go to Spain by land, he would be at the expence of his journey; but the Admiral chose to return by sea, and arrived at Palos in Andalusia, on the 13th of March 1497, having set out from thence the 3d of August before, making his voyage to the new world, and back again in seven months and eleven days. Here the people received him with a solemn procession and thanksgiving for his return, most of his seamen, it seems, belonging to this port.

Here the Admiral heard, that MARTIN PINZON, Captain of his other ship, was arrived in Galicia, and had given advice of it to the Court of Spain, proposing to have brought the first news of the American discovery; but their Catholick Majesties sent him word, that he should attend on the Admiral, to his great mortification; and this mutinous officer, who had given the Admiral very great disturbance in his voyage, retired thereupon in discontent to his native country, where he died soon after.

Their Catholick Majesties being at Barcelona at this time, when the Admiral drew near that city, all the Court went out to meet him, and he was received with the honours due to a sovereign Prince; nor was it easy to determine, whether the Admiral had greater satisfaction in relating, or their Majesties in hearing the discoveries he had made in the new world.

The rejoicings for the success of this great enterprise being over, their Majesties confirmed to the Admiral the Viceroyship of all the islands and continent to the westward of the Azores, and the Cape Verd islands, which he either had or should discover and conquer, empowering him to appoint all Governors, civil and military, in these new discovered Indies (as they were called, it being then imagined, that they lay contiguous to, or near the East-Indies) and orders were given for the fitting out a fleet immediately to plant and take possession of those countries; in which such diligence was used, that the Admiral set sail again, with seventeen ships and fifteen hundred men, from the road of Cadiz the 25th of September 1493. He touched at the Canaries, as in the first voyage; and, departing from those islands the 7th of October, made St. Dominica, one of the Caribbee islands, the 2d of November, in the night-time, when by their reckoning they were between 750 and 800 leagues from the Canaries. Meeting with no convenient harbour in St. Dominica, which he so named from its being discovered on a Sunday, he sailed to another island, which he called Marigalante, which was the name of his ship; where

landing, and taking possession of it for their Catholick Majesties, he returned on board again, and sailed to another of the Caribbee islands, which he called St. Mary of Guadalupe, at the request of some Friars, who belonged to a monastery of that name in Spain. He found a little town here; but the inhabitants were all fled into the woods, except some children, to whom they gave some glittering toys, to entice their parents to come and traffick with them. The next day, the admiral sent his boats on shore again, and his people brought off two young Indians, who said they were not inhabitants of that island, but of another called Boriquen (now St. John de Porto Rico): That the natives of Guadalupe were Caribbees, or Canibals, and had taken them prisoners. The same day, six Indian women fled to the Spaniards, and came voluntarily on board their ships, for fear of the Caribbees; but the Admiral caused them all to be set on shore again, giving them glass-beads, bells, and other things, which he thought would strike the fancies of their masters; and they were no sooner landed, but the Spaniards saw the Caribbees take all these toys from them. After which, the captives came running again to the ships boats, begging that the Spaniards would take them on board, for the Caribbees would eat them, or make slaves of them at least: And accordingly the Admiral ordered them to be brought to the fleet, with another young man, and two children, that made their escape also from the Caribbees: But, it seems, these people of the island of Boriquen, or St. John's, who had been taken by the Caribbees of Guadalupe, pretended it was their custom to kill and eat only the men they took, and reserve the women alive, either for slaves, or their pleasure. Still the natives of Guadalupe refused to return to their houses; whereupon the Admiral landed, and took a particular view of their town, and found a great deal of cotton, spun and unspun, looms to weave cotton-net-hammocks, abundance of men's skulls hung up, and baskets of bones. These were better houses, and more plentifully furnished with provisions than any the Admiral saw in his first voyage.

On Sunday the 10th of November, he weighed anchor, and sailed along the coast of Guadalupe, towards the north-west, for Hispaniola, and came to another island, to which he gave the name of Montserrat, because of its great height; and the Indians that were with him, informed him, that it was depopulated by the Caribbees, who had devoured the inhabitants. And sailing on further westward, he saw abundance of other islands; amongst the rest, that of St. Martin, where he met with a canoe, having four men and a woman in it, who fought his boat's crew with their bows and arrows; and the boat oversetting the canoe, one of the Indians shot several arrows as he swam in the water: However, they were at length all taken up, and the Spaniards observed that the men were castrated; it being usual, says the son of COLUMBUS, for the Caribbees to geld their captives, as we do capons, that their flesh may relish the better. The Admiral having passed by above fifty other islands, which he left to the northward, came, at length, to the island of Boriquen, which he named St. John Baptist, and anchored in a bay on the west side of it, where he met with several houses pleasantly situated.

Before I proceed further in the description of this second voyage to the new world, give me leave to consider a little the account these discoverers

verers give us of the Caribbees, whom they will have to be canibals, or devourers of human flesh. I must confess, I have hitherto been of opinion, that there never was a nation of canibals upon the face of the earth. From the beginning of the world, we may observe, that every people almost has looked upon those, who were situated at a distance from them, as barbarians; and, upon the first discovery of them, ascrib'd abundance of monstrous and unnatural customs and practices of them, and among the rest, frequently that of being devourers of human flesh. Thus it appears, many of the ancients treated each other, and we of these latter ages seem to copy after them. There are some islands that lie in the bay of Bengal, in the East-Indies, which we were assured were inhabited by canibals, by the first adventurers that sailed to the East-Indies; but, upon our better acquaintance with them, there appeared to be no canibals there; nay, they were so far from eating human flesh, that they eat no flesh at all. On my travelling into the mountains, and most inaccessible parts of the East-Indies, where they had scarce any traffick or correspondence with the Europeans, I found that they had as barbarous notions of us, as we could have of them, or of any others we knew but little of. On the coast of Guinea, where we trade chiefly for slaves, the unhappy captives have a notion we buy them up to fatten, and then feed on them; which, 'tis said, has been the occasion of many desperate attempts to free themselves, and murder the seamen that are sent to transport them to the plantations in America. On the first discovery of America, there was scarce a country or island in that part of the world, but we were told was replenished with man-eaters; but, now we are perfectly well acquainted with them, it is very certain there are no canibals to be found, any more than amazons, giants, or other monsters, which our first voyage-writers describe. But here I am aware it may be objected, that since the Christians came amongst them, they are civilized, and have left off many of their barbarous customs; and this indeed may be of some weight in regard to those countries that are under the dominion of the Christians: But as to the inland parts both of North and South-America, in which the Christians have little or no influence, as appears by their retaining the rest of their ancient customs and superstitions, this argument is of no force. And as to the giants and monsters that are said to be found in America on the first discovery, as this has happened within the space of three hundred years, it is strange there should be none of the race of them left, if there ever were any such.

Besides, I don't remember to have met with any traveller, or writer of credit, that will take upon him to say he has ever seen that people, that made human flesh their ordinary food. We may observe in the relation before us, that Columbus's son says no more, than that they took some people at the island of Guadalupe, who said they were natives of the island of St. John, and, being made prisoners by the Caribbees, apprehended they should either be eaten, or made slaves of; for they had heard that this was common at Guadalupe, and the other islands inhabited by the Caribbees. But all this is but hear-say evidence: None of them pretend to say, they had seen men slaughtered, and their flesh dressed on purpose to be eaten. I am inclined therefore to think, that those islands where the Caribbees are said to have

inhabited, were peopled from that part of the continent where human sacrifices were offered to their gods; for the men sacrificed on these occasions, were usually captives taken in war. It might be true enough, that the Caribbees sacrificed the men they took from other islands; they might eat them too, to make the victims the more acceptable, as we find the best and fattest animals were always made choice of for sacrifice. But as to the Indians eating these human sacrifices, or making human flesh their common food; this might be, and probably was, an addition of the unhappy captives, who look'd upon their masters, as capable of any barbarity, after they had seen them sacrificing men. It was from the report and apprehensions of these slaves, it seems, that we received the notion of the Caribbees being canibals. However, if I meet with any confirmation of this practice in the course of this history, I shall not fail to represent the evidence impartially; and, whenever it shall appear probable to me that there ever was such a people, I shall not be ashamed to own my mistake. In the mean time, I must beg leave to suspend my belief of a custom so very unnatural, 'till I see it better proved.

To return to our history: The Admiral arriving at Hispaniola the 12th of November, found that all the people he had left in the fort he built there, and called The Nativity, were dead: The natives informed him, that some of them died a natural death, others parted from their company, and were destroyed by the Indians as they straggled into the inland country in search of gold, and the rest were defeated and slain by a Cacique who came down from the mountains, and attack'd the small remainder that were left in their fort, notwithstanding the Cacique, or Prince, the Admiral had enter'd into alliance with in the first voyage, did all he could to protect the Spaniards; and it appeared, that this Cacique, and several of his people, were wounded in an engagement with the Indians of the mountains, who had overpowered the Spaniards and their friends, and destroyed the fort. He understood also that the little garrison he left soon fell into parties and divisions, and had led most abandon'd lives, taking four or five women a-piece, and perhaps some of them by force; which, with their attempt to discover the gold the Indians were possess'd of, probably hasten'd their ruin. The Admiral going to visit the Cacique GUACANAGARI, the Spaniards ally, who lay ill of the wounds he receiv'd in the engagement with CAUNABO the Cacique of the mountains; GUACANAGARI lamented the misfortune of the men he left in the island, shew'd him his wounds, that appeared to be given him by their country weapons, and not by the Christians; which satisfied the Admiral he had no hand in the destruction of the Spaniards: Afterwards, the Cacique presented him with a string of gold beads, a regal crown of gold, and three calabashes full of gold dust, amounting to about two pound weight of gold; in return for which the Admiral gave him some toys, and glittering trifles, which the Indians esteemed much more valuable. But if knives and tools were among these toys, surely the Spaniards had no reason to laugh at the folly of the Indians; for to them who had seen nothing of that kind before, these things must in reality be more valuable than gold.

The Admiral having observed other parts of the island more convenient for building a town, and

and settling a colony, than that where he built the first fort, return'd with his fleet farther eastward; and near a mountain, he had named Monte Christo, finding a commodious harbour near the mouth of a river, and a rock that was a good natural fortification, he laid out the plan of a town, to which he gave the name of Isabella, being the name of the Queen of Castile: and while one part of his men were busied in building this town, another detachment was sent to discover the country of Ciboa, about three or four score miles to the southward of it, where the greatest plenty of gold was to be found, according to the information of the natives: For tho' the Spaniards frequently insinuate, that their grand design in planting these countries was to extend and advance the kingdom of CHRIST; nothing is more evident than that the possessing the gold that they expected to find there, was the principal thing they had in view. For this no labour or hazard was thought too much; and few of the Chiefs, employed in these discoveries and conquests, stuck at any villany to gratify their insatiable avarice.

The Admiral having sent a party of men to discover the country of Ciboa, from whence most of the gold was brought, and receiving advice that it was generally a rocky country, pretty well replenish'd with rivers, in whose lands were found a pretty deal of gold dust; he went thither in person, in order to build a fort there that might command the natives; having first sent twelve of his ships back to Spain, and so disposed of the rest as to prevent a mutiny in his absence: For the Adventurers, having flatter'd themselves that they should immediately possess mountains of gold, when they found there was a great deal of labour and fatigue to be undergone, in building forts and towns, and making discoveries, before they must expect to accomplish their ends; they formed a conspiracy against the Admiral, and had even laid a design to run away with the remaining ships, and return to Spain: But COLUMBUS, having discover'd the plot, and so disposed things as to prevent a mutiny for the future, he set out for the country of Ciboa, with a strong party of men, and some horses and mules; and here he erected a fortress, to which he gave the name of St. Thomas, in which he left a garrison of four hundred men, and upwards, and then return'd to his ships in the harbour of Isabella.

In this expedition, the Admiral observes, that the natives were under the greatest consternation when they saw their horses; and, tho' the Indians would sometimes venture to engage their foot, a single horseman might drive hundreds of 'em before him. They did not think themselves secure, even when there was a deep river between them and the horse; for they imagin'd the creature could fly; and, as the Poet suggests, perhaps they took the horse and the rider for one animal.

The Admiral, having put the town of Isabella and the fort of St. Thomas in a posture of defence, and left a sufficient body of troops in the country, to keep the natives in awe, determin'd to go upon new discoveries: Whereupon he nominated a Council of his principal officers, to take the government of the island upon them in his absence, in which his brother JAMES COLUMBUS was to preside, and then set sail to the westward, with three ships, for Cuba, not knowing yet whether it were an island, or part of the continent. In

this voyage he met with several good harbours and rivers, and found the country to be very fruitful. He also discover'd the island of Jamaica, to the southward of Cuba; which he commends as a more populous, pleasant and fruitful country than either Cuba or Hispaniola; and relates, that it was inhabited by a warlike people, who attack'd his men with their bows and arrows, and would not permit him to make a settlement on the island: Whereupon he return'd to Cuba, determining to sail along the coast, five or six hundred leagues to the westward, 'till he found whether it was an island or not; but he met with so many small islands, rocks and lands on the coast, together with bad weather, as made most of his men sickly, as well as himself; and he was obliged to return to the town of Isabella in Hispaniola, without effecting his design.

While the Admiral was absent, Don PETER MARGARETTE, to whom he had given the command of the flying-army that was to keep the country in subjection, aspiring after the sole command of the island, and refusing to obey the Council the Admiral entrusted with the government; finding he could not obtain his ends, left the country, and transported himself to Spain: Whereupon his troops dispers'd themselves, and, committing great outrages, several of the Caciques of the island assembled their forces in their defence, and cut off a great many of the Spaniards; but the Admiral being return'd, assembled his scatter'd forces, and with the assistance of the Cacique GUACANAGARI, his faithful Ally, subdued all the country under the obedience of his Catholick Majesty; tho', 'tis said, one of the Indian armies that oppos'd him consisted of an hundred thousand men; and all the Admiral's troops, that took the field, amounted to no more than two hundred foot, twenty horse, and twenty great dogs. But, if we consider the consternation the natives must be in, when they were attack'd with fire-arms, and especially cannon, which they had never seen before; I don't think these accounts very improbable: Nor were the horse and dogs, it seems, less terrible to them than the great-guns, as they were not able to escape from them when they fled.

Certain it is, the inhabitants of Hispaniola were subdued in this second voyage of COLUMBUS, who imposed a tribute on them; and having taken CAUNABO, the most powerful Cacique or Prince of the island, prisoner, sent him to Spain. This Cacique acknowledg'd, that it was he that destroy'd the first Spanish fort, call'd The Nativity, and put to the sword above twenty of the garrison the Admiral had left there.

The tribute the natives of Ciboa (where the gold was found) agreed to pay the Spaniards, was a large horse-bell full of gold dust for every head above fourteen years of age, once a quarter; and the rest were to pay twenty-five pounds of cotton per head every three months. And now the Spaniards had no enemies remaining in the island; but suffer'd very much from the unhealthfulness of the climate, one half of them being swept away by pestilential distempers; and the frequent mutinies of the Spaniards against the Admiral (who was a foreigner) and their dissensions among themselves, were still more fatal to them, and retarded their making farther discoveries for some time. And here it may be proper to take some notice of the religion and customs of the natives, when the Spaniards first arrived at

Hispaniola;

Hispaniola; of which the Admiral himself gives us the following account.

The religion of the natives of Hispaniola, when Columbus arrived there.

He says, that every one of their Kings or Caciques (who were very numerous) had a house set apart for their images, which they call'd Cemi's: That these images were either of carv'd wood or stone, and the natives pray'd to them, and perform'd such acts of worship and adoration as the Catholics did to their images in their churches: That these images bore the name of their fathers, grandfathers, or other more remote ancestors; and that they were nine or ten of them frequently in one house or temple: That they shew'd more devotion and reverence to some than they did to others, and address'd themselves to different images on different occasions; to some they pray'd for health, to others for plenty, and to others for seasonable weather, success in their enterprizes, &c. But that these they worshipp'd as inferior deities, and had a much greater veneration for the Sun, of which planet however they made no image or resemblance.

That the Cacique seem'd to be Chief Priest of his temple, as well as Sovereign of his people; and made use of many holy cheats to keep his people in awe, and draw money from them; causing answers to be given as from the mouth of the image address'd to, as was practis'd by some oracles of old, and is by some miracle-mongers among the Papists at present.

They had various ways of disposing of their dead: Some they buried in caves, others they burnt in the houses where they died; but their Caciques and Great men were embowel'd and dry'd, in order to preserve the corpse as long as possible.

After death, they apprehended they should pass to some delightful plains (by their description not unlike the Elysian fields) where they should meet with their ancestors, kindred and friends, and enjoy all the pleasures that food, women, or the most charming situation could afford; and, lastly, that they had Physicians amongst them that administer'd medicinal herbs, roots and plants to their patients; but pretended to effect the cure chiefly by magick, or the assistance of demons, with whom, they taught the people, they convers'd.

The Admiral, having settled the government of the island, and built three fortresses, besides that of Isabella, to preserve his conquest, thought fit to return to Spain; for he found so many ill offices had been done him by his enemies, that the Court of Spain neglected to send him any farther reinforcements, to enable him to extend his discoveries. He seem'd under a necessity therefore of attending their Catholick Majesties in person, in order to set matters right, and procure such supplies as were wanting; and accordingly, setting sail to the eastward on the 10th of March, the wind being directly against him he arrived, with infinite labour, at the Caribbee islands the 10th of April; where he took in fresh provisions. Had he stood to the northward, instead of plying to the east, as all shipping do now that come for Cuba or Hispaniola, he would soon have come into the way of the westerly winds, and might have arrived in Spain as soon as he did at the Caribbees; but, labouring thus against the trade-winds, which sit constantly from the north-east, or thereabouts, near the Tropic of Cancer, he made it the 9th of June before he came upon the coast of Spain, being near three months after his setting sail from the town of Isabella.

VOL. III.

The Admiral, attending their Catholick Majesties at Burgos, presented them with such foreign plants and animals as he judg'd would be most acceptable to them, and with some gold plate and gold dust, but in no great quantities, and was in appearance graciously received: But the Court were much disappointed that they received little more than trifles for all the expence they had been at; they expected to have entered immediately on mountains of gold, and to have loaden their ships home with it; whereas they could not yet hear of any mines that were opened, and met only with small quantities of the dust that was washed down from the mountains, or in the sands of rivers.

This, with the practices of the Admiral's enemies, who insinuated that he was not equal to the great work he had undertaken, and by no means qualified to civilize and govern barbarous nations, very much abated the zeal of the Spanish Court for supporting and enlarging their discoveries in the new world; insomuch, that the Admiral was forc'd to remain near two years at the Court of Spain, before he could obtain the supplies he solicited for.

And notwithstanding the Admiral appears to have been a very great and good man; yet there seems to have been some errors in his conduct, that very much retarded his further discoveries, and rendered the enterprize less advantageous to himself and his royal employers, than it might have been in his life-time.

When the Spaniards appeared so sanguine on his first discovery, as to equip him out immediately for a second voyage, with seventeen ships, crowded with men and all manner of necessaries, had he employed a dozen of these ships as many different ways on his arrival at Hispaniola, instead of sending them home again with trifles, he had probably discovered the rich treasures of Mexico and Peru in that voyage, and increas'd the great opinion the Spaniards entertained of him on his first success; instead of which, not finding their expectations answered, they began to quarrel with the Admiral, grew cool upon the matter, and not long after, in a manner, became his enemies; insomuch that he was in great danger of losing his head, instead of receiving a reward for the inexpressible labour and hazards he had undergone, to add another world to their dominions, as will appear in the following relation.

The Admiral, after near two years attendance at the Court of Spain, having, at length, procured six ships, set sail on the 30th of May, 1498, for America again, and in his way touch'd at the Maderas. He afterwards made the island of Ferro, the most westerly of the Canaries, from whence he detach'd three of his ships directly for Hispaniola, and with the other three bent his course towards the islands of Cape Verd, which lie in fifteen degrees north latitude: Here he touch'd again; and, having taken in some refreshments, held on his course to the south-west, in expectation of discovering the continent, till he came into five degrees north latitude; but meeting here with calms, and excessive hot weather, with abundance of thunder and lightening, he was deterred from sailing any further to the south, and bent his course to the north-west, till he came into seven degrees north latitude, and then he steer'd due west; which course having continued some days, he discovered a large island on the 1st of August, to which he gave the name of the

20 Q

Trinity,

Trinity, which lies near the mouth of the river Oronoko in South-America; and in a day or two after, he made the continent of Paria or Guiana, now called New-Andalusia, lying about seven degrees south of Barbados.

The Admiral going on shore on the 5th of August, bartered away some trifles with the natives of Paria, and observed they were rather whiter than those of Hispaniola; that the men wore their hair long, and had little aprons and caps of cotton-linnen; that the women wore little gold plates and chains of pearl about their necks, but had no aprons or covering for their nudities; and that they were generally a harmless inoffensive people (not cannibals as some represent them.)

The Admiral having spent about a fortnight upon the coast of Paria, in getting what intelligence he could of that continent, set sail directly for Hispaniola, and arrived at St. Domingo, a town that his Brother (and Lieutenant) had built on the south side of the island, and so named in memory of their Father DOMINIC, on the 30th of August, 1498. The continual labour and watchings the Admiral had endured in attempting to discover the continent, made the sight of Hispaniola very acceptable to him, where he hoped to have enjoyed some ease and satisfaction after numberless hazards and fatigues; but to his great mortification he found the island in the utmost distraction: He had left his Brother his Lieutenant, as has been related, during his absence, and one FRANCIS ROLDAN, a Spaniard, in the quality of Chief Justice, who agreed pretty well in their respective commands for the first year after the Admiral's return to Spain; but there being no news what was become of him, and generally believed that he was lost, ROLDAN, 'tis said, began to entertain thoughts of setting up for himself, and expelling the Admiral's brothers from the island, representing that the family of COLUMBUS were foreigners, who had formed a design of aggrandizing themselves at the cost of the Spaniards, and intended to usurp the dominion of their fellow-adventurers, as well as of the lands they had discovered and conquered with their Arms: And to gain the Indians, he observed, that the Admiral had imposed a tribute on them, to enrich himself, without the knowledge of the king of Spain, and designed to use them as his slaves; and by these seditious discourses, made such a party among the Spaniards and Indians, as had very near occasioned a general revolt. It was with a great deal of difficulty, therefore, that JAMES COLUMBUS preserved part of the island under his obedience, till the Admiral returned: Nor could he himself accommodate the matter, and reduce the country to a state of tranquillity, till he consented to confirm ROLDAN perpetual chief Justice of the island.

And now applying himself to the digging of the gold mines, he found such plenty of that metal, that one man frequently got five marks of gold in a day's time; by which means COLUMBUS and his family were in a fair way of becoming immensely rich, when another insurrection was raised against him by ALONZO DE OJEDA, a considerable Spaniard, whom he had employed to make discoveries upon the coast of Paria: And tho' the Admiral, by his excellent conduct, found means to maintain his authority in the island, and depress his enemies there; yet they appeared too

hard for him in the Court of Spain, by the malicious stories they transmitted thither. They represented him to the King, as ambitious, covetous, and tyrannical; that he had no true notions of government, and used both Spaniards and Indians as slaves; that he possessed himself of vast treasures, while he concealed the richest mines from the King's officers: And these gentlemen having friends and relations in the Court of Spain to back their complaints and malicious suggestions, at length work'd him out of the King's favour. But perhaps nothing was a greater inducement to King FERDINAND to deprive him of his government, than the heaps of gold he was told would flow into his treasury, on his removing the Admiral: His Majesty therefore sent over FRANCIS BOVADILLA, a Spanish Knight, to Hispaniola, to enquire into the Admiral's conduct, giving him authority to apprehend him, and send him to Spain, if he thought fit, requiring all the Commanders and Officers of the island to assist BOVADILLA: He sent a letter to the Admiral himself also, commanding him to obey this new Governor.

COLUMBUS, on the arrival of BOVADILLA with these orders, surrendered himself upon the first summons (tho' he was now in a condition to have held the island against all the power the Spaniards could have sent thither;) believing that on his representing his case to the King and Queen of Spain, of whom he had deserv'd so well, he should be restored to his command, especially as he was conscious his enemies could prove none of the things they had laid to his charge.

The insolent BOVADILLA made the most of his commission; he immediately took possession of the Admiral's palaces, and all his effects, and clapping him and his brother in irons, sent them both prisoners to Spain: The Captain of the ship, indeed, ashamed to see this Great man in fetters, offered to ease him of them; but he was resolved to carry them to Europe, as an evidence perhaps of Spanish gratitude; for he could not believe that BOVADILLA durst have used him in this barbarous manner, if he had not express orders for it from Court. However, their Catholick Majesties no sooner heard of the Admiral's arrival, but they sent orders to release him, and invite him to Court, assuring him that BOVADILLA had exceeded his commission, and that his estate should be restored, and he should be continued in the command of all he had discovered in the new world; for it evidently appeared that the complaints that had been brought against him, proceeded either from self-interest, or malice. But notwithstanding the Admiral was innocent, and had the titles of Admiral and Vice-roy of the Indies continued to him, he appears to have been actually deprived of his government of Hispaniola, and another was sent thither in his room, that would be more acceptable to the Spaniards, as well as the Indians, as was supposed, and bring more treasure into their Majesties coffers: Which the Admiral so much resented, that he had determined to retire, and lead a private life, without attempting any further discoveries; for he reflected, that if what he had done for the Spanish nation could not induce them to use him well, nothing that he could do hereafter would. But the King, either considering what dishonour the laying the Admiral aside might reflect upon him, or imagining he might make yet more profitable

fitable discoveries, persuaded COLUMBUS to put to sea again, vested with the like powers he had conferred on him in his former voyages.

Accordingly the Admiral set sail from Cadiz with four ships from 50 to 70 tun, and 140 men, on the 9th of May, 1502; and, touching at the Canaries on the 20th of the same month, where he took in wood and water, he sailed from thence the 24th, and arrived at Martinico, one of the Caribbee islands, the 15th of June, and the latter end of the same month came before St. Domingo, in Hispaniola: But the Admiral was not suffered to enter that port, tho' most of his estate and effects lay thereabouts, and he had represented to the Spanish Governor, that one of his ships was much damaged, and he apprehended a storm. From whence, 'tis too plain, that the Court of Spain had given orders, that he should never more reside in Hispaniola, which he had conquered for them. The Admiral, however, had the good fortune to get into a little creek in the island, where he weathered a very terrible storm, in which BOVADILLA his great enemy, and fourteen ships laden with treasure, and bound for Spain, perished.

The Admiral, after the storm was over, left the coast of Hispaniola, and sailing to the westward, pass'd by the south side of the island of Jamaica, from whence continuing his course, he arrived at the island of Guayana, in the gulph of Honduras, where he met with a canoe as long as a galley, and eight foot wide, made of one tree; which being loaden with such merchandize as the neighbouring continent afforded, and having twenty-five men, and several women and children on board, bound for the coast of Mexico, he made them prisoners: He found on board the canoe several large pieces of cotton-linnen, quilts, and quilted waistcoats, without sleeves, finely wrought, and dyed of several colours. The women on board the canoe wrapp'd themselves up in pieces of cotton-linnen, or had cloths of the bigness of handkerchiefs to cover their nudities: There were found also on board the canoe, wooden swords, edg'd with flints, and hatchets made of copper: They had also bells, plates, and crucibles of copper to melt their metal in.

Their provisions were maize or Indian-corn, several sorts of roots, and cacao-nuts, of which chocolate is made.

The Admiral having taken out of the canoe such things as he lik'd, and given the Indians such European goods in return, as were most acceptable to them, he dismiss'd the canoe, and all the people in it, except one old man he detained to inform him of the state of the neighbouring continent, and to serve him for an interpreter among the natives: The Indians, who were already on board the Admiral, it seems did not perfectly understand the language of those of the continent, that were taken in the canoe; but learn'd, however, thus much from them, that north-west of the province of Honduras, on which coast the Spaniards lay at this time, there lived a potent Prince (afterwards found to be the Emperor of Mexico) and that to the south-east of Honduras was a narrow strait, that led to a vast ocean (afterwards known by the name of the South-sea) which the Admiral determined to search out, rightly conjecturing, that over that sea he should find a way to the treasures and spices of the East-

Indies: But the misfortune was, that the same word which signified a strait by sea, might be, and really ought to have been, on that occasion, interpreted an isthmus by land; and if he had understood these Indians right, they would have informed him, that there was a narrow neck of land, afterwards called the Isthmus of Darien, that separated the North and South-seas, or the Atlantic from the Pacific-ocean. This mistake caused the Admiral an infinite deal of trouble and fatigue; for upon this intelligence he returned to the eastward, in order to find out the imaginary straight, labouring against the trade-winds and currents, which constantly sit to the westward in the north-sea. As he sailed to the eastward along the coast of Honduras, his people frequently went on shore and traffick'd with the natives, exchanging bells, glittering beads and toys, for thin gold-plates; and here they were furnished with water and fresh provisions, such as venison, geese, hens, fish, and beans, like kidney-beans. Most of these people went naked, only their heads were covered with a piece of cotton-linnen, as were also their nudities; and some of them had short quilted waistcoats of cotton, which I find served them for armour as well as cloathing, and would defend them against a stroke of their wooden swords: Those that were naked, had the figures of beasts, birds, castles, &c. painted on their arms and bodies; and on rejoicing days, when they would be very fine, they painted their faces red or black, or marked themselves with long strokes of various colours, which made them look very deformed in the eyes of the Spaniards, how agreeable soever they might appear to one another: They adorn'd their necks, ears and noses, with thin gold-plates, and those hung at their ears, stretched them to such a prodigious size, that the Admiral gave the coast of Honduras the name of De las Orejas, or, the Country of Ears.

The Admiral sail'd along this coast to the eastward, 'till he came to the Cape, which he named Gracias a Dios, or Thanks be to God; because he was no longer obliged to struggle against the winds and currents; for here the coast bending to the south, he continued his voyage without any difficulty, by the assistance of the easterly trade-winds. The Admiral found the people here very jealous the Spaniards had some design upon their country, and came down armed; in great numbers, with bows and arrows, spears and clubs, as if they intended to dispute their landing: But afterwards, finding the Spaniards only wanted to trade with them, they became more tractable, and exchanged cotton-linnen, and plates of gold for some European toys. But, it seems, one of the Admiral's people taking out a pen and ink, and beginning to write down his observations on the people and country, the natives immediately fled, and left all the things behind them they had received of the Spaniards: From whence the Admiral conceived they thought they should be bewitched, if they conversed any longer with his men. It is remarkable also, that here the Spaniards met with several dead bodies embalm'd, and wrapp'd in cotton sheets, and so perfectly dry, that they had no manner of ill-scent. These were reposit in tombs, in a large wooden house or temple, and over each tomb was laid a board, with the figures of beasts carv'd on it; and on some, the figures of the persons deceased, adorned with beads, gold plates, &c.

• On

Mexico
discovered

On the second of November, the Admiral continuing his voyage to the eastward, came to a large commodious harbour, to which he gave the name of Porto Bello, which it retains to this day; it lies in the province of Terra-firma Proper, in 10 degrees north latitude. Here he met with a great many Indian houses well inhabited; and, on the islands near the shore, he found a great deal of Indian-corn, and other refreshments, from whence he gave those islands the name of the *Bastimento's*, or, the Islands of Provision. Here the Admiral, understanding that there were gold mines in the province of Veragua, which lies to the westward of Terra-firma, he returned again to that coast, where he met with such stormy weather, that it almost destroyed his ships, and reduced his men to despair: But the weather favouring him at length, he sent some men a-shore in search of the golden mountains he had heard so much of, and they had the satisfaction of gathering some gold, at the roots of trees, and near the surface of the earth; which made the Admiral determine to settle a colony in Veragua, and leave his brother Governor of it 'till he returned to Spain for further reinforcements.

Accordingly he built a little town and fort, in which he left his brother, and a garrison of eighty men, supplying them with arms, ammunition and provisions: But apprehending the friendship of the natives was not to be depended upon, before he set sail, he ordered his brother to make the Cacique or Prince of that part of the country, with his family, and the principal natives, prisoners; which he did, and sent them on board the Spanish ships: But the Cacique, and most of the prisoners, jumping into the sea, and making their escapes, raised the whole country upon the Spaniards; and killing some, and wounding others, oblig'd them to quit their new settlement; and it was with great difficulty that the rest escap'd to their ships, one of which was so eaten up with worms, that they were obliged to leave her behind. After this unfortunate encounter the Admiral set sail with the three remaining ships, in a miserable shatter'd condition, and arriv'd again at Porto Bello; where he was forced to leave another of his ships, she was so disabled by the tempestuous weather they had on this coast, or the worm. From Porto Bello, he directed his course north, 'till he made the great island of Cuba, and on Midsummer-day they arrived at Jamaica, their ships so leaky, that they found it almost impossible to keep them above water 'till they got to shore. Whereupon they run them both a-ground in a small creek close together, about a musket-shot from land, where they supported and shored up the ships with timber, and liv'd on board them above a year, trafficking with the country people for provisions; but they did not care to lie on shore for fear of being surprized and destroyed by the natives, if any quarrel should happen between them and the Spaniards.

In the mean time, the Admiral sent over some of his crew to Hispaniola, in open canoes, to get ships to carry him and his company off. This was a very hazardous enterprize; for these canoes, which are only small boats made out of trunks of trees, were to pass the ocean about fifty leagues, and are in danger of being overset in every little storm. However, they arrived safe at Hispaniola; but the Governor, who was an

enemy to the Admiral, delay'd sending ships so long, that his people mutinied, and one half of them left him, and went on shore on the island, where they committed great outrages, 'till the Admiral fought them, and reduced them to their duty by force, many of the Spaniards being killed on both sides in the engagement. At length, the Admiral's people having bought and fitted out a ship, at his charge, in the island of Hispaniola (in which they had no assistance from the Governor) they came back to Jamaica, and brought the Admiral off, after he had spent above a year there, in great distress, and lain most of the time bed-ridden with the gout. The Admiral arrived at St. Domingo, in Hispaniola, the 13th of August, 1504; and, having settled his affairs in this island, where he had a good estate, and effects of value, he returned to Spain, where his Catholick Majesty receiv'd him, in appearance, very graciously; but it seems was contriving, at the same time, to deprive him of most of the advantages he had stipulated to allow him, on the Admiral's undertaking the discovery of that new world: For his great patroness Queen ISABELLA was now dead, and most of the Court envied him the wealth and honour he had acquired, how justly soever he merited them, and that chiefly, because he was a foreigner. But, notwithstanding the strictest scrutiny the malice of his enemies could make, it does not appear that any thing was fix'd upon him, that could sully his character, unless it was his too great zeal to serve the ungrateful Spaniards, and enlarge their dominions, by bringing the innocent, inoffensive Indians under the subjection of that cruel and haughty people. But he, as well as the rest of the Popish world, it seems, was then of opinion, that his Holiness had the disposal of all Pagan countries, and could confer them on whom he pleased: Or, that all Infidel nations ought of right to become slaves to the Christians. These notions he certainly went upon, or he could not with any colour of justice have subdued Hispaniola, and made the Indians of this and other places captives, who received him as a friend, traffick'd with his people, and furnished them with whatever their respective countries afforded.

If we consider, I say, that the Spaniards could have no right to invade the Indians, enslave them, or deprive them of their country; even this memorable enterprize of COLUMBUS cannot be defended. However, in the light he viewed things, with all his prejudices and prepossessions about him; as he thought he was doing God good service, by enlarging the bounds of Christendom, and reducing the nations of this new world, to submit to the Gospel; or, which he took to be the same thing, to the Pope and his Catholick Majesty; it must be admitted he intended well, tho' all he did was not strictly just.

And what was the end of all this mighty discovery in regard to himself? He was indeed, at first highly caress'd and honoured, his family ennobled and vastly enrich'd: But if we consider the infinite hazards and labours he underwent, even in his old age, and that he saw himself at last about to be deprived of so many years toil and perplexity; we cannot wonder it had an effect upon his health, which the numerous hardships he had suffered had already greatly impaired: It is rather to be admired he struggled so

long under a train of calamities, of which the ingratitude of the Spaniards was not the least. This, it appears, sat heavy upon him; and being retired to the city of Validolid, we find he there left this life for a better, on the 20th of May, 1506; dying, 'tis said, with abundance of resignation, under a sense, no doubt, that the most important services, attended by the most surprising success, were thrown away upon an ungrateful nation: He saw they could not procure him a continuance of the fame he had so justly acquired, or a moment's repose in his old age; and that there was no rest, or real felicity, to be found on this side the grave.

After his death, indeed, his Catholick Majesty was so just to this Great man, as to bury him magnificently in the Cathedral of Seville, and to erect a tomb to his memory, with this inscription: THAT COLUMBUS HAD GIVEN A NEW WORLD TO CASTILE AND LEON.

From this relation it appears, that the Admiral in person discovered the Lucayo's, or Bahama islands, the great islands of Cuba, Hispaniola, and Porto-Rico, with several of the Caribbee Islands; that he afterwards discovered the countries of Paria, and Guiana, near the mouth of the river Oroonoko, in South-America, and the island of Trinity, which lies in 10 degrees north latitude, before the mouth of the said river Oroonoko; that he also discovered Yucatan, a province of Mexico, the Bay of Honduras, and all that coast which runs south-east from thence, as far as Porto Bello, and the river or gulph of Darien, and received some intelligence of that vast ocean, which has since obtained the name of the South-seas: So that all those, who afterwards extended the discoveries of the Spaniards in the new world, only improv'd what the great COLUMBUS had begun; and yet we find one of them (*viz.*) AMERICUS VESPUTIUS, of whom I am to treat in the next place, had the good fortune to give his name to that vast continent.

Americus Vesputius the second Discoverer

The enemies of COLUMBUS having given the Court of Spain an ill opinion of him, it appears they employed AMERICUS VESPUTIUS, a Florentine, in the year 1497, to improve and enlarge the discoveries begun by that Great man; but however fortunate this gentleman might be in making discoveries, he gives the lamest account of them of any man that ever was employed in such an undertaking. He says, he touched at the Canaries in this voyage, and, having sailed a thousand leagues to the westward, arrived at a country situated in 16 degrees of north latitude, which must be some of the Caribbee islands: He sailed near nine hundred leagues further westward afterwards, and came to a country under the Tropic of Cancer, which, by the latitude and distance to the westward, seems to be part of Mexico. He did not attempt to make settlements any where, and probably was not provided for it, but satisfied himself with having trafficked with some of the Indians for trifles, and fought with others, whose arms were like those COLUMBUS met with in other places.

He made another voyage in the service of the Spaniard, the following year 1498; and sailing to the south-west, passed the Equator, and came to a country in five degrees of north latitude; which, in all likelihood, was Surinam, in the province of Guiana. Here he traded with the natives for pearls, and some gold, which they exchanged for glais and toys, and returned home by Antegoa, one of the Leeward islands.

VOL. III.

EMANUEL, King of Portugal, afterwards entertained AMERICUS VESPUTIUS in his service; and in May 1501, he sailed from Lisbon with three ships; and, coming again upon the continent of South-America, in five degrees of south latitude, he sailed afterwards along that coast to the southward, till he came into 52 degrees of south latitude, when the cold and tempestuous weather obliged him to return home. Thus having discovered a continent in the new world, little inferior, in dimensions, to that of the old, he was so happy as to give his name to the whole, which, from him, has ever since gone under the name of America, tho' he never attempted to make one settlement in it, either for the King of Spain, or the King of Portugal, who employed him in these discoveries; while COLUMBUS, who first went in search of this continent, and made such acquisitions in it for the Spaniard, did not give his name to one single place. But 'tis observable, that both these enterprising gentlemen were Italians; and, as their ancestors had formerly the honour of subduing the greatest part of the old world; so these traced out the way to the new, and gave the Spaniards an opportunity of conquering the greatest part of this new world.

The next, or rather a cotemporary Discoverer with AMERICUS VESPUTIUS, was CABOT, an Italian also, or at least of Italian extraction; for some affirm, he was born at Bristol in England of Genoese parents. This gentleman was employed by King HENRY VII. to find out a passage to China, and the East-Indies, by the north-west; and accordingly he set out from England, in the year 1498, and sail'd along the continent of America, to 67 degrees of northern latitude; but his men murmuring at the hardships they underwent in that cold climate, he returned home, bringing with him only some of the savage natives of those frozen regions. (The same CABOT, or his son, 'tis said, first attempted the finding a way to China by the north-east, and in that voyage discovered the way to Archangel in Muscovy by the North Cape.) But to return to the West.

Cabot's discoveries

Thus have we seen that vast continent of America, discovered (from 67 degrees north latitude to 52 south) within the compass of about ten years; but the Spaniards did not penetrate far into the inland country, 'till some years afterwards.

The next considerable Discoverer, was VASCO NUNEZ DE BALBOA, who prosecuting what had been begun by COLUMBUS, made an entire conquest of Cuba, and found it to be an island; then he sail'd to the river of Darien, on the isthmus of America, where COLUMBUS had attempted to make a settlement, but was driven from it. Here VASCO built a fort and town, which he named Sancta Maria del Antigua, or Old St. Mary's; and cultivating a correspondence with the Caciques, or petty Kings thereabouts, they shew'd him the way to the South-sea, over those vast mountains that run along the middle of the isthmus, parallel to the North and South-seas; and tho' it was not more than three or fourscore miles from the one sea to the other, yet their way lay over such craggy precipices, and was incumbered with such thick woods, that they travelled 25 days before they came in sight of the South-sea: And there VASCO, upon the highest mountain, erected crosses, and took possession of the country for their Catholick Majesties; as he did soon after of the South-sea itself, and of all its

The discoveries of Vasco Nunez de Balboa.

20 R

coasts

coasts and bays for the crown of Castile and Leon, in the year 1513. He afterwards erected the fortrefs of Panama on the South-sea, and fitted out a fleet to make further discoveries on that ocean; for which services the Court of Spain made him Governor of Cuba and Panama, and Admiral of the South-seas. But, the King of Spain sending over PEDRARIAS, Vice-roy of Darien and the continent, with a superior command to that of VASCO NUNEZ, the Vice-roy took an opportunity to pick a quarrel with VASCO, and caus'd him to be put to death under a colour of law.

and con-
quests.
Magel-
lan's dis-
coveries.

The next great Discoverer and Conqueror, was FERNANDO CORTEZ, who began the conquest of Mexico in the year 1518; of which I shall give a particular account in this work.

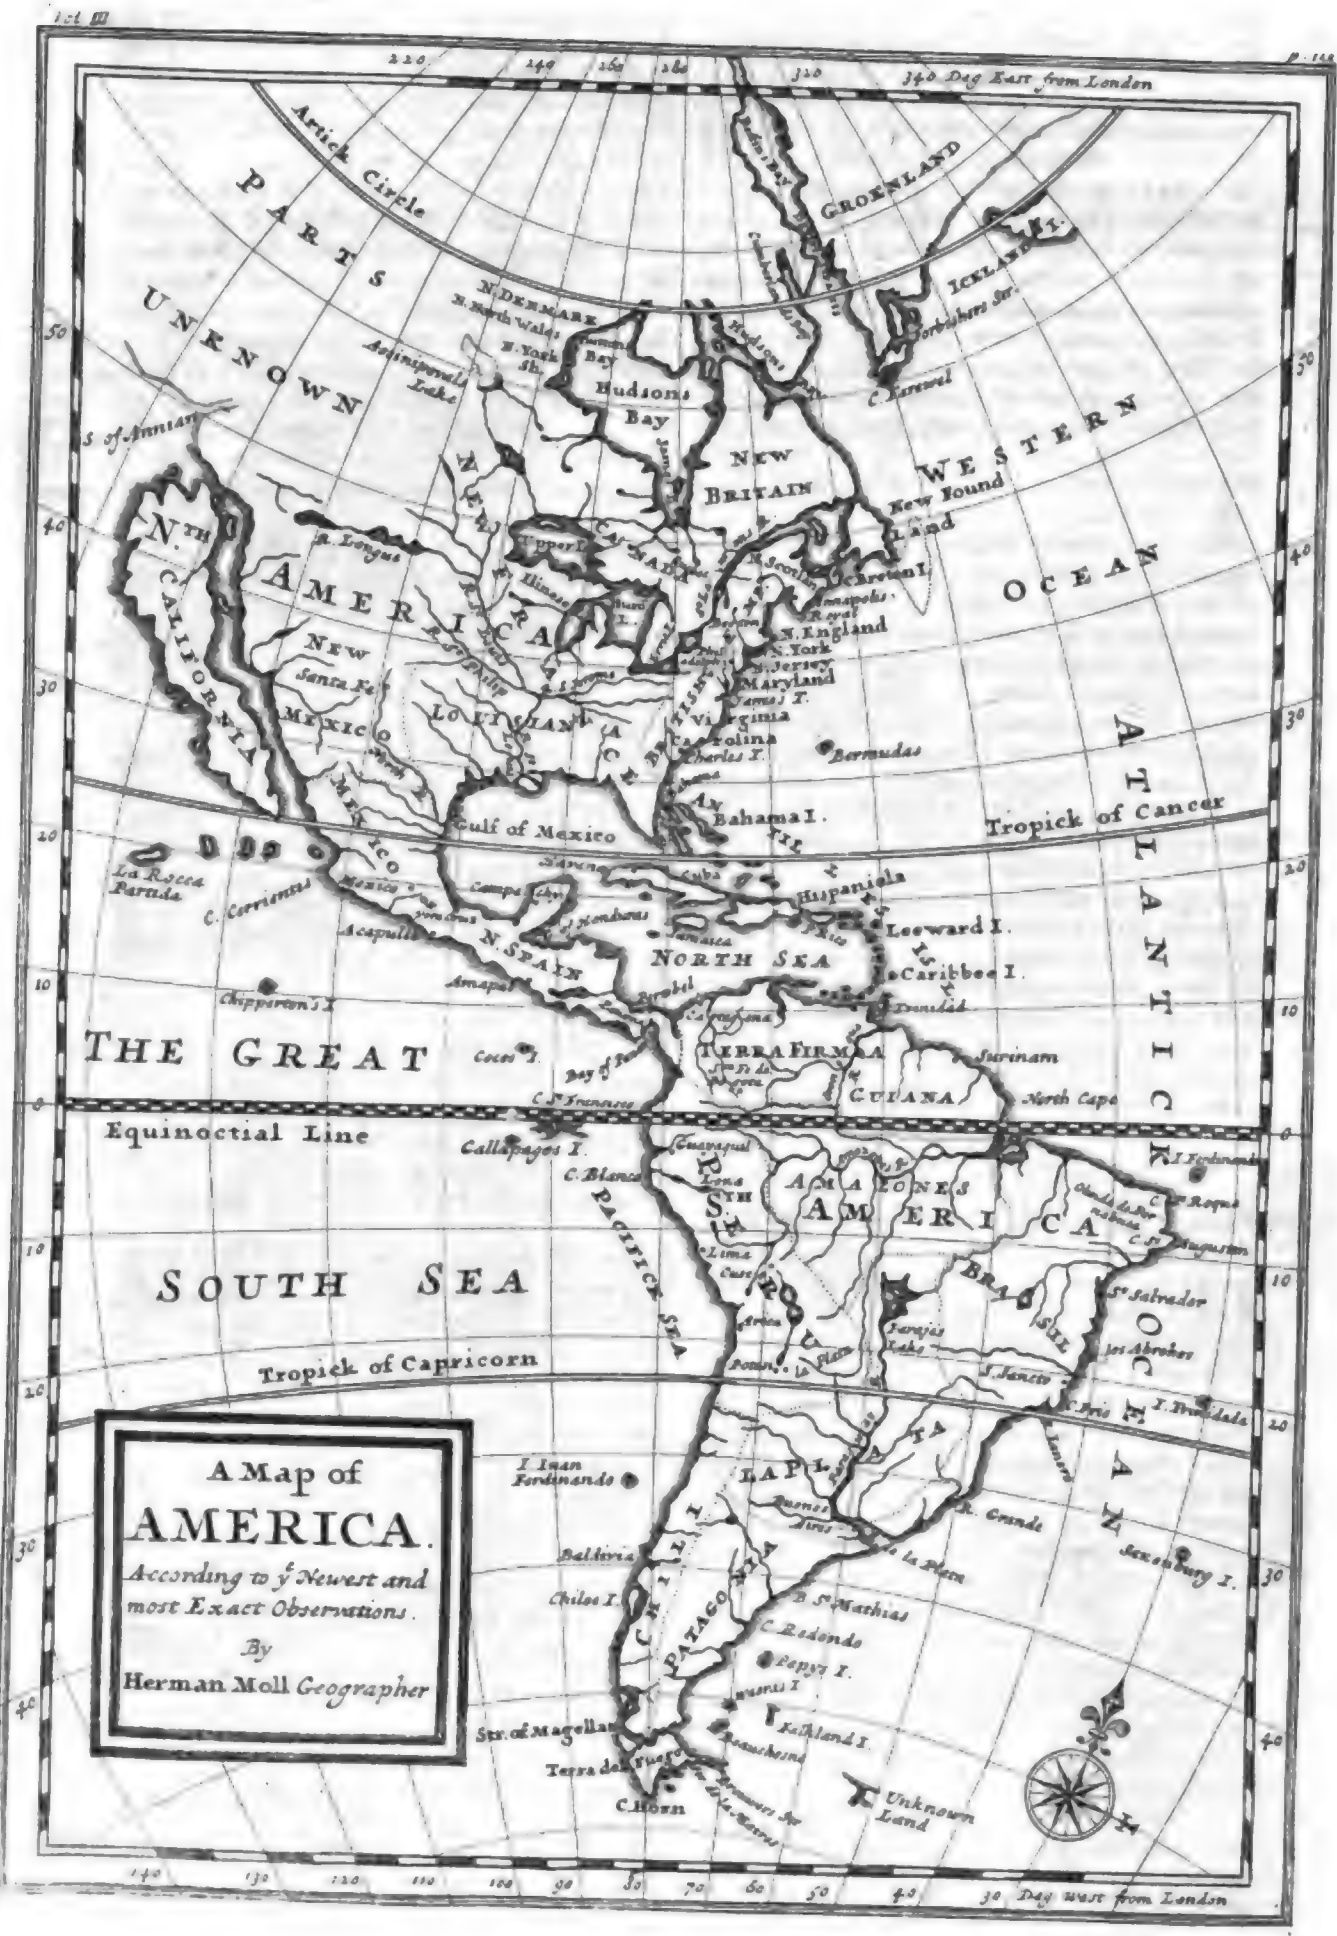

The famous MAGELLAN, in 1520, discovered the straights (to which he gave his name) in South-

America; from whence he sailed thro' the South-sea to the East-Indies, being the first Commander that attempted that passage: His ship surrounded the globe, and returned safe home, tho' he had the misfortune to be killed in an island of the East-Indies. But I refer the Reader to the former volumes of *Modern History* for a full account of this first voyage round the globe.

The last discoveries I shall mention in this Introduction, are FRANCIS PIZARRO, DON DIEGO DE ALMAGRO, and FERNANDO DE LUQUE, who, in confederacy or partnership, undertook the discovery of Peru, from Panama by sea, in the year 1525, and afterwards made a conquest of great part of that extensive empire. Of all which discoveries and conquests, the Reader will meet with a particular account in the history of America.

T H E

PRESENT STATE

OF

AMERICA in general.

CHAP. I.

Of the name, and several grand divisions of AMERICA.

CHAP. I. **T**HE natives of this new world had no general name for their country when the Spaniards arriv'd amongst them in the 15th century; but the most considerable empire in North America, went under the name of Mexico, and that in the south, under the name of Peru. AMERICA VESPUTIUS, who discover'd the eastern coast of South America, had the honour first of communicating his name to the whole continent, which it retains to this day.

CHAP. I. **A**s the greatest and best part of America is now under dominion of four European Monarchs; namely, of the Kings of Spain, Portugal, Great Britain and France, I shall throw the whole into four grand divisions, and treat of them as subject to one or other of these four Princes; tho' it must be confess'd, many nations of the inland Indians still retain their original freedom, and own no subjection to any foreign power: And there are some small settlements in America belonging to the Dutch, the Dane and the other European powers; but these will be taken notice of, and described in treating of those countries that lie contiguous to one or the other of the above said four grand divisions respectively. And first, I shall describe the Spanish dominions in America, which comprehend, 1. Old Mexico, or New Spain; 2. New Mexico; and 3. Florida (in North America); 4. Terra Firma; 5. Peru; 6. Chili; 7. Patagonia, or, the Terra Magellenica; 8. Paragua, or La Plata; 9. the country of the Amazons; and, 10. the islands belonging to Spain, both in North and South America.

The Spanish territories upon the continent lie contiguous, and, according to their accounts, extend from 45 degrees north latitude to the Straights of Magellan, which lie in 54 degrees of south latitude, and, consequently, take up 99 degrees of latitude, which allowing 70 miles to a degree, makes the length near 7000 miles; but the breadth is very unequal, and, in many places, very uncertain: However, thus much is certain, that in some parts, the Spanish America is near 1500 miles broad, and in others, not 100 miles broad.

CHAP. I. **T**he second grand division of America is that under the dominion of Portugal, which consists of the country of Brasil, extending from the mouth of the river Amazon, under the Equator, to the mouth of the river La Plata, which lies in 35 degrees of south latitude; being 2400 miles and upwards, if we measure in a direct line, from north to south; but if we take in the winding of the shores, Brasil will be found to have a sea-coast of near 4000 miles, tho' it is not 200 miles broad in many places. Neither the Spanish or

Portuguese America extend to any great distance from the sea-coast; tho' these Powers lay claim to the whole continent of South America. The natives, who live 2 or 300 miles from the sea-coast, scarce own any subjection to either of them.

CHAP. I. **T**he third grand division of America is that under the dominion of the King of Great-Britain; which lies along the eastern coast of North America, from 31 degrees to 51 north latitude, comprehending, 1. Carolina (in which Georgia is included); 2. Virginia; 3. Maryland; 4. Pennsylvania; 5. New Jersey; 6. New York; 7. New England; 8. New Scotland and new Britain; 9. the islands belonging to Great-Britain; and, lastly, Hudson's Bay, which lies most to the northward of any of our settlements, and is detach'd from the rest.

The British dominions, that lie contiguous on the continent, run from the south-west to the north-east, and are upwards of 1500 miles in length, but breadth scarce 200 in many places.

CHAP. I. **T**he fourth grand division of America is that which the French pretend is subject to them; and, according to their maps, extends from the north side of the Gulph of Mexico or Florida, to the north of Canada, that is from the latitude of 28 to 52 degrees and upwards of northern latitude; so that they would have us believe, their territories extend near 1700 miles in length from north to south, and are little less in breadth from east to west, for their maps lay them down between their British dominions on the east, and New Mexico on the west, comprehending most part of Florida and Canada, to which their Geographers have given the name of Louisiana and New France.

But Florida and Canada may with much more propriety be assigned to the Spaniards and the English, than to the French; for the Spaniards first discovered and made settlements in South Florida, some of which they possess at this day, as they do the entire west side of Florida and Canada: The English, on the other hand, have been long possess'd of Virginia and Carolina, which were originally part of Florida, and of several places in Canada; while the French have only two or three little settlements on the Gulph of Florida or Mexico, near the mouth of the river Mississippi, to entitle them to Florida; and a man may travel some hundreds of miles, both in Florida and Canada, without meeting with a French settlement, or even with a single Frenchman. To say the truth, very few of the Indians of Florida or Canada are yet subject to any European power; and a very small part of their country the property of any foreigner. The only just and legal way of becoming proprietors of any part

CHAP. I. part of either, is by treaty with the natives, and giving them what they esteem a valuable consideration for it; as our adventurers in Georgia actually do for whatever they intend to plant or cultivate.

The maps of these countries ought to be corrected.

We are extremely weak, in assigning this fine country, containing a square of 1500 miles of a side, to France, which lies on the back of all the British settlements; and that for no other reason, than that the French have assurance enough to lay claim to it, especially since this claim, if it be allow'd, must for ever exclude us from extending our settlements to the westward: I hope, therefore, our British Geographers will be commanded by their superiors, to blot Louisiana and New France out of their maps, and restore the primitive names of Florida and Canada to those countries; and that they shall not be suffer'd stupidly to follow the French Geography, and give that people a colour for their encroachments on the British plantations.

France already looks upon the great rivers of Mississippi and St. Laurence as her own, and will, no doubt, if ever it is in her power, swallow up all those countries that border upon them, or which lie between the mouths of those two rivers, in which space lie most of the British dominions on the continent of America. But I shall further explain the dangerous consequences of permitting such an alteration in our maps, when I come to treat of Florida and Canada, and the English dominions that lie contiguous to those countries: In the mean time, I shall apply myself to enquire into the present state of the Spanish territories in America, describing the several subdivisions of that empire; and first treat of that of Mexico, or New Spain.

CHAP. II.

The present state of Mexico:

Describing the situation and extent of Mexico, or New Spain; and the face of the country.

CHAP. II. The situation and extent of Mexico.

MEXICO is bounded by New Mexico or Granada, and Florida, on the north; by the Gulph of Mexico, and the north sea, on the north-east; by Terra Firma Proper, in South America, on the south-east; and by the Pacific Ocean, or South-sea, on the south-west; and lies between 7 degrees and 28 degrees of north-latitude; and between the 83d and 116th degrees of western longitude from the meridian of London, stretching along the South-sea 2000 miles and upwards; and on the North-sea, and the Gulph of Mexico, more than 1500 miles; but the breadth is very unequal; for upon the confines of New Mexico, where it extends from the Gulph of California on the west, to Florida on the east, it is upwards of 600 miles broad; and in the province of Veragua, from the North-sea on the north-east, to the South-sea on the south-west, being the narrowest part of the isthmus, it is very little more than 60 miles broad; and the form is so irregular, that it can only be comprehended by a view of the following map of Mexico:

The face of the country.

Mountains.

Mexico is very much encumber'd with mountains, which are, for the most part, cover'd with woods; but there are a chain of hills higher than usual, that run almost the whole length of it, from the south-east to the north-west: From these we descend to other hills, on either side considerably lower; and between the hills, are many

fine fruitful valleys, but scarce any plains of a considerable extent. Which way soever we turn our eyes, the prospect is bounded by hills and woods, 'till we come near the North, or South-seas: But the lands, near the sea-coast, especially on the North-sea, are so flat and low, that they lie under water great part of the rainy season; and upon these morasses and bogs, are thickets of Bamboe canes, mangroves, thorns and briars, so closely mix'd and interwoven, that it is almost impossible to penetrate them, without cutting a way through with a hatchet. There are, indeed, some sandy bays, where it is tolerable landing; but there is much more of the mangrove land, where a man must wade up to the middle in mud, before he can get to the dry ground. Beyond the mangroves, indeed, we meet with fine savannahs or meadows, lying between little rising hills; and on the north-west coast of the South-sea, near the Gulph of California, the mountains come almost close to the shore; and there is none of these morasses or mangrove lands, that we find in other places.

And it is very remarkable, that the mountains on the west side of Mexico, are most of them vulcano's, from whence fire and smoke are perpetually issuing; and this is supposed to be the occasion of those frequent earthquakes that happen on this coast, in which whole towns are sometimes buried.

Upon these mountains, there is a great variety of fine, large timber, and little or no underwood: A man may ride through them without any difficulty; whereas the woods upon the coast in the flat country, are so full of bushes and underwood, that there is scarce any breaking through them, as has been observ'd already.

And it is very remarkable, that the mountains on the west side of Mexico, are most of them vulcano's, from whence fire and smoke are perpetually issuing; and this is supposed to be the occasion of those frequent earthquakes that happen on this coast, in which whole towns are sometimes buried.

Upon these mountains, there is a great variety of fine, large timber, and little or no underwood: A man may ride through them without any difficulty; whereas the woods upon the coast in the flat country, are so full of bushes and underwood, that there is scarce any breaking through them, as has been observ'd already.

CHAP. III.

Of the seas, gulphs, or bays, capes, lakes, rivers, and springs in Mexico.

THE seas of Mexico are, either the Gulph of Mexico, and the North-sea, on the north-east, or the Pacific Ocean, on the south-west.

In the Gulph of Mexico, lies the famous Bay of Campeachy, between 18 and 20 degrees north latitude, where the greatest quantities of Logwood are cut. And between Jucatan and Honduras, is another great bay, call'd the Gulph of Honduras, lying between the 15th and 18th degree of north latitude.

The chief capes in these seas, are, 1. Cape Concededo; and 2. Cape Catorh: The first the north-west, and the other the north-east point of Jucatan; 3. Cape Honduras; 4. Cape Cameron, on the north of the province of Honduras; and, 5. Cape Gratia Dios, being the north-east point, a promontory of the same province. In the Pacific Ocean, are the Gulph of Salinas, or Nicoya, in 10 degrees north latitude; and the Gulph of Amapalla, in 12 degrees north latitude: and the Capes are, Cape Blanco, in 9 degrees north latitude, and Cape Co-rientes, in 20 degrees north latitude.

The chief lakes are, that of Nicaragua, in the province of the same name, which has a communication with the North-sea by the river of Nicaragua; and the other way extends almost to the South-sea: And, 2. the Lake of Mexico, in which the Metropolis stands. These, and the rest of the lakes with which this country abounds, will be more particularly describ'd in treating of the respective provinces.

CHAP. III. The principal rivers in Mexico are, 1. the North river, which rises in New Mexico; and, after running a very long course to the south-east, falls into the Gulph of Mexico, in 26 degrees north latitude.

Chief river. The North river. Panuco river. 2. The river of Panuco, or Tompeque, which rises very far within the land, and running eastward, falls into the Gulph of Mexico, in 23 degrees, 50 minutes, north latitude.

Alvarado river. 3. The river Alvarado, composed of three rivers, which, rising in different parts of the country, unite their streams, and fall into the Gulph of Mexico, in 19 degrees north-latitude, 6 leagues to the eastward of Vera Cruz.

Tobasco river. 4. Tobasco river, which rising not far from the South-sea, runs to the north-east, and falls into the Bay of Campeachy, in 19 degrees north latitude to the eastward of Tobasco river.

Xagua. 5. The river Xagua, which rises in the province of Honduras, and, taking its course to the north-east, falls into the North-sea, near Cape Gratia Dios, in 14 degrees, odd minutes, north latitude. And,

Yara river. 6. The river Yara, which rising in the province of Nicaragua, to the northward of the lake of that name, runs east, and falls into the North-sea, in 13 degrees north latitude. These rivers are moderately large, and would be navigable some of them, for great ships, if they were not choak'd up with bars of sand at their entrance. However, boats and small vessels may enter them, and frequently do sail up them many miles.

There are a multitude of other rivers, which rising in the neighbouring hills, fall into the Gulph of Mexico, and the North-sea, especially during the rainy season: These over-flow all the low lands; but when fair weather returns, they are dried up, and scarce any fresh water is to be met with, in many places.

Rosario river. The chief rivers of Mexico, which falls into the South-sea, are, 1. Rosario, which runs from east to west, and falls into the South-sea, in 22 degrees, 51 minutes south latitude: Some gold mines lying within two or three leagues of this river, the sands of it are rich in gold.

Teguantipique. 2. The river Teguantipique, which rises not far from the North-sea, and running westward, falls into the South-sea in 15 degrees, odd minutes, north latitude, near a Town of the same name.

Lempa river. 3. The river Lempa, said to be the largest in this country, runs from north to south, and falls into the South-sea in 13 degrees, odd minutes, north latitude, near the town of Trinidad.

As to hot baths and medicinal springs, Mexico abounds with them; especially those places which lie near the burning mountains: And, in the dry season, the waters of many of their lakes and rivers are salt or brackish; but their waters will be treated of more particularly in the respective provinces where they lie.

CHAP. IV.

Of the winds and tides, the temperature of the air, and seasons of Mexico.

CHAP. IV. IN every ocean, whether the Indian, Atlantic, or Pacifick Ocean, the wind continually blows from east to west, between the latitudes of 30 north and south (a little distance from land); only to the northward of the Equator it inclines north-east, and to the southward of the Equator, south-east; to which rule there is only this exception, that under the Line, and for two or three degrees on each side, the winds are variable, and perpetually changing; and

CHAP. IV. sometimes there is so little wind, and such calms, under the Line, that a ship shall not sail a league in a month's time.

However, upon every coast, almost, within the latitude of 30 north or south, there are other periodical winds and storms that return at certain seasons of the year, call'd Munfoons; and there are, during the fair season, land and sea breezes, which constantly take their turns at stated hours every day, and particularly upon the north and south coast of Mexico, the Country I am now describing.

The land breezes begin here late in the evening, and blow 'till six or seven the next morning, when they die away insensibly; and from that time 'till near noon, it is generally calm. About noon the sea breeze rises, and refreshes the inhabitants, who would, otherwise, faint with heat; the forenoon, therefore, is much the hottest time of the day within the Tropicks. But the land winds are not hot in Mexico, as they are in the East-Indies, where they blow over a long tract of burning sand: On the contrary, 'tis observ'd, that the winds, which blow from the mountains in the middle of this country, are colder than those that come from the sea.

There are some hours difference on different coasts, as to the rising of the sea and land breezes. In some places the sea breezes begin at nine or ten o'clock, or at eleven at farthest; but at others, they do not set in 'till one in the afternoon: In like manner, the land breezes begin some hours before midnight on some coasts, and not 'till after midnight on others. And it is observ'd, that these sea and land breezes very seldom blow directly on or off the shore, but obliquely; as where the coast runs north and south, these winds blow from the north-west, or north-east; and in south latitude, from the south-west or south-east: And Mr. DAMPIER, I perceive, takes the sea breezes to be nothing else but the true trade-wind, which always blows from the north-east or the south-east, or pretty near those points; and that these winds only cease blowing upon the coast for about twelve hours every night, when the land wind prevails: For he observes, that such promontories and head-lands as run far out into the sea, have much more of the sea breeze than bays and creeks, which are almost surrounded by the land; and, consequently, such parts of the coast are much hotter than those that lie open to the ocean.

The rainy season, which begins usually in May, and lasts 'till September, is introduced with thunder and lightening, tornadoes and hurricanes, when the wind blows almost from every point of the compass; but the worst weather is in June and July. DAMPIER informs us also, that there are strong north winds that blow in the Gulph of Mexico, and in the Bays of Campeachy and Honduras, between the months of October and March, about the full and change of the Moon, and are most violent in December and January.

As to tides, DAMPIER observes, there are no Tides in places in the ocean without them; but that they rise highest, and run strongest, in narrow channels, bays and creeks, or up the mouths of rivers; and that on such coasts as have no bays or rivers, the tides are but weak, and scarce perceptible: That in the Bay of Campeachy, in the Gulph of Mexico, the tide runs very strong, but does not rise more than six or seven foot: On the other hand, in the Gulph of St. Michael's, on the coast of the South-sea, he observ'd the tides rose eighteen or twenty foot, while, in small islands at a distance from the continent, it scarce rises a foot and a half.

CHAP.

IV.
Wet and
dry sea-
sons.

It is observ'd, that as the Sun approaches either of the Tropics, it carries wet weather so far with it; and when it is farthest from either Tropic, then the weather is fair under that Tropic. On the contrary, those people who live without the Tropics, have their fair weather when the sun is nearest them, and wet weather when it is at the greatest distance from them.

In Mexico, their rainy season begins in April or May, and lasts 'till September, and sometimes longer. It begins, as has been observ'd, with tornadoes, or tempests, first one in a day, afterwards more, encreasing 'till the month of June, and then it rains for two months every day, great part of the four and twenty hours; but less in the morning, and in the day-time, than in the night: Those, therefore, that are oblig'd to travel during this season, set out early in the morning, that they may come to an end of their journey before the rain begins. And it is observ'd, that the rains continue much longer in bays upon the sea-coasts, and particularly in the bays of Campeachy and Honduras, than on capes and headlands, and higher up the country. In some bays, 'tis said, the rainy season continues near two thirds of the year.

Tempera-
ture of
the air.

These rains, which overflow all the flat country, the land and sea breezes that blow alternately, and their numerous lakes, render the air cool, and make even the Torrid Zone habitable and pleasant; the heats whereof would otherwise have been as insupportable as the antients imagined them. The coolest part of the year is in the months of July and August, when the low lands lie under water: Then the natives really complain of cold, morning and evening, as they do in the succeeding months 'till February; though the weather then seems very moderate to an European constitution. The tops of the highest mountains are indeed sometimes very cold, being cover'd with snow even in 16 or 18 degrees of north latitude; but here are very few towns. The people chuse to reside on those eminences between the mountains and the flat country, where the air is most agreeable, and the earth most fruitful. The hottest time of the year is in February, March, and the beginning of April; for then the sun is seldom obscur'd by clouds, the waters are every where dried up, and it is very difficult then to meet with fresh water in some places.

Seed time
and har-
vest.

The chief season for sowing, or rather planting their Indian-corn, tho it will grow and come to maturity at any time almost, is in May and June (the beginning of the rainy season) and they reap it in October, when the rains are over; their trees are ever green, and their fruits blossom and ripen almost all the year round: But I shall enlarge on this article, when I come to treat of their plants, corn and husbandry.

CHAP. V.

Of the provinces Mexico is divided into, its subdivisions, and chief towns, with their publick and private buildings and furniture.

CHAP.

V.
Provinces.

MEXICO, or New Spain, is divided into three Audiences; viz. 1. The Audience of Guadalajara, or New Galicia; 2. The Audience of Mexico; and, 3. The Audience of Guatimala.

Guadala-
jara Au-
dience.

The Audience of Guadalajara, or Galicia, is bounded by New Mexico on the north-west, by the Gulph of Mexico on the east, by the Audience of

Mexico on the south-east, and by the South-sea and the Gulph of California on the south-west, being 800 miles in length, and generally 500 or 600 miles broad, and is subdivided into the following seven provinces; viz. 1. Guadalajara Proper; 2. Zacatecas; 3. New Biscay; 4. Cinoloa; 5. Culiacan; 6. Chametlan; and, 7. Xalisco.

1. The province of Guadalajara Proper is bounded by New Mexico towards the north, by Mexico Audience on the south-east, and by the Pacific Ocean on the west. It is a plentiful country, and hath several silver mines in it. The chief town is Guadalajara, situated on a river of the same name, Guadalajara in 20 degrees, odd minutes, north latitude, 108 degrees west of London. It is the capital of the whole Audience, the seat of their courts of Justice, and a Bishop's see. There are several churches in it, besides the cathedral, and some monasteries and nunneries; but I meet with no further description of this place.

2. The province of Zacatecas, bounded by New Zacatecas Biscay on the north, by Mexico Proper and Panuco province on the east, by Guadalajara on the south, and by Chametlan and Culiacan on the west. The chief towns whereof are, 1. Zacatecas, situated 40 leagues north of Guadalajara, and about 80 north-west of the city of Mexico. The town consists of five or six hundred Houses, and the Spaniards keep a good garrison in it to defend their silver mines. 2. Nombre de Dios, a large, populous town, situated in 25 degrees north latitude, and 109 degrees west of London; and, 3. Durango, situated at the conflux of several rivers, 8 leagues north-west of Nombre de Dios.

The east part of this province has plenty of corn and fruit, and the west is no less famous for its silver mines.

3. The province of New Biscay, bounded by New Biscay New Mexico on the north, by part of Florida and Panuco on the east, by Zacatecas on the south, and by Culiacan on the west. The chief towns whereof are, 1. St. Barbara, situated in 26 degrees north latitude, 108 degrees west of London; and, 2. St. John's, situated 70 miles north of St. Barbara.

This province also is rich in silver mines.

4. The province of Cinoloa, bounded by New Mexico on the north-east and the north-west, by Culiacan on the south-east, and by the Gulph of California on the south-west: The chief town whereof is Cinoloa, situated in 26 degrees, odd minutes, north latitude, and 112 degrees west longitude: In this province are rich pasture grounds, well water'd with the rivulets that fall from the mountains; and here is great plenty of Cotton.

5. The province of Culiacan, bounded by New Biscay and Zacatecas on the north-east; by Cinoloa on the north-west; by Chametlan on the south-east; and by the Gulph of California on the south-west: The chief town whereof is Culiacan, situated in 24 degrees, odd minutes, north latitude, and in 112 degrees of west longitude.

6. The province of Chametlan, bounded by Zacatecas on the north-east; by Culiacan on the north-west; by Xalisco and Guadalajara on the south-east; and the South-sea on the south-west: The chief town whereof is St. Sebastian, situated on a river of the same name, about 40 miles to the eastward of the South-sea, in 23 degrees of north-latitude.

This province hath both gold and silver mines in it.

7. The province of Xalisco is bounded by Guadalajara and Chametlan on the north; by Mecholacan

acan on the east; and by the South-sea on the south and west: The chief towns whereof are, 1. Xalisco, situated near the South-sea, in 20 degrees south-latitude, west longitude 111; 2. Compostella, situated also near the South-sea, about 20 leagues to the northward of Xalisco, a rich town lying in the neighbourhood of several silver mines; 3. Santa Pecaque, where the Spaniards of Compostella keep a great many hundred slaves, that work in their silver mines. This town, DAMPIER relates, the Buccaneers (among whom he served) plunder'd in the year 1686; but being attack'd by a great body of Spanish horse, they lost fifty of their men.

The Audience of Mexico is bounded by that of Guadalajara on the north-west; by the Gulph of Mexico on the east; by the Audience of Guatimala on the south east; and by the South-sea on the south-west; and contains nine provinces; viz. 1. Mexico proper; 2. Mechoacan; 3. Panuco; 4. Tlascala; 5. Guaxaca; 6. Tabasco; 7. Yucatan; 8. Chiapa; and, 9. Soconusco. The province of Mexico Proper is bounded by Panuco on the north, Tlascala on the east; by Mechoacan towards the south, and Xalisco on the west.

This province is said to exceed all the provinces of America, in spacious extensive vallies, in the richness of its arable lands, pasturage and variety of fruits: The great lakes and rivers, and the neighbourhood of the sea, also furnish them with plenty of excellent fish; and give them great advantages in trade, both foreign and domestick. The chief towns of Mexico Proper are, 1. Mexico, the metropolis of the whole viceroyalty now, and anciently of the empire of Mexico, situated in 20 degrees of north latitude, 103 degrees west of London; in a spacious lake, that lies on the east side of a valley, about 14 Spanish leagues in length, 7 in breadth, and upwards of 40 in compass; the valley being surrounded by mountains on all sides, which in the lowest part are 42500 yards above the lake, according to GEMELLI CABERI, who was upon the spot; but surely there must be a cypher too much in this account: For, if he means perpendicular height, the lowest mountains cannot be more than 4250 yards above the level of the lake.

The town is a perfect square, each side half a league; and, consequently, the circumference of the whole about two leagues. There is a great square, or parade, in the middle of it, from whence the streets run quite through the town in a direct line, either north and south, or east and west, crossing each other at right angles; so that the length and breadth of the place may be discern'd at the corner of any street. They are all wide, and well paved, but generally dirty. The town stands, great part of it, upon a bog or morass, which occasions the foundations of some of them to sink; and, what is still worse, there are so many rivers that fall from the mountains into the lake, that the town is often in danger of being overflowed; many of the houses and inhabitants have been actually swept away by floods, tho' they have been at a vast expence in making canals, dikes and sluices to carry off the waters. They have sometimes found the hazard and inconveniencies of their situation so great, that it has been debated, whether they should not abandon the city, and build another upon better ground. But they have hitherto been diverted from that resolution by several considerations: 1. By the vast expence it would be, to build such another city: 2. By the coolness of the Situation, occasioned by the lake, which they should want on higher ground: And, lastly,

by the natural strength of the city, there being no approaching it but by the five causeys that have been made between the city and the main land. This the ancient Mexican; as well as the Spaniards, look'd upon to be so great a security, that they never erected walls or gates about it. The churches and houses are built of stone or brick, three stories high, where the ground will bear it: but they cannot lay their foundations very deep; for the reasons already mention'd. Mexico is an archbishoprick; and there are in it, besides the cathedral and parochial churches, twenty-nine monasteries, and two and twenty nunneries, and contains, as is computed, about one hundred thousand inhabitants. But, as most of the lands in the neighbourhood belong to the churches and religious houses, which are all vastly rich, there are not many Spanish noblemen and gentlemen in the place; and among the meaner sort of people, the Spaniards do not seem to make a tenth part of the inhabitants. The bulk of the people are Blacks or Mulattoes; there having been abundance of Black slaves brought thither, who by one means or other obtain'd their freedom, and married with the natives: Their descendants are very numerous. There is also a strange mixture of Spanish and Indian blood. The pure Spaniards, and those that are descended from Spanish ancestors on both sides, are a very small number, both here and in other towns of Mexico. But I shall not enlarge on this head here, having reserv'd a chapter on purpose to treat of the present inhabitants of Mexico.

Neither shall I dwell upon their trade and manufactures, having assign'd a particular chapter to treat of these: I shall only observe, that the value of their merchandize is not to be computed; this being the great mart for all goods brought from the East-Indies or Europe. Those of the East-Indies they receive from Acapulco, a sea-port on the South-sea; and those of Europe from La Vera Cruz, situated on the North-sea: And their own native treasures, Gold, Silver, precious Stones, &c. added to the former, make the shops and markets of Mexico the richest that are to be found in any town in the world.

Their churches and monasteries are proportionably rich and splendid, and their revenues surprisingly great. The cathedral, like most others, is built in form of a cross, lofty and spacious; the painting, gilding and carving exquisite; and it contains abundance of fine altars and chapels on each side, the high altar standing in the middle of the choir. The revenues belonging to the Archbishop, Dean and Chapter, and other Ecclesiasticks of this cathedral, are equal to the beauty and magnificence of the buildings. There are belonging to it nine Canons, five dignified Priests, viz. the Dean, Arch-deacon, Schoolmaster, Chanter and Treasurer; six Demicanons, and six Half-Demi-canons, one head Sacristan, four Curates chosen by the Viceroy, twelve royal Chaplains elected by the Chapter, and eight others. The archbishop's constant annual revenue (besides casual fines, &c. which amount to near as much) is sixty thousand pieces of eight, near fifteen thousand pounds sterling per annum. The Dean's revenue is eleven thousand pieces of eight per annum, and the other four dignified Priests have eight thousand per annum each; the Canons six thousand; the Demi-canons five thousand; the Half Demi-canons three thousand; each Curate four thousand; every Chaplain three hundred, and the inferior officers and attendants in proportion. All the Ecclesiasticks belonging to this church are three hundred in number;

CHAP.

V.

CHAP. V. ber; and it is computed, the entire annual revenue of the cathedral of Mexico, amounts to three hundred thousand pieces of eight (each piece four shillings and six pence english); at least, this was the state of it in the year 1698, about forty years since, as GEMELLI CARERI relates, who was then upon the spot, and is esteemed one of the most judicious and faithful writers that ever travell'd.

What is most remarkable besides in Mexico, is the vast spacious market-place, or square, in the middle of the town; on one side whereof runs a cloister, under which are some of the richest shops in the world; and on the other, stands the magnificent Palace of the Viceroy, built about a large square; the principal front to the market-place not inferior to that of Naples, in which the courts of Justice are held.

The palace of the Marquis DE VALLE, the successor of the celebrated CORTEZ, who conquer'd Mexico, is built on the ground where one of the palaces of the Emperor MONTEZUMA stood, and admir'd for its dimensions and structure.

Beside the churches and monasteries in this city, there are several hospitals richly endow'd; among the rest, there is one for young maids that are orphans, who are maintain'd handsomely while they live single, and allowed five hundred pieces of eight each when they marry. There is another hospital erected for those who have been unfortunate in venereal encounters, which has a revenue of thirty-six thousand pieces of eight per annum, and is a royal foundation; and there is a third hospital only for sick Priests: And GEMELLI relates, that when he was in this city, the Archbishop, Dr. FRANCIS D'AGUAR, gave that year all his revenues to the poor, and an hundred thousand pieces of eight more: For, I find, in this rich city, there are a multitude of wretched objects; but none poorer than the Spaniards themselves, who are above working, tho' not above thieving, it seems: For the same writer relates, that he saw the Viceroy sitting on his tribunal, assisted by five other Judges, and that there were brought before him no less than four hundred Spaniards for theft; adding, that tho' a stranger be never so much upon his guard, it is difficult for him to get out of the city without losing either his money or effects: That, as these idle Spaniards apply themselves to no other business but lying, sharpening, and cheating, they are such masters of these arts, that no honest man can defend himself against them: They chuse this way of life rather than business; tho' all that will work are better paid for their labour here than in any place in the world.

The several trades, I perceive, have their respective streets or quarters. There is a spacious street, which runs from the market, where the Goldsmiths expose their rich goods to sale; and here are to be seen, 'tis said, the value of many millions of Gold, Silver and Jewels. The street of St. Austin, where the Mercers expose their rich Silks to sale, has a very grand and beautiful appearance; and the street called Tacuba, where those tradesmen reside that deal in Bras, Steel, and Iron ware, is very long and spacious: but the Street, call'd Eagle-street, inhabited by the Nobility, Gentry, and great Lawyers, is said to excel all the rest in magnificence. Here are no ordinary houses or tradesmens shops intermix'd with them; and in this street stands the Marquis d'VALLE's fine palace, already mention'd.

There is also a pleasant Park, well planted, and adorn'd with fountains and water-works; whither the quality of both sexes, and the gay part of the town resort every evening, some in coaches, and

others on horseback: And here the young Cavaliers endeavour to recommend themselves to the Ladies, by feats of activity and horsemanship. Several hundreds of coaches are frequently seen here, with numerous retinues of Black slaves, in the richest liveries, moving gently along, backwards and forwards, as at the Ring in Hyde-Park.

Another diversion of the citizens, is fishing in boats upon the lake, whither they carry wine and cold provisions to regale themselves with upon the water: And this brings me to give some description of the Lake, on the west-side whereof Mexico is situated. This lake is about five leagues in length, from north to south; but the breadth is very unequal; the greatest breadth is something more than four leagues; but the north-end of it is scarce half so broad. North of this lake, there are three others, which have a communication with it by rivers or canals; and on the south there are two other lakes, divided from it only by a causeway. There are several rivers that rise in the adjacent mountains, and fall into these lakes, on the east and west; which are the occasion of those terrible inundations some years in the rainy season. The waters of these lakes are not fit for all uses; one of them is so salt, that they make Salt of the waters: And tho' some travellers relate, that in several places they are sweet and wholesome; yet, I perceive, the water they drink is brought from a mountain that lies a good distance from the town, by a spacious aqueduct, supported by arches.

The neighbourhood of Mexico is render'd extremely pleasant, by the numerous palaces, country-seats, monasteries, and villages, either on the islands in the lakes, or on the banks of the several lakes within view of the city; to which the citizens resort in boats, when they are disposed to retire from the hurry of the town.

The second town I shall describe in Mexico-Pro-Acapulco town. per is Acapulco, a celebrated port on the South-sea, in 17 degrees north latitude, and in 102 degrees of western longitude; about two hundred and forty miles to the southward of the city of Mexico. At this port all the merchandize of Europe and America is shipp'd for China and the Phillippine islands in the East-Indies; and here the ships annually arrive in January from China, the East-Indies, and Peru, with the merchandize of those countries; which makes the Fair that is held here at that time one of the greatest in the world. GEMELLI, who was upon the spot, says, that some millions of pieces of eight are return'd here during the fair. But tho' it is then crowded with wealthy Merchants, it has at other times the appearance of a mean village. Except the castle and the harbour, there is little worth notice; the town consisting only of two or three hundred thatch'd houses, inhabited by Blacks and Mulattoes, a religious cloister or two, and an hospital. The town lies at the foot of some high mountains, which cover it on the east, and render it very unhealthful. The Spaniards therefore, and even the Governor himself, desert the place as soon as the Fair is over. The harbour indeed, is an excellent one, very secure and spacious; it has a narrow winding entrance, defended by platforms of great guns; and within is inclosed by high mountains, that surround it like a wall, and so deep, that the shipping may come up close to the shore, and be fastened to the trees on the beach. The Governor of the castle, who is also the chief Civil Magistrate in this part of the country, makes his post worth twenty thousand pieces of eight per annum, arising chiefly from the profits of the Fair. The

CHAP. V. Comptroller of the customs makes little less: and the Curate (the Parson of the place) whose stated revenue is no more than one hundred and eighty pieces of eight per annum, makes fourteen thousand frequently; for he extorts most extravagant fees from the friends of such rich Merchants as die there, or on board the ships that arrive at Acapulco, and are buried there. GEMELLI relates, that this Priest will not be satisfied sometimes with less than a thousand pieces of eight for his burial-fee. It is excessive dear living in this place during the Fair; the Negroe Porters expect three pieces of eight a day for carrying goods, and people pay a dollar a day for their ordinary: Inns, it seems, there are none in the place; or rather, all the houses in the town are inns during the Fair; the people making it their business to accommodate strangers with lodgings; but there are multitudes that lie in huts and tents for want of room in the town.

Port Marquis town. Two leagues to the southward of this place is another port, called Port Marquis, where shipping sometimes puts in; but the town consists only of a few Fishermen's huts, and the harbour is neither so commodious or secure as the former.

Pachuca town. The last town I shall mention in the province of Mexico is Pachuca, which having several rich silver mines near it, the silver is refined here, and cast into pigs or bars, fit for transportation. The town is situated about 60 miles north of the city of Mexico.

Mechoacan province. The province of Mechoacan is bounded by Panuco on the north, by Mexico Proper on the east, by the South-sea toward the south, and by Guadalajara on the west. In this province also are mines of Gold, Silver, and Copper; and the country produces Cotton and Cocoa Nuts, of which Chocolate is made: It affords good corn and pasture also; and, being well water'd with rivers and springs, is esteem'd one of the most pleasant and healthful provinces in the Audience of Mexico. The chief towns are, 1. Mechoacan the capital, situate in 20 degrees north latitude, and in 105 degrees west longitude, upon the side of a lake; and is about 150 miles to the westward of the city of Mexico: It is a Bishop's see, Suffragan to the Archbishop of Mexico; but I meet with no farther description of it. 2. Colima, situate in 18 degrees north latitude, not far from the coast of the South-sea: The town is said to be rich and spacious, and to stand upon a river in one of the most pleasant and fruitful valleys of this province, near which is a vulcano, the flames whereof are seen at sea.

Colima town. 3. Navidad, or the Port of Nativity, situate on the South-sea, a little to the westward of Colima, in 18 degrees north latitude. This is a good harbour; and, the neighbouring country affording timber, the Spaniards build some of the largest ships here they have in the South-sea.

Panuco province. The province of Panuco is bounded by part of Florida on the north; by the Gulph of Mexico on the east; by Tlascala and Mexico Proper on the south; and by Mechoacan and Guadalajara on the west. This province has some Silver mines; is tolerably fertile on the south next to Mexico; and the Spaniards used to make a great deal of Salt in that part of it which lies on the Gulph of Mexico.

St Lewis de Tampico town. The chief towns are, 1. St. Lewis de Tampico, which lies just under the Tropic of Cancer, in 101 degrees of west longitude, and on the north side of the river of Panuco, near its mouth.

St. Estevan, or Panuco town. 2. St. Estevan Puerto, formerly called Panuco, the capital of the province, situated on the south-side of the river Panuco. 3. St. Jago de los Valles, **St. Jago town.**

CHAP. V. situated 5 leagues south-west of St. Estevan. This town is most taken notice of for the salt-works near it, and the garrison the Spaniards have here to awe the natives. 4. The last town I shall mention is St. Lewis de Potosi, an inland place to the north-west of St. Jago de los Valles, probably named Potosi, from a Silver mine near it, resembling that of Potosi in Peru.

The province of Tlascala, or Los Angeles, is Tlascala bounded by Panuco on the north; by the Gulph of Mexico on the east; by Guaxaca and the South-sea on the south; and by Mechoacan and Mexico Proper on the west. This province is said to be the best peopled by Indians of any in Mexico; the natives having been exempted from tribute, and well used by the Spaniards, on account of their joining Cortez, and assisting him in his conquest of Mexico.

It is a plentiful country, abounding in sugar, corn, cattle and rich pastures; nor is there any want of venison or wild-fowl: Here are also some Silver mines, Copperas, Allum, liquid Amber, and fragrant Gums; with abundance of Cochineel. The province is also well water'd with rivers, the chief whereof is that of Zahnah, or Zacadula, which runs almost the whole length of the province, frequently overflows the flat country, and falls into the South-sea to the westward of Acapulco. The chief towns are, 1. Tlascala, situate in 19 degrees, odd minutes, north latitude, in a fruitful plain, 20 leagues to the eastward of the city of Mexico; once a large populous place, capital of the province; but now dwindled to a village, having little remarkable in it but a monastery of Franciscans. 2. Puelba, or the city of Angels, situate in 19 degrees of north latitude, on the banks of the river Zacatula, in a fine valley, 25 leagues to the eastward of Mexico. The buildings are chiefly of stone, and the form of it like that of other Spanish towns: A spacious square in the middle, from whence run the principal streets in a direct line, which are cross'd by others at right angles. The great square is encompass'd on three sides with a stately uniform piazza, under which are the shops of the principal tradesmen; and on the fourth side of the square is the cathedral, with a most beautiful front: This is, in every respect, a finer square than that of Mexico, according to GEMELLI, who view'd both of them. The streets also are much cleaner; and there are a great many beautiful and magnificent parochial and conventual churches, with several rich monasteries and nunneries: But some parts of this fine town, I perceive, are subject to inundations, as well as Mexico. It is the see of a Bishop, Suffragan to the Archbishop of Mexico, whose annual revenue is fourscore thousand pieces of eight per annum; and there are two hundred thousand more paid annually to the Canons and Officers of the church; the whole revenues whereof amount to three hundred thousand pieces of eight per annum. The people of this city in general are exceeding wealthy; tho' the Laity in this part of the world, cannot pretend to vie with the Clergy, either in estates or influence. 3. Vera Cruz, or Vera Cruz, Ulva, situate in the Gulph of Mexico, in 18 degrees, odd minutes, north latitude, and in 100 degrees of western longitude, lying about sixty-five or seventy leagues south-east of the city of Mexico, in a barren sandy plain; but considerable upon account of an excellent harbour, defended by its natural situation within the rocks, and by a castle and forts at the entrance: It is also of importance, on account of the Flotilla's resorting hither to receive the Gold and Silver found in the mines of Mexico; and its being

leagues to the eastward of the city of Mexico; once a large populous place, capital of the province; but now dwindled to a village, having little remarkable in it but a monastery of Franciscans.

2. Puelba, or the city of Angels, situate in 19 degrees of north latitude, on the banks of the river Zacatula, in a fine valley, 25 leagues to the eastward of Mexico. The buildings are chiefly of stone, and the form of it like that of other Spanish towns: A spacious square in the middle, from whence run the principal streets in a direct line, which are cross'd by others at right angles. The great square is encompass'd on three sides with a stately uniform piazza, under which are the shops of the principal tradesmen; and on the fourth side of the square is the cathedral, with a most beautiful front: This is, in every respect, a finer square than that of Mexico, according to GEMELLI, who view'd both of them. The streets also are much cleaner; and there are a great many beautiful and magnificent parochial and conventual churches, with several rich monasteries and nunneries: But some parts of this fine town, I perceive, are subject to inundations, as well as Mexico. It is the see of a Bishop, Suffragan to the Archbishop of Mexico, whose annual revenue is fourscore thousand pieces of eight per annum; and there are two hundred thousand more paid annually to the Canons and Officers of the church; the whole revenues whereof amount to three hundred thousand pieces of eight per annum. The people of this city in general are exceeding wealthy; tho' the Laity in this part of the world, cannot pretend to vie with the Clergy, either in estates or influence. 3. Vera Cruz, or Vera Cruz, Ulva, situate in the Gulph of Mexico, in 18 degrees, odd minutes, north latitude, and in 100 degrees of western longitude, lying about sixty-five or seventy leagues south-east of the city of Mexico, in a barren sandy plain; but considerable upon account of an excellent harbour, defended by its natural situation within the rocks, and by a castle and forts at the entrance: It is also of importance, on account of the Flotilla's resorting hither to receive the Gold and Silver found in the mines of Mexico; and its being

leagues south-east of the city of Mexico, in a barren sandy plain; but considerable upon account of an excellent harbour, defended by its natural situation within the rocks, and by a castle and forts at the entrance: It is also of importance, on account of the Flotilla's resorting hither to receive the Gold and Silver found in the mines of Mexico; and its being

CHAP. V. being a mart for all manner of merchandize and rich goods that are brought hither to the Fair from China, East-Indies, Peru, and Europe.

The town extends itself from east to west, being much longer than broad; but it is not more than half a league in circumference. The walls are of very little use, the sands being level with the tops of them in many places; but the castle and forts are so situated, as to be a defence to the ships in the harbour. The air is very unhealthy, especially during the north-winds, which blow frequently on this coast. The place is also very poor, being inhabited by Blacks and Mulattoes, and some few Spaniards; unless when the Flota is there, and then vast multitudes resort to Vera Cruz from all parts, living in little huts or tents while the fleet remains there; but, upon the departure of the fleet, all people of substance retire into the country, as well on account of their healths, as because their effects are not in any security there, the town having been several times plundered by Buccaneers or Pirates. I don't find there is more than one parish-church in the place, but there are some convents and an hospital that have churches belonging to them. The houses are, for the most part, thatch'd cottages; the owners most of them fishermen. The ordinary garrison the Spaniards have here, consists of a troop of sixty horse, and two companies of foot, which are scarce sufficient to defend the town against the Buccaneers. It was near this place, viz. at Ulva, or Old Vera Cruz, that CORTÉZ landed, when he enter'd on the conquest of Mexico; but the old town, not having so commodious an harbour, was deserted; and there are now scarce any remains of it. The province of Guaxaca, or Guaxata, is bounded by the North-sea on the north; by Tabasco on the east; by the South-sea on the south; and by Tlascala, or Los Angeles, towards the west. The chief towns are, 1. Spirito Sancto, situate in 17 degrees, odd minutes, north latitude, and in 97 degrees of western longitude, at the foot of certain mountains near the South-sea. 2. Guaxata, the capital, situate in a fine valley on the banks of the river Alvarado, about twenty leagues to the southward of La Vera Cruz: It is a Bishop's see, Suffragan of Mexico, and said to be a rich, well built town, and the country about it full of villages. 3. Guatulco, or Aquatulco, situate on the South-sea, in 15 degrees and a half north latitude, and 98 degrees of western longitude, once a good Spanish town; but, having been frequently plundered by Enemies and Pirates, was totally deserted; and there is now scarce any remains of the town but a small chappel, and is only mention'd here for its excellent harbour, which, our Seamen relate, is one of the most commodious on the coast of Mexico. 4. Tecoahtipeque, situated to the eastward of Guatulco, on a river that falls into the South-sea, said to be a well built town; but has been plunder'd, I perceive, more than once by the Buccaneers.

The air of this province is good, and the lands fruitful: They have great numbers of Horses, Mules, Sheep and Oxen; and, abounding in Mulberry-trees, make more Silk than any part of Mexico. Here are also rich Mines of Gold and Silver, and Gold Sands in several of their rivers. It produces Cassia, Cochineel, Corn, Cotton, Sugar, Cocoa-nuts, Plantains, and a variety of other fruits. The province is mountainous, like the rest of Mexico; but has several fine valleys in it, particularly that of Guaxaca, which is 16 leagues in length, and full of villages; and the country ex-

tending both to the North and the South-seas, is extremely well situated for trade.

CHAP. V. The province of Tabasco is bounded by the Bay of Campeachy on the north; by Yucatan on the east; by Chiapa on the south; and by Guaxaca on the west; and was heretofore deem'd a part of Yucatan. As most part of this province lies on the Bay of Campeachy, where the Logwood grows which our Dyers use, the land is generally so flat and low, that it remains under water great part of the year. DAMPIER relates, that it rains nine months in the year here; and that the Logwood-cutters work in the water usually up to their knees, when they fell those trees; and they can scarce find a dry piece of ground to build their huts on; that there are woods and thickets of Mangrooves, Bambow-canes and Briars on the coast, that grow in the water a yard deep, and are almost impenetrable: However, farther up in the country, are fine savannahs, or meadow-grounds, and gentle rising hills on the sides of them, planted with Guava's, Coconut-trees, and other fruits; and hills beyond them, on which grow Cedar, Brazil-wood, and other good timber. In the valleys between the hills, they have Indian-corn, Rice, Barley, and all manner of garden stuff; and the Spaniards have introduced Grapes, Figs, Lemons, Oranges, and other European fruits: Here are also found Deer, and a species of wild Hogs, proper to America, and almost all sorts of European cattle. But, though the sea-coasts of this province are overflow'd six or seven months of the year, it is so hot and dry there for three months, viz. in February, March, and April, that there is scarce any enduring it, or any fresh water to be found; which makes the country very unhealthy, and is the reason, possibly, that there are no towns near the coast; for, as for Tabasco, so much talk'd of, I find scarce any traces of it, only a large river of that name; on the banks whereof are some straggling Indian houses, and Fishermen's huts; but nothing that has the appearance of a town. DAMPIER, who lived among the Jamaica Logwood-cutters a great while, in the Bay of Campeachy, assures us, there is not so much as an Indian village, much less a Spanish town, within four or five leagues of the coast, in the Bay of Campeachy, for several hundred miles. He adds, that it is very pleasant sailing up the river Tabasco, the banks being planted with tall Cabbage-trees an hundred foot high, and with the largest Cotton and other Timber-trees, that are to be met with any where: That, eight leagues up the river, the Spaniards have a breast-work and a small guard to watch the Buccaneers, who sometimes venture up, and have actually plunder'd the town call'd Villa de Mosc, which lies four leagues higher than the breast-work; and this seems to me to be the chief town in the country; for he tells us, here is a fort and a church in it, and that it is inhabited by Spaniards and Indians: That thus far the ships come up with European goods in the months of November or December, and stay here 'till June or July, taking Cocoa and other native commodities in return: That all the Merchants and Tradersmen in the country resort hither at Christmas, which very much enriches the place. He mentions also the town of Estape, lying on the same river, four leagues beyond Villa de Mosc; said to be a town of pretty good trade, and of such force, that it repulsed Captain HENRY, when he attack'd it with two hundred desperate Buccaneers. He mentions a flou-

CHAP. a flourishing town, call'd Halpó, also higher up the river of Tabasco.

V.
Jucatan
province. The province of Jucatan, or Yucatan, is a peninsula, situated in the Gulph of Mexico, between the Bays of Campeachy and Honduras: The isthmus whereof has the provinces of Tabasco and Chiapa on the west. This peninsula extends from 16 to 21 degrees, odd minutes, north latitude, and lies between the 89th and 94th degrees of west longitude: It is generally flat, low land, scarce any hills, unless in the western part of it, near the isthmus: It is now thinly inhabited, especially near the coasts; though it was very full of people before the Spaniards destroyed the natives. This country is not agreeable to European constitutions, the air being excessive hot, and the lands near the coast frequently under water. The chief produce of the country is Cotton, Salt, and Logwood; and the Indians employ themselves pretty much in fishing. The only Spanish town on this extensive coast is Campeachy, situate on the west-side of the peninsula, in 19 degrees odd minutes north latitude: It stands in a bending of the land, but open to the sea; and, being built of stone, and surrounded with a good wall, makes a fine appearance: It has a citadel for its defence; notwithstanding which, it has been twice taken by the Buccaneers, viz. in the years 1650, and 1678; the last time by surprise, the Buccaneers enter'd the gates in the day-time without opposition, the Spaniards looking upon them to be a party of their own garrison, returned from an expedition out of the country. There are two inland Spanish towns of some note in Jucatan, viz. Merida and Valladolid. The town of Merida is situated in 20 degrees, odd minutes, north latitude, between thirty and forty miles from the North-sea, and is a Bishop's see; but I meet with no farther description of it. The town of Valladolid is situated on the east-side of the peninsula, in 19 degrees, odd minutes, north latitude, about thirty miles within land, and forty to the westward of the island of Cozumel.

Merida
town. The province of Chiapa is an inland country, bounded by Tabasco on the north; by Jucatan on the east; and by Soconusco on the south: It is mountainous, but well wooded and watered, and has several fruitful valleys, where they feed great herds of cattle; and they have a pretty brisk trade with the neighbouring provinces. The chief town is Chiapa, or Ciudad Real, situate in 16 degrees, odd minutes, north latitude, in a plain, surrounded by mountains, at an equal distance almost from the North and South-sea: It is a Bishop's see, and the seat of their courts of Justice; and there are some monasteries in the town; but I don't find it is either rich or populous. There is another town called Chiapa de los Indos, because it is inhabited by the natives, the largest Indian town in the country, and situate about 12 leagues from Spanish Chiapa.

Soconusco
province. The province of Soconusco is bounded by Chiapa on the north; by Guatemala towards the east; and by the South-sea on the south and west: It lies along the coast of the South-sea for above an hundred miles, and is not a very fruitful country; neither do they seem to have much trade: Our seamen observe, that it is very mountainous; and that the highest mountain, which is a vulcano, goes by the name of Soconusco: That to the south-east of this vulcano runs a river, on the banks whereof is situated a large Indian town; and that both the town and the river take their names from the vulcano.

The Audience of Guatemala is bounded by that of Mexico on the north-west; by the North-sea on the north-east; by the province of Darien, or Terra-Firma Proper, in South-America, on the south-east; and by the South-sea on the south-west; being about 1000 miles in length from the north-west to the south-east; but scarce half so broad in any part, and in some not 100 miles broad. This Audience is subdivided into six provinces; viz. 1. Vera Paz; 2. Guatemala Proper; 3. Honduras; 4. Nicaragua; 5. Costa Rica; and 6. Veragua.

The province of Vera Paz is bounded by the Gulph of Honduras and Jucatan on the north; by the province of Honduras on the east; by Guatemala Proper on the south; and by Chiapa towards the west. It is said to have had the name of Vera Paz, or True Peace, given it by the Spaniards; because the natives submitted, and made peace with them voluntarily. It is a woody mountainous country, subject to earthquakes, and neither fruitful or populous. The Spaniards mention two towns; viz. Vera Paz, or Coban, and St. Peter's, both of them situated a little to the southward of the bay of Honduras; but travellers have not thought them worth a particular description. Coban, or Vera Paz, is found in our maps, in 15 degrees north latitude, and St. Peter's a little to the south-east of it.

The province of Guatemala Proper is bounded by Vera Paz towards the north; by Nicaragua and Honduras on the east; and by the South-sea on the south-west. It is a mountainous country, every mountain almost a vulcano, and subject to earthquakes and fiery eruptions; as DAMPIER, Captain ROGERS, and others relate, who were very well acquainted with the coast. There are, however, many fruitful valleys, abounding in corn and pasturage, and rich drugs for dying; viz. Indico, Otta, Silvester, and Cochineel; and great herds of cattle; several Sugar plantations, and some Silver mines; and, as it lies along the coast of the South-sea, is well supplied with fish. It is agreed, by all, to be an exceeding fruitful country; nor are the heats so intolerable as might be expected between the Tropics, the earth being refreshed by the annual rains, and the land and sea-breezes, which succeed each other every day at stated hours. The chief towns are, 1. Guatemala, or St. Jago de Guatemala, the capital, situate in 14 degrees north latitude, 8 or 9 leagues from the South-sea. There is a famous mountain, with two tops, 2 or 3 leagues from this city; out of one of which issues water, and out of the other fire. At the bottom of this mountain stood the old town of Guatemala, once destroyed by a fiery eruption, and a second time by water issuing from the other head; which induced the Spaniards to build a new city 3 leagues from thence: However, at this distance, the town is sometimes covered with ashes from the fiery vulcano, which throws out stones and pieces of rocks as big as a house, and is observed to burn most fiercely during the rainy season. The new town lies on a river in a fine valley, and is one of the largest cities in Spanish America, containing upwards of eight thousand families: It is the seat of the President, and of the courts of justice of this Audience; a Bishop's see, Suffragan of Mexico; a university; and has several fine monasteries: The cathedral and parochial churches also are exceeding rich. 2. Trinidad, or Sonfonate, a port town, situate on the bay of the South-sea, 100 miles south-east of

CHAP. V. of Guatemala, in 13 degrees north latitude: It consists of four or five hundred Spanish families, besides Mulattoes and Indians, and has five churches. 3. St. Michael's, another port-town to the eastward of Sonsonate, having seven or eight hundred houses, and several fine churches; and near it is a great vulcano, called the vulcano of St. Michael's; beyond which is a large lake, the banks whereof are well inhabited by Spaniards, Mulattoes, and Indians. 4. Amapalla, situate on a fine bay to the eastward of St. Michael's; in which are above an hundred Spanish families, who have a brisk trade for their Cochineel, Cocoa, Hides, Indico, &c.

Honduras province. The province of Honduras, or Comaiagua, is bounded by the Gulph of Honduras and the North-sea on the north and east; by Guatemala Proper and Nicaragua on the south; and by Vera Paz on the west. The air of this country is said to be generally good, and the soil rich in corn and pasture, occasioned by the annual floods of their numerous rivers, and was exceedingly populous, 'till the natives were destroyed by the Spaniards, who tortured and put many of them to death, 'tis said, to make them discover their Gold and Silver, and killed many more, by obliging them to work in the mines, and carry burthens beyond their strength. It is even said, in a letter to CHARLES V. written by the Bishop of Chiapa, that the Spaniards murdered two millions of people in this province; but this account must certainly be very extravagant, there being scarce so many people in it, if it be true, as most writers agree, that America was not so well peopled as Europe, when the Spaniards came thither. The chief towns are, 1.

Valladolid town. Valladolid, or Comaiagua, situate in 14 degrees of north latitude, and 91 degrees of western longitude, in a pleasant valley, on the west side of a river, which falls into the gulph of Honduras, 80 miles north of the town. Here the Silver is refined, which is dug in the adjacent mountains. It is the residence of the Governor of the province, and a Bishop's see, Suffragan of Mexico. 2. **Truxillo town.** Truxillo, situate in 15 degrees, odd minutes, north latitude, on a bay of the sea, on the north side of the province: It stands on an eminence between two rivers, the mouths whereof, and some islands that lie before it, form the harbour, which is defended by a castle; but the place has however been plundered several times by the Buccaneers.

Gracias a Dios. 3. Gracias a Dios, situated at the mouth of a river near the north-east Cape, or Promontory of Honduras. It stands on a mountain near a fine fruitful valley, and hath some Gold mines in the neighbourhood of it.

Nicaragua province. The province of Nicaragua is bounded by Honduras on the north, by the North-sea on the east, by Costa Rica towards the south-east, and by the South-sea on the south-west: This country consists of mountains, valleys, and spacious lakes, with fine savannahs, or meadows, in which feed numerous herds of cattle: They have also Sugar plantations, and a variety of pleasant fruits: And their constant sea and land breezes, with that extensive lake, that runs quite cross it, renders this province cool and healthful; insomuch, that some of our countrymen that have resided here, call it the paradise of the Indies: But the vulcano's in their mountains, and the earthquakes occasioned by them, too often disturb their repose. The west end of the great lake I have mentioned, lies within a few leagues of the South-sea, and stretching to the westward, falls into the North-sea by a nar-

CHAP. V. row channel, usually called the river of Nicaragua; but this channel, it seems, is so obstructed by rocks, and the river falls down such precipices frequently, that the navigation is scarce practicable: Nor do the Spaniards care to move these obstructions, lest some other nations should find a way through this lake to their settlements on the South-sea; for the head of the lake is not more than four or five leagues distant from the South-sea. It is of a good depth after passing the narrow channel from the North-sea, and upwards of an 100 miles in length, and thirty or forty in breadth: It ebbs and flows like the sea, and the banks of it are pretty well inhabited, on account of the plenty of good fish in it, and other conveniences; but it is pretty much infested by Crocodiles and Alligators.

The chief towns in this province are, 1. The city of Leon, situate towards the west end of the said lake, in 11 degrees and a half of north latitude, about 20 miles to the eastward of the South-sea: It stands in a plain at the foot of a piqued mountain, call'd, the vulcano of Leon. It is a Bishop's see, and, besides the cathedral, has several churches and monasteries, and about a thousand houses, whereof the Governors and some of the principal inhabitants make a grand appearance; but they are most of them low built on account of earthquakes. The riches of the place has tempted the Buccaneers to plunder it several times, and particularly the crew that DAMPIER sail'd with in the year 1684, who set fire to the place, on the Governor's refusing them a sum of money: And, perhaps, the easiness of access to this city, was one great inducement to their attempting it; for DAMPIER relates, that the way to it lay through fine level savannahs or meadows: Nor does he mention any fortifications about it, only some breast-works in the way thither. 2. **Ria Lera town.** Ria Lera, or Rea Lejo, situate on the South-sea, being the port-town to the city of Leon, and situate 20 miles west of it. The town stands in a plain on a small river, is pretty large, and, according to DAMPIER, has three churches and an hospital; but is a very sickly place, on account of the creeks and salt marshes that lie about it, and occasion a very nauseous smell. 3. **Granada town.** Granada, situate on the south side of the lake of Nicaragua, about 60 miles south-east of Leon, a good trading town, with some fortifications about it; and yet it was taken and plundered by the Buccaneers in the year 1686. 4. **St. John's town.** St. John's, situate on the north side of the river of Nicaragua, about 100 miles to the westward of the North sea; but I meet with no farther description of it.

The province of Costa Rica, or the Rich coast, Costa Rica is bounded by Nicaragua on the north; by the North-sea on the east; by Veragua on the south-east; and by the South-sea on the south-west; extending 200 miles along the South-sea coast, and about 60 miles along the coast of the North-sea. This is a mountainous barren country; but inexpressibly rich in Gold and Silver mines, from whence its shores obtained the name of the rich coast. The chief towns are, 1. **Nicoya town.** Nicoya, situated 30 miles to the eastward of a bay of the South-sea, to which, however, it gives its name, and lies in 10 degrees, odd minutes, north latitude, consisting of about fourscore houses. The bay is much frequented by the Spanish shipping, being a commodious harbour, and several rivers falling into it; but what is most considerable, is a Pearl fishery the Spaniards have here, which yields them a considerable

CHAP. V. siderable profit: This may well be called the rich coast therefore, when the sea and the land yield such valuable treasures. All our Seamen take notice of the mountains near this coast, both on account of their vast height, and the figure they make at sea: They are called the Crown Mountains, and are five or six ridges of hills, gradually surmounting each other, and resembling a crown at a distance. But to return to the town of Nicoya: This also was taken and plundered by the Buccaneers in the year 1687, who extorted a considerable sum from the Governor, for not setting it on fire; so exceeding weak do the Spaniards appear to be in those parts. 2. The second town I shall mention, is Carthage, the capital, which is situated also 30 or 40 miles within the land to the eastward of Nicoya; but I meet with no farther description of it: As it is a barren country, there are few towns in it, and those are not very considerable.

The crown mountains. Carthage town. Veragua province. Santa Fe town. Conception town. Puebla Nova. Chiriqui town. La Villia town. The province of Veragua is bounded by the North-sea on the north; by the province of Darien, or Terra-Firma Proper in south America, and by the Gulph of Panama on the east; by the South-sea on the south, and by Costa Rica on the west. This is a mountainous barren country; but then their mountains are well clothed with timber, and near the coast of the North and South-seas, the land is low and incumber'd with thickets of Mangroves and Bamboa-canes, and generally very unhealthful; but they have mines of Gold and Silver, not inferior to those of Costa Rica; and in their rivers, which fall from the mountains, is frequently found Gold-dust: But the course of their rivers is very short and rapid, especially those that fall into the North-sea, the mountains lying very near that shore; nor are they far from the coast of the South-sea. The chief towns are, 1. Santa Fe, or St. Faith's, situate in the middle of the province, in 9 degrees of north latitude, and 83 degrees of western longitude; where, 'tis said, the Spaniards melt their Gold into bars; but their capital is said to be, 2. The Town of Conception, situate on a bay of the North-sea, 40 miles north of Santa Fe; but I meet with no farther description of either of these towns. 3. Puebla Nova, or New Town, situate at the mouth of a river, which runs into the South-Sea, encompassed with bogs and morasses; said to be a large place, but of no force, being taken by a crew of Buccaneers, with whom DAMPIER sail'd in the year 1685. 4. Chiriqui, situate on a river, that falls into the South-sea, about 3 miles from its mouth, and upwards of 40 miles to the westward of Puebla Nova. This town also was taken by the Buccaneers in 1686. As was, 5. La Villia, on the same coast, where the Buccaneers surprized three hundred Spaniards in the church at high-mass, and possessed themselves of a vast treasure in bullion and rich merchandize; but falling into an ambuscade afterwards, lost most part of their plunder; however, they carried off their prisoners, and had upwards of ten thousand pieces of eight paid them for their ransom.

Having given a description of modern Mexico, and some of the chief Spanish towns; I proceed to describe the towns and villages of the Indians, both ancient and modern, with the form of their houses, and the materials, of which they were, or are built, with their furniture, as far as we can learn these particulars from the first discoverers, or from travellers that have lately visited those countries; and first I shall treat of the city of Old Mexico.

Old Mexico described. What the form of the old city was, no author, that I have met with, attempts to describe, any more than the dimensions: But, as it stood on the

same ground the present city stands on, there is reason to believe it was square, as modern Mexico is, or pretty near that figure; and the dimensions may be gathered from the number of families that resided in it, which the histories of that conquest make to be about sixty thousand. These histories inform us also, that there was a vast square in the middle of the city, which, in the time of their great Fair, contained an hundred thousand people, that resorted thither with their goods and merchandizes, and lodged in the booths and tents they erected in that square: That the town was divided into two parts; the one inhabited by the Court, the Nobility, and persons of distinction; and the other by Tradesmen and people of inferior rank: That the former was much the largest part; where the streets were spacious, the houses of white hewn stone, one story high; and that they had flat roofs adorn'd with battlements: That their ciellings were of Cedar, Cypress, or other odoriferous wood; and their hangings were either of furs and beautiful feathers, or painted cottonlinen, with a variety of figures of birds, beasts, or plants. The only furniture mention'd besides, are their beds and chairs, which do not seem suitable to the rest; for their beds were no better than mats, and their chairs of wood; nor were any of the Nobility served in plate: This was the prerogative only of the Emperor, the rest eat out of earthen dishes.

The only publick buildings writers give us any description of, are the Emperor's palaces, and their temples; and these descriptions are not so full as could be wished.

The palace where MONTEZUMA, the last Emperor resided, sufficiently shew'd the magnificence of that Prince, says the *History of the Conquest*: The pile was so very large, that it opened with thirty gates, into as many different streets; the principal front making one side of the great square above-mention'd. The materials of this building were polish'd Jasper, black, red and white; and over each gate, in a large shield, were the arms of MONTEZUMA, being a Griffin, half Eagle and half Lion, with the wings extended, and a Tiger in his talons.

This palace consisted of several square courts, so vastly extensive, that here were apartments for three thousand of his women, and a proportionable number of other domesticks; and might rather be styled a separate city, than a palace.

The palace assign'd to CORTEZ and his army was vastly large, containing commodious rooms and apartments for his five hundred Spaniards, and for several thousand Tlascalans, his Indian allies; the whole being surrounded with a thick stone-wall, and flank'd with stately towers, at convenient distances. In several of the streets of Mexico were canals, with bridges over them, and many thousand boats ply'd upon the water to bring in provisions, and for the service or pleasure of the inhabitants. There were two vast aqueducts also made by the Emperor MONTEZUMA, which brought in fresh water from a mountain 3 miles distance, supplying the palaces and the numerous fountains in the high-streets with water.

Besides the two palaces already mentioned, MONTEZUMA had several pleasure-houses in and about the city: In one of which were great galleries, supported by pillars of Jasper, in which were kept every species of land-fowls and birds that Mexico produced: The sea-fowls were preserved and fed in reservoirs of salt-water; and those that were bred in lakes and rivers, in others of fresh water; and so numerous were the feather'd race of all kinds, that

CHAP. V. it is said to be the business of three hundred men to feed and look after them.

In another square, of the same palace, were kept all manner of wild beasts, in their respective dens and cages, in a most regular order; and in another part of this palace were apartments for dwarfs and monsters, fools and naturals, of the human species, kept for the sport or service of the Court.

Here were also armories, well replenished with armour, and all manner of Indian weapons; of which I shall give a particular account under another head: And in the same quarter were seen the artificers at work that form'd and clean'd these arms.

All these palaces had spacious and elegant gardens, not planted with fruit, but laid out in fine shady walks, beds of fragrant and medicinal herbs, and parterres of beautiful flowers; with magnificent summer-houses, bagnio's, arbours, and fountains, that might have vied with any thing of that kind in Europe in those days.

But there was a building, in the most solitary part of these gardens, which surprized the Spaniards, 'tis said, more than any thing they met with; and that was an edifice, call'd, the House of Sorrow; to which the Emperor used to retire on the death of his near relations, or on any calamity, publick or private: It was so contrived, as to inspire those that approached it with gloomy melancholy thoughts; the roof, the cieling, and sides were black; and only light enough let in to discover the dismal obscurity. Here he used to remain 'till the time of mourning and humiliation were over; and here, if we may credit those authors who writ the *Conquest of Mexico*, MONTREZUMA used to converse familiarly with the Prince of darkness: But those who read these gentlemen, are at liberty to believe as much or as little as they please of such relations.

Temples.

I come, in the next place, to the description of the Mexican temples, the principal whereof was dedicated to *Ullitliputli*, the God of War: This stood on a spacious square, surrounded by a wall of hewn stone, wrought on the outside with various knots of twisted serpents: At a little distance from the principal gate was a place of worship, built of stone, and ascended on the outside by thirty steps, on the top whereof was a long flat roof, and the front of it adorned with the skulls of men that had been sacrificed, placed in rows one above another, which half covered this edifice.

On each side of the grand square was a magnificent gate, and over every one of them four statues, supposed to represent some subordinate deities; for all that entered the gates seem'd to adore them. Under the wall, on the inside, were the apartments of the Priests, and of their officers and servants; and yet the square was so very extensive, that there was room left for eight or ten thousand persons to dance on their solemn festivals.

In the middle of the square was an edifice of a pyramidal form; three sides whereof were smooth, and the fourth contained an hundred and twenty stone steps, by which they ascended to the top, that was a flat of 40 foot square, laid with Jasper of all colours. The rails, or ballustrade, that surrounded this, were of a serpentine form, covered with a stone as black as jet, and joined with a red and white cement, that was very ornamental.

On each side, within the rails, was a marble statue, supporting a vast candlestick, and between them a green stone, five spans high from the floor, which terminated in a point; and on this they extended the human victims they sacrificed, throwing them on their backs, and ripping them open with knives

made of flint; after which, they tore out their hearts, and offered them to their idols: For, on the farther side, opposite to the stairs, stood a chapel of exquisite materials and architecture, where the idol was placed on an altar. This image was of human form, and sat on a throne, sustained by an azure globe, which they called heaven; from the sides whereof issued four rods, their ends resembling the heads of serpents: On the head of the image was a helmet, adorn'd with plumes of various colours; its countenance was severe and terrible, and much deformed by two blue hands, which bound the forehead and the nose; in the right hand it held a twisting serpent, that served for a staff; and in the left four arrows; which were revered as the gift of heaven: It bore a shield also, adorned with fine white plumes in the form of a cross. On the left hand was another chapel of the same form, in which was the image of *Tealock*, another of their gods; resembling the former however in every respect: They were esteemed friends; or rather so intimately united, that they ascribed to them the same attributes, and paid them the same honours. The walls and altars of these chapels were immensely rich, covered with jewels and precious stones, set on feathers of various colours.

There were eight of these temples in Mexico, of the like architecture and equal wealth, besides two thousand small ones, dedicated to as many different gods; every street having its tutelary deity; every distress or calamity its particular altar, to which they had recourse for a remedy of their several sufferings: But, having reserved a chapter on purpose to treat of their religion, I forbear enlarging on that subject here.

Those, who have written the *Conquest of Mexico*, have given us an account of several other noble cities and towns in that empire, whose buildings were little inferior to the capital; particularly *Iztacpalapa*, situate on an island in the lake about two leagues from Mexico, and with which it had a communication by a spacious stone causeway. The Spaniards, who passed through this city in their first march to Mexico, relate, that it consisted of ten thousand houses, many of which were built like those of Mexico, with flat roofs, battlements, and cedar cielings; and that the rooms of the Cacique's palace were hung with cotton linen finely painted: That, among other curiosities in his garden, he had a square reservoir of stone, with stairs on every side going down to the bottom, each side containing four hundred paces. Another city they passed through, called *Cholula*, which for beauty they compared to Valladolid in Spain, and assure us, that it contained twenty thousand souls, and had suburbs of equal dimensions.

The city of *Tlascala* also, they inform us, was built with stone and brick, and the houses had flat roofs, with battlements of terrasses, like those of Mexico: That it was situated on four eminencies, which were united and defended by a stone wall: So well were these people versed in architecture in those days; and yet I do not find that there are any towns in the country now built of brick or stone, except those in possession of the Spaniards. I proceed therefore, in the last place, to describe the towns there are in Mexico at this day, inhabited by such Indians as are not come into the Spanish modes of building, with the form of their houses and their furniture.

Even those Indians that have submitted to the Spaniards, and embraced their religion (if they have not intermarried with them, and are not inhabitants

VITZLIPUTSLI.

CHAP. V. of their great towns) live in thatch'd cottages, and observe very little regularity in laying out their streets; their houses neither stand contiguous, or in any order, but are dispersed here and there, as in our villages, every one having his separate plantation; only they have one common guard-house, or fort, situate on an eminence, whither they resort on the approach of an enemy, or when they assemble in council.

They never lay any deep foundations; their houses stand in a manner upon the surface of the ground: They set up small posts, seven or eight foot high, two or three foot asunder; and, having splinter'd up the intervals, cover them with clay: The roof is made like that of an ordinary barn, and covered usually with Palmeto leaves: The length of the building is about 24 foot, and half as broad as it is long: The fire-hearth is in the middle of the house, and they have a hole over it to let out the smoke, but no chimnies: They build but one floor, and have no partitions; all the house is but one room: Instead of beds they use hammocks, which are hung up on the principal beam, from one end to the other of the house; nor have they any other seats or tables, but blocks of wood: Their furniture consists of pots and pans, and other kitchen utensils, with Calabashes or Gourds of an uncommon size to hold their liquor; and their arms, bows, arrows, lances, darts, and quivers, with their tools, are hung round the cottage as ornaments.

Their guard-house is about 120 foot long, and 25 broad; the walls 9 or 10 foot high, and the top of the roof about 20 foot in height, and thatch'd with Palmeto leaves, as the private houses are; but they have narrow loop-holes on the sides, from whence they can annoy an enemy with their arrows. These houses, as has been observed, are generally situated on an eminence; and the ground is cleared of wood and shrubs for a good space about them, that an enemy may find no shelter from their arrows, or any place to lie concealed. They have strong doors to defend the entrance to these houses; but the Spaniards, it seems, easily burn down these little fortresses, by shooting flaming arrows into the thatch.

CHAP. VI.

Of the persons and habits of the Mexicans; of their genius and temper, arts, manufactures, diet, exercises, and diversions.

The various inhabitants of Mexico.

THERE is at present a great variety of inhabitants in Mexico; viz. 1. The native Indians; 2. the Spaniards, and other Europeans; 3. The descendants of the Spaniards unmix'd, who are called Criols; 4. The Mestices, or Mesties, the issue of a Spaniard and an American; 5. The Fine Mesties, the issue of such issue; 6. The Terceroons dez Indies, the children of the last, intermarried with pure Spaniards; 7. The Quartoons dez Indies, whose posterity are allowed the same privileges as pure Spaniards. The Blacks also are pretty numerous, having been carried over to the Indies from Africa, and by one means or other obtained their freedom. The issue of a Spaniard (or other European) by one of these female Negroes, is call'd a Mulattoe: The descendants of these also are call'd Mulattoes, tho' again intermarried with Spaniards, and as white as the Spaniards themselves; and can never enjoy the privileges of Spaniards unless they can conceal their descent, which they frequently do, by removing from the place of their nativity. And there is also a mingled breed of Negroes and Indi-

ans, whose descendants are ever excluded from the privileges of Spaniards 'till their ancestors are forgotten: But, besides these, there are some common-wealths of Blacks, in several parts of Mexico, that own no subjection to the Spaniards: These were constituted out of the Negroes that run away from their masters into the woods and mountains; and, at length, became so formidable, that the Spaniards were forced to enter into treaties with them, and grant them their liberties, and permit them to be governed by their own Magistrates, on condition they would put a stop to their depredations.

I proceed, in the next place, to describe the persons and habits of the native Mexicans.

The Indians, I find, are generally of a middle stature, and their complexions a deep olive, darker than that of the Portuguese: The men have straight clean limbs, are big-boned, and well shaped, scarce a crooked or deformed person is to be found among them: They are nimble and active, and run very swiftly: The women are moderately fat, and well-shaped; and the faces, both of men and women (who have not taken pains to alter the natural shape) are round: Their eyes large, either black or grey, lively and sparkling: Their fore-heads are high; their noses short; the mouth of a moderate size; their lips thin; their chins and cheeks well proportion'd; and all of them have fine sets of teeth: The features both of men and women generally good.

In the wearing of their hair, which is always black, they differ very much; in some places the men wear it short, and the women long; and in others it is just the reverse: Some are proud of having long hair hang down their backs; others wear it short, just below their ears, and some tie it up behind; but all agree in suffering no hair to remain upon them, unless the hair of their heads, and over their eyes; the rest is pull'd off by tweezers as soon as ever it appears, which is the business of the old women it seems; inasmuch, that the Spaniards did not find a beard in the country, or any hair below the waist, when they arrived among them. There are some nations of Indians that take abundance of pains to render their countenances deformed; they do not only flat the noses of their new born infants, but so press and squeeze their heads between two boards, that they make them perfectly flat; while others endeavour to mould their tender skulls into the shape of a sugar-loaf: And there are scarce any of them but disfigure their faces and bodies with paint, and rub themselves over with oil or fat: They begin to anoint and paint their children very young, and the women are the operators: The colours they chiefly affect are a lively red, blue or yellow; and sometimes they make the figures of men, beasts, birds, or plants, on every part of the body, but chiefly on the face: They draw these figures on the skin with wooden pencils, gnaw'd at the end to the softness of a brush; renewing the paint from time to time, 'till the colours are fix'd: But the way they often take to render the figures lasting and indelible, is by pricking the skin with a thorn 'till the blood follows, and then rubbing the paint in with their hands: Some nations of Mexicans, when they go to the wars, paint their faces red, and their bodies with other colours, according to their several fancies; but this is usually washed off at night, and renewed every morning.

As to their habits, most of the Mexican nations were some habit or other; but there are Indians that go perfectly naked. GIMELLI relates, that he saw some of the Chichimecas, when he was at Mexico, who

CHAP. VI.
Negro common-wealths.

The persons of the Indians.

The habits of the Indians.

CHAP. VI. who had no part of their bodies covered, but their nudities; all the rest of the body was naked, and stain'd with several colours: That their faces were streak'd with black lines, made by pricking the skin, and rubbing in the black liquor: That some of these wore Stags skulls on their heads with the horns on; others had a Lion's, a Tyger's, or a Wolf's head upon their own, fastened about their necks with part of the beast's skin: These are worn as triumphs of their victories over those animals. But they are ambitious of nothing so much as of killing a Spaniard, that they may fix his head on their own, and triumph in the destruction of their most dreaded enemy.

Ornaments.

There is another nation in Veragua, where the men cloath nothing but the Penis, which the inferior people wrap up in a leaf, and those of better quality inclose in a case of gold and silver, of the fashion of a cone or extinguisher, and adorn it with jewels, letting the Scrotum hang over in full view: But even these people, on festivals, and other solemn occasions, have a white or black cotton garment, like a Plowman's frock, that reaches down to their heels; and if an European gives them a shirt, or any other cloathing, they immediately put it on, and reckon themselves very fine. But if they have no cloaths, they seldom want ornaments for the face, ears, and neck, besides the painting of their skins, already mentioned. The men have always a thin plate of gold or silver, hanging over their lips, of an oval figure, and a piece being cut out of the upper side, it is almost of the form of a crescent, the points whereof gently pinch the bridge of the nose, and fasten it on; the middle of this plate is about the thickness of a guinea, and grows gradually thinner towards the edges. This is the size of the plate they wear when they assemble in council, or at a festival; but they have one much less, that does not reach their lips, which they wear at other times.

The women, instead of a plate, wear a ring of the like size, which goes through the bridge of the nose, and by its weight sometimes draws it down to the mouth. Both men and women lay the larger ornaments aside while they are eating at an entertainment, and then put them on again, and the lesser sort do not hinder their eating. Their great men also wear two gold plates, of the shape of an heart, a span long, at each ear, being fastned to it by a gold ring, which stretches the ear to an immoderate size, and occasioned COLUMBUS to give this province the name of the Country of Ears. They also wear a kind of coronet or bandage of gold or silver about their heads, eight or nine inches broad, and indented on the upper side; others have only a bandage of cane painted red, stuck round with beautiful feathers standing upright: And almost all the Indians of both sexes wear strings or chains of beads, teeth, shells, and other toys, hanging from the neck down to their breasts: Every person almost has three or four hundred of these chains on, and the larger and heavier they are, the more ornamental; the meanest woman, when she is dress'd, has fifteen or twenty pound weight of these strings, some carry thirty, and the men as much more: But these are worn only at festivals, and on solemn occasions. The women carry the men's ornaments in baskets on their shoulders to their assemblies, where they put them on, and will dance with that weight about them: The women, besides their ear-rings and necklaces, have some of them bracelets of the same materials on their arms.

As to the Mexicans, that lived in towns when the Spaniards arrived there, they had most of them some cloathing, although those that inhabited the country, had little or no cloathing, any more than they have at this day. What the general habit of the Mexicans was, when the Spaniards first came among them, I don't find any where particularly described. They tell us, indeed, that MONTAZUMA, the emperor, when he met CORTÉZ at his entrance into Mexico, had on a robe of fine painted cotton linen, that trail'd upon the ground, and was covered in a manner with glittering jewels, and precious stones; that he wore a crown of gold, in form of a mitre, had shoes of hammer'd gold, and a kind of Roman buskin about his legs.

The Spaniards also relate, that the High-priest wore on his head a crown of beautiful feathers of various colours, with golden pendants, enrich'd with emeralds at his ears, and that he was cloathed in a vest, and a fine scarlet robe over it; and in the pictures they have given us of the Priests, it appears, they had sandals on their feet, but their legs were bare, which makes it reasonable to believe, that the generality of the people, even in their capital city, wore neither stockings or shoes, if the rest of their bodies were cloathed; and in other pictures they have given us the upper part of the body naked.

I proceed in the next place to shew how the Indians are cloathed, that live in the Spanish towns, or are under their government; and these GEMELLI CARERI informs us, wear a short waistcoat and wide breeches, with a short cloak of various colours over all; and some of them have sandals on their feet, but go bare-legg'd; that the women wear a waistcoat of cotton linnen, over which they have a frock or shift, and a strait petticoat of various colours; and when they go abroad, have another cloth wrapped about them.

That the Mestige, Mulattoe and Black women, who make the greatest part of the Mexican women, not being allowed to wear veils, or cloath themselves after the Spanish fashion, and despising the Indian habit, go in an extravagant dress, wearing a kind of petticoat about their shoulders, like a cloak. Mr. DAMPIER relates, that the country Indians, who are civiliz'd, in some provinces wear a short waistcoat and breeches, and have a Palm-leaf for a hat, which is their holiday-dress; that they have no shoes or stockings, nor do they wear so much as a waistcoat on working-days; that the women have a cotton linen petticoat, and a kind of frock, that reaches down to their knees, the bosom whereof is open and finely work'd; that they tie their hair up in a knot behind, and in this dress they think themselves very fine. He does not inform us, whether they have any other covering for their heads, besides their hair.

As to the genius and temper of the Mexicans, it seems, there is a wide difference between what they were when the Spaniards arrived amongst them, and what we find them to be at this day: They are far from being improv'd either in arts or morals. The first adventurers inform us, that they were a wonderful ingenious people, inoffensive and hospitable; and, except in the matter of human sacrifices, and their idolatrous worship, which their superstition required, there was very little reformation wanting; nay, we are assured, that the generality of the people detested these sacrifices, and were weary of their superstition.

It appears, they were no mean artificers in painting, statuary and building: That they used both the

CHAP. VI. the pencil, and the beautiful feathers of birds, in drawing and forming of pictures; and without any manner of iron tool, hew'd out vast pillars and slabs of marble out of the rock, and polish'd them, as they did several precious stones and jewels; that they made arms, defensive and offensive; wrought mines of gold, silver and copper, melted and separated these metals, and afterwards wrought them into plates and vessels; and all this, as has been observed, without being acquainted with iron. We find also, that they built great towns, removed stones of prodigious size from place to place; and yet had no horses, oxen, or other cattle for draught, but all their carriages were drawn by men. They had also images of gold and silver, wood and stone, and yet not an iron tool to work with. And how did they carve and engrave, paint and build, remains very much a secret to us. The Spaniards were so intent upon plundering their gold and silver, that they neglected to make proper observations on these articles; at least, they did not think fit to transmit these matters to posterity: We have only lame and imperfect accounts of the arts and manufactures of the Indians; we only know, that there were magnificent buildings, images, pictures, vessels, and utensils of gold, silver, earth and wood; but how they form'd them without the help of iron tools, is, in a great measure, a mystery to us. We know, indeed, that sharp flints served them instead of axes, knives and swords: That with these they form'd the edges of these tools; but how they could grave or carve their hardest stones with such instruments, is past my apprehension; and, though I don't suppose they excelled, or even equalled the Europeans in building, carving or painting, yet it shews a vast genius and uncommon application, that they were able, in such circumstances, and with no better instruments, to perform any thing of this kind.

It may be objected here, perhaps, that if the Indians were such ingenious artists two or three hundred years ago, it is strange that there is now none of them left. To which I answer, as to the matter of fact, that they had such buildings, images, pictures, and utensils, is averred and confirmed by the concurrent testimony of many thousands of eye-witnesses, and was never controverted or denied by any adventurer or traveller that has visited those countries. And there are sufficient reasons to be given for the neglect and disuse of these arts at this day: In the first place, the Spaniards, under pretence of zeal for destroying the temples and idols of the Mexicans, but, in reality, that none of the gold and silver, and other treasures of the Mexicans might be concealed from them, pull'd down and demolished every town where these arts flourished, and most of the people of those towns, leaving scarce any remains of their antiquities. Secondly, they reduced the natives to the most abject slavery, compelling those they left alive, to work in the mines, and supply the place of beasts of burthen; by which means they destroyed more of them than they had done by the sword, and entirely discouraged the rest from attempting to preserve or improve any art or science among them: And, thirdly, since the Europeans possessed themselves of those countries, and have been provided with all manner of tools and instruments to perform these things in a better manner than the Indians could be supposed to do under so many disadvantages, it is no wonder, that the natives neglected the working in that manner they were used to before, and threw away their country tools and implements, for those which were so

VOL. III.

much better adapted to the purposes above-mentioned. CHAP. VI.

As to the virtues of the ancient Mexicans, they do not seem to have been defective either in point of temperance, fortitude, or military skill: Both their policy and stratagems were admirable, considering the disadvantages under which they labour'd; and that they had an enemy to oppose, versed in the modern art of war; possess'd of gun-powder, artillery, arms, armour and horses, which the Indians had never seen or heard of 'till then.

The principal manufacture of the ancient Mexicans was cotton linen, which they spun and wove, and afterwards painted with the figures of men, animals, trees, flowers, &c. These they always made fit and proportionable for the uses they design'd them, and never cut any of their linen. They used the sinews of animals instead of thread, and bones instead of needles. The feather manufacture also was very great: They stripp'd and plunder'd every feather'd animal, to make their pictures, and adorn their houses or their persons. Architecture also must be deem'd another of their arts in towns, and almost every man made his own arms. They had no other vessels upon the water in their seas, lakes or rivers, but canoes or periagoes, which only differ in their dimensions: They are both of them made out of the body of a tree, and carry from three men to threescore. They first hew'd one side of the tree flat with their flint hatchets, and then burnt it hollow with coals, smooth'd it, and form'd the ends something like a boat, which they push'd along with small flat staves, but knew nothing of either sails or oars. These kind of vessels are found very useful to this day, and they have now a much easier way of framing them by the help of European tools. Their skill in physick, their diseases, and methods of cure, will be treated of under another head.

I proceed, in the next place, to shew how the modern Mexicans are degenerated from their ancestors. GEMELLI CARERI relates, that the present Mexicans are cowardly and cruel: That they have no sense of honour, are drown'd in vice, and die without any concern or apprehensions of futurity; but seems to intimate, that the hard usage of the Spaniards is the occasion of this change: For he says, they make them work in their mines, and treat them worse than slaves; nay, that they suffer the Negroe slaves to abuse and insult them; and, if they happen to get any thing by their labour, the rapacious Spanish Governors and Officers take it from them: And it is no wonder that this usage has made them perfectly careless; for to what purpose should a man labour for what he can never possess securely? Or why should he be concern'd at dying, when it relieves him from something worse than death? But GEMELLI adds, that the Mulattoes in Mexico, which are the most numerous body of people in that city, are still worse than the Indians, greater cheats and thieves than the former; and, in short, that there is not one honest, fair-dealing man in an hundred amongst them: Nor does GEMELLI give the Spaniards themselves, that reside in that city, a better character: For he says, he saw four hundred Spaniards brought before a Court of Justice there for theft, at one time: That they are many of them idle, slothful vagabonds, and turn sharpers to get a livelihood; and that it is almost impossible for a stranger to escape being robb'd by them. Whether the Mestizes, or mixed breed, have better morals, he does not inform us; but

20 X

CHAP. VI. but surely there must be some of better principles amongst them, or it would be impossible for the Government to subsist long. Thus much, however, may be concluded from the relations of all travellers, that the present inhabitants of Mexico, of what nation, tribe, or denomination soever, are more vicious and effeminate than the Indians which the Spaniards found there, and might be beaten out of that country with as much ease almost as the ancient Spaniards made that conquest, if they were not to be supported or reinforced from Europe.

Genius of the Indians that have preserved their liberties.

I come, in the next place, to enquire into the character of the Indians in the open country, that do not live in towns, and have still preserved their liberties, of which there are yet great numbers; and many more that only obey them occasionally, when they happen to reside in the neighbourhood of the Spanish towns, or are oblig'd to yield a forced obedience when the Spanish troops are amongst them. These, DAMPIER and other late adventurers inform us, are people of great humanity, still brave, generous, active, and unacquainted with the fordid vices of those that live in towns, whom the Europeans have corrupted. DAMPIER, in his Second Volume, Part II. p. 115, says of the Indians, they are an inoffensive people, kind to strangers, and even to the Spaniards, who use them worse than slaves, when they get them into their power; those of the open country spending great part of their time in hunting, shooting, or fishing, as the ancients did: Every man builds his own house, and makes his own arms, tools, and implements of husbandry. They cultivate but little ground, planting just enough Indian-corn, roots and fruit, to serve the necessities of the family; and these plantations are the business of the women altogether, after the men have cleared the ground. The women also spin, and weave their cotton linnen. They do all the household business; and, what is still harder upon them, they carry the baggage upon a march, and serve their husbands instead of porters and pack-horses; and that with all imaginable cheerfulness and alacrity. They are never known to murmur or speak disrespectfully to their husbands; nor is a man ever heard to give his wife any hard ill-natur'd language: On the contrary, they are admir'd by our people for the mutual love and kindness that seems to reign in their families: But more of this under the head of marriage.

The diet and exercises of the Indians.

I proceed in the next place, to treat of their diet, exercise, festivals and diversions, which will discover more of the temper and disposition of these Indians, who still enjoy their liberties. Their principal food is either Indian corn, parch'd and ground into flour, and made into thin cakes; fruit, particularly Plantains, roots, and sometimes fish, wild Hogs, Deer, or other venison. They go out a hunting and shooting frequently in companies a week or a fortnight for food, every man carrying with him his bow and arrows, or a gun, if he can procure one, a spear, a hatchet, and a long knife. Each man also takes a dog or two with him to beat for game. Some women also go with them to carry their provisions, namely roasted Plantains, Bonanoes, Yams, Potatoes, and the flour of Cassavi roots; which will be describ'd hereafter: They carry also in their baskets parch'd Indian-corn ground to flour, with Calabashes or Gourds for their drink, and pipkins to dress their food. The beasts they hunt, are chiefly Pecary or Warree (two sorts of wild Hogs peculiar to America) and they meet with great variety of fowls. They lodge at night wherever they happen to be at sun-set, chusing to be

near some river and on the brow of a hill, if they can find such a situation. They hang up their hammocks between the trees, and have scarce any other covering, but a Plantain-leaf, only they make a fire near their hammocks; they begin their hunting again at sun-rise the next morning; their game, the Pecary and Warree, are not swift of foot, and usually go together in droves of two or three hundred; but sometimes they hunt a whole day without meeting any: When the beast is tired or wounded, he will stand at bay with the dogs, 'till the master comes up and shoots him; after which, the Indian strikes his spear into the creature, to let out the blood, embowels it, and cuts the beast in two pieces, carrying them on a stick laid cross his shoulder, to the place where they have appointed their women to meet them; here they cut off the head of the Hog, quarter and flee it. What they intend to preserve, they dry upon a wooden grate (which is call'd a Barbacue) making a fire of wood-coals under it; this they renew for three or four days, or a week, till the meat is as dry as a chip, and the pieces will keep a great while. The men are so good as to assist the women to carry the venison home, when they have a great deal of it; and when their stock of provisions is almost spent, they go out again to look for more.

As to their cookery, whether their flesh is dried or fresh killed, they cut it into small pieces, and throw it into a pipkin, adding some roots, green Plantains, or other fruits, with a great deal of Pepper, stewing them together seven or eight hours, and not suffering them to boil; this reduces all the ingredients to a pulp or hotch-potch, and is for their set-meal at noon. When it is poured out into an earthen-dish or calabash, and being set upon a wooden-block, that serves them for a table, they sit round it on lesser blocks, every one having a calabash of water standing by him on the ground, into which they frequently dip their fingers while they are eating (these calabashes, or gourds, serve them for bottles, and, when they are cut in half, for bowls, basons, or drinking-cups.) They have seldom more than one set-meal, but they eat Plantains and other fruit, raw or roasted, almost all day long. They have also the flour of Indian-wheat, or of the Cassavi-root, with which they sometimes make a kind of gruel, or else make into paste, and bake as hard as biscuit; and either the flour or biscuits made of it, they have always by them, especially when they are on a journey, or in hunting; these serving them both for meat and drink, mix'd with water and fruit, when they want more substantial food.

There is scarce any flesh, fish, or fowl, but what the natives of Mexico eat either stewed or barbecued, that is, broil'd over a wooden grate, or upon the coals; and I don't perceive they use either knives, forks, or spoons in eating; but take up the stew'd hotch-potch with their right-hand, and fill their mouths with it; and the broil'd flesh they tear off the bones with their teeth, unless those, that have learn'd better of the Europeans, and conform themselves to Spanish customs. Every thing they eat is high-season'd with Pepper, and Salt too, if they can get it; but, as Salt is scarce in many places, they are content with stroaking their meat upon a lump of Salt, before they put it into their mouths.

As to Chocolate, this serves both for meat and drink, in almost every province of Mexico, both among the civiliz'd and barbarous Indians, if they can get it; but this is so much used by the Spaniards, and

CHAP. VI. and so much of it exported to Europe, that it is pretty scarce among the forest Indians.

They have a great variety of liquors: The readiest and most ordinary drink is water, with the flour of Indian-corn infused in it, and drunk off presently: This, DAMPIER says, the natives call *Posole*, and the English, *Poor soul*, because it just serves to keep them alive on a march, when they can get no other provision.

Against an entertainment, they frequently sleep twenty or thirty baskets of Indian-corn, and after the water is impregnated, the women chew more of the same corn and spit into it, which ferments and works the liquor like yeast; and when it has done working, they draw the liquor clear off, and it proves very intoxicating, but tastes pretty much like *four small-beer*.

Mislaw is another liquor, and of this they have two sorts; one made of Plantains fresh gather'd, and the other of dried ones; the first they roast, and peeling of the rind, mash them in a bowl of water till they are dissolved, and then drink the mixt liquor; the other is made of cakes, or lumps of Plantains dry'd over a slow fire; this they carry with them on journeys, and drink it, dissolv'd in water. Green and half-ripe Plantains they also eat instead of bread, boiling or roasting them first, as they do also Yams and Potatoes. The *Cassavi-root*, already mentioned, of which the Indians make bread, is first boil'd and squeeze'd, then dried, ground and made into paste or biscuit; and tho' this kind of bread is very wholesome, when it is thus cook'd, yet if it be eaten before it is boil'd, and the juice squeeze'd from it, it is rank poison. As for green herbs and salads, I don't find the Indians of the open country eat any. As their Pine-apples are one of the most delicious fruits of America, an infusion of these is one of their beloved liquors; and indeed they may drink of all manner of fruits almost, as well as grain, adding honey to them at their entertainments. But as to wine, their country affords none; for their Grapes will not ripen kindly in the rainy season, and the heats at other times make the liquor sour; and this is the reason, that scarce any countries between the Tropics afford good wine.

Their
feast.

The Indians scarce undertake any business of consequence, without making an entertainment. If they propose entering into a war, either with the Spaniards, or any Indian nation; their Chiefs are summon'd to a consultation, where they eat and drink plentifully, before they enter on their debates. A hunting-match, which lasts usually some weeks, is preceded also by a drunken-bout. At weddings, and other joyful occasions, they have their feasts, where they continue drinking two or three days, 'till all the liquor is out: And, as they are very quarrelsome in their drink, the master of the house always secures their arms before they begin to be merry; for they never go without their arms, if it be but to next door: They usually get exceeding drunk, insomuch that they can neither stand nor go; and, having slept till they have recover'd their senses, they move off.

The men, it seems, drink to one another at meals, as the Europeans do; but never to the women; the women always stand by, and wait upon their husbands, while they are eating and drinking, serving them with liquor; and, even when they are at home, the wife does not eat 'till the husband has done: But the females feast, and are as merry as the men among themselves: They are not afraid of being very drunk neither, 'tis said.

CHAP. VI. However, till their husbands are recovered, they take care to keep sober, and, when they perceive the men overcome with liquor, they will take them up, and put them into hammocks, waiting on them, and sprinkling them with water, 'till they are in a condition to return home.

Nothing is more universally drank in the city of Mexico itself, and in such towns as are under the dominion of the Spaniards, than *Chocolate*. GEMELLI informs us, that to every pound of the *Cocoa-nut* the Europeans add a pound of sugar, and an ounce of Cinnamon; but that neither the Spaniards there, nor the Indians, use any *Venella* in it, looking upon them as unwholesome: But to every pound of *Cocoa* they add two ounces of the flour of Indian-corn, to make it froth. This drink was not used by the Indians before the Spaniards arrived there. They distil a spirit also from a plant called *Magey*, which is very intoxicating, and so generally drank, that GEMELLI tells us, the excise of it came to eleven hundred thousand pieces of eight per annum in Mexico; that the Indians committed such outrages, when they were intoxicated with this liquor, that it was prohibited for a time; but, while he was at Mexico orders came from the King of Spain to take off the prohibition; and both Europeans and Indians now drink it again.

I must not forget, that the Indians smoke as well as drink, since it was from them we first learnt the use of Tobacco about two hundred years ago; but what the natives plant is not so good as that the English plant and cure in Virginia: They neither understand, nor will take the pains to cultivate it as our people do; and, if they taught us to take Tobacco, we taught them to improve it, and the use of pipes; for the way they smoke'd it, was by lighting one end of a roll they made with the leaf, and holding the other end of the roll in their mouths; and, when it was half burnt out, they threw the remainder away: Others contented themselves with the smell of the Tobacco. A boy, having lighted one end of the roll, went round the company, and blew it in their faces; and this is done in some of the provinces of Mexico by the natives to this day.

Their principal exercises, or rather employments, as has been touch'd already, are hunting, shooting, and fishing; for these they are in a manner forced into, in order to make provision for their families. Every man breeds up his son to these exercises; and they are so dextrous at them while they are children, that a boy of eight years of age, 'tis said, will split a cane set up at 20 yards distance, with his bow and arrow, and hit a bird flying. But the most dextrous people are the *Mosquito Indians*, natives of the province of Honduras, as all travellers relate. DAMPIER says, these people are tall, well-made, strong and nimble: That they are long visaged, have lank black hair, a stern look, are hard favour'd, and of a dark copper complexion: That they are bred to throw the lance, harpoon, and dart, and draw the bow, from their infancy; and that they will put by and parry any of these missive weapons thrown at them, with a small cane, not bigger than a gun-stick, tho' the arrows and darts fly very thick. These people inhabit on the sea-shore, or the banks of rivers; and their principal employment is to strike fish, particularly the *Manatee* and *Tortoise*: The *Manatee* is what the ancients called the *Sea-horse*, an amphibious animal, that lives in the salt-water, but eats weeds and grass on shore like a Cow; and from thence, and from its size and figure, is frequently called the *Sea-*

sions.

Mosquito
Indians.

CHAP. VI. Sea-cow. The English Privateers and Buccaneers, that cruize on the Mexican coast, have usually one or two of these Mosquito men on board, to strike Manatee, Tortoise, and other fish; and they will take and kill fish enough to maintain a ship's crew of an hundred men. When they serve the English, they learn the use of guns, and are exceeding good marksmen: They are found also very brave and daring in fight, and will never flinch or give back, while they are supported by the party that entertains them.

They have conversed so long with the English, who frequently bring them to Jamaica, that they will not acknowledge the dominion of the Spaniard, and frequently declare, they will have no other Sovereign, but the King of England; nor have the Spaniards ever been able to subdue these, and many other nations, that inhabit Mexico. While they are at Jamaica, and among the English, they wear the same kind of cloaths, and delight to be neat and clean; but when they return to their own country, they put off all their cloaths, and conform to their country fashion again, wearing only a small piece of linnen tied round their waists. But to return to the exercises and diversions of the Indians, from whence the dexterity of the Mosquito men has led me.

They have their dances, and their musick too, such as it is, wooden drums of the form of a kettle-drum, and a kind of pipes or flagelets, made of a cane or reed, but very grating to an European ear. 'Tis observ'd, they love every thing that makes a noise, how disagreeable soever the sound is; they will also hum over something like a tune, when they dance; but I don't find they delight in songs and ballads, as some other unpolished people do. They dance thirty or forty in a circle, stretching out their hands, and laying them on each others shoulders: They stamp and jump, and use the most antick gestures for several hours, till they are heartily weary; and one or two of the company sometimes step out of the ring to make sport for the rest, shewing tricks, and feats of activity, throwing up their lances into the air, catching them again, bending backwards and springing forwards with great agility; and when they are in a most violent sweat, will frequently jump into the water, without taking any manner of cold. And I should have remembered among their exercises, that no men swim or dive better than the native Indians. The women have their dances and musick too, by themselves; but never with the men.

As to their religious festivals, musick and dancing, these will be taken notice of in the chapter of religion.

CHAP. VII.

Of the conquest of Mexico by the Spaniards.

The conquest of Mexico.

I Have already given an account of the discoveries and conquests, made by COLUMBUS, and his successors, in Hispaniola, St. John de Porto Rico, Jamaica, Cuba, and some other American islands; as also of the settlements made by VOSCO NUNES DE BALBOA, on the isthmus of Darien on the continent, and his discovery of the South-sea in the year 1513. I shall proceed in this chapter to give as just an account of the conquest of Mexico, as can be collected from that variety of authors, that have written on this subject, whose relations differing in many material facts and circumstances, it will demand a pretty deal of attention to discover

what may be relied on, and what ought to be treated as fiction. CHAP. VII.

In the year 1515, or 1516, FRANCIS FERNANDEZ DE CORDOVA, embarking at the island of Cuba with an hundred and twenty men, set sail for Jucatan, a province of Mexico, where he made a descent, and was about to have erected a fort, in order to settle a colony of Spaniards there: But he suffered himself to be surpriz'd by the Indians; and, having twenty men kill'd, thirty more wounded, among whom was FERNANDEZ himself, and two made prisoners, the rest retired with some difficulty to their ships, and returned to Cuba. However, those that escaped reporting that they saw great plenty of Gold among the natives, and imputing their misfortune more to accident, or the unskilfulness of their Commander, than to the courage of their enemies; and offering to make a farther attempt on the continent of Mexico, where they gave out, that inconceivable treasures were to be found; the Spaniards of Cuba appeared impatient to make another experiment, and inform themselves whether there were really those riches to be met with as had been reported. DIEGO VELASQUEZ was at this time Governor of the island of Cuba, by the appointment of Don DIEGO COLUMBUS, or COLON, the second Admiral of the Indies, and son of the celebrated COLUMBUS who first discovered that new world; and, observing the ardour his soldiers express'd to engage in a fresh enterprize against the continent, he fitted out three ships and a brigantine, to make farther discoveries, giving the command of them to JOHN DE GRIJALVA, his near relation, who set sail from Cuba on the 8th of April, 1518; and arriving at Potonchan, or Champoton, in Jucatan, where FERNANDEZ DE CORDOVA had been defeated, took a severe revenge on the natives, and then stood farther westward, till he came to the mouth of the river Tobasco, in the Gulph of Mexico. Here GRIJALVA landed, and formerly took possession of the country for the Emperor CHARLES V. then King of Castile; letting the Indians know, by his Interpreters, that he and his people were the subjects of a powerful Monarch, Lord of that part of the world where the sun rises, from whom he came to offer them peace, if they would submit to his dominion.

To this one of the Chiefs of the Indians answer'd, that they would consult their superiors on the offer of peace, and return an answer in a short time; but as to their becoming vassals to a Prince they had never before heard of, it was not in their power, as they were already subject to a Sovereign of their own; concluding, that they looked upon it as a very strange demand, and then took their leaves.

Some little time after, the same Indians returned, and acquainted the Spaniards, that their Caciques accepted their offers of peace; and that they had heard of the defeat of their neighbours of Jucatan, which had render'd the Christians very formidable. One of their principal Caciques also brought GRIJALVA a considerable present, consisting of plumes of feathers of various colours, robes of cotton linnen, adorn'd with the figures of animals of beaten gold: For which GRIJALVA returned them such European toys and utensils as were most acceptable to them; and, having taken his leave in a friendly manner, went on board his ships again, continuing his course still farther westward, 'till he came to the river of flags, where the natives inviting the Spaniards to land, brought them as much Gold as amounted to fifteen thousand Peso's; for which they

The Spaniards first attempt on Jucatan defeated.

Grijalva sent from Cuba to make farther discoveries on the Continent.

Takes possession of the country for the King of Spain.

Offers the natives peace; who accept it.

Trafficks with them for their Gold.

CHAP. VII. they took knives, hatchets, combs, beads, and glass, in return. GRIJALVA afterwards visited the port of St. John de Ulva; and from thence sailed as high as Panuco, the most northern province of Mexico on that side, trading with the people as he went, and understood from them that they were subject to a Monarch called MONTEZUMA, a Prince possess'd of a vast empire, abounding in gold, silver, and rich merchandize; with which acceptable intelligence he returned to Cuba, having sent PEDRO DE ALVARADO before him, with the treasure he had acquired on the coast of Mexico.

Learns the greatness of the Mexican empire.

Grijalva returns to Cuba. DIEGO VELASQUEZ was infinitely rejoiced at the discoveries that had been made by GRIJALVA, and immediately sent over to the Admiral at Hispaniola, and to the Court of Spain, to acquaint them with the success of the expedition; desiring that he might be made Viceroy of all the countries he should conquer on the continent. But, notwithstanding the great service JOHN DE GRIJALVA had done, VELASQUEZ was so exasperated that he had not made a settlement in Mexico, that he laid him aside as an improper instrument to be concerned in the reducing so mighty an Empire, as that of Mexico had been represented to him, and look'd out for a person to command the forces he was about to send thither, who had a genius and courage equal to so important an enterprize; and, after much deliberation, pitch'd upon the celebrated HERNANDO, or FERNANDO, CORTEZ, to command the small army, with which he propos'd to make an entire conquest of that continent.

Cortez made Captain-General against Mexico.

Some account of him.

Hernando Cortez was born at Medellin in Estramadura, and was son of MARTIN CORTEZ and DONNA CATALINA PIZARRO, a lady of noble extraction. He was bred a Scholar, and two years a Student in the University of Salamanca; but affecting a more active way of life, and particularly some military employment, he embarked, in the year 1504, for the island of Hispaniola; and went from thence to Cuba, where he was very instrumental in the conquest of that island, and obtained a mighty reputation for military skill; and was, for his services, made Alcaide, or chief Magistrate of St. Jago, the principal town in the island; which post he possess'd when DIEGO VELASQUEZ fixed upon him to command in the Mexican expedition; CORTEZ having a little before married DONNA CATALINA SUAREZ, a young lady of a noble family in Cuba.

His rivals.

The relations of DIEGO VELASQUEZ envying CORTEZ the honour of commanding in an expedition that was like to be attended with a vast acquisition of wealth, as well as glory, suggested to the Governor, that he could not have fixed upon a more ambitious or popular man, who would soon have it in his power, as he had it already in his intentions, to renounce his dependance on the person that raised him, and set up for himself; which, at first, made but little impression on VELASQUEZ; but, observing at length with what eagerness all the military men of the island crouded to be enrolled under the standard of CORTEZ, he began to alter his mind; and, tho' he had attended that General to the sea-side, when he embarked, with all the marks of respect and affection (on the 18th of November 1518) the fleet was no sooner sail'd, but he repented himself, and sent orders to the Havanna, where they were to touch and take in provisions and a farther reinforcement of troops, that the fleet should not proceed in the voyage 'till farther orders; and that CORTEZ should return to him to St. Jago. But the Governor's orders were not obey'd: The

Cortez is recalled by the Governor.

soldiers were so transported with the expectation of acquiring mountains of gold, and had such an opinion of the valour and conduct of their General, that they would not consent to the changing of him, or to the delay of the enterprize, lest their hopes should be defeated; but agreed immediately to set sail, contrary to the positive orders of their Governor DIEGO VELASQUEZ. The General and his Officers, 'tis said, urged, in their justification, that they had, by the encouragement of the Governor, laid out their whole estates in making provision for this expedition; and that if it should be now laid aside, or others employ'd in it, they should infallibly be ruined: Even DIEGO DE ORDAZ, and JOAN VELASQUEZ DE LEON, the Governor's own relations, declared against his injustice in disappointing them, after they had embarked all their friends and fortunes, by his command, in the enterprize. It being agreed by all of them therefore to proceed in the design forthwith, CORTEZ, with a fleet of ten ships, and between five and six hundred soldiers, set sail from the Havanna the 10th of February, 1518-19, and arrived at the island of Cozumel, near the eastern coast of Yucatan; where his troops having plunder'd some towns of the Indians, and even their temples, and taken several prisoners, CORTEZ shew'd his displeasure at these ravages; and order'd every thing they had taken to be restored, endeavouring to cultivate a good correspondence with the people of the island. It is related, that the Spaniards found in the temples on this island abundance of rich jewels, that were employ'd in adorning the images of their gods; and some instruments for sacrifice, made of a mixture of gold and copper: But as it appeared afterwards, that all the knives and edg'd-tools of the Mexicans were made of flint, we cannot give entire credit to this part of the relation.

But proceeds in the enterprize notwithstanding.

He arrives at the island of Cozumel.

CORTEZ, mustering his forces in the island of Cozumel, found them to consist of five hundred and eight Foot-soldiers, sixteen Horse, and one hundred and nine Seamen and Mechanics; besides his two Chaplains, JOHN DIAZ the Licentiate, and Father BARTHOLOMEW DE OLMEDO, who accompanied him in the expedition. The writers of this history tell us, that the General made a speech to his forces at this muster; wherein he said, "When he considered the good fortune that had brought them to this island, the obstacles they had surmounted, and the difficulties that oppos'd the enterprize; he acknowledged the hand of God in the work they had undertaken, and promised himself success from beginnings so remarkably favoured by Divine providence, in their zeal for the service of God and their King: That he should not lessen the danger of the undertaking; they must expect bloody engagements, a multitude of enemies, and incredible fatigues; and they must proportion their resolution to the difficulty and importance of the enterprize: That they were but few in number, but union added strength to armies, and in a manner multiplied their forces; exhorting them to be all of one mind, and resolve, as one hand, to execute the commands of their Leaders: As for his part, he should be ready to hazard his life for the meanest soldier, and would lead them, by his example, to the execution of his orders; assuring them, that he found in himself a spirit sufficient to undertake the conquest of the world; and that this hope inspired him with an extraordinary impulse, the most promising of all presages." Which speech was received with the loud acclamations of

The number of his forces.

CHAP.
VII.

his troops, who desired he would immediately lead them on to action, and make an experiment of their affection and zeal for the glorious cause they were engaged in.

A Spaniard
and ran-
som'd who
was priso-
ner in Ju-
catan.

While CORTEZ remained in the island of Cozumel, he was inform'd, by the principal Cacique, or Prince of the country, that there were some men in the neighbouring province of Yucatan who had been prisoners there several years, and much resembled the Spaniards he had with him: Whereupon CORTEZ desired the Cacique to send some of his people with a letter to those prisoners, and a present to the Prince in whose power they were, for their ransom; which was done, and the Indians returned to Cozumel, bringing with them JERONIMO DE AGUILAR, a native of Spain, in Deacon's orders. This Ecclesiastic related, that he had been near eight years in Yucatan, whither he escaped in a boat with several more, after they had been shipwreck'd in their passage from Darien to Hispaniola: That it was his fortune to fall into the hands of a certain Cacique, who used him hardly for some time; but afterwards advanced him to one of the best posts in his army; and, by his skill in military affairs, the Cacique gained several victories over his enemies; which had given JERONIMO a great reputation in Yucatan; inasmuch, that when the present came for his ransom, the Cacique, in whose service he was, very readily dismiss'd him. He added, that the Indians, he believed, had sacrificed the rest of his company to their gods; for he did not know that any of them were living at that time, except GONZALO GUERRERO, to whom he had communicated the General's letter, and endeavour'd to bring him with him; but GONZALO had married a rich Indian wife, by whom he had three or four children, and chose to remain with them in Yucatan, rather than leave them: Which, if true, is a sufficient confutation of those writers, who relate, that the Indians sacrificed the rest of the Spaniards, who were shipwreck'd on the coast of Yucatan, to their gods: For can it be believ'd, that the only remaining Spaniard, if this had been true, would have chosen to remain in so barbarous a country? Or that both he and JEROM DE AGUILAR should meet with such good usage there?

He demon-
strates the
images of
the Indi-
ans.

But to return to the history: This Spaniard JEROM was of infinite service to CORTEZ in this expedition; for, having resided so long in the country, he was perfectly acquainted with their strength, their way of making war, and with their language; which enabled CORTEZ to make such enquiries as were necessary to the prosecution of the conquest when he arrived at the continent. He had two or three slaves also presented to him by the Cacique of Cozumel, whom he order'd to be instructed in the Spanish tongue. Before he left the island, he express'd his zeal against the idolatry of the natives, by breaking down their idols; which does not seem very complaisant, after the hospitable reception he met with from the islanders, especially when the Mexican Priests protested and exclaimed against the outrage, as the greatest that could be done to their people: And, after all, CORTEZ appears to have had no aversion to images in general; for the history relates, he erected a temple to the VIRGIN MARY, in which he left her image and a cross, and required the natives of Cozumel to adore them: So that this great Conqueror and Reformer only required they should exchange their idols for those of his own country. But to proceed:

Sets sail
from Co-
zumel.

The forces being reimbarcked, CORTEZ took leave of the island of Cozumel on the 4th of March,

1518-19; and, having doubled Cape Catoch, the most easterly promontory of Yucatan, continued his voyage to the mouth of the river Tobasco (or Grijalva) in the Bay of Campeachy; where he found the Indians in great numbers on the shore, threatening to oppose his descent: Whereupon he sent JEROM DE AGUILAR to them in a boat, with a flag of truce; acquainting them, that he was come to confirm the peace made with them the year before by GRIJALVA; and that if they refused him a peaceable entrance into their country, he should land by force: And, when they still persisted to oppose his descent, he fired upon them with his artillery and small arms: Whereupon they turn'd their backs, and fled; some of them to the woods, and others to the town of Tobasco. After which, he landed his men without opposition; but, being obliged to pass through some woods and defiles, a body of the enemy, who had conceal'd themselves therein, surprized and wounded some of the Spaniards with their arrows; and CORTEZ, continuing his march 'till he came to the town of Tobasco, found it fortified with a kind of wooden wall, formed with the bodies of trees fixed like palisadoes, through the intervals whereof they shot their darts and arrows: But his men no sooner came up to the works, and fired their muskets thro' the palisadoes, than the enemy retired to a large square in the middle of the town, where they made some shew of defending themselves; but, upon the approach of the Spaniards, they retired from thence also, and fled to their friends in the woods. And in all these encounters, which the Spaniards represent as very bloody and obstinate, there were only fourteen or fifteen of them wounded, and no more than two of these died of their wounds. I don't doubt that part of the relation, which informs us that great numbers of the natives were killed; for it seems to have been a maxim with CORTEZ to render himself as terrible to the Mexicans as possible, in order to facilitate the conquest of their country: But it cannot be supposed that the Spaniards met with any great opposition, when in a battle, wherein they engaged many thousands, and stormed the capital city of the province, only two of their men were killed; and indeed the fire-arms of the Christians were so very terrible to the Indians, who had never seen any thing of that kind 'till the arrival of the Spaniards, that they could very seldom be brought to make a stand within the reach of them.

But to return to the history: My author, DON ANTONIO DE SOLIS, relates, that the day after the taking of Tobasco, the Mexicans assembled an army of forty thousand men, with which they attack'd the Spaniards; and that the battle seem'd doubtful, 'till CORTEZ sallied out of a wood, and charged them in flank with his horse; by which he obtained another complete victory. The Indians are represented in this battle as a very formidable enemy, and to have attack'd the Spaniards with that bravery, that they were scarce able with their fire-arms to repulse them: And this is related with a view, no doubt, to magnify the courage and conduct of CORTEZ and the Christians. They relate also, that St. JAMES the Apostle appeared in the battle, on a white Horse, and fought for the Spaniards, insinuating, that nothing less than a miracle could have given them the victory over the Indians: Whereas every one knows, and the Spanish writers themselves confess in other places, that the Indians durst never stand a regular body of Europeans; but were in the utmost consternation when they were attack'd with fire-arms or horse, and especially when the artillery thunder'd upon them, believing that the people they engaged

CHAP. VII. engaged were rather gods than men; and consequently there was very little occasion for a miracle, or indeed for much military skill or courage, to defeat an enemy, when they had such advantages on their side. Even at this day, now fire-arms are so well known, and used by every nation almost, I don't doubt but a thousand veteran soldiers of Europe, attended by a train of artillery, would defeat an army of an hundred thousand men either in the East or West-Indies; the writer of these sheets having seen three hundred Europeans rout twenty thousand Indians, intrench'd up to the teeth, who wanted neither horse, artillery or small-arms to defend themselves, and had the courage to stand 'till they came to push of pike and bayonet. What then might we suppose a body of veteran soldiers capable of effecting against a naked people, that had never seen a horse, or heard of gun-powder or artillery, 'till they saw their forces slaughter'd and tumbled upon heaps by those murdering pieces, a mile almost before they approach'd them? The success of CORTEZ and his Spaniards therefore is not to be wonder'd at; it was no more than might reasonably be expected, all circumstances consider'd.

The Indians of Tobasco sue for peace. The day after the battle, DE SOLIS relates, that the Cacique or Prince of Tobasco sent a solemn embassy to CORTEZ, to implore peace, attended with a present of such fruits and provisions as his country afforded, together with jewels, plumes, and painted cotton linnen, and whatever he thought most acceptable to the conquerors: That the Ambassadors approach'd CORTEZ as they used to do their gods, with golden pans or censers; in which they burnt aromatic gums, and other incense: That the Cacique afterwards came in person, and made his submission, bringing with him twenty beautiful Indian virgins, which he made CORTEZ a present off: And one of these, whom the General afterwards caused to be baptized by the name of Donna MARINA, served him, it seems, during the whole expedition, in the double capacity of concubine and interpreter; for she was a native of Mexico, a female of ready wit, and understood the customs of the country and the language perfectly well; and indeed to her merit and address the Spaniards ascribe the success of their arms in a great measure. The historian, however, takes an opportunity, in this place, to admire the virtue and piety of his hero, CORTEZ following in this the precedent set him by the ancients. But to proceed: When the Cacique of Tobasco came to make his submission, CORTEZ let him know, that he came from a powerful Prince; and that his principal view was to make them all happy in this world and the next, by making them the subjects of the same Sovereign, and converting them to the true religion. To which the frightened Cacique answered, as the Spaniards tell us, that he and his people should think themselves happy in obeying a King, whose power and greatness appeared with such advantage in the valour of his subjects: But as to the point of religion, 'tis said, they gave little hopes of their conversion. CORTEZ, being about to advance still farther with his fleet on the Mexican coast, was under the greatest concern, we are told, that he must leave that people before he had fully instructed them in the Catholick religion; and on Palm-Sunday, the day he had appointed to embark his troops, he first caused an altar to be erected in the open field; where he celebrated high mass in the presence of the Indians, and all his troops march'd in their ranks to the altar, with boughs or palms in their hands, to celebrate that festival: The procession seeming to excite in the natives the utmost

awe and reverence; insomuch, that some of them, 'tis said, cried out, "This must be a great God that such brave men adore."

CORTEZ, having concluded a peace with the natives of Tobasco, or rather compelled them to acknowledge the King of Spain for their Sovereign, embarked his forces, and sailed to the westward 'till he arrived at the port of St. John de Ulva. When the Spaniards were coming into this port, two peraguas, or large canoes, full of Indians, came into the fleet, and addressed themselves to the General in a submissive manner; but were not understood by his interpreter; which the celebrated Donna MARINA, the General's concubine, observing, offer'd to become interpreter between the Christians and her country-men the Mexicans. And here the Spanish writers entertain us with the character and family of this Indian damsel; who, being mistress to their hero CORTEZ, and so instrumental in the following conquest, we must not wonder that they derive her pedigree from ancestors of quality and distinction. They acknowledge, indeed, that she was slave to the Prince of Tobasco, who presented her, with several more, to CORTEZ; but then they tell us, this happened by accident; she was really the daughter of a Cacique, or Mexican Prince, tho' she had the misfortune to be taken captive in the wars, and made a slave: That she had a ready wit, and several natural endowments, which well agreed with the nobility of her birth: That CORTEZ took her to his bed for political reasons; and had a son by her, to whom he gave his own name, making him a Knight of St. Jago, in consideration of the nobility of his mother's birth. But to return to the history: Donna MARINA supplying the place of Interpreter, the General was informed by the Mexicans, that their Emperor MONTEZUMA had sent two of his Ministers, viz. PILPOROR, Governor of that province, and TENTILE, one of his Generals, to know with what intention the Spaniards visited his dominions, and to offer them such provisions and accommodations as his country afforded. To which the General answer'd, that he came as a friend, and to treat of matters of great importance; desiring a conference with the officers MONTEZUMA had sent to receive his proposals: And, landing with his troops on Good-Friday, he laid out a camp on an advantageous situation, fortifying it with trenches and redoubts, and planting his artillery in such a manner as to command the country round him; being assisted in this work, and in erecting huts and tents to preserve his soldiers from the weather, by great numbers of Mexicans that the Governor of the province sent to assist him: For the historian observes, that the Mexicans, having heard of the defeat of their countrymen at Tobasco, made a virtue of necessity, and thought it prudence to make friends with a people they durst not oppose. Nor does DE SOLIS forget, in this place, to observe again the great veneration his hero had for religion; telling us, that he immediately erected a chapel, setting the image of the blessed Virgin on the altar, and a great cross at the entrance, in order to celebrate the approaching festival of Easter; for "Religion (says he) was always his principal care."

On Easter-day 1519, MONTEZUMA's Ambassadors came to the camp of the Spaniards, and were admitted to the presence of CORTEZ, who received them in great state: But, before he would enter upon any business, the historian relates, he went to chapel, and heard divine service; being attended thither by the Ambassadors, and a crowd

An embassy from Montezuma.

CHAP. VII. of Mexicans, who appeared extremely delighted with their pompous ceremonies.

Being returned to the General's tent, he entertained the Ambassadors at dinner in a very splendid manner: After which, he informed them, that he was come from Don CARLOS of Austria, the great Monarch of the east, to propose matters of great importance to their Emperor MONTEZUMA, and his subjects; but that it was absolutely necessary he should deliver his message personally to the Emperor, according to the usage of all nations; and hoped he should be received with the respect due to his character.

To this the Mexican Ministers answered, that they had orders from their Sovereign, the great MONTEZUMA, hospitably to receive and entertain all strangers that arrived on their coasts, and had brought him a present of such things as their country afforded, consisting of fine painted cotton linen, beautiful feathers, and plates of wrought gold, which their servants were ordered to bring in, and place in the General's view: But they gave him to understand, at the same time, that their Emperor never admitted foreigners to his presence; and therefore he must not think of approaching his court. CORTEZ replied, that never any Ambassadors were refused an audience, unless it were with a design to affront the Prince they came from; and that he was determined not to leave the country 'till he had delivered the contents of his embassy to their Emperor himself. Whereupon the Mexican Ministers desired, that he would, however, remain in his camp 'till they had acquainted their Emperor with the proposal, and received his commands; and they would, in the mean time, supply his people with provisions, and every thing they wanted.

During this conference, the Spaniards observed some of the Mexicans were very busy in drawing, upon cotton cloth, the pictures of the principal Spaniards, and whatever they thought remarkable, as their ships, arms, artillery, and horses; which were designed, they understood, to be sent to MONTEZUMA, to acquaint him what kind of people, and of what force the Spaniards were. Of which CORTEZ being inform'd, desired they would not finish their piece 'till he had given them a taste of his military operations: Whereupon he ordered his forces to be drawn up in order of battle, and to exhibit a mock engagement: He ordered also his horse to mount, and shew their activity and horsemanship in charging, wheeling, and retiring, as in a battle: Then the small arms were ordered to fire, and afterwards the artillery. At which the Mexicans were astonished; some of them actually fled, and others fell down with the fright, apprehending they should be destroyed by this artificial thunder; but, being a little recovered from their consternation, by a cessation of the fire, they made several additions to the pieces they were painting; wherein they endeavoured to represent the amazing scene they had been witnesses off: And, having finish'd it, the Ambassadors carried the picture, with a present CORTEZ had provided for the Emperor, to the Court of Mexico. They returned to CORTEZ again seven days after, and brought another magnificent present from MONTEZUMA for the General; which, they said, their Emperor had sent as a testimony of his respect for the King he came from; but could not admit of the Spaniards resorting to his Court.

To which CORTEZ answered, he durst not return to his Prince 'till he had delivered the message he was sent upon to the Emperor MONTEZUMA; giving them to understand, that he was determined

to prosecute his journey to Mexico at all hazards.

Here the historian takes an opportunity of giving us an account of the state of the Mexican Empire at that time, and of the character of MONTEZUMA. He says, that the empire was in the most flourishing condition it had ever been in: That MONTEZUMA was then possessed of almost all the habitable parts of North America, his dominions extending above 500 leagues in length, and lying upon the North and South-seas: That MONTEZUMA was the eleventh Emperor, and the second of that name, elected to the throne in consideration of his great merit, particularly on account of his courage and military virtues; and tho' he affected to appear extremely modest and affable before he arrived at the imperial dignity, he was no sooner invested with it, but he became intolerably proud and insolent, and would be served in his Court only by his vassal Princes and Nobility, and was guilty of great cruelty and oppression; which render'd him generally hated by his subjects, and occasioned insurrections in several parts of the empire. He had reign'd fourteen years when CORTEZ arrived there; the last of which, they tell us, was full of prodigies and wonderful portents, which shew'd that the destruction of that empire was approaching: That, when GRIJALVA and the Spaniards were upon the Mexican coast the year before, a comet appeared for several nights, of a pyramidal form; and another was seen at noon day, resembling a fiery serpent with three heads, which ran swiftly towards the east 'till it vanished: The lakes of Mexico overflow'd in an unusual manner, carrying away both houses and people; one of their principal temples was burnt down to the ground, without their knowing from whence the fire proceeded; nor was it possible to extinguish the flames: Horrid voices were heard in the air, and strange oracles pronounced by their idols, intimating their sudden fall: Monsters of horrible deformity were taken and brought to MONTEZUMA, particularly a fowl of a prodigious size and make, which had on its head a shining plate like looking-glass, in which the Emperor saw an army of men coming from the east, and making terrible havock of his subjects: That a countryman, who had seen a vision, came to Court, and boldly told the Emperor, he was commanded by the gods to warn him of his approaching ruin; for an enemy was coming from the farther part of the world to destroy both his empire and religion. I shall leave the world to give what credit they please to these prodigies and portents; and only observe, that there scarce ever was a revolution in any nation, but some such intimations of it have been pretended.

The Spaniards seem to give some countenance to them; and assure us, that these prodigies induced the Emperor MONTEZUMA to deny CORTEZ and his Spaniards leave to approach Mexico; believing that these were the people, from whom that destruction was to proceed that had been threaten'd.

While CORTEZ remained in his camp, he order'd his fleet to sail along the Mexican coast, and sent out parties by land to gain farther intelligence of the state of the Mexican empire; and, in the mean time, received a message from MONTEZUMA, requiring him to depart his dominions, or he should look upon the Spaniards as his enemies, and treat them as such: Which, 'tis said, occasion'd a mutiny among his men; some of them representing, that it was the highest rashness to attempt the conquest of so great an empire with so small a force; and intimating, that they expected to be sacrificed to the avarice and ambition of their General.

CHAP. VII.

The state of Mexico when the Spaniards arrived there.

Prodigies and portents of the fall of the Mexican empire.

The Mexicans astonished at the artillery and small arms.

CHAP. VII. Whereupon CORTEZ pretended he would return to Cuba, and get a farther reinforcement of troops; but finding, on this declaration, a majority of his soldiers desirous of prosecuting immediately what they had so fortunately begun, and to be of opinion they had forces sufficient to deal with the Mexicans already; he determined to continue his march towards the capital city of the empire: In which resolution he was confirm'd by the Cacique of Zempoala, a Prince in the neighbourhood of Ulva, who offered to enter into an alliance with the Spaniards against MONTEZUMA, complaining loudly of his tyranny and oppressions.

The Cacique of Zempoala joins Cortez.

But, before CORTEZ proceeded farther in this grand enterprize, he thought it proper to get his authority establish'd in a better manner than it was at present: He represented to his soldiers, that he had no other commission than that which he received from DIEGO VELASQUES, Governor of Cuba, which had been recalled; and therefore proposed their electing some one of their Officers to be General in this expedition, whom they would willingly obey and submit to: For it could not be supposed, he should be able to transact any thing of consequence, so long as his title to command them was precarious, and every one was at liberty whether they would obey his orders or not. He resigned the commission therefore he had received from DIEGO VELASQUEZ, and delivered up his General's staff, desiring they would proceed to an election, and then withdrew: And, after a very short space a majority of the Officers and Soldiers made choice of CORTEZ to be their general again; some few of the relations of DIEGO VELASQUEZ only protesting against it, and these he obliged to submit to the suffrages of the rest.

The Spaniards march to Zempoala.

The General being thus establish'd in his command, began his march to the city of Zempoala, the capital of his new ally; where, arriving in two or three days, he was received by the Cacique with the greatest marks of esteem and affection: He informed CORTEZ, that all the Caciques on that side the country were in a manner enslaved by MONTEZUMA, and so oppress'd by his tyranny, that they were ready to throw off their subjection to that Prince, and would infallibly join the Spaniards as soon as they durst declare themselves: And the Cacique order'd the Spaniards to be quarter'd in the best part of the city of Zempoala, supplying them with plenty of provisions.

The General continuing his march the next day for the town of Quibislan, situated on the coast where he had ordered his fleet to meet him, the Cacique of Zempoala commanded four hundred Indians to carry his baggage, and assist in drawing the artillery; for there were neither beasts of burden or draught to be found in the country; every thing was done by the strength of men.

They arrive at Quibislan, or Vera Cruz.

When the army arrived at Quibislan, they found the town deserted by the inhabitants, who were fled in the utmost consternation; but the General sending some of their countrymen after them, and acquainting them that he intended them no hurt, they soon returned to their dwellings: And, while CORTEZ remained in this town, above thirty Caciques of the mountains came and desired his alliance, offering to reinforce his troops with an hundred thousand men, if he would take them under his protection, and assist them in throwing off that yoke which MONTEZUMA would impose upon them. This CORTEZ readily consented to; and, as the Indians seemed to believe the Spaniards invincible,

VOL. III.

and to be rather gods than men, CORTEZ was not backward to encourage the notion, looking upon it as a very likely means to facilitate the reduction of that empire; of which he seemed to have such an assurance at this time, that he took upon him to decide the differences of the Caciques, or Indian Princes, as their Sovereign; and even ventured to demolish the temples and images of the Zempoalans, who sacrificed some of their prisoners; telling them that the God of the Christians abominated such sacrifices: Which seems to have been a very bold and impolitic step, if he had not thought himself able to subdue the Mexicans by pure force; and was no doubt afterwards remember'd to his disadvantage. Nor was he content with this; but he converted one of their temples into a Christian church, and erected an altar in it, on which he placed an image of the blessed Virgin, and celebrated mass with great solemnity: And tho' the Indians did not seem inclinable to renounce their own superstition, yet the Catholick historian informs us, they were not averse to the admitting the image of the Virgin MARY into the number of their idols; and even desired she would be their advocate, that the God of the Christians might protect them; of whose power they seem'd extremely sensible.

CHAP. VII.

Cortez demolishes the temples of Zempoala.

Converts one of them into a church.

After this execution on the Mexican idols at Zempoala, CORTEZ returned to Quibislan, to which he gave the name of Vera Cruz, where his fleet lay at anchor, and found a vessel just arrived there from Cuba, with a small reinforcement of ten soldiers and two horses; for such was the opinion the Spaniards had of the success of the enterprize against Mexico, that they went by stealth after CORTEZ in small parties, and were ready to run all hazards to join him, hoping to share the wealth of the continent with that Captain. By these the General understood, that DIEGO VELASQUEZ, Governor of Cuba, continued to threaten him; and had sent to the Court of Spain to obtain the King's commission (for he had only a commission from DON DIEGO COLUMBUS before) to be Viceroy of that island, and Captain-General on the continent, in order to defeat the ambitious projects of CORTEZ, and that he might reap the glory and advantage of the conquest the Spaniards were about to make of the empire of MONTEZUMA.

New adventurers arrive.

Upon this intelligence, CORTEZ drew up a letter to the Court of Spain, in the name of his principal Officers; giving an account of the success of their expedition, the wealth and fertility of the country, the town they had fortified, and the several Princes and provinces that had already revolted from their Emperor, and entered into an alliance with the Spaniards: They were directed also to complain of the injustice of VELASQUEZ, by whose encouragement they had embarked all their fortunes in the enterprize, and yet endeavoured to defeat it, to the irreparable damage of the Crown of Spain, and of the Christian religion, which would probably be spread and propagated over this new world, if they were not prevented prosecuting their design by the unreasonable opposition of the Governor of Cuba.

Cortez sends to Spain for a commission.

This letter, with all the gold, jewels, and valuable curiosities they had obtained by presents from MONTEZUMA, or by traffick with his subjects, were sent to Spain, as a specimen of the wealth of the country, and to shew of what importance it was to support CORTEZ and his fellow-adventurers. In this dispatch also was enclosed a petition, that CORTEZ might still continue to be the General and

CHAP.
VII.

and Conductor of the enterprize, inasmuch as he had already shewn himself extremely well qualified for such an undertaking.

But, notwithstanding a majority of the Soldiers appeared to be in the interest of CORTEZ; and others, out of fear of his power, consented to sign these dispatches for Europe; there was still a considerable party in the interest of Don DIEGO VELASQUEZ, and amongst them some of the principal Officers, his near relations. JOHN DIAZ, one of the Chaplains of this little army, also was found to favour the Governor of Cuba; and was for transacting every thing therefore in his name, and by his authority, who first formed the design of invading Mexico, and largely contributed to it. And when the disaffected party found they were not able to carry their point, they enter'd into a conspiracy to seize one of the ships and return to Cuba; which was discover'd the night before it was to have been executed; and CORTEZ, to establish his authority, and deter his people from such attempts, caused two of the conspirators to be put to death, two more of them were whipped, and one of the principal mariners had his foot cut off. The General and Officers of his party also agreed to set fire to the fleet, after they had brought the tackling, iron-work and planks on shore, that might be useful to them; whereby they render'd it impossible for any of their people to desert them for the future, and added an hundred seamen to their army.

A mutiny
among the
Spaniards.Cortez
burns his
ships.

This action ANTONIO DE SOLIS magnifies to the skies, comparing CORTEZ to the greatest Captains of antiquity; tho' there does not seem to be any thing more in it, than this: The General found he had very little to apprehend from the Mexicans, who were not only extremely terrified by the fire of his artillery and small arms, but so divided amongst themselves, or rather generally disaffected to their Prince, that there could be little difficulty in subduing the country, if he was not interrupted by the Governor of Cuba; for the prevention whereof he did indeed a very prudent thing in burning his ships, that VELASQUEZ might have no intelligence of his motions; and that his people, having now no possibility of retreating to Cuba, might join unanimously in prosecuting the conquest, which nothing but their own divisions could defeat. He found he was in more danger from the attacks of the Governor of Cuba, and the murmurs of the Spaniards, than from the naked defenceless Indians; and destroy'd his fleet, because the keeping of it was the only thing that could undo him, and frustrate his ambitious views: which, tho' it discover'd a good share of cunning, yet I don't see any great reason to cry up the courage of CORTEZ upon this occasion; for he knew he should have been exposed to much greater hazards by having a fleet, than by having none; and that the destruction of it would contribute to his security more than any step he could take.

The Go-
vernor of
Jamaica
lays claim
to Mex-
ico.Cortez be-
gins his
march for
Mexico.

Soon after the burning of the fleet, appear'd three Spanish ships upon the coast, that came from Don FRANCISCO DE GARAY, Governor of Jamaica; who landed a Notary, attended by three witnesses, that were sent to declare and testify, that the Governor of Jamaica laid claim to that part of the coast where CORTEZ was, and intended to settle a colony there; requiring him to remove from thence: But CORTEZ, instead of complying with the demand, made the Notary, and six Spaniards more, prisoners; and the ship that brought them thereupon stood off to sea again. After which, the General, having finish'd the fortifications of Vera Cruz, and left in it a garrison of an hundred and fifty Spanish

foot, two troopers with their horses, and a good number of confederate Indians; began his march towards the city of Mexico, with the rest of his forces, consisting of five hundred Spanish foot, fifteen horse, and six field-pieces, which were drawn by the natives. He was attended also in this march by his allies the neighbouring Caciques, and a numerous army of Indians; and, having pass'd some high barren mountains, where he complains his men suffered a great deal by the cold, the heavy rains they met with, and the want of provisions, they arrived at the city of Zocothlan; the Cacique whereof commanded a great extent of the country, and received the Spaniards, 'tis said, with a great shew of respect; but did not seem sincere in the friendship he profess'd: And when the General demanded, if he was subject to the Emperor of Mexico? He answer'd with another question, viz. "Is there a man up-
"on earth, that is not a vassal and slave to MONTEZUMA?" To which, 'tis said, CORTEZ as haughtily reply'd, That the Cacique knew very little of the world; for that he, and the Spaniards with him, were the subjects of a Prince that commanded greater Kings than MONTEZUMA. Still the Cacique insisted, as the Spanish historians relate, that MONTEZUMA was the greatest Prince in the world: That the Provinces he commanded were innumerable: That he kept his Court in a city that was impregnable, founded in the waters, and which there was no approaching but by causeys, fortified with bulwarks and draw-bridges: That his wealth and the number of his forces were inconceivably great; and, lastly, that he sacrificed twenty thousand of his enemies, or of his rebellious subjects, annually to his gods. But, as the last part of this pretended speech was certainly false; so the first part of it seems exceeding jejune and vain; and rather resembles the disputes of school-boys contending for the preference of their respective schools, than a conference between two great Generals. As to the falsity of the Mexicans sacrificing so many thousands every year to their gods, we find the Spanish Bishop of Chiapa, who resided in Mexico soon after this conquest, declaring, that tho' there had been human sacrifices in that country, they never sacrificed fifty persons within the space of a year: And, if this part of the speech was false, we can have no great regard to the rest. Indeed, I am ready to ascribe this, and most of the speeches we meet with in this history, to the invention of their historians, who in this imitate the practice of some of the antients; and, provided their discourses are just, adapted to the quality and circumstances of the persons that speak, and the subject in debate, there may be no great occasion to censure them. But to return to the history: CORTEZ being advis'd to march through the territories of Tlascala, an Indian republic, that was ever at war with MONTEZUMA, sent four of the Chiefs of the Zempoalans, his allies, as Ambassadors, to offer them peace, and to demand a passage through their country: And here the Spanish historians have given us another speech, which, they tell us, the principal Ambassador made to that commonwealth, of the following tenor:

Arrives at
Zocothlan.A dialogue
between
Cortez
and the
Cacique.An embas-
sary to Tlascala.A speech
of the Am-
bassador's.

"Noble, valiant, and potent Tlascalans, our
"Sovereign, the Prince of Zempoala, and the
"Caciques of the mountains, your friends, wish
"you health, a plentiful harvest, and victory over
"your enemies; and, by us, send to acquaint you,
"that certain invincible men are arrived from the
"east, who seem a kind of gods: They sail in pa-
"laces upon the ocean; their weapons are thunder
"and lightening, the peculiar arms of heaven; they
"profess

CHAP. VI. " profess themselves servants of a God superior to
 " ours, that is offended with tyranny and human
 " sacrifices; their Captain styles himself the Ambaf-
 " sador of a powerful Prince, who sends him to re-
 " form the manners of our country, and deliver the
 " Mexicans from the oppressions of MONTEZU-
 " MA, the great enemy of yours and all the neigh-
 " bouring States; and only desires a passage through
 " your country to the Court of that Monarch:
 " Which the Ambassadors advised them to admit
 " of; assuring them, that these foreigners had no
 " other views than the common good of their
 " country, and made no other use of the terrible
 " arms they carried, but to promote the welfare of
 " mankind."

Whether this speech be genuine or no, is not ma-
 terial: The reason of my giving this abstract of it
 is, to shew the glorious pretensions of the Spaniards
 to gain over the Indian natives to their party; tho',
 after they were subdued by the assistance of their own
 arms, the conduct of the Spaniards appear'd the ve-
 ry reverse of their declarations.

Debates in the senate of Tlascala, in an embassy. This pacific proposal, the same historians relate,
 being debated in the senate of Tlascala, one of the
 gravest of them, by name MAGISCATZIN, ob-
 serves, that it had not long since been declared by
 their Priests, and was generally believed by their
 people, that an invincible race of men should one
 day come from the east, who should have power
 over the elements, be able to live upon the ocean,
 and with fire and air subdue the earth: Men of a
 celestial race; so valiant and powerful, that one
 should be able to vanquish a thousand: and so good,
 as to promote nothing but what was just, reasonable
 and beneficent: That these strangers resembled the
 people their oracles had described, in almost every
 instance: Their valour those of Tobasco had already
 experienced, and their goodness their allies declared,
 amongst whom they had resided.

That the comets they had lately seen, foretold
 this great event; and it would be madness to op-
 pose a people arm'd with the thunder of the gods,
 and whose lightning pointed out their submission.

There was a party, however, in the senate, led
 by XICONTAL, the Tlascalcan General, who were
 of another mind, according to DE SOLIS: They
 said, it was true these pretenders to reformation did
 come from the east: but it was much to be questi-
 on'd whether these were the same their oracles fore-
 told should come from thence; for those they ex-
 pected were to be of a celestial race: Their fire-
 arms and floating castles, which some called pala-
 ces, might be the effect of human industry and in-
 vention; or, perhaps, they might be the illusions
 of some enchantment: Their success at Tobasco
 might be ascribed to surprize, or a panic fear that
 possess'd that people; but was no means to be
 looked upon as miraculous: And they suspected,
 that the good usage the Zempoalans had experienced,
 was only the effect of artifice, and in order to
 draw in that people to their party; for they did
 not want instances of the covetousness, pride and
 ambition of these foreigners: They had plunder'd
 several towns on the coasts, and express'd an insati-
 able thirst after the Gold and Silver their country
 produced: They contemned and derided their re-
 ligion, destroyed their temples, pulled down their
 altars, and blasphemed their gods; which sufficient-
 ly evinced, they were far from being of heavenly
 extraction: That those portents and signs in the
 air, which had been so much insisted on, were the
 constant forerunners of some dreadful calamity, and
 sent as warnings by the gods, that they might pro-

vide against them: They ought therefore to oppose
 these invaders with all their forces, and, by their
 supplications to the gods, endeavour to avert those
 miseries they were threaten'd with.

I have given an abstract of these speeches, to
 shew what the Mexicans thought of the Spaniards
 on their arrival among them; or rather, what the
 Spaniards would have us believe the Indians thought
 of them: Not that I suppose such speeches were
 ever made; for it was impossible the Spaniards could
 have come to the knowledge of them if they had,
 there being no such thing as writing among that
 people, and the Spaniards at that time perfectly ig-
 norant of their language.

But whatever were the debates in the senate of
 Tlascala, it is evident, they determined to oppose
 the passage of the Spaniards thro' their country, 'till
 they had made an experiment of their strength.
 Indeed, they durst not meet this terrible enemy,
 whose arms they resembled to thunder and light-
 ning, in a fair field; but they frequently laid am-
 buscades in the woods and mountains, and, sur-
 rounding the stragglers, killed and wounded some
 of the Spaniards; by which they learnt they were
 neither invulnerable nor immortal, as they had been
 represented. However, such was the advantage the
 Spaniards had in their artillery and horses, that
 the Tlascalans, finding it in vain to continue the
 war, were contented, at length, to accept of peace,
 and become most faithful allies to CORTEZ.

The Spaniards, 'tis true, mention several great
 battles fought with the Tlascalans, and a variety of
 stratagems used on both sides in this war; and sug-
 gest, that the success of the Christians was to be
 ascribed to a supernatural power: But there is very
 little regard to be given to such insinuations; for
 the terror the natives were in at the approach of the
 horse and artillery, was such, that they constantly
 fled when they saw the Christians in motion. Be-
 sides, the forces of the Caciques and Indian Princes,
 that join'd CORTEZ, were more numerous than
 those of Tlascala, and able to have maintained the
 war perhaps against that people alone; and we find
 few of the Spaniards were hurt in this war: It is
 highly probable, therefore the opposition CORTEZ
 met with was inconsiderable; and that a very mo-
 derate degree of courage and military conduct was
 sufficient to drive the frightened defenceless Indians
 before them. That the slaughter of the Indians of
 Tlascala was great, I shall not contest; for the ex-
 ecution of a flying enemy is generally very terrible;
 and the allies of CORTEZ, no doubt, when they
 saw their enemies turn'd their backs, might do much
 more execution than the Spaniards themselves; in-
 asmuch as they were more numerous, and not in-
 cumber'd with the heavy arms and armour of the
 Christians.

When MONTEZUMA received advice, that the
 Spaniards had subdued the Tlascalans, and were
 about to incorporate them in the number of their
 allies, he was under the utmost consternation; for
 he knew them to be the bravest of the Indian na-
 tions, and the most inveterate enemies to his em-
 pire: A people, who had long resisted his enemies
 alone, and, join'd with these invincible strangers,
 he apprehended would shake the foundations of his
 throne: He sent another embassy therefore to
 CORTEZ, to represent the Tlascalans as a treache-
 rous and barbarous people, who had no regard to
 their treaties, and who would take the first oppor-
 tunity that presented itself of destroying those that
 confided in them: But the Spaniards easily saw
 through the design of MONTEZUMA, in offering
 them

CHAP. VII.

them this advice, and concluded their treaty with Tlascalala the sooner, because they found that Prince so much dreaded the confederacy they were negotiating.

to Tlascal-
la.

MONTÉZUMA made still another effort to divide the Spaniards and the Tlascalans: He even offered to pay a yearly tribute to the Spaniards, consisting of half his revenues, provided they would break with their new allies, and lay aside their design of marching to Mexico: But CORTÉZ would not consent to either of these propositions; and, receiving an invitation from the senate of Tlascalala, to take up his quarters in their capital, he enter'd that city in triumph, on the 23d of September, 1519; and had a palace assign'd him, consisting of several courts, large enough to accommodate his whole army; and was entertain'd here at the expence of that republick, who readily consented to become fellow-subjects of the same mighty Prince the Spaniards were. But, when CORTÉZ press'd them to abandon their idols, and embrace the Christian religion, they desired to be excused from such compliances; and the General could prevail no farther, than that they should suspend their human sacrifices. He would, the historian relates, have proceeded to demolish their temples and images by force, as he had done at Zempoala; but that Father BARTHOLOMEW DE OLMEDO dissuaded him from that rash resolution, which, he represented, would infallibly unite all the Indian nations against him, and put a stop to the progress of their arms.

The vul-
cano of
Potopetec
survey'd.

While the Spaniards remained at Tlascalala, the burning mountain of Potopetec, which lies about eight leagues from that city, burnt with great violence, throwing out stones and ashes that cover'd the neighbouring country: And this the Mexicans also looked upon as the forerunner of some calamity. But the Spaniards informed them, that this eruption proceeded from natural causes; and DIEGO DE ORDAZ, to shew his contempt of what the natives so much dreaded, took two of his soldiers along with him, and climbed up this dreadful vulcano, 'till he came to the mouth of it, where they saw a great mass of boiling sulphur, and, having satisfied their curiosity, returned again to Tlascalala, where they were given over for lost: And, tho' it was in reality a very rash and foolish attempt, yet the Spaniards observe, it was attended with very fortunate consequences; for first, it raised in the Indians a vast opinion of the Spaniards, who were not afraid to march up to the mouth of this vulcano, which their own people durst never approach; and secondly, the Spaniards by this means discover'd a vast quantity of sulphur, which was of great use to them afterwards in making gun-powder, when the powder they brought with them was almost exhausted.

Monte-
zuma invites
Cortez to
Mexico.

CORTÉZ, having remained at Tlascalala about 20 days, received another embassy from MONTÉZUMA, inviting him to advance to the capital city of Mexico; for, finding the Spaniards were now become so powerful, by their alliance with the Tlascalans and other states, that it was in vain to oppose their march, he thought it the least evil of the two to receive them as friends: He found, if he persisted any longer to deny the Spaniards coming to his capital, they would force their way thither, which would occasion a war that might end in the destruction of himself and his empire; whereas, by entering into an alliance with them, he might not only preserve himself, but still continue to govern his dominions, on making some formal acknowledgments of his dependance on the King of Spain;

CHAP.
VII.

and that the Spaniards, in this case, would rather support and protect him against the Tlascalans, and his rebellious subjects, than endeavour to weaken his authority. And there is no doubt, but at this time MONTÉZUMA and the Mexicans were so terrified with the artillery of the Christians, and the formidable alliances they had enter'd into with the natives, that they might have made that Emperor tributary to Spain, and put almost any terms upon him: But CORTÉZ, who ever affected to make himself rather feared than loved, and to effect every thing by pure force, pretended that this sudden change in MONTÉZUMA could arise from no other motive than treachery; and, as he had invited him to continue his march, and take up his quarters in Cholula, one of the frontier cities of his dominions, he had reason to suspect that this was done with a view of surprising and cutting off the Spaniards, when he should have enclosed them in that fortress; and therefore CORTÉZ pretended he would take this opportunity to chastise his treachery and insolence; that is, he would cut in pieces some thousands of the Mexicans, at his entrance into their country, in order to keep up and increase the dread they had of his arms: And in this project, they tell us, the Tlascalans concurred, or rather advised him to, that they might take a full revenge of their antient enemies the Mexicans, now they were reinforced by the invincible Spaniards.

CORTÉZ, his own historian relates, (tho' he knew of this plot of MONTÉZUMA and the Mexicans to cut off the Spaniards at Cholula) continued his march thither; which was certainly very imprudent, if he really believed there was such a conspiracy formed against him, as he pretended: But, as a precaution, they tell us, he took six or seven thousand of the Tlascalans with him, besides the Zempoalans, and the forces of his other confederates; and, being arrived at the city of Cholula, he was received with all imaginable marks of esteem and affection; only they desired the Tlascalans might quarter without the city, as they were of a different sect in point of religion, and their antient enemies: Which CORTÉZ thought fit to consent to; but directed the Tlascalans to encamp so near the town, that they might join their forces with the Spaniards, if there should be occasion. The same historians relate, that such were the joyful acclamations of the Mexicans, on the Spaniards entering into this city, that they themselves, tho' they had entertained a jealousy of a conspiracy before, were inclined to think them sincere: That the quarters the magistrates assigned the Spaniards, were four large houses contiguous to each other, spacious enough to contain the Christians, and all their allies, except the Tlascalans, who were so posted as to have a communication with their friends; and that the Spaniards, having fortified their quarters, were in no danger of being surprized. But still, they proceed to give us a farther relation of this pretended plot of the Mexicans, to destroy the Christians in this town, by a general massacre; affirming, that a Mexican lady discover'd it to Donna MARINA, CORTÉZ's mistress, in compassion to her; and that some Priests of the Mexicans, being examined thereupon, confirm'd the truth of it. But, whatever there was in the conspiracy of the Indians against the Spaniards, all agree, that CORTÉZ and the Tlascalans fell upon the poor defenceless citizens of Cholula, and cut the throats of many thousands of them, without the loss of any of their own people: That he even set fire to their temples, which he burnt

with

CHAP. VII. with great numbers of Priests and others, who had retired thither, either to invoke the protection of their gods, or as to sanctuaries, which they thought none would be so barbarous as to violate. Thus, says ANTONIO DE SOLIS, did CORTEZ chastise the treachery of MONTEZUMA and the Mexicans. He acknowledges, indeed, that one of their own historians charges this General with barbarous cruelty in this and many other massacres of the like nature; suggesting, that his avarice for the plunder of that rich city, and his ambition to render himself terrible, were the real motives to this butchery: And we can't easily avoid being of that opinion, after the good Bishop of Chiapa, who lived upon the spot a little after the conquest, has confirm'd the truth of it.

Certain it is, this terrible execution had such an effect on MONTEZUMA, that he immediately sent another rich present to CORTEZ, with farther offers of submission and resignation to his pleasure: And, I think, there is little room to doubt, but CORTEZ expected this massacre would be attended with some such consequences; and that the prospect of them were the principal motives to that bloody action. It is evident, great part of the history of DE SOLIS is mere fiction: That he has formed councils, made speeches, and contrived stratagems for his hero; for which there was no manner of occasion, against so weak and defenceless a people, frightened out of their senses at the discharge of his artillery: Nay, he has wrought several unnecessary miracles for the Spaniards; at which every reasonable man must laugh. And, if these relations are evidently false, what regard ought we to have to other improbable facts he relates, where they are not confirm'd by the concurrent testimony of other

A pretended miracle. writers? To add another instance of a false miracle to those I have related already from DE SOLIS: He tells us, that the Spaniards having erected a Cross on an eminence in the city of Tlascala, when they march'd out of that town, a prodigious bright cloud descended, in form of a pillar, and settled perpendicularly upon the Cross, where it remained for three or four years: That there proceeded from the cloud such a splendor, as struck the Indians with a veneration for the Cross, shining out in the darkest nights, and compelling them to acknowledge, that the Cross contained some Deity; and that it was with reason the Spaniards worshipped it, and imitated them, by bending the knee before it, and applying to it for relief in their distresses, neglecting their own idols: Which devotion encreased to that degree, that the Indian Priests grew jealous of their religion, and endeavoured to pull down that miraculous Cross, and break it in pieces; but they always returned extremely terrified, not daring to declare the reason, lest they should lose their reputation among the people. These, and a multitude more of such feign'd miracles in the Spanish historians, oblige us to read them with caution; tho' DE SOLIS is frequently so good as to save us the trouble of a strict examination, and confute himself, by relating impossible or inconsistent facts, as will appear in the course of this history. And, after all, if that conquest was attended with miracles that were wrought for the conviction of the Indians, there had been little occasion for those numerous stratagems, and that inimitable bravery they ascribe to their hero CORTEZ; much less for those cruel massacres that were exercised by the Spaniards, under pretence of forcing the Indians into the Christian fold. There was surely very little of heaven in that cruel war, if it may be called a war, which

VOL. III.

CHAP. VII. ravenous Wolves make upon defenceless Sheep: And if ever religion, or rather superstition, was propagated and established by the sword, that of the Papists was in America; their artillery were their Apostles, and fire and faggot their Evangelists. If we may believe their own historian, the Bishop of Chiapa, who resided in Mexico soon after the conquest, and came to Spain again to solicit a cessation of these barbarities, in compassion to those miserable people, whom he saw destroy'd by thousands; and was so happy as to obtain orders from Court to the Spanish Governors to treat the Indians with more humanity.

CORTEZ, having remained some days at Cholula after this massacre, and made the necessary preparations for his march, advanced, by easy stages, towards the Court of Mexico, in order to gain farther intelligence, and strengthen himself by alliances with the Caciques, or Mexican Princes, great numbers of them resorting to him, and complaining of the tyranny and oppression of MONTEZUMA, their Emperor. Nor was CORTEZ sorry, says his historian, to see these humours prevail in the heart of the country; "persuading himself, that a Prince could not be very powerful with so many marks of a Tyrant, who, by losing the love of his vassals, was destitute of the surest defence of a King." Here we may observe the force of truth: The very advocates of CORTEZ, and the first adventurers, acknowledge, that the disaffection of the Mexicans was so universal, that MONTEZUMA could not, without difficulty, have prevented the revolt of his subjects, and a confederacy of the Indian Caciques against him, if the Spaniards had not come to their assistance: And, consequently, the mighty actions pretended to be done by these adventurers, had very little to be admired in them; at least, they could never deserve those applauses that have been bestowed on them; since MONTEZUMA's empire must have fallen of itself, by their own relation, without foreign assistance. Can we think it strange then, that it should be overturn'd, when the oppressed Indians were assisted in their revolt by a people versed in the European arts of war, and armed with artillery and other advantages, which must have terrified and confounded any people, how brave soever, that had never seen any thing of this kind.

They frequently insinuate, indeed, that nothing less than miracles and supernatural aids could have enabled such a handful of men to reduce so vast an empire; but they forget, on those occasions, that they have inform'd us, that the armies of Indians that join'd CORTEZ were equal to those of MONTEZUMA; and that his subjects were oppressed, and prepared for a general revolt. From whence it appears, that neither miracles, or any great share of courage or conduct, were necessary to bring about that revolution, which is represented as so astonishing, that the actions of ALEXANDER, CÆSAR, and the greatest heroes of antiquity, are not to be compared to it.

The historian proceeds to tell us, that MONTEZUMA had laid another plot to destroy the Spaniards, by leading them into a desert country, full of defiles and difficult passes, where he proposed either to cut them off, or starve them; but their Indian allies, it seems, advised CORTEZ to take a different road, whereby he preserved his army: That this stratagem failing, MONTEZUMA commanded his Magicians, Necromancers, and all that were versed in the black art, to assemble, and distress his enemies by their enchantments, on pain of death: That thereupon the Magicians, relying on the distress the Spaniards.

21 A

CHAP.
VII.A pretend-
ed vision.

on the support and assistance of those infernal powers that used to favour them, took their post on a mountain, in view of the Spanish army; where, beginning to draw circles, and invoke the Devil (like our European Necromancers) the Prince of Darkness appeared to them, in the form of one of their idols, of a most terrible countenance; and from whom they supposed plague and famine, and other calamities, to proceed; and, with an angry look, exceeding the fierceness of the idol, seem'd to threaten them. Whereupon they prostrated themselves before the infernal spirit; but he, regardless of their devotion, in a dismal tone and voice, spoke to them in this manner: "Unhappy Mexicans, the time is come wherein your enchantments have lost their force; and the league between us is dissolved. Tell MONTEZUMA, that, for his tyranny and cruelty, heaven has decreed his ruin: And, that you may in a more lively manner represent to him the desolation of his empire, turn your eyes upon that miserable city, already forsaken of her gods." Having said this, the apparition disappear'd, and they beheld their capital city in flames; which they found, however, untouch'd on their return thither.

When this vision was related to MONTEZUMA, 'tis said, he was astonish'd, and for some time remained speechless; but, at length, broke out in the following exclamation: "What can we do, if our gods forsake us? Let the strangers advance, and the heavens fall on us: To hide ourselves, or turn our backs on the vengeance that threatens, would be dishonourable. I only lament the fate of the women and the children, that cannot defend themselves." And, when he had said this, seem'd ready to dissolve in tears: And now, finding it in vain to oppose the march of the Spaniards any longer, he began to make preparations for their reception.

Thus, we find, the Spanish historians have interested both heaven and hell in the destruction of this unfortunate Emperor, against whom they had already arm'd his own subjects, and all the neighbouring powers; which must render their share in the subversion of this empire exceeding small: A Prince, terrified by visions and prodigies, by his own oracles, by a general insurrection and confederacy against him, scarce wanted the artificial thunder and military skill of the Spaniards to complete his ruin. But to proceed:

The Spaniards, continuing their march, were attended by several other Caciques and Lords of the country, who complained of the intolerable oppressions of MONTEZUMA; telling CORTEZ, that they look'd upon him as their DELIVERER, sent from heaven to restrain and punish the injustice and cruelty of tyrants: To whom he promised his protection; and, drawing near to Mexico, in order to strike the greater terror into the natives, he order'd his artillery and small arms to be discharged; and caused several Indians to be shot, that approached too near his quarters while he lay incamp'd at Amemeca, on the borders of the Mexican Lake.

Here Prince CACUMATZIN, the nephew of MONTEZUMA, attended by the Mexican nobility, came to the General, and bid him welcome; assuring him, that he would meet with a very kind and honourable reception from the Emperor; but intimated, that there having lately been a great scarcity of provisions in the city of Mexico, occasion'd by unseasonable weather, they could not ac-

commodate him as they desired; and therefore entreated he would defer his entrance into that capital, if he did not think fit entirely to decline going thither: But, CORTEZ appearing determined to advance, the Prince seem'd to acquiesce; and the preparations for the reception of the Spaniards were continued.

CORTEZ, being arrived at Quitlavaca, a city situated on an island in the great Lake, 5 or 6 leagues from Mexico; is said to have had some apprehensions, that the Mexicans should break down the causey, and remove the bridges on it; which would have very much embarrass'd him, because he could neither have advanced or retired in that case, especially with his horse and artillery. But the Cacique of Quitlavaca, who appeared to be a friend of the Spaniards, very much encouraged the General; telling him, he had nothing to fear; that the prodigies in the heavens, the answers of the oracles, and the fame of the great actions and surprising arms of the Spaniards, had perfectly dispirited their Emperor, and dispos'd him to submit to whatever the General would impose on him; and that he was so far from meditating to impede their march, that he had given his commands to all the places, through which the army was to pass, to supply them with provisions, and all other accommodations; and that he would find the people every-where infinitely rejoiced on his approach, looking upon him in a manner as their good angel, and in expectation the Spaniards would answer the character they had conceived of them, and rescue them from oppression.

This is acknowledged by all the Spanish historians. How is it possible then, to form a more favourable conjuncture, for the Spaniards to have establish'd their dominion in Mexico, even without the least bloodshed, if the General, who conducted them, had been equal to the enterprize, or had had less avarice and cruelty in his composition.

The last town the Spaniards came to, before they arrived at Mexico, was Iztacpalapa, which stands upon the great causey leading to that capital, and is about 2 leagues from thence; where he was received, with all imaginable honours, by the Cacique and the neighbouring Princes, who presented him with a great variety of plumes and fruits, and with plates of gold, to the value of two thousand Peso's. The Prince assign'd CORTEZ his own elegant Palace also for his quarters, and entertained him in the gardens of it, which, the Spaniards inform us, were equal in beauty and magnificence to any thing of that kind in Europe.

The General, having remained here one night, began his march early the next morning, being the 19th of November, 1519, in order to make his entry into the metropolis of the empire; and, as they drew near it, says DE SOLIS in his lofty style, they saw, with admiration, that great city elevated vastly above the rest of the cities of the lake, and carrying an air of dominion in the pride of her buildings. Being come within a league of the city, they were met by four thousand of the Nobility and great Officers of State, who, having paid their compliments, advanced before them to the gates of Mexico, and then made a lane for the army to march through; the rest of the people appearing at the windows and battlements on the tops of the houses, which were crowded with them; but they were not suffer'd to stand in the streets, that the march of the Spaniards and their auxiliaries might not be impeded or disorder'd.

The

CHAP.
VII.Cortez en-
ters Mex-
ico.

CHAP. VII. The army consisted at this time of four hundred and fifty Spaniards, and six thousand Tlascalans and Indians, who had no sooner enter'd the streets of Mexico, but they were met by two hundred Noblemen of the Emperor's household, cloathed in one livery, with large plumes of feathers upon their heads, all of the same fashion and colour.

These, after meeting and complimenting the General, fell back also, and, dividing themselves, made a lane for the Spaniards: Then came another body of the Nobility, of a superior dignity, who made a more splendid appearance; and, in the midst of them, was the Emperor MONTEZUMA, carried in a chair of beaten gold, on the shoulders of his favourite Courtiers, four more of them sustaining a canopy over his head; the whole adorned with beautiful feathers, through which the glittering gold appeared: He was preceded by three Officers, with rods of gold, the harbingers of the Emperor's approach, on whose appearance the people prostrated themselves, none daring to look up.

His first interview with Montezuma.

CORTES dismounting when the Emperor drew near, the Mexican Monarch alighted from his chair, and carpets were spread in the street for him to tread on: He advanced, according to the Spanish historians (who seem to have taken many of the ceremonies they relate from their own Court) with a slow solemn pace, leaning on the arms of two Princes, his relations; and was met by CORTES with a becoming haste, and a most profound reverence; which MONTEZUMA answer'd, by touching the ground with his hand, and afterwards raising it to his lips; a new and unheard-of condescension, my author observes, from MONTEZUMA, who would scarce bend a knee to his gods; and added to the esteem and veneration his subjects already had of the Spaniards. The conference between the Emperor and the General was short, the historian relates, at this interview; neither has he made a speech for either of them on this occasion; only tells us, that their speeches were suitable to the occasion; and that the Emperor commanded one of the Princes, his relation, to conduct the General to the palace assigned for his residence; and then returned to his own palace.

It was about noon the Spaniards were brought to the royal house appointed for their reception, which was so spacious as to contain all the Europeans and their auxiliaries: It had thick stone-walls, they tell us, flank'd with towers: The roof of the palace flat, and defended by battlements and breast-works; insomuch, that when the General had planted his artillery, and placed his guards, it had very much the appearance of a fortress.

Montezuma visits Cortes.

Hither MONTEZUMA came the same evening, and was received by CORTES in the principal square of the palace; and that Monarch, having entered the room of state, and seated himself, ordered a chair for CORTES; and a signal was made for his Courtiers to retire to the wall: Whereupon the Spanish Officers did the same; and CORTES, being about to begin a speech by his interpreters, the historian relates, MONTEZUMA prevented him, and spake as follows:

His speech.

"Illustrious and valiant Stranger, before you disclose the important message the great Monarch you come from has given you in command, it is necessary some allowances be made for what fame has reported of us on either side. You may have been inform'd, by some, that I am one of the immortal gods; that my wealth is immensely great, and my palaces covered with gold: And, on the other hand, you may have

CHAP. VII. "heard, that I am tyrannical, proud and cruel. "But both the one and the other have equally imposed on you: You see that I am a mortal of the same species of other men; and, tho' my riches are considerable, my vassals make them much more than they are; and you find, that the walls of my palaces are nothing more than plain lime and stone. In like manner, no doubt, has the severity of my government been magnified: But suspend your judgment of the whole, 'till you have had an opportunity of informing yourself concerning it; and you will find, that what my rebellious subjects call oppression, is nothing more than the necessary execution of justice.

"After the same manner have your actions been represented to us. Some speak of you as gods; affirming, that the wild beasts obey you: That you grasp the thunder in your hands, and command the elements: While others assure me, you are wicked, revengeful, proud, and transported with an insatiable thirst after the gold our country produces.

"I am now sensible, ye are of the same composition and form as other men, and distinguish'd from us only by accidents, which the difference of countries occasions.

"These beasts (Horses) that obey you, are probably a large species of Deer, that you have tamed and bred up in such imperfect knowledge as may be attained by animals: Your arms are made of a metal indeed unknown to us, and the fire you discharge from them, with such an astonishing sound, may be some secret taught by your Magicians. As to your actions, my ambassadors and servants inform me, that you are pious, courteous, and govern'd by reason: That you bear hardships with patience and cheerfulness; and are rather liberal than covetous: So that we must, on both sides, lay aside our prejudices and prepossessions, and rely only on what our eyes and experience teach. Nor need you take any pains to persuade us, that the great Prince you serve is descended from our ancestor QUEZALCOATL, Lord of the Seven Caves of the Navatlaques, and King of the Seven Nations, that gave beginning to the Mexican empire. We know, that he departed from this land to conquer new regions in the East, promising to return again, and reform our government and manners: And, because you come from the East, and your actions manifest you are descended from this our illustrious progenitor, we have already determin'd to pay you all imaginable honours."

To this the General answer'd, That it was true, various were the reports they had heard: Some endeavoured to defame and asperse him, while others adored him as a god: But the Spaniards, who were endued with a penetrating spirit, easily saw through the different colours of discourse, and the deceit of the heart: That they neither gave credit to his rebellious subjects, or those that flatter'd him; but came into his presence assured, that he was a great Prince, and a friend to reason; but very well satisfied, however, that he was mortal, as they themselves were: That the beasts which obey'd him were not Deer, but fierce and generous animals, inclined to war, and seemed to aspire, with ambition, after the same glory their masters did.

Their fire-arms were indeed the effect of human industry, and ow'd nothing to the skill of the Magician, whose arts were abominated by the Spaniards: And thus, having given some answer to the Emperor's

The answer of Cortes.

CHAP.
VII.CHAP.
VII.

peror's discourse, CORTÉZ proceeded to let him know, That he came Ambassador from the most potent Monarch under the sun, to desire his friendship and alliance: That there might be a communication and intercourse between their respective dominions; and, by that means, the Christians might have an opportunity of convincing them of their errors: And though, according to their own traditions, he might claim a more absolute power over this part of the world, their King only desired to make use of his authority, to instruct them in matters infinitely to their advantage; to shew the Mexicans that they lived in darkness and error, adoring insensible blocks of wood, the works of mens hands and fancies; whereas there was but one true God, the eternal cause of all things, without beginning or ending; whose infinite power created, out of nothing, the wonderful fabrick of the heavens, the sun which gave them light; the earth that sustained them, and the first man from whom they proceeded: And this God they were all under equal obligation to acknowledge and adore; an obligation imprinted on their souls, and of which even the Mexicans could not be wholly ignorant, though they dishonour'd that almighty Being, by worshipping devils and impure spirits, creatures of the same God, who, for their ingratitude and rebellion, were doom'd to subterranean fires; of which their vulcanoes had an imperfect resemblance: That these infernal spirits, whose malice and envy render'd them most inveterate enemies of mankind, endeavour'd their perdition, by causing themselves to be adored in their abominable idols: That it was their voice they sometimes heard in the answers of their oracles, and their illusions that impos'd on their reason. That these mysteries could not be explained at a single interview; but the King, whose superiority they acknowledged, admonish'd them to hear those Fathers whose business it was to preach the heavenly doctrine: This was the first and principal thing the King his master commanded him to insist on, as the most likely means of establishing a lasting amity; that, being united in principles of religion, their alliance might become indissoluble.

Montezuma's reply.

The reply MONTEZUMA made to this harangue, 'tis said, was, That he accepted the alliance propos'd by the King of Spain, the descendant of his great ancestor QUEZALCOAL; but as to the overture that had been made concerning religion, he held, that all gods were good, and the God of the Spaniards might be what they represented; but he saw no reason to withdraw that veneration the Mexicans paid to theirs: And, having made CORTÉZ a present of gold, jewels, and other valuable curiosities, and distributed more among his Officers, that Prince returned to his palace.

Remarks on these speeches.

In the first of these speeches, the Spanish historians have made MONTEZUMA speak what they thought it was proper for him to say on such an occasion; and have sufficiently discovered that submission MONTEZUMA was then dispos'd to pay them: They shew, that the Spaniards were then so high in the opinion of the Mexicans, that they might have impos'd what terms they pleas'd upon them, if they had not struck upon the only string that could have prevented it; namely, the demanding a sudden and total change in their religion, even at this first conference. Whether the answer said to be made by CORTÉZ be genuine, or not, is not very material; but it is evident, from this first speech their writers have put into his mouth, and many other passages, as also from his demolishing their temples and images at Cozumel and Zempoala,

that he began foolishly to prejudice the Indians against the Spaniards, by insisting on a change of religion before he had establish'd his authority. Had he once possess'd himself of the government, which the Emperor MONTEZUMA, and his subjects the Mexicans, in a manner courted him to accept; he might, probably, by reason, by encouragements and rewards, have wrought upon many of the Indians to have relinquish'd their superstition; for, tho' he had not the power of working miracles, the actions of the Europeans were look'd upon as miraculous, and their power invincible; And if to this had been added some examples of that humanity and benevolence which Christianity inspires; had the Indians seen them act like Christians, and manifested a real concern for their temporal as well as eternal happiness, the Christian religion had, in all probability, been soon established in that part of the world. But when they saw the Spaniards destroying their temples and idols by force, before gentle means, and the arts of persuasion, had been made use of to convert them from their errors, and give them an opinion of the religion propos'd to be introduced; when they saw those they at first look'd upon as gods or angels, rather than men, rapacious and cruel, intent upon amassing gold and treasure, and murdering the natives by thousands and ten thousands, under pretence of plots and conspiracies against them; when they found, by experience, that the Spaniards were but men, and were rendered desperate by the cruel treatment they met with from them; no wonder they held fast their errors, and endeavour'd to free themselves from a yoke they found intolerable.

CORTÉZ, and the Spaniards seem to have proceeded upon very impolitic and bloody maxims: They expected, in the first place, that the Indians should immediately entertain and embrace their religion, before they knew any thing of it; and believed it lawful, if the Indians refus'd this, to destroy them by all ways imaginable: And accordingly we shall find, in the course of this history, that they us'd them worse than they would have us'd any species of animals; first making them their slaves, and then destroying them without mercy; which was not only barbarous, but extremely impolitic. The Romans, we find, whenever they extended their arms, made even the Princes of the conquered nations subservient to their designs, and assist them in establishing their dominion, by constituting them Viceroy's and Governors under them; and, by that means, reconciled the people they subdu'd to their empire: But the Spaniards reject'd, or neglected all such politic arts; and seem'd to know no other way of subduing that new world, than by massacring and murdering the ancient inhabitants; insomuch, that large provinces and islands were perfectly depopulated, and many millions of people destroy'd, within the space of twelve years after the invasion of CORTÉZ, as the Spanish Bishop of Chiapa informs us, who was so successful in his application to the Spanish Court, as to procure a stop to be put to these unparallel'd outrages and devastations, in some measure. But to proceed in our history, which will abundantly manifest the truth of what I have here advanced.

The Spanish General, attended by some of his officers and soldiers, went the next day to the palace of MONTEZUMA, and was admitted to an audience. And here again, their historians relate, that CORTÉZ entertain'd that Prince chiefly on the subject of religion: That he endeavour'd to give him an opinion of the rites and ceremonies of the Christians; exclaimed against human sacrifices, and how unnatural

The first audience of Cortez.

CHAP. VII. unnatural it was to devour their own species thus sacrificed: And they tell us, that they prevailed so far on him, as to induce him to banish human flesh from his own table; tho' he durst not prohibit his subjects eating of it, or his Priests the continuing to offer such sacrifices. On the contrary, he maintained, that it was no cruelty to offer to his gods prisoners already condemned to die; tho' CORTEZ, and Father OLMEDO the Priest, frequently endeavour'd to convince him of the barbarity of the practice, and of the excellency of the Christian religion: That he still insisted, "That his gods were "as good in his country, as the God of the Christians was in theirs:" Nor could he dissemble his resentment, when he was press'd so closely on this subject.

Montezuma shows Cortez the great temple. At another time, MONTEZUMA carried CORTEZ, Father OLMEDO the Priest, and some of the principal Spanish Officers, to take a view of the great temple; explained to them their rites and ceremonies, the deities the images represented, and the use of the sacred vessels and utensils, and this with great reverence and seriousness: At which the Spaniards, their historians inform us, were so rude and impolitic, as to laugh and make a jest of them; and that MONTEZUMA thereupon admonished them to keep within the bounds of decency. But CORTEZ, transported with great zeal, said to the Emperor, "Permit me, Sir, to fix the Cross of "CHRIST before these images of the devil, and "you will see whether they deserve adoration or "contempt." At which the Priests were enraged, and MONTEZUMA himself in confusion; and said to the Spaniards, "You might, at least, have "shewn this place the respect you owe to my person:" And immediately led them out of the temple; but returned thither again himself, telling them, he must ask pardon of his gods for having suffered them to proceed so far. And now, it seems, CORTEZ and his Priests were themselves convinced, they had taken a wrong step in pressing the Emperor so strenuously to change his religion, which only tended to provoke him, and fix him in his errors; and contented themselves with erecting a chapel, by his leave, for the exercise of the Christian religion publicly; in which they placed the image of our Lady and a Cross, and celebrated mass every day. They add, that MONTEZUMA and his Court were frequently present at divine service, and admired the humanity of the Christian sacrifice; though they could not be brought to abolish their own.

Remarks upon it. Give me leave just to remark, in this place, that the Mexicans did not eat the flesh of those that were sacrificed, or ever fed on human flesh; nor were human sacrifices frequent in Mexico; though, upon some festivals, and extraordinary occasions, it be admitted, men were sometimes sacrificed. The design of the Spaniards, in representing these people to be so very barbarous, was evidently to justify their own cruel butcheries on these unfortunate Indians, as will be shewn under the head of religion. And, indeed, with what face could the Spaniards declaim against the worship of images, while they worshipped images themselves? Or how could they pretend such a detestation of human sacrifices, when they sacrificed so many thousands to their ambition and avarice? And, as some have observed, might not the Indians have justly retorted upon them, that if they sacrificed prisoners taken in war, the Spaniards every day almost sacrificed and eat their very God, as they themselves acknowledged. To return to the history.

V O L. III.

CHAP. VII. Still there continued a great intimacy between MONTEZUMA and CORTEZ. If we may credit the Spanish historians, CORTEZ frequently resorted to the Mexican Court, and MONTEZUMA as often visited the Spanish quarters, making presents to the General, and to his Officers and Soldiers, and exhibiting shews and entertainments for their diversion. The Mexicans still treated the Spaniards with a respect that savour'd of submission, according to my author. MONTEZUMA spoke of their King with the same veneration he mentioned his own gods; his Nobility paid a profound respect to the Spanish Officers, and the people bow'd the knee to the meanest Spanish Soldier: But an accident happened, which very much lessened the esteem, or rather dread, the Mexicans at first entertained of these foreigners.

One of that Emperor's Generals, levying the annual tax imposed on the vassal Princes in that part of the country which lay in the neighbourhood of the Spanish garrison of Vera Cruz; these Caciques, who had thrown off their subjection to the Mexican empire, and entered into an alliance with the Spaniards, applied themselves to JOHN DE ESCALANTE, Governor of Vera Cruz, for protection; who thereupon march'd out of that fortress, with forty Spaniards and three or four thousand confederate Indians, to their assistance; and, tho' he had the good fortune to defeat the Mexican General, yet one of the Spaniards was killed, and his head sent up to Court; and the Governor, with five or six more of his garrison, were mortally wounded. Which news being brought to CORTEZ, gave him great uneasiness; and the more, because he was inform'd, by the confederate Indians, that the Mexicans were consulting how to drive him out of their territories; which they did not apprehend impracticable since the engagement near Vera Cruz.

The Spanish General therefore finding it impossible to maintain his authority among the Indians any longer, without entring on some action that might give them fresh cause of astonishment, says my author, and recover that reputation they seemed to have lost by that unfortunate accident, resolv'd to seize the person of MONTEZUMA, and bring him prisoner to his quarters: And, accordingly, at an hour when the Spaniards were used to pay their court to that Prince, CORTEZ, having given orders to his men to arm themselves without noise, and possess themselves of all the avenues leading to the palace, in small parties, that no notice might be taken of it; went to the Mexican Court, attended by several of his Officers and thirty Soldiers, whose resolution he could rely on; and, being admitted to the Emperor's presence, he complained of the violation of the peace between them, by one of the Mexican Generals falling upon his confederates, and afterwards killing a Spaniard he had taken, in cold blood. To which MONTEZUMA answer'd, that if any thing of that nature had been done, it was without his orders; and he was ready to make satisfaction for any injury that might have been done undesignedly, either to the Spaniards, or their allies. But CORTEZ gave him to understand, that nothing would satisfy them but his surrendering himself into their hands, and residing with them in the palace assign'd to the Spaniards for their quarters.

MONTEZUMA, at first, seem'd astonish'd at the insolent demand, and remained for some time silent: But, recovering from his surprize, he said, that Princes of his rank were not accustomed to yield themselves up to a prison; nor would his subjects permit this, if he should forget his dignity to far

of Montezuma.

Farther remarks.

far. CORTEZ answer'd, If he would go along with them voluntarily, they were not afraid of any opposition his subjects should make; and they would treat him with all the regard due to his dignity: He might continue to exercise his authority as formerly, and no restraint should be put upon his actions; only, for their security, he insisted, that the Emperor should reside amongst them. MONTEZUMA still refusing to put himself into their hands, was given to understand, that if he would not, they would carry him off by force, or murder him if they were oppos'd: Whereupon he submitted to do, what he found it was impossible to avoid; and gave orders to his Officers to prepare for his removal to the Spanish quarters, whither he went in the usual state, and in all appearance voluntarily, unless that he was attended by a company of Spaniards, that surrounded his chair, under pretence of doing him the greater honour: The Spaniards also oblig'd him to take with him some of his children, with the principal Lords and great Officers of state, whom they detain'd as hostages for their farther security; all which could not be effected without a suspicion, that they were in reality all captives to the Spaniards, and had very near caus'd a general insurrection to obtain their liberty. But CORTEZ oblig'd MONTEZUMA to declare, that his removal was voluntary, and to give his orders, that the people should disperse, which was submitted to, possibly, lest the Spaniards should murder their Emperor, and all the great men they had in their power: And, 'tis said, that Prince was allow'd to live in the same state he had done in his own palace for some time, attended by his officers and servants; and that he issued his orders, as if he had been under no manner of restraint; only the Spaniards used that precaution, as not to admit too many of the Mexicans to enter their quarters at a time, and kept a very strict guard at all the avenues.

And here I cannot but observe a little inconsistency in the Spanish historians, particularly in ANTONIO DE SOLIS, who tells us, "That MONTEZUMA, neither in his expressions, or his behaviour, discovered the least weakness under his confinement, or ceased to maintain the grandeur of an Emperor." And within twenty lines he says, "The want of spirit in MONTEZUMA, was not less remarkable, than the boldness of the Spaniards was surprising;" adding, that the hand of God was upon the hearts of the Mexicans, as well as their Emperor; or so haughty a Prince, and a warlike nation, excessively zealous in supporting the dignity of their Sovereign, would never have submitted so tamely, and without attempting his rescue.

The Spaniards relate also, that MONTEZUMA's table, during his confinement, was serv'd with greater plenty than usual, and that what was left, was distributed among the Spanish soldiers; that some of the best dishes were sent to the General and his Captains, who were now perfectly known to MONTEZUMA, and that he would converse freely and pleasantly with them; but in such a manner, as was not inconsistent with majesty: That he spent most of his time, when he was disengag'd from affairs of state, among the Spaniards; and used to say, he was not himself without them; and the respect they paid him in return, gave him great satisfaction. That he would sometimes play with CORTEZ at a Mexican game, call'd Toloque, wherein they bowl'd at certain golden pins, and that he used to distribute his winnings amongst the Spaniards, and that he preserv'd the sentiments of a Prince,

even at play. But sometimes they tell us, that CORTEZ entertained this Prince with more serious subjects; particularly, that his zeal would not permit him to lose so fair an opportunity of making the Emperor his convert: But that all the arguments, that he, and Father BARTHOLOMEW DE OLMEDO, the Priest, could use, had no effect upon him; insomuch, that they were in doubt, whether he had not still some intercourse with the Devil; tho' it was the general opinion, that after the appearance of the Cross of CHRIST in Mexico, all their infernal invocations lost their force, and the oracles became silent.

Nor did the Spaniards only tease this unhappy Prince, on the point of religion; but they compelled him to issue out his orders for apprehending his General QUALPOPOCA, who had engaged the Spaniards near Vera Cruz; and this Gentleman being brought prisoner to Court, the Spanish Officers at a Court-martial condemn'd him to be burnt before the gates of the palace, with the rest of the Captains, that were concern'd in that enterprize; and lest this should occasion an insurrection, and an attempt be made to rescue MONTEZUMA, CORTEZ caused him to be laid in irons that morning the execution was to be perform'd.

But such was MONTEZUMA's astonishment, when he saw himself treated in this ignominious manner, says DE SOLIS, that he wanted force to resist or complain; and his servants lamenting their Emperor's hard fate, threw themselves at his feet, endeavouring to ease him of the weight of his fetters: And tho', when he recovered from his first amazement, he began to express some impatience; yet correcting himself, he acquiesced in his misfortunes; acknowledging, they proceeded from the will of his gods, and waited the event, not without apprehensions that there was a design against his life. But CORTEZ having seen the execution perform'd, by which he found, he had struck such a terror into the Mexicans, that little was to be fear'd from them, he returned to MONTEZUMA's apartment, and order'd his fetters to be taken off; and, as some writers relate, fell on his knees, and took them off with his own hands, for which favour the Emperor embrac'd and thank'd him. But, what is still more difficult to be believ'd, they assure us, that CORTEZ gave the Emperor leave to return to his palace, and that he refused the offer, out of regard to the Spaniards; telling them, he knew very well, that as soon as he was out of their power, his subjects would press him to take up arms against them, to revenge the wrongs he had suffer'd: Nay, the Spanish historians positively affirm, that notwithstanding all the injuries and indignities they had offer'd to MONTEZUMA, he expressed a more than ordinary friendship and regard for them, preferring their interest to that of his own subjects; which I must take the liberty to suspend my belief of, 'till they produce better proofs of it, and cease to speak less inconsistently than they do in their accounts of this enterprize.

And now DE SOLIS relates, that CORTEZ gave MONTEZUMA leave to go whither he pleas'd; which he seems to contradict within a very few lines afterwards: For, he tells us, when that Prince only desired to perform his devotions in one of his temples, it was granted upon certain conditions; namely, that he should give his royal word to return to the Spanish quarters again, and from that day abolish human sacrifices: And, I make no doubt, but they insisted on a third, viz. That he should take a guard of Spaniards with him; for they acknowledge

VII.CHAP.
VII.

knowledge, that a body of Spaniards actually attended him to the temple, which they could do with no other view than securing their prisoner; tho' DE SOLIS says, indeed, it was at the request of MONTEZUMA they went with him: Nor did he ever go abroad without a Spanish guard, or without asking leave of CORTÉZ, or ever lay one night out of their quarters, by their own confession; which they would have us ascribe purely to choice, and his affection to the Spaniards, who had put such indignities upon him. They add, that CORTÉZ was now become his Prime Minister: That all posts of honour or profit were disposed of by him and his principal Officers, who were courted by the Mexican Nobility, when they saw that no places or preferments could be had but by their interest; which might be true possibly: But, surely, it is much more probable, that MONTEZUMA was influenced more by his fears, than his affection for the Spaniards. And we may observe, from hence, that, with all these advantages, CORTÉZ and his Spaniards might have establish'd their power upon such a foundation, as could not easily have been overthrown, without such a deluge of blood as they spilt afterwards, if CORTÉZ had been as able a Politician as he was a Soldier; or, if his benevolence and humanity had exceeded his cruelty and avarice.

He seems to have left scarce any means untried for his security and establishment, but the principal; namely, the gaining the affections of the Indians, and the winning them over to his party, as well as to the Christian religion, by acts of generosity and beneficence. He was so careful of himself, that he caused some brigantines to be built on the Lake of Mexico; whereby he entirely commanded the lake and the causeys leading to the city: And, at the same time, he increased his reputation with the Mexicans, by the artful management of those vessels. The Indians were at this time ignorant of the use of sails and rudders; and, when they saw the Spaniards sailing not only before the wind, but upon a wind, and sometimes almost directly against it; and that the vessels were steered this way and that way with only the turn of a hand, they began to return to their first opinion, that the Spaniards had in reality the command of the elements: And, indeed, such was the opinion the Indians now entertained of the skill and power of the Spaniards, that it was purely their own fault the Mexicans ever attempted to regain their freedom.

The most fatal of all the errors CORTÉZ committed, were his repeated attempts, from the very time he landed, to destroy the temples and images of the Mexicans, and force them to receive a new religion before they knew any thing of it, and before he was in a condition to force their compliance. Indeed, religion ought never to be forced upon a people, how potent soever their Governors may be: But to attempt the subversion of religion, and the introducing another by force, in the infancy of a revolution, was surely the most impolitic thing in the world. And, if the attempt was not to be ascribed to weakness in CORTÉZ and his Officers, it must be imputed to a much worse cause; namely, to their avarice and cruelty, who, looking upon themselves to be armed with the Pope's authority, as well as the King of Spain's, imagined, that all the wealth of that rich country would be forfeited to them, if the Mexicans refused an immediate submission to their demand of becoming Christians; and that, in such a case, it was lawful to plunder, enslave and murder them without mercy, and make all the wealth of Mexico their own. This they

looked upon as the shortest way to arrive at what they principally aimed at; namely, the acquiring unbounded treasures. This their future actions evidently demonstrate, if any credit is to be given to their own historians.

Even now, when the Emperor MONTEZUMA and his subjects appeared to be all submission, and had in a manner given the reins of government into the hands of the Spaniards, did they offer them such unnecessary provocations, in the capital city of the empire, as no people would ever have borne. They attempted at once, without demanding leave; or giving any reason for it, to demolish all the images of their gods, and convert the principal temples in Mexico into Christian churches; which occasion'd, as might reasonably be expected; a general insurrection. The Priests took up arms, and the whole city rose, says my Spanish author, in defence of their gods; and the Spaniards were at length convinced, by the opposition they met with, that it was expedient to admit their idols to remain; for the present, where they stood. However, they persisted in erecting a Christian chapel in one of the temples, and placing in it the cross, and an image of the blessed Virgin; and actually sung mass in it with great solemnity: Which the Indian Priests agreed not to oppose, provided their own idols might be permitted to remain in their temples: And thus the matter was accommodated between them, and the tumult appeased. Some of the Spanish historians describe a solemn procession also, that was made to the new-erected chapel when the Pólish images were carried into it; and give us a speech, said to be made by CORTÉZ on that occasion, before the crucifix. They tell us also of that General's working a very great miracle, a little afterwards, for the proof of the Christian doctrine: They say, that the Mexicans came to him in a tumultuous manner, complaining that their gods refused to send them rain, because he had introduced strange deities into their temples: And that, to appease the people, he told them the God of the Christians would send them plenty of rain in a very few hours; which prediction heaven was pleased to fulfil, to the great admiration of MONTEZUMA and his subjects.

However, these pretended miracles were but of small service to the Spaniards, it seems; and, had they been real, the false politicks or bigotry of CORTÉZ, in endeavouring to destroy the Indian superstition, and introduce his own thus precipitately, prejudiced that people against him to such a degree, that we hear of nothing but plots and conspiracies on the one side, and cruel butcheries and oppression on the other, 'till the Spaniards established themselves by pure force, and had in a manner extirpated the natives, instead of converting them to the Christian faith.

Their historians relate, that CACUMAZIN, A plot against the Spaniards.
King or Cacique of Tezcucó, and nephew to MONTEZUMA, assembling many more of the vassal Princes of that empire, represented to them the tyranny of the Spaniards, who in a manner govern'd the state in the name of their unfortunate Prince, whom they had made their prisoner, and even loaded with irons, like a common malefactor: Nor did he forget to reflect on the outrages that had been done to their religion, by deriding and vilifying their gods, and attempting to demolish their temples and images; concluding, that it was the greatest reproach their country could suffer, namely to submit to these outrages from a handful of foreigners, who appeared, now they were better acquainted with them,

CHAP.
VII.

them, to be but mortals of the same species, and who had no other advantage over them than what their fire-arms and enchanting magick gave them; inciting them to behave themselves like men, and deliver their country from this shameful and intolerable slavery: With whom most of the Caciques concurr'd; but some false brethren amongst them, 'tis said, betray'd the conspiracy to CORTEZ: Whereupon CACUMAZIN was made prisoner, and his brother, a creature of the Spaniards, was made Cacique of Tezcuco in his stead; and the rest of the conspirators were dispersed, tho' not entirely disheartened; for this plot, to free themselves from the tyranny of the Spaniards, became in a short time more general: And MONTEZUMA, receiving advice, that his subjects were unanimous in their resolution of restoring him to his liberty and empire, and to dismiss their haughty guests the Spaniards, summoned the vassal Princes to Mexico, who came thither attended with formidable bodies of their troops; and, in this situation, he had the courage to let CORTEZ know, That, having acknowledged his Master the King of Spain the heir of his empire, and that he held his dominions of him, as descended from their great ancestor QUEZALCOAL; and having prepared a rich present for that King, to testify his submission and dependance on him; he expected CORTEZ should withdraw from Mexico, and return to the Prince that sent him, to give him an account of the success of his embassy: And at the same time delivered to CORTEZ an immense treasure, which he and his subjects had contributed, in hopes that the avarice of the Spaniards would have been entirely satisfy'd with it, and that they should enjoy the possession of their country, and what they had left, in quiet, freed from any farther outrages or insults. And the Spaniards themselves introduce MONTEZUMA making the following short speech on this occasion, viz.

Montezuma requires Cortez to return to Spain.

"That it was reasonable, CORTEZ should now begin to think of his departure, since he was thus fully dispatch'd: And that the motives or pretences for his stay being ceased, and he having received, for the service of the King his Master, so favourable an answer to his embassy, the vassal Princes would not fail to surmise, that he had still farther views, if they saw him persist in remaining longer at that Court; nor would it be in his power to support and protect the Spaniards against them."

And CORTEZ, it seems, was under such apprehensions, that he should suddenly be attack'd by the forces of the whole empire, if he refused to comply with this reasonable demand, that he did not think fit to object any thing against it; only desired time to build a fleet to transport his troops to Spain, the fleet which brought him thither being destroy'd: To which the Mexicans agreed, and immediately assign'd him timber, workmen, and labourers, to rebuild his ships; which furnish'd him with a pretence to stay some time longer; and he gave directions to the workmen not to make too much haste in equipping the fleet, expecting that a reinforcement of troops might in a short time arrive from Spain, and enable him to maintain his ground against all the powers of Mexico.

Narvaez sent from Cuba, with a body of Spaniards, to reduce Cortez.

But, while CORTEZ lived in expectation of a friendly squadron coming to his assistance, advice was brought, that eleven tall ships, and seven smaller vessels, with eight hundred Spanish foot, fourscore horse, and twelve pieces of artillery on board, were arrived on the Mexican Coast, near Vera Cruz; and that they were sent by DIEGO

VELASQUEZ, Governor of Cuba, to prosecute the conquest of Mexico, and to make CORTEZ and all his men prisoners, that refused to submit to his authority, and obey PAMPHILIO DE NARVAEZ, who had the command of the fleet and army employed in this expedition. To understand the reason whereof, it will be necessary to look back a little, and call to mind, that DIEGO DE VELASQUEZ, Governor of Cuba, first formed the design of reducing Mexico, and provided a fleet and army, giving the command thereof to HERNANDO CORTEZ, in order to attempt that conquest: But being inform'd, that CORTEZ had a design to deprive him of the glory and advantage of the enterprize, and set up for an independency, DIEGO VELASQUEZ revoked his commission, and, before CORTEZ left the island of Cuba, required him to relinquish that command, and return. But CORTEZ, and his friends, having embark'd all their fortunes in the design, in hopes of mighty advantages that would accrue to them in the pursuance of it, and both soldiers and seamen having a high opinion of the valour and conduct of CORTEZ, they agreed to set sail, and proceed in the enterprize; notwithstanding the express command of the Governor of Cuba to the contrary. Whereupon the Governor sent complaints to Spain, that CORTEZ had mutiny'd, and run away with the ships and forces design'd for the reduction of Mexico; and desired he might have his commission of Lieutenant-General renew'd and confirm'd by that Court; and that he might be constituted Lieutenant-General of all the countries conquer'd, or to be conquer'd, on the continent of Mexico (for his former commission was given him by Don DIEGO COLUMBUS, the successor of the celebrated COLOMBUS that discovered this new world). And so good was the interest of DIEGO VELASQUEZ in the Court of Spain, that he received the commission he desired: And, being inform'd of the success of the Spaniards under CORTEZ, and supported by the commission he had obtained, propos'd, by this second embarkation, to reap all the glory and advantages he at first propos'd to himself by that conquest.

On the other hand, HERNANDO CORTEZ, meeting with that incredible success, that has been related, and being furnish'd with a large share of treasure, by the presents made him by MONTEZUMA and the vassal Princes, sent the whole, by two or three of his Officers, in a ship to the King of Spain, who was just embarking for Germany as they arrived, in order to take upon him the imperial dignity, as he did soon afterwards, by the name of CHARLES the Vth. The new Emperor was mightily pleas'd with the rich present sent him by CORTEZ, especially as he look'd upon it to be an earnest of much greater treasures; and, tho' he was not at leisure to attend the business of the Indies before he embarked, left orders with his Council to take the supporting of CORTEZ into their consideration. But such, it seems, was the interest of DIEGO VELASQUEZ at the Court of Spain, who had represented CORTEZ as a traitor and deserter, that nothing was done towards the assisting of him 'till two years afterwards; and the Governor of Cuba was left to pursue his revenge, which had very near lost the Spaniards all they had possess'd themselves of on the continent of Mexico, as I shall, in the next place, proceed to relate.

The royal chamber of Audience at Hispaniola saw the mischievous consequences of a dissention among themselves, at so critical a juncture; and represented to DIEGO VELASQUEZ, when they heard he

CHAP.
VII.

CHAP. VII. he was making preparations to fall upon CORTÉZ, that this would probably be of pernicious consequence, and deprive them of those valuable acquisitions they had already made, and perhaps end in the ruin of them all: And, when they found DIEGO VELASQUEZ was not to be prevailed on to lay aside the expedition, they sent some Ecclesiasticks and Officers with NARVAEZ, who was constituted General of the forces on board the fleet, to mediate an accommodation between him and CORTÉZ; and, if that could not be effected, to dispose the Spaniards of both armies to a reconciliation, and to unite in the cause of their country and their common Sovereign.

NARVAEZ and the Spaniards from Cuba arrive at Vera Cruz. PAMPHILIO DE NARVAEZ arriving with his fleet near Vera Cruz, summoned GONZALO DE SANDOVAL, who had been appointed Governor of that fortress by CORTÉZ, to surrender: But GONZALO was so far from complying with the summons, that he sent those that came on that errand prisoners to CORTÉZ at Mexico. However, NARVAEZ landed his forces, and march'd directly to Zempoala; of which CORTÉZ receiving advice, at first seem'd thunder-struck; but, recovering from his surprize, resolv'd to make NARVAEZ offers of peace, and propose the uniting their forces in the service of their Prince. At the same time he represented to MONTEZUMA, who was already acquainted with the arrival of NARVAEZ, that the Spaniards under the command of that General were subjects to the King his Master, and were come upon a second embassy to induce him to comply with the overtures he had already made; but that he should dispose them to return to Spain with him, since he had already obtained the end of his embassy.

Cortez provides to oppose them. To his own men CORTÉZ suggested, that he did not doubt to bring the Spaniards NARVAEZ had brought with him over to his party; and that they would, in the end, probably prove such a reinforcement, as would enable him to finish his conquest of that empire: And immediately applied himself to his confederate Indians, to provide him with such forces as might be necessary, in case he should not be able to accommodate matters with NARVAEZ. In the mean time, the Spanish prisoners arriving, which GONZALO DE SANDOVAL had sent up from Vera Cruz, among whom were an Ecclesiastick and a Notary, who had been sent by NARVAEZ to summon that town; CORTÉZ received them with great civility, and assured them, the Governor of Vera Cruz had exceeded his orders in making them prisoners: And, having shewn them the great power he exercised in the Court of Mexico, he made them very rich presents; telling them, that he relied on their good offices in disposing NARVAEZ to accept the peace he had offer'd him: After which, he dismiss'd them, and order'd them to be conducted to that General with all imaginable respect. After these, he sent Father BARTHOLOMEW DE OLMEDO, an Ecclesiastick of great reputation, to propose a treaty with NARVAEZ; and, if that did not succeed, to sound the disposition of his officers and soldiers, and incline them to pacific measures. He furnish'd the Father also with jewels and rich presents to the principal officers, in order to render his negotiation the more successful.

Father BARTHOLOMEW, on his arrival in the camp of NARVAEZ, gave him to understand, of what advantage it would be to their Sovereign and their Country to unite their arms; acquainting him with the state of the conquest, and the numerous

VOL. III. NUM. CXVI.

CHAP. VII. alliances CORTÉZ had made with the Indian Princes: But insinuated, that they should, however, have occasion for their united strength, to bring the Mexicans under their subjection, who were naturally brave, and did not want military skill; and, should they find there was a misunderstanding among the Spaniards, they might probably make their advantages of it, and destroy them both, in order to free themselves from a foreign yoke.

To which NARVAEZ, 'tis said, haughtily reply'd, that DIEGO DE VELASQUEZ had order'd him to enter into no treaty with the rebels, as he termed CORTÉZ and his party; but that his first and principal business was to compel them to return to their duty; telling him, that he should immediately proclaim them all traitors, who adhered to CORTÉZ, having brought sufficient forces with him to compel their obedience, and finish the conquest of that country.

The Father finding no good to be done upon NARVAEZ, apply'd himself privately to several of the officers and soldiers, and especially to those gentlemen, who came on purpose from Hispaniola, to mediate a peace, as most conducive to their Prince's interest; and distributed the presents, he had brought, with great judgment. The prisoners also, whom CORTÉZ had released, were very lavish in his praises: They described the grandeur and magnificence of the Mexican Court; the sway that CORTÉZ bore in it, and the humanity and courtesy with which he treated all mankind; which had such an effect on the soldiery, that most of them appeared ready to join CORTÉZ, who had already obtain'd so high a character for his valour and conduct, and given such sensible proofs of his affection for them.

In the mean time it appears, that MONTEZUMA, A treaty between Montezuma and Narvaez. was carrying on a private negotiation with NARVAEZ the Spanish General, who had given him to understand, that he came with a commission from the King of Spain, to call CORTÉZ to an account for all the violence and extortion he had committed; that he and his adherents were fugitives and rebels; and that he would immediately advance and restore his Mexican Majesty to his liberty, and the peaceable possession of his dominions, which, it was evident, CORTÉZ was endeavouring to usurp. Whereupon MONTEZUMA made NARVAEZ some very considerable presents, and shew'd a disposition to enter into an alliance with him for their common defence.

In the mean time, CORTÉZ was not idle; but Cortez endeavours to bring over the Spaniards sent against him to his party. as he was much more apprehensive of the mischief he might suffer from the forces sent against him by the Governor of Cuba, than of the power of the Mexicans, he apply'd himself chiefly to gain the Officers of the troops lately arrived, by presents and caresses, which was his principal view, in sending Father OLMEDO with offers of peace to NARVAEZ. That Father therefore was no sooner return'd to him, with an account of the success of his negotiations; but he resolv'd to take the field against his rival, before he had an opportunity of concerting measures with MONTEZUMA and the Mexican Princes, and drawing them over to his party. Having assign'd fourscore Spaniards, therefore, under the command of PEDRO DE ALVARADO, to keep garrison in Mexico, and secure MONTEZUMA from making his escape; the rest were order'd to be ready to march at an hour's warning: But going to take his leave of his royal prisoner, before he set out, DE SOLIS relates, that that Prince spoke to him in this manner. He said, he had for some time observ'd the General to be thoughtful, for which no doubt

CHAP.
VII.

doubt he had reason; for he had received repeated advice, that NARVAEZ, who commanded the Spaniards lately arriv'd, was come with a design to supplant him; and tho' his Mexican Majesty did not much wonder, that there should be private piques and quarrels between the subjects of the same Prince; yet it was strange, they should be suffer'd to command two different armies, and clash when the interest of their Prince, and the publick service required a union in their councils and actions: He concluded therefore, that one of them must be a rebel to his King.

The answer of Cortez.

To which CORTEZ answer'd, as 'tis said, that it was true, they were both the subjects of the same Prince, and they both intended the service of their King and Country; but were not indeed agreed in the methods of doing it; he had resolv'd therefore to march to Zempoala with the best part of his forces, in order to cultivate a good understanding with NARVAEZ and his troops; and did not doubt, either to dispose those Spaniards to return to their ships, or to treat the subjects of the Mexican empire, as a people, whom the King of Spain had taken under his protection.

MONTESUMA commended his design; but observed, that as NARVAEZ had given out threatening speeches, and seem'd to intend his ruin, and commanded a body of forces of twice his strength; it would be prudent for CORTEZ to reinforce his little army with thirty or forty thousand Mexicans, which he would order to assemble forthwith for this service, and direct his Generals to obey the commands of CORTEZ; But he wisely refused the insidious offer, placing but slender confidence in the Mexicans, says the historian. He was cautious of entertaining auxiliaries, that might command him, knowing how he should be embarrassed in the day of battle with a known enemy in front, and pretended friends in flank and rear.

CORTEZ, having given his orders therefore to ALVARADO, to have a strict eye over MONTESUMA, and not to suffer too great numbers of the Mexicans to resort to him, or any long conferences between them; and extorted a promise from the royal prisoner, that he would not attempt an escape in his absence; telling him, he should soon return to Mexico, in much better circumstances; began his march towards Zempoala; and taking Tlascala in his way, he was received with the highest honours by that republick: However, they gave him to understand, that they could not assist him with their troops against the new-arriv'd Spaniards, whose horses and artillery they were not able to resist. Whereupon he proceeded in his march for Zempoala, taking an advantageous post in the neighbourhood of that city, where he could either treat, or defend himself against NARVAEZ, if he should be attack'd. And first, he made fresh overtures to that General, for accommodating the differences between them, and uniting their forces in the service of their country; and even offer'd, 'tis said, to relinquish the advantages of that conquest, and go upon some other enterprize with his adherents, rather than the King's service should suffer. And tho' NARVAEZ refused to give him any other terms than those of surrendering at discretion; yet the concessions CORTEZ made, had such an effect on the Officers and Soldiers, which NARVAEZ commanded, that CORTEZ was sensible, he should meet with but a faint resistance from them. And understanding by some deserters, that NARVAEZ trusted so much to the superiority of his forces, that he kept but a very negligent guard, he resolv'd to attempt to surprize his enemy in the night-time.

Cortez makes overtures of peace to Narvaez.

Accordingly, in a very dark tempestuous night, when NARVAEZ least expected such a visit, CORTEZ fell upon his quarters, and made him and his principal Officers prisoners, before they were well awake: Whereupon the rest of his troops flung down their arms, and most of them enter'd into the service of CORTEZ. And here it must be admitted, that CORTEZ, by his artful treaties and negotiations in the first place, and by his courage and conduct in defeating an enemy so much superior to him in numbers, and especially in horse and artillery, shew'd himself to be a good Soldier; tho' he can never be allow'd to be a very great Statesman, that, with all his success and advantages, knew no other way of establishing himself, but by the extirpation of the defenceless Indians.

CHAP.
VII.

Cortez surprizes Narvaez, and makes him prisoner. The troops of Narvaez serve under Cortez.

While CORTEZ was engaged in this expedition against NARVAEZ, PEDRO DE ALVARADO, who was left to command the Spaniards in Mexico, and secure the person of MONTESUMA, behaved himself with that insolence and cruelty, and discover'd such an insatiable avaritious temper, as united the whole city against him: The people became desperate, when they found there was no end of his extortions, and that they were daily plunder'd and murder'd for their wealth; their religion derided, and their very gods defaced and demolish'd. But the principal occasion of this insurrection at Mexico was ALVARADO's falling upon the Mexican Nobility at a religious festival, when they were most of them assembled on that occasion, and engaged with the common people in that solemn dance, call'd Mitotes; wherein all distinction is laid aside, and the whole city, Noblemen, and Plebeians, great and small, join annually in celebrating the day. The Bishop of Chiapa relates, that ALVARADO, observing they had put on their jewels and richest ornaments on this occasion, assembled his Soldiers, and fell upon them, putting above two thousand of the Mexican nobility to the sword, and plunder'd whatever was valuable about them. Nor are the facts (either the slaughter or the robbery) denied by any of the Spanish historians; only they endeavour to justify the action in their usual way, that is, by pretending there was a plot of the Mexicans to destroy the Spaniards on that day. Some pretend, that they were incited by NARVAEZ to fall upon the Spaniards of CORTEZ's party; and that MONTESUMA himself encourag'd the insurrection, in the absence of that General, to obtain his liberty: While others affirm, that MONTESUMA had no share in the conspiracy; but that his subjects, encouraged by the declarations of NARVAEZ against CORTEZ, and the absence of most of the Spaniards, agreed to fall upon their quarters, give their Emperor his liberty, and free themselves from the tyranny of the Spanish garrison. Others say, that the Indian Priests were at the bottom of the conspiracy, seeing their religion in danger, and another about to be introduced; and all agree, they were very active in animating their people to defend themselves against the attacks of the Spaniards. It is also agreed, that the day before this solemn festival, some of the Mexican Nobility and Priests attended ALVARADO, apprized him of the assembling of the multitude the next day, to celebrate the festival, that he might not be alarm'd on that occasion; and actually obtained his permission before they would resolve on the solemnization of it: But then some of them pretend, that arms were discover'd concealed in the temples afterwards; and that the Mexicans only took the opportunity of this festival to put the plot against the Spaniards in execution.

The insolence of the Spaniards left in Mexico.

Alvarado massacres and plunders the Mexican Nobility.

However,

CHAP. VII. However, those that speak most favourably of this action, acknowledge that ALVARADO fell upon the Mexicans while they were disarmed; and that they did not fall upon the Spaniards: That all the jewels and rich ornaments of the murder'd Nobility were carried off by the Spaniards; and that ALVARADO never made any excuse or apology for the outrage. Whereupon the Mexicans, expecting they should all be massacred if CORTEZ returned with a reinforcement of troops, assembled from all parts, and attack'd the Spanish quarters on every side, chusing rather to die with their arms in their hands, than to be murder'd in cold blood. And, altho' they were beaten off by the artillery and fire-arms of the besieged; yet, as they had cut off all their provisions, the Mexicans would probably have starved ALVARADO, if CORTEZ had not returned suddenly to his relief: He sent therefore express after express to CORTEZ, to hasten his march; letting him know, that he should be obliged to surrender, if he was not speedily supplied and reinforced.

The Mexicans unite their forces against the Spaniards.

Cortez returns to Mexico.

His usage of Montezuma.

Cortez treats the Mexicans as a conquered people.

Revises the hostilities with them.

CORTEZ had just finish'd the defeat of NARVAEZ, when he received advice of the distress his people were in at Mexico; and, having incorporated all the troops NARVAEZ brought over with his own, began his march towards Mexico, with a thousand Spanish foot, an hundred horse, and several thousand confederate Indians; leaving at the same time garrisons in the towns of Zempoala and Vera Cruz. Nor did the Mexicans offer to interrupt his march: They retired, upon his approach, from the Spanish quarters, and left that part of the town destitute of inhabitants.

MONTENZUMA, 'tis said, met the General at his return, and congratulated his success: But he, having been informed of that Emperor's negotiations with NARVAEZ and his own subjects, in his absence, in order to procure his liberty, turned from MONTENZUMA with all the contempt imaginable; not so much as vouchsafing to speak to him. BERNAL DIAZ, who accompanied CORTEZ in this expedition, says, that he now looked upon himself to be powerful enough to subdue the Mexican empire, without courting MONTENZUMA or his subjects; and therefore carried every thing with a high hand, or to that effect: Which, other historians observe, was a very great error; for, if the General had, on his returning in triumph with such an addition of forces, entered into a treaty with that Emperor and his Nobility, they would have yielded to almost any terms; and he might have gained the dominion of that empire, for the King of Spain his master, without any bloodshed. But he was too much elated with his success, to think of pacific measures. On the contrary, he resolved to give them all manner of provocations, and even to render them desperate, that he might have a colour to destroy them, and seize all their possessions, whether lands or treasure. He had found a garrison of fourscore Spaniards able to repel the whole force of Mexico; and he did not doubt, now he saw himself at the head of eleven hundred Spanish horse and foot, with a multitude of confederate Indians, he should be able, by force, to reduce the Mexicans, and make them slaves: But he was near paying very dear for his presumption; for, sending out a detachment of four hundred Spaniards and Tlascalans, in search of the enemy, who were retired to the farthest part of the city, they were surrounded, and in danger of having their retreat cut off; and he himself, with the rest of his troops, escaped very narrowly being starved, or cut in pieces, as will appear in the ensuing relation: For the Mexicans, rendered brave

by their despair, were not afraid to attack CORTEZ in his quarters, tho' defended by a numerous garrison and a train of artillery: And, when at any time he made a sally, he found intrenchments in the streets, and the bridges broken down, which render'd his cavalry in a manner useless; and, tho' he usually came off victorious, he found he had committed a very great error, in shutting himself up in Mexico, from whence it was almost impossible to make his retreat, and where he found it impracticable to fetch in provisions, the enemy being masters of all the causeys that led to the town, and of all the boats upon the lake: So that, if his people were not destroyed by the continual attacks of the enemy, they must certainly in time be reduced by famine.

CHAP. VII. They attack his quarters.

In this distress CORTEZ thought fit to endeavour a reconciliation with MONTENZUMA, and make use of the authority he still retained among his subjects to induce them to lay down their arms, and permit the Spaniards to march out of Mexico; which, it was presumed, they would readily come into, that they might get rid of a people so much dreaded, as well as hated, by them. Accordingly, a party being proposed and agreed to, MONTENZUMA appeared on the battlements of the palace; and, some of the Mexican Nobility advancing to hear what overtures he would make them, the Spaniards tell us, their Emperor made a speech to his subjects; wherein he gently reprimanded them for taking up arms without his leave, tho' it was with an intention to obtain the liberty of their Prince; declaring, that he was in reality under no manner of restraint, but remained with the Spaniards upon choice: That he thought himself obliged to shew the Spaniards this favour, on account of the respect they had always paid him, and out of duty to the Prince that sent them: That their embassy being dispatch'd, he was about to dismiss these foreigners from his Court; and desired his subjects would lay down their arms, and not interrupt their march, and he should readily pardon their having taken up arms, or to that effect.

He proposes to treat with them.

Whether this speech is genuine or not, it is evident, the Mexicans had little regard to it: Whatever their Emperor's words were, they knew they were put into his mouth by the Spaniards, whose prisoner he was, and tended only to procure them a safe retreat; and they were sensible, if they lost the advantage they had, they must never expect such another opportunity of getting rid of these unwelcome guests. They had them now coop'd up in this fortress, where no relief could be brought them, and from whence it was scarce possible for them to retreat, if the Mexicans broke down the bridges and causeys upon the lake, and made such ditches and trenches in the streets as the Spaniards themselves had taught them: But foresaw, that if their enemies ever got over the lake again, they might not only receive fresh reinforcements from Spain and their Indian allies, but they must engage them to great disadvantage in the open country, having nothing to oppose their horse and artillery. The Mexicans resolved therefore not to consent to a cessation of arms; but rejected the overture with disdain, as being framed only to give their mortal enemies an opportunity of escaping out of their hands, and reinforcing themselves, to the destruction of their country: And some historians say, they were so enraged at the overture, that they shot at their Emperor for making it, and mortally wounded him. Others say, he was wounded by accident. On the other hand, the Mexicans gave out, that the Spaniards murder'd him afterwards in their retreat, when they found they could not carry him

The Mexicans refuse to let Cortez retire.

The Mexicans solemnize their funeral.

him off; which last seems to me much the most probable opinion.

CORTEZ, finding the Mexicans were not to be amused with insidious proposals, from what hand soever they came; that his provisions were almost spent, and that it would be impracticable to make his retreat in the day time, resolved to attempt it in a dark night. Having divided the treasure therefore amongst his men, with which they were pretty well loaded, for it amounted to the value of a million of crowns, he issued out of his quarters at midnight, the weather being extremely tempestuous, whereby his march was for some time concealed; but he had not advanced a mile upon the causey, before he found himself attack'd on every side by the Mexicans, both by land and water, the lake being filled with their canoes, or boats; and, as they had broke down the bridges, and cut the causey through in several places, the Spaniards were in great danger of being entirely cut off. CORTEZ indeed had foreseen this, and provided a portable bridge to pass the breaches in the causey, which was of great use to him in several places: But the Indians found means to destroy this bridge before they were all passed over, and their rear-guard, consisting of two or three hundred Spaniards, and a thousand Tlascalans, was cut in pieces: They lost also their artillery, prisoners, baggage, and treasure, with six and forty horses. However, CORTEZ, with the best part of his forces, broke through the Indians, and escaped to the other side of the lake. Some impute this loss to the avarice of his soldiers, who were so loaded with gold and silver, that they could scarce make use of their arms; and possibly there may be some truth in it: But, I believe, every one, who considers his circumstances, must be of opinion, that he was very fortunate in escaping so well. Had the enemy provided a body of forces to oppose him on the farther side of the lake, he must inevitably have perished; but they did not expect his falling out so suddenly, especially in that tempestuous season; and therefore were not provided to attack them.

DE SOLIS, the historian, endeavours to give us a very particular account of this action; admires the valour and conduct of CORTEZ and his Officers, and informs us how every one distinguished himself in this memorable retreat: But, as he says just before, that it was performed in a dark tempestuous night, and in the utmost hurry and confusion, no great regard is to be given to the particulars he has given us. He proceeds to inform us, that they arrived, just as it was day-light, on the firm land; and thought themselves very happy that there was no army to oppose them there, and that they were pursued no farther, 'till they had time to form and recover themselves from their consternation.

This good fortune, it seems, was owing to the compassion the Mexicans express'd for the two sons of MONTEZUMA, and several Princes of the royal blood, whom they found slaughter'd among the Spaniards, when the day-light appear'd. The Mexicans relate, that MONTEZUMA himself was of this number; and that the Spaniards murder'd both him and his sons, when they found they could not carry them off. The Spaniards, on the other hand, say, that MONTEZUMA was killed before, by the arrows of the Mexicans; and that the Princes also were accidentally killed in this engagement, while it was dark, and they could not distinguish friends from foes. But however that was, it is agreed, the Princes were found dead, pierced through with ma-

ny wounds; and the Mexicans deferr'd the pursuit of the Spaniards, to solemnize the exequies of those two Princes, or of MONTEZUMA himself. To which piece of piety, CORTEZ, and the Spaniards who were left alive, in a great measure, ow'd their safety.

The Spaniards, having halted some time to refresh themselves, and take care of their wounded men, continued their march towards Tlascala, the country of their faithful allies and confederates: But they had not advanced many leagues before they were again overtaken and attack'd by the Mexicans, at a time when they were so fatigued and harass'd, that had not CORTEZ taken possession of a temple, surrounded by a wall of a large extent, that very fortunately lay in his way, he would have found it difficult to have repulsed the enemy. But the Mexicans, finding they could make no impression on the Spaniards, as they lay intrench'd within those walls, thought fit to sound a retreat. However, CORTEZ, apprehending he should be distress'd here for want of provisions, began his march again at midnight, with great silence, in hopes to have got the start of the enemy so far, that he should have reached the Tlascalan territories before they could have overtaken him: But, to his great surprise, being arrived on the top of a very high mountain, he discovered the whole forces of the Mexicans, consisting (according to their historians) of two hundred thousand men, drawn up in battalia, in the valley of Otumba, through which it was necessary to pass, in his way to Tlascala.

Whereupon DE SOLIS relates, CORTEZ made only this short speech to his Officers: "WE MUST EITHER DIE, OR CONQUER: THE CAUSE OF OUR GOD FIGHT FOR US. And, finding an uncommon ardour in his soldiers to engage, immediately led them on. The fight, they pretend, was for some time bloody and obstinate; and that CORTEZ, apprehending his men would be wearied out by the continual supplies of fresh forces which the Indians poured in upon him, gave a surprizing turn to the battle, by attacking the imperial standard carried by the Mexican General, who was surrounded by their Nobility: For, having routed them, killed the General, and taken the standard, the rest of the troops turned their backs, and fled; and were pursued with incredible slaughter by the Tlascalans, as well as the Spaniards, who made themselves ample amends, with the spoils of the enemy, for the treasure they lost on retiring from the city of Mexico.

They tell us, indeed, as usual, that their Protector, St. James, visibly fought for them; and that they were obliged to a miracle, at last, for their victory. But, as they relate, at the same time, that the Mexicans durst never oppose their horse or fire-arms, a General of an ordinary capacity might, one would think, have obtained a victory, armed with such advantages, over the naked defenceless Indians, without the help of miracles. And, however great and decisive this victory is represented to be, it appears, that CORTEZ continued his retreat from Mexico, and did not think himself safe 'till he arrived at the country of his friends and confederates the Tlascalans: Nor had he remained long here, before an embassy came to that republick, from the new-elected Emperor QUETLAVACA, to negotiate a peace between the two nations of Mexico and Tlascala, and propose the uniting their forces against their common enemy the Spaniard: And, though a majority of the Senate agreed to remain firm to their alliance with CORTEZ; yet there

Rather a fortunate escape than a victory.

An embassy from the Mexicans to the Tlascalans.

CHAP. VII. there were those amongst them that represented it was no less the interest of the Tlascalans than of the Mexicans, to drive these foreigners out of their country; for that they plainly intended the subversion of their religion, as well as government, and to bring them under the power of an unknown arbitrary dominion; whereas they had hitherto maintained their freedom, and were never subject to the will of any Prince whatever.

The Tlascalans refuse to quit the party of Cortez. But, it seems, the Mexicans were more dreaded by this republick than the Spaniards; and the generality of that people still looked upon the Spaniards to be sent from heaven to their assistance against that ancient enemy of their state. The Ambassadors from Mexico therefore were dismiss'd, with some marks of contempt, and preparations made to carry on the war against that empire, in confederacy with the Spaniards.

A confederacy between Mexico and Tepeaca. The Mexicans were more successful in their negotiations with the city and territory of Tepeaca, a country that lay between Tlascala and the Spanish fort of Vera Cruz. They incited this people to take up arms against the Spaniards; and the Tepeacans; having concluded an alliance with Mexico, actually cut off some small parties that CORTÉZ sent from Tlascala to Vera Cruz; insomuch, that the General found it absolutely necessary to reduce Tepeaca, in order to keep open his communication with the sea: And, accordingly, both the Spaniards and the Tlascalans made preparations to invade Tepeaca. The Mexicans, on the other hand, sent them a reinforcement of troops; and a general battle ensued; wherein CORTÉZ was so fortunate as to defeat their united forces. After which, the city

Tepeaca subdued by Cortez. and territory of Tepeaca submitted to the Conqueror, who took a severe revenge on that unhappy people, murdering great numbers of them in cold blood, and selling the rest for slaves. And a Spanish fortress was erected at Tepeaca, to which they gave the name of Segura de la Frontera, or the Security of the Frontier; which was the second colony the Spaniards fix'd in that part of the continent. CORTÉZ also reduced the city of Guacachula, and several other towns, by the assistance of his Indian confederates, of whom he had not less than one hundred thousand in his army at this time: For CORTÉZ had learnt, from his misfortunes at Mexico, to regulate his conduct. He found it necessary now to cultivate a good correspondence with the Caciques and Princes of the country, and to take their troops into his service, tho' he had formerly slighted their assistance pretty much. He saw his error also in neglecting to possess himself of such towns and passes as might keep open his communication with the sea, with his own people at Vera Cruz, and with his allies. Having taken a particular survey therefore of the country, he made himself master of all such posts as might be of advantage to him in reducing the city of Mexico, which was ever his principal view: And, as he was sensible there was no approaching that city by land, but on the causeys, which might be broken down, he order'd thirteen brigantines and sloops to be built, which would make him master of the navigation of the lake, and enable him to attack the town on every side by water, as well as land. The timbers and planks of these he caused to be prepared by the Spanish Carpenters, assisted by several thousand Indians, at Vera Cruz; and afterwards made the poor natives carry them on their shoulders over the mountains to the lake of Mexico, a journey of near 300 miles; and here the brigantines were put together, and launch'd.

VOL. III.

While these vessels were building, CORTÉZ assembled an army of two hundred thousand confederate Indians, and made himself master of Tezcuco, and several other considerable towns upon the lake; where he laid up magazines of ammunition and provision, to carry on the intended siege of the capital. He was so fortunate also, before he enter'd upon this grand enterprize, to be join'd by near three hundred Spaniards from Cuba and Jamaica, who chose to follow his fortunes, tho' they were sent out by those who were no friends to CORTÉZ, and with a view of depriving him of the advantage of this conquest; and with these he received a supply of arms and ammunition, and some recruits of horses.

Thus prepared and reinforced, CORTÉZ commanded a Captain, five and twenty Spaniards, and twelve Rowers, to go on board each of the thirteen brigantines: He also placed one of his field-pieces on board every one of the vessels; and, while his fleet sailed to take a view of the city, he possess'd himself of the three principal causeys leading thither, in order to carry on as many attacks by land. All the Europeans CORTÉZ had in his army at this time amounted to no more than nine hundred, of which about two hundred were musketeers and cross-bows, eighty-six were horse, and the rest pike-men; and his train of artillery consisted of eighteen field-pieces, fifteen whereof were brass.

The first engagement with the Mexicans happened upon the water; for, when the Spaniards approach'd the city with their brigantines, an innumerable swarm of canoes and periagoes (Indian boats) came out of the canals of the city to oppose them; whose feathers and arms, says DE SOLIS the historian, afforded a prospect both beautiful and terrible. They seem'd to cover the lake: But the brigantines, having the advantage of the wind, run in among the canoes, sunk and overset them at pleasure, having scarce any occasion to make use of their arms. Whereupon those canoes that escaped the first shock, fled, with the utmost precipitation, back to the city; whither they were followed by the brigantines, and several great shot fired into the town, to terrify the inhabitants. After which, the brigantines retired; and the next day some progress was made at the three attacks by land; but the enemy had made such breaches and intrenchments on the causeys, as render'd the approaches very difficult: And, whenever the Spaniards advanced to attack them, canoes full of armed Indians issued from the town, and charged them in the flank; which obliged CORTÉZ to order some of the brigantines to support his land forces on the several causeys, and beat off the canoes: He also caused some thousand canoes to be made, and managed by his confederates, that might follow the Mexicans into the shallows and creeks, where his brigantines could not pursue them. But, notwithstanding all these precautions, the Spanish historians relate, that the Mexicans, by their stratagems, gained several advantages of CORTÉZ. At one time, they laid an ambuscade of canoes among the reeds of the lake, and were very near carrying off some of his brigantines: At another, they broke down one of the causeys, cut off his retreat, and took him prisoner: But he was rescued out of their hands as they were carrying him away. However, there were about sixty Spaniards and a thousand Tlascalans killed or taken in this action, and many more wounded; and he was forced to leave one of his great guns behind him. This misfortune obliged the Spaniards to carry on their attacks with more caution and circumspection for the future.

future. It is related, that they were forced to be upon the defensive after this accident, 'till their wounded men were recover'd, and they had reinforced their army with some bodies of confederate Indians. And here again they have recourse to miracles; and tell us, that their wounded men were healed in a few days, only by applying oil to their wounds, and repeating some passages out of the Psalms over them, which operated by way of charm. But their writers are not agreed, whether these cures were to be ascribed to a good or an evil spirit: And, I perceive, these were only flesh-wounds that were thus healed: The weapons of the Indians seldom broke any bones; and every one knows, that ordinary flesh-wounds, if they are kept clean, will heal of themselves frequently, without the assistance of medicines or miracles.

And now, the wounded men being recover'd, and the army of the confederate Indians recruited, so that it amounted again to two hundred thousand men, CORTEZ resolv'd to give a general assault to the city; and accordingly, having order'd his forces to advance at all the three attacks, they filled up the breaches and trenches that had been made in the causeys, and drove the enemy back into the town: Each body made a lodgment within the city, and fortified it; but could not advance far that night, the enemy having cut trenches, and barricado'd all the streets.

The next day the Spaniards got more ground; and, on the third, repulsed the enemy on every side, and advanced to the great square in the middle of the town, where CORTEZ drew up his united forces; the enemy retiring to the farther part of the town, and fortifying themselves there. Whereupon CORTEZ thought fit to offer them terms; and they agreed to treat, with a view of amusing him, as their historians relate, 'till the Emperor and his Nobility made their escape, in their canoes, to the farther side of the lake: Of which CORTEZ being appriz'd, renew'd the hostilities, and GUATIMOTZIN, the Emperor, with the principal Mexican Nobility, were taken by the brigantines in the lake, as they were endeavouring to get away. Whereupon all the rest of their forces flung down their arms, and submitted to mercy; and CORTEZ took possession of that capital on the 13th of August, 1521, being the day of St. HYPOLITO, who was thereupon made the patron of Mexico.

The Spanish historians relate, that no less than one hundred thousand Mexicans fell by the sword in the defence of this city, besides great numbers that perished by famine, and other calamities: And that this conquest was attended with the submission of most of the neighbouring provinces, who consented to acknowledge themselves subjects of the King of Spain (the then Emperor CHARLES V.)

The city of Mexico being thus reduced, CORTEZ distributed the plunder among his Soldiers, reserving only a fifth, with the most remarkable curiosities, for the King; which he sent to Spain by some of his principal Officers, together with an account of his conquest, and the state of that country; desiring his Majesty would confirm the Magistrate he had appointed to govern that country, with the grants of the conquer'd lands, and Indian slaves he had made, to his Soldiers. Among the rich jewels CORTEZ sent to the Emperor, 'tis said, there was a fine Emerald of a pyramidal form, as large as the palm of a man's hand at the biggest end; a noble set of gold and silver vessels; several things cast in gold and silver, viz. beasts, birds, fishes, fruits and flowers; bracelets, rings, pen-

dants, and other ornamental pieces of plate and jewels; some of their idols, Priests vestments of cotton, furs, and feathers of various colours.

The General requested his Imperial Majesty to send over persons qualified to survey the country; that it might be improved to the best advantage; with Priests and Missionaries, for the conversion of the people; as also cattle, seeds and plants, to improve the lands: But, 'tis said, he provided particularly against the sending over Physicians or Lawyers. What could be his reason against sending Physicians, is not easy to be conceived; but he had certainly all the reason in the world to desire that neither Laws nor Lawyers should be admitted there, having determined to treat the natives as slaves, and seize both their persons and possessions, and indeed to usurp an arbitrary dominion over both Spaniards and Indians in that new world.

The provinces that depended on Mexico having submitted to the Spaniards, as has been related already, CORTEZ summon'd the more distant Indian Princes to come and acknowledge the King of Spain for their Sovereign; of whom one of the chief was the King of Mechoacan, a territory which lies to the westward of Mexico, upon the coast of the South-sea.

To this Prince CORTEZ sent MONTANO, and three other Spaniards, attended by twenty Mexican Chiefs, with a present of European utensils and toys; and, when they came within half a league of Mechoacan, they were met by fourscore Lords of the country, each of them attended by ten thousand of their vassals (according to the Spanish historians) who let the Spaniards know, that they were come from their King, to welcome them into their country: And, when they arrived in the city, a house was appointed for the reception of these Ambassadors; all manner of provisions and refreshments, that the country afforded, were sent in; and they were entertained in a very splendid manner; which agrees but ill with the following part of the story: For they tell us, the King himself came to the Spanish quarters, soon after their arrival, demanded who they were? Whence they came? And what brought them from so remote a country? Whether they had nothing to eat at home, that they prey'd upon strangers? And what the Mexicans had done, that they had destroy'd their city? Demanding if they design'd to do the like by him? If they did, he said, he should not tamely submit to it, but oppose force to force.

To which the Spaniards answer'd, They came from the Emperor of the Christians, to cultivate a friendship with him, to traffick with his people, and to instruct them in the worship of the true God. (These were ever the glorious pretences of the Spaniards, tho' their actions sufficiently shew they had baser views.)

The King of Mechoacan, HERERA relates, was at this time determined to have sacrificed the Spanish Ambassadors; but that the Mexicans, who accompanied them, assured that Prince, if he offer'd any violence to their persons, their General would infallibly take a severe revenge on him and his kingdom; giving an account of the wonders he had done in their country with his fire-arms, horses, artillery, &c. At which the King was so astonish'd, that he order'd the Spaniards to be treated with the utmost respect; and, admitting them to an audience, he told them, that he had heard of the fame of their General, and desired to become subject to the mighty Monarch from whence he came, who commanded such god-like men: That, in return to this

CHAP.

can sub-
mits.

CHAP. VII this embassy, he should send some of his principal Nobility to attend on the General; and desired they would take a present with them, which he sent as a testimony of his esteem and affection for that Great man; and, soon after, as much gold and silver was sent in as amounted to an hundred thousand dollars, besides a great quantity of cloathing, jewels and ornaments, and a present for each of the Ambassadors; with which they returned to Mexico, attended by the Mechoacan Noblemen who were sent Ambassadors to CORTEZ.

The General, to confirm these Indians in the great opinion they had conceived of him, after he had complimented and entertained the Ambassadors in a very splendid manner, ordered his troops to be drawn up, and to exercise and skirmish before them, making several discharges of his artillery and small arms, to their great amazement.

The Ambassadors returning, and making their report to their Prince of what they had been witnesses of at Mexico, he resolved to pay CORTEZ a visit in person; and, being arrived in that city, 'tis said, he made a speech to the General; wherein he acquainted him, he was come to make his submission personally, and acknowledge his subjection to the King of Spain, now his and their Sovereign; and should, from that day, be ready to receive his commands; desiring they would accept the treasure he brought with him, as a tribute and earnest of his future obedience. Whereupon CORTEZ acquainted him, how happy he would be in becoming subject to so great an Emperor, who desired nothing more than his conversion, and to have him instructed in the religion of the Christians; and, having entertained his royal guest for several days, suffer'd him to return into his own country.

Mechoacan treated as a conquer'd province. Other countries treated in the same manner. But CORTEZ soon let the King of Mechoacan know, that he had a farther view than to make him acknowledge the King of Spain for his Sovereign; for he commanded CHRISTOPHER OLID to march into Mechoacan, with an hundred Spanish foot, forty horse, and several thousand confederate Indians, who were kindly received by that Prince at first; but, when he found they proceeded to take possession of his chief towns, and treat his subjects as a conquer'd people, he began to stand upon his defence; for which he was, in the Spanish phrase, severely chastised; that is, great numbers of his people were massacred and murder'd in cold blood: And CORTEZ, having, through this country, penetrated to the South-sea, erected forts, and built ships there, for farther discoveries on that side. GONZALO DE SANDOVAL also was sent to subdue the countries near Tobasco and Tecoa-tepec, on the North-sea: And PEDRO DE ALVARADO, another Commander, was detach'd, with a body of Spaniards and confederate Indians, to take possession of the countries bordering upon the vale of Guaxaca, to the eastward of Mexico; who all submitted to the Conqueror.

While CORTEZ was thus employ'd in reducing all the country to his obedience, in the name of the Emperor CHARLES the Vth, CHRISTOPHER DE TAPIA arrived at Vera Cruz, with a commission from that Prince to command all the new conquests: But the garrison CORTEZ had left at Vera Cruz so threaten'd and terrified DE TAPIA, that he was glad to make his escape, and leave the General in possession of Mexico. Having got rid of this rival, CORTEZ march'd in person to the province of Panuco, which he obliged to submit to him. Whereupon he divided the country, and all the Indian inhabitants, among his Offi-

cers and Soldiers, who treated them as slaves. And this was his practice in every province, whether the people voluntarily submitted to him, or were compelled to it by force.

But, notwithstanding this barbarous usage of the natives, and his refusing to resign his government to those who were sent to succeed him in his command; so powerful were the rich presents he from time to time sent to the Emperor, and such were the representations made to that Prince in his favour, that CORTEZ was declared Captain-General and Governor of New Spain by the Emperor. The Governors of Hispaniola and Cuba were commanded to reinforce that General, and give him all possible assistance. Whereupon, finding himself now established in his command, he set about rebuilding the city of Mexico, which he had burnt and demolish'd: He assign'd places for building churches, and other publick benefices; laid out market-places, divided the best part of the ground among the Spaniards, and the rest among the natives, giving them encouragement to build and people the place again: He assign'd one quarter part particularly to MONTEZUMA, a son of the late Emperor's, and another to one of the most popular Indian Generals; and they soon erected a much finer town than that which had been destroy'd, having now the advantage of iron tools, carriages and engines, which they wanted before. But nothing could be more magnificent than the palace CORTEZ erected for himself, upon the ground where MONTEZUMA's palace formerly stood; about which, 'tis said, he used seven thousand beams of Cedars, some of them 120 foot in length: He also provided himself with a numerous train of artillery, consisting of thirty-five pieces of brass cannon, and seventy of iron; which gave the Indians a vast opinion of his power. But that which was his real strength, and did him most service, both in Mexico and Europe, was the prodigious wealth he acquired, by the plunder of all the provinces he became master of, and the rich mines of Gold and Silver he every day discovered, or violently took from the owners.

The provinces of Guatimala, Chiapa, Soconusco, and several others bordering upon the South-sea, had already submitted to CORTEZ, and sent him presents by way of tribute. However, under pretence that they were not sincere, and assisted the enemies of the Spaniards, ALVARADO was sent to chastise them; that is, to seize on the country and inhabitants, massacre some, and enslave the rest; which he executed with great cruelty, as will appear hereafter; and was for this service, made Governor, or rather Proprietor, of all Guatimala, and the natives in it, who were treated by this monster of a man worse than brutes, sold for slaves to work in the mines, and compell'd to carry burdens beyond their strength, 'till they were worn out in such services.

CORTEZ was generally fortunate in the choice he made of the Commanders he sent to reduce the several provinces; but he appears to have been mistaken in CHRISTOPHER OLID; for this officer, elated with success, threw off his dependance on CORTEZ, and was about to set up for himself: However, he was soon after assassinated by some of the General's creatures, and his soldiers thereupon laid down their arms.

In the mean time, Commissioners came over from Spain, to enquire into the conduct of CORTEZ and his fellow-conquerors, as they call'd themselves; repeated complaints having been sent to Europe

Europe of their cruelties and oppressions, which were found to be so many, and so manifest, that CORTEZ was removed from his government for a time, his palace and effects seiz'd, and he was threaten'd with capital punishment: To avoid which, he assembled his army, and march'd against the large provinces of Honduras and Jucatan; of which he made an entire conquest, and, in the end, so cunningly managed his affairs, by his agents in the Court of Spain, that they agreeing to pay the Emperor (who wanted money extremely at that time) two hundred thousand pieces of eight, he was restored to the government of Mexico, with the titles of Don and Adelentado, or Lord-Lieutenant; had several new privileges conferred upon him, and was allowed to bear the same arms as the Emperor of Mexico had borne. Such is the almighty power of gold; and thus are the greatest Princes frequently compelled to countenance the greatest villanies, when they become necessitous. And now CORTEZ acted more despotically than ever; but, to shew himself impartially cruel, he hanged the Emperor QUATEMOC, who was elected after the death of MONTEZUMA, with two other tributary Kings, under pretence they were forming a conspiracy against him, tho' he had kept them always prisoners, in his own quarters, from the time that Mexico was taken.

In the year 1517, the complaints against CORTEZ being revived, the Emperor sent over LEWIS PONCE DE LEON, as supreme Judge of New Spain, to examine the conduct of CORTEZ: But this Judge died soon after his arrival, suspected to be poison'd by CORTEZ, or his creatures. However, before his death, he appointed MURE DE AGUILAR to succeed him; but he also died soon after, appointing ALONZO DE ESTRADA his successor: But CORTEZ refused to submit to his judgment; alledging, that his predecessor had no power to appoint a successor. Orders afterwards arriving from Spain, to confirm DE AGUILAR in the post of supreme Judge, he commanded CORTEZ to remove from the city of Mexico, and took the administration out of his hands; and, sending over a just representation of the outrages committed by that General and his Officers, three other Commissioners were sent to Mexico, to bring CORTEZ to a trial, and it was generally expected he would have lost his head. But he found means, in some measure, to pacify the Court of Spain, and obtained leave to go over thither, and make his defence before the Emperor: He carried with him such a prodigious treasure, that all his faults seem'd to be entirely forgot; his Majesty countenanced him, seem'd delighted with his conversation, and to give credit to every thing he said; rewarding and honouring this barbarous tyrant, instead of punishing him; particularly, his Imperial Majesty made him a grant of the whole valley of Aristo in Mexico, with all the towns and villages belonging to it; in which he had twenty-four thousand vassals: He created him Marquis of the valley of Guaxaca, and constituted him Generalissimo of all the forces in New Spain; tho' it was thought fit to exclude him absolutely from the civil government: And several strict orders were made for the better usage of the natives for the future; particularly, that they should not be obliged to carry burdens like pack-horses on the road; and that every Spaniard, who should so load an Indian, should, for the first offence, forfeit an hundred pieces of eight; for the second offence, three hundred; and for the third, should forfeit all his goods: That the Indians should

not be compelled to work in the mines, or in their fortifications or buildings, unless for wages, and that voluntarily: That no Indians should be carried out of their respective countries, tho' really slaves: That the Magistrates should have power to determine who were slaves, and who were not: And that the Spaniards should detain no Indian women in their houses, on any pretence whatever. And, that these orders might be the better observed, the Bishop of Mexico, and the Superiors of the Dominicans and Franciscans, &c. were made Protectors of the Indians; among whom was the celebrated Father BARTHOLOMEW DE CASAS, afterwards Bishop of Chiapa, who laid the grievances of the Indians before the Court of Spain, and procured a redress of them in some measure; tho', he complains, the Emperor's orders were very ill observed at that distance. But, from these intended regulations, we may gather what the grievances of the Indians were; namely, their being obliged to carry burdens beyond their strength; to work in the mines, fortifications, and buildings, with such rigour, that they perish'd in the service; that their women, wives and daughters were taken from them, and abused by the lustful Spaniard; that they made slaves of the natives without distinction, and transported them to the mines in distant countries, where they perish'd: And it was many years before these abuses were fully redress'd, even in those countries that peaceably submitted to their dominion. As to the natives who fled to the woods and mountains, they were always very cruelly used, when they fell into the hands of the Spaniards, as their posterity are at this day. And it is not very strange, if the Indians have sometimes retaliated the injuries they received from a people that so violently and unjustly expelled them from their country, and treated them as slaves. But to return to the history.

Before CORTEZ left Old Spain, he procured all the grants of the lands and territories of the Indians, which he had given to his soldiers, to be confirm'd; and, that he might not want employment now the civil government of Mexico was taken from him, he was constituted Governor of all the continent and islands he should discover in the South-sea; and a twelfth part of such discoveries was granted to him and his heirs. The General, having taken his leave of the Emperor, embarked soon after for New Spain, and arrived at Vera Cruz in July 1530; and, not being suffer'd to go to the city of Mexico, took up his residence at Tezcuco, some few leagues distant from it, where he had a very great Court, consisting of his Indian confederates and of his officers and soldiers, amongst whom he had distributed the lands of the subdued provinces. The General, before his going to Old Spain, had sent three ships through the South-sea to the Moluccoes, or Spice Islands in the East-Indies; where, his people encountering the Portuguese, who had already got possession of those islands, his ships and most of the men were destroy'd, some few only returning to Old Spain, with an account of their misfortune. Before CORTEZ received advice of this accident, he fitted out two other ships on the South-sea, to make discoveries towards California and the north-west; but these met with no better success than the fleet he had sent to the East-Indies, most of the men perishing in the attempt. He again fitted out two ships more, in the year 1531, to make discoveries to the north-west; but these also were as unfortunate as the former. Whereupon CORTEZ embarked on the South-sea himself, but did not meet with better success than those he had sent upon discoveries

CHAP. VII. coveries before him: He was obliged to return, after he had sustained innumerable hazards and fatigues, without meeting with any thing answerable to the pains and expence he had been at. In the year 1539, however, CORTEZ fitted out three ships more in the South-sea, which sailed to the northward 'till they arrived in 50 degrees and upwards, and his people landed in California and the opposite continent, but made no settlements: And the General, having been at a vast expence in these several naval expeditions, went over to Old Spain again, in the year 1539, in hopes of prevailing on that Court to reimburse him his charges: But the Ministry, expecting to have received an increase, rather than a diminution of their treasure, from these expeditions, CORTEZ did not meet with so favourable a reception as formerly: The Court began to give credit to the repeated complaints that had been made against him; and though it was not thought fit to proceed rigorously against the General, since he had been instrumental in adding so large and wealthy a country to the Crown of Spain, yet he was never suffered to return to Mexico again; and he remained a kind of prisoner at large in the Emperor's Court, where he died on the 2d day of December 1545, in the 62d year of his age; and his body was afterwards transported to Mexico, and interr'd in the cathedral of that city.

He goes to Spain, and is never suffered to return to Mexico.

His death

How the Spaniards behaved themselves towards the natives on the conquest (as it was called) of this new world, will best appear from the Bishop of Chiapa, above-cited, who resided there at the time of the conquest, and, during the life of CORTEZ, applied himself to the Court of Spain, to put a stop to the barbarous usage of that people, after he had been an eye-witness of their unparallel'd sufferings.

The Bishop of Chiapa's narrative of the Spaniards' cruelties, dedicated to Prince Philip.

This Prelate drew up a narrative of these transactions in the year 1532, which he republished in the year 1542, when CORTEZ was at the Court of Spain; which he dedicated to Prince PHILIP, son of the Emperor Charles the Vth, and afterwards his successor in that kingdom: In which dedication he puts that Prince in mind, that God, for the benefit of mankind, had appointed Kings and Princes to be the Fathers and Protectors of their people; and it was to be presumed, he observed, if any violence or injuries were committed in their dominions, and not redressed, that the Prince had no notice of them; it being his interest to promote the good and welfare of his subjects.

That, considering the intolerable mischiefs the Crown of Spain sustained in the new world, by the tyranny, oppression, and unheard-of cruelties of the Generals and Adventurers, to whom those countries had been granted in propriety respectively, by the name of conquests; he should think himself, he said, in some measure, guilty of them, if he concealed the loss of that infinite number of souls and bodies he had seen destroy'd there: That God and the holy church had committed the government of that people to the King of Castile, to the end they might be converted, and their temporal as well as spiritual happiness promoted. That his Majesty therefore might be truly apprized of the state of those countries since the conquest, and redress their grievances, he had selected some few instances of the conduct and behaviour of the Great men who had begg'd those conquests of the Crown; which he had caused to be printed some years before, and humbly intreated that Prince to use his interest that none of those countries or islands might be granted for the future to any private persons as their conquests; for that those poor innocent people were daily murder'd

VOL. III.

and destroy'd, through the avarice and ambition of the above-said adventurers. CHAP. VII.

Proceeding in his narrative, the Bishop observes, that Hispaniola and the neighbouring islands were full of people, as well as the continent, when the Spaniards first discovered America: That, as to the genius and temper of the natives, they had very quick parts, were capable of learning any thing; and yet were very meek, inoffensive, and hospitable; void of malice, covetousness, or ambition; very obedient to their superiors; patient and temperate; and as their food was plain and simple, so they eat and drank sparingly; but that they were of a tender constitution, not able to endure labour or hardships; and if they were transported to distant countries, did not long survive it.

He shows how populous America was before the Spaniards arrived there, and the genius of that people.

Upon these harmless sheep (in my author's phrase) the Spaniards fell, like so many ravenous Wolves or Tygers, as soon as they arrived amongst them; and did not cease for forty years (viz. from the year 1492, when America was first discovered, to the time our author wrote, anno 1532) to torture, murder and destroy them, by a variety of strange and unaccountable cruelties, such as were never heard of before; insomuch, that of three millions of souls they found in the island of Hispaniola, there were not, at the time the Bishop wrote, two hundred native Indians upon that island; and the neighbouring island of Cuba, equally populous, and almost of equal extent, was in a manner depopulated: That those of Porto Rico and Jamaica, fruitful flourishing islands, and abounding with people when the Spaniards came thither, were become perfect deserts: The Bahama islands, which contained five hundred thousand souls, had not, when the Bishop wrote, one human creature left upon them; and the Antilles, or Caribbee islands, had most of them been destroyed in like manner.

How cruelly used.

The islands depopulated.

Then he proceeds to give an account of the continent; where, he says, it was certain, that the Spaniards, by their cruelties, had depopulated ten realms larger than Spain, and extending as far as from Seville to Jerusalem, which was 1000 leagues and upwards, though they were before as well peopled as any countries whatever: That he was able to give a certain and particular account of twelve millions of souls, men, women and children, that, within the said space of forty years, had been unjustly and tyrannically put to death by the Spaniards; and, he verily believed, more than fifteen millions of souls had perished by their hands within that time; the cause whereof, he says, was the insatiate avarice and ambition of the Spaniards.

On the continent.

Fifteen millions destroy'd.

That he himself saw four or five of the Indian Princes, or great Lords, broil'd at one time on gridirons, over a slow fire, and others roasted; many more he saw torn in pieces with dogs: That they massacred whole towns, sparing neither women nor children; ripped up women with child, beat out the brains of some infants, and drowned others; and that they would, in sport, lay wagers which should kill the poor Indians soonest, by cutting off their heads, or piercing their breasts: That the Soldiers being about to burn one of the Indian Princes, whose name was HATHWAY, a Priest was sent to him, to persuade him to turn Christian before he died; and the Priest telling him he would go to heaven, a place of happiness, if he embraced Christianity; otherwise he must expect eternal torments in hell; HATHWAY demanded, if the Spaniards went to heaven? And being answer'd, yes; the Indian Prince reply'd, "Then let me go to hell, where there will be no Spaniards."

Variety of tortures.

21 E

The

CHAP.
VII.

The Bishop relates, that marching with some Spanish troops towards a great town, consisting of three thousand Indians, the people came out to meet them, bringing along with them all manner of provisions and refreshments for the Spaniards, who, notwithstanding, fell upon them, and put all these defenceless people to the sword, men, women and children; and that without any manner of cause or provocation, that he could discover.

That at another time he saw six thousand infants destroyed within the space of three or four months, for want of people to look after them, their fathers and mothers being sent away to work in the mines, or to some other laborious employments, at a great distance from them: That it being the usual way for the Officers and Soldiers to divide the natives amongst them, he knew an Officer, that, having three hundred Indians assign'd him for his share, killed two hundred and sixty of them, within three months, by hard service in the mines; and that they afterwards assign'd him as many more, of whom he made the like havock.

That, in the year 1514, a Spanish Adventurer destroyed all the country from the river Darien to the province of Nicaragua, extending upwards of 500 miles; and that one of his Officers, in one excursion, murdered more than twenty thousand people, some of whom he burnt, others he caused to be torn in pieces by dogs, or tortured 'till they expired in exquisite pain.

If the Spaniards had intelligence that any town was rich in gold, or other treasure, it was an ordinary thing to send a party of men to summon them to turn Christians, and acknowledge themselves subjects of Spain; which if they refused, they thought they had sufficient authority to plunder the place, and massacre the inhabitants: But many of their parties went farther; they would make proclamation, a mile or two before they came at the town they had destined to destruction, that the inhabitants should immediately come and do homage to the King of Spain; which the poor people knowing nothing of, were attack'd without any notice, and put to the sword. If these Spanish adventurers could prove that proclamation was made, this was held sufficient, whether the people heard any thing of it or not; and if they spared the lives of any, it was only in order to torture them, and compel them thereby to discover such treasure as might be concealed, or to make slaves of them: And that, in such expeditions, the Governor of the province of Terra-firma only destroy'd eight hundred thousand souls between the years 1514 and 1522. That one of the Indian Princes, having given this same Governor the value of nine thousand ducats in gold, was tortured by him 'till he discovered the value of three thousand castillans (pieces of eight) more; and not being able or willing to make any farther discoveries, the Governor caused his feet to be burnt off by inches, 'till the marrow dropt out of his bones, and he expired in torments: And it was a common thing with the Spanish Officers to torture the Indian Princes and great Lords, to make them discover their riches, and put them to death when they did not answer their expectations.

In the province of Nicaragua, the Bishop relates, the Spaniards made slaves of the people they did not otherwise destroy, and transported great numbers of them to the mines of Peru, where they all died in a very little time: For, he observes, that when the Indians are removed from their native place, they seldom live long; and that many of them perished for want of proper food, or by being compelled to

labour beyond their strength: And that there had not been less than five hundred thousand souls destroyed by these means, in that province only, within the space of ten years, viz. between the years 1523 and 1533; insomuch, that there were not, at the time of drawing up this narrative, five thousand of the natives left alive in the province.

Then the Bishop proceeds to give some account of the conduct of the Spaniards in Mexico, or New Spain, where HERNANDO CORTEZ commanded their forces in person, and had the direction of all affairs: And here he affirms, that within the space of twelve years, viz. between the year 1518 and the year 1530, four millions of souls were put to the sword, besides infinite numbers that were made slaves of, and perish'd by famine and oppression; there being no part of Europe so populous as Mexico, when the Spaniards arrived there, according to this author, who was Bishop of Chiapa in Mexico during the administration of CORTEZ.

Descending to particulars, the Bishop mentions, in the first place, the massacre of Cholula, a city consisting of thirty thousand houses; where CORTEZ, having summoned the principal inhabitants, and the Lords of the neighbouring country to attend him with their vassals, he commanded the inferior people to be cut in pieces by the Spaniards and his confederates the Tlascalans, and those of better quality he burnt alive: Adding, that this was their practice in every province they invaded, to execute some such notable butchery, that the people might tremble at their approach, and submit to their tyranny.

That this Captain-tyrant (as the Bishop calls CORTEZ) sent out two other tyrants more cruel than himself; the one to the country of Guatemala, (viz. PEDRO DE ALVARADO) and the other to that of Honduras: And that the first, in a letter to ALVARADO, inform'd him, that he had killed, plundered, burnt, and destroyed all the realm of Guatemala for the space of 400 miles; and the other Captain, that was sent to reduce the province of Honduras (a country which the Bishop represents as a paradise of pleasure, and then exceeding populous) destroy'd more than two millions of souls.

That the first Captain, on his entering the frontiers of Guatemala, being met by some Caciques, or Lords of the country, with their vassals, who brought him provisions, and came to make their submission; he caused those Caciques to be burnt alive, because they told him they could not produce the quantity of gold he demanded; and the rest of the Caciques fled to the mountainous and inaccessible part of the country, ordering their subjects to submit to the Spaniards, which they accordingly did, without making any opposition. But this would not satisfy these unmerciful adventurers, or conquerors, as they called themselves; they burnt the houses of these poor people, putting to death man, woman and child, because they could not, or would not discover what was become of their Lords: Whereupon the rest of the Indians stood upon their defence; and, among other stratagems, they dug pits in the highways, in which they set sharp stakes, covering them with turf, in order to prevent their being attack'd by the Spanish horse; and some of the Spaniards fell into them; which so enraged this Captain, that he ordered some of the natives, of all sexes and ages, to be thrown into these pits, and buried alive; the rest were either destroy'd with fire and sword, or made slaves of, many of whom were transported to the mines, and perish'd there; while others were worn out in carrying burdens,

CHAP.
VII.

CHAP. VII. dens, and such like drudgeries. The women met with the best quarter, the Spaniards reserving them either for their lusts or domestick employments, as well as for the cultivation of their lands; this being chiefly the business of the Indian females: Nor is it to be supposed they destroy'd all the male slaves, when they were so useful, and even necessary to them, in building houses, ships, carrying burdens, &c. And, no doubt, many of the inferior people escaped after their former masters to the woods and mountains, whose posterity are found there to this day, having hitherto preserved their freedom, tho' they have lost the best and richest part of their country. But how many soever escaped, the Bishop assures us, that this Captain put to death between four and five millions of people in the country of Guatimala, within the space of fifteen or sixteen years: And so very little account did the Spaniards make of these unhappy people, the same author relates, that he had known eight hundred Indian slaves given for one Mare; and that another of these adventurers, having employ'd eight thousand Indians in his buildings and gardens, obliged them to serve him without pay, and gave them so little food, that they fell down under their burdens and died; at which their hard-hearted master shew'd no manner of concern. He knew the same Captain, who was afterwards made President of Mexico, employ between fifteen and twenty thousand Indians in carrying the Spaniards baggage in an expedition; and says, all of them perish'd in that service except two hundred.

Eight hundred Indians given for a Mare.

The same barbarous wretch, in the province of Mechoacan, about 40 leagues from Mexico, being met by the Cacique or Lord of the province, who brought him presents, and offer'd to become subject to the Spaniards, put the unhappy Prince to the torture, burning his feet off by inches, to make him discover his treasure; inasmuch, that he expired in most exquisite torments: And abundance of other Lords were used in like manner, to make them produce the gold and silver they imagined them possess'd of.

A Prince sold for a Cheese.

He relates, that one of these adventurers, who was made Governor of Yucatan in the year 1526, finding there was no gold or silver in that province, after he had ravaged the country, and killed great numbers of the natives, sold the rest for slaves; but set so small a value on them, that he sold the son of one of their Princes for an ordinary Cheese, and an hundred men for an Horse: That the son of a certain Lord, refusing to leave his country, and go with a Spaniard into slavery, he cut off his ears, nose, and lips: And so wantonly cruel was another Spaniard, that he chopp'd a living infant to pieces, and gave it to his dogs. But I am weary with relating these barbarities, as I believe the reader must be with the relation of them; and therefore forbear to mention any more of them here; but shall have occasion to resume the subject again, when I come to the conquest of South-America.

These facts well attested.

These facts, I must confess, are so shocking, that it cannot be supposed they should easily gain credit: But if we consider, that they are given us by Father BARTHOLOMEW DE CASAS, Bishop of Chiapa, during the administration of CORTEZ; that he came over to Spain to obtain a redress of these grievances of the Emperor CHARLES the Vth; that he met with a very great opposition from CORTEZ and his friends, and yet that he procured that General to be displaced, and obtained an order that the Indians should be no more treated as a conquer'd people, or made slaves of; that CORTEZ

was actually prosecuted for these outrages, and not suffer'd to return to Mexico to his dying day, notwithstanding the pretended services he had done, in adding the Mexican empire to the dominions of CHARLES the Vth; we must believe, that the charge was in a great measure true; especially when we find some great Spanish Ecclesiastics pleading and endeavouring to maintain, before that Emperor, "That it was lawful to massacre and enslave any people who refused, upon their summons, to turn Christians, and submit to the Pope in Spirituals, and to the Emperor in Temporals."

Give me leave to add a paragraph or two out of the Bishop of Chiapa's apology for the poor Indians.

It is not true (says that great Prelate) that the Indians did annually sacrifice twenty thousand persons, or one hundred, or even fifty; but the Tyrants (the Adventurers) have invented such stories to justify their own barbarity, and that they might have a pretence still to detain those miserable people in slavery. But it may very truly be said, "That the Spaniards, since their arrival in the Indies, have annually sacrificed to their adored goddesses (avarice) more people than the Indians sacrificed in an hundred years." This the heavens and earth witness and bewail: Neither can the tyrants, the authors of these calamities, deny it. For it is evident, that these countries, when the Spaniards first went thither, swarm'd with people; but are now laid waste and depopulated. We might blush for shame, that, having lost all fear of God, we seem to think we scarce want a colour or excuse for these execrable actions. We have, in little more than forty years, depopulated and destroyed more countries than Europe contains: We have not only plunder'd and usurp'd the dominion of them, but have murder'd twenty millions of souls.

Part of the Bishop's apology for the poor Indians. They did not sacrifice such numbers as was pretended.

Twenty millions destroyed in forty years.

The Spaniards, in attempting the conquest of the Indies, had very little regard to the honour of God or religion: Their zeal for the salvation of mankind was but a pretence: Nor had they any views to their Prince's service, of which they so vainly boasted; but covetousness drew them thither, and an ambition to usurp the dominion of those countries; for they perpetually solicited the Court of Spain to have it divided among them: And, to speak plainly, says the Bishop, their views are to expel the Kings of Castile out of that world, and seize upon it themselves. However, we see success frequently sanctifies the worst actions, and gains the applauses of inconsiderate men.

DON VELASQUEZ, Governor of Cuba, first laid the design of adding Mexico to the Spanish dominion: It was he that first levied soldiers, provided a fleet of ships, with arms, ammunition, and provisions, suitable to such an undertaking; and gave the command of the whole to HERNANDO CORTEZ: But, being apprized of the ambition and ingratitude of that gentleman, before he left the island, he revoked his commission, and recalled him, with a design of sending another Commander in his room.

But CORTEZ refused to obey his orders; and, corrupting the soldiers and mariners, persuaded them to turn rebels and pirates; to renounce the authority of VELASQUEZ their Governor, who fitted them out, and to set up for themselves; and, at last, to chuse him the Captain of this mutinous crew, who, by all laws, civil and military, deserved death, and would probably have been hang'd, with their leader, if they had not met with unexpected success. And as the enterprize was rebelliously undertaken, so was it prosecuted with such cruelty and ill conduct as must

Some remarks on the reduction of Mexico.

CHAP.
VII.

must affect every one with horror and detestation of the wicked instruments that were concerned in it : They found a naked defenceless people, terrified to the last degree with their fire-arms, artillery, horses, and dogs : They found the several kingdoms and states also at variance, and so equally divided, that either of them were ready to join the invaders of their country, and assist them in the conquest of it : And we find all of them ready to submit to the dominion of the King of Spain, to become subject and tributary to him, before there was (scarce) any blood spilt. But this would not have done the business of our piratical adventurers : Here would have been little or no spoils or plunder to have enriched them with ; no slaves to have been made, or territories conferred on private men ; the Mexicans would have been their fellow-subjects, and entitled to the like protection and good usage as the Spaniards themselves were : And therefore they held it necessary to make enemies of them, to give them all manner of provocations, and, under pretence of plots and conspiracies of the natives to massacre them, take their country from them, and seize on their lands and treasures, together with the gold and silver mines, that were look'd upon then, and have since been found, to be inexhaustible. These were temptations which that rapacious crew could not resist ; and, it is more than probable, if NARVAEZ had not been sent to reduce CORTEZ, that he had set up for himself, and assumed the sovereign authority of MEXICO, as the Bishop of Chiapa suggests ; and the sole reason that he did not, probably, was an apprehension that, if he did not acknowledge the authority of the King of Spain, many of his own men would have deserted him, as he had deserted his General and Benefactor, and the advantage of that conquest would have been taken from him. And, tho' he and his officers did submit to hold those countries of the Crown of Spain, yet, we find, they procured themselves to be made proprietors of them, in such a manner as to have the absolute dominion both of the country and the people ; and that they treated them as their slaves and vassals ; nay, worse than enemies, worse than ever brute animals were used ; massacring and torturing them in such a manner as could never have been credited, if their actions had not been publicly try'd and condemn'd, and the facts confess'd and acknowledg'd by many of those that were engaged in the enterprise ; and it had not been evident, to all the world, that countries had been destroyed and depopulated for thousands of miles together, which were before crowded with people, and (in the Bishop of Chiapa's phrase, who was upon the spot) resembled a terrestrial paradise. And what still aggravates the cruelty is, that the natives were, according to the best accounts, a harmless inoffensive people, treated all mankind civilly and hospitably, even the Spaniards themselves ; and are generally admired for their ingenuity and the quickness of their parts ; the Popish Missionaries themselves acknowledging, that they never met with a more tractable people, more ready to be instructed, and to embrace the Christian religion ; insomuch, that the Bishop of Chiapa observes, there was no manner of occasion to use force to bring them over to Christianity : And therefore CORTEZ and his Officers could never justify their barbarous usage of the Indians, on pretence of obstinacy : Their mighty zeal for religion, and the service of their Prince and Country, was all a sham : Their cruelties could be ascribed to nothing else but to their ambition or avarice : The Gold and Silver of the country, the Indians

themselves observed, were the only gods these adventurers adored ; for the acquiring of which they seem to have divested themselves of all humanity. CHAP. VII.

It may be objected indeed to the credit of those relations given us by the Bishop of Chiapa, of the cruelties of CORTEZ, ALVARADO, and the rest of the Commanders concerned in the conquest of Mexico, That those barbarities are scarce mention'd either by ANTONIO DE SOLIS, or ANTONIO DE HERERA, two of the best of the Spanish historians.

To which I answer, That it was evidently the design of DE SOLIS to write a panegyrick upon CORTEZ ; and therefore it cannot be expected he should give us the dark side of that General's character : Besides, the greatest part of that pretended history appears, on the face of it, to be a mere romance ; only valuable for the language, and for some reflections he makes on the facts he is pleased to feign, which are judicious enough, admitting there was any truth in what he relates. And as to ANTONIO DE HERERA, who was Historiographer to the King of Spain, he was employ'd by the Ministry to give such an account of that conquest as might reflect honour on the kingdom of Spain, and on the administration under which it was effected : And had he related the barbarities of CORTEZ and his Officers, after he had informed us, that those adventurers were encouraged and rewarded, instead of being punish'd, he could not have reflected a greater dishonour on the Kingdom and Court of Spain. And, altho' HERERA himself does not give us all the particulars the Bishop of Chiapa does, yet he confirms some of them ; and assures us, "The Bishop is an author that deserves credit." It was not convenient for him to say what the Bishop had said ; but, on the other hand, he was so faithful an historian as to let us know, that "That Prelate ought to be believed."

CHAP. VIII.

Of the Mexican animals.

WHEN the Spaniards first arrived in this new world, they found neither Horses, Oxen, Camels, Asses, Goats, Sheep, Elephants, Hogs, or Dogs, of the European species. There were indeed wild beasts, to which they afterwards gave the name of Hogs, because they came the nearest to our Hogs of any animals they found there, viz. their Pecaree and Warree ; but these are evidently of another species, especially the Pecaree, which have their navels always upon their backs. They had also some little dumb Dogs, with which they beat for game ; but no other kind. The Indians were as much afraid of the Mastiffs and great Dogs the Spaniards carried over, as of Lions or Tigers ; nay more, for their cruel conquerors hunted this unhappy people in the woods and mountains with their dogs, as they would hunt wild beasts, and tore men, women and children in pieces. When the natives fled from their towns, the Spaniards pursued them to the woods with packs of dogs ; insomuch, that no cover could conceal or defend these naked people from their rage. Nor were their horses less terrible to the Indians than the European dogs, as has been observed under another head. The Mexicans had no beasts that served them to carry burdens, or to draw their carriages ; every thing of this kind was done by their Tamenes, or Porters of both sexes : For, in many places, the women carried the baggage, especially in their wars and hunting

Animals that were not found in America.

CHAP. VIII. hunting expeditions; the men thinking it sufficient to carry their arms, and hazard their lives.

There were great numbers of Wolves and Bears towards the north, and some Lions and Tygers in the warmer climates, but not many; and there were some few Elks. But whatever the Indians wanted of our animals, the Spaniards soon supply'd them with, particularly Horses, Oxen and Hogs; which increased so prodigiously in a few years, that every Planter had enough for his use, and vast numbers of them were suffer'd to run wild in the woods, both in the islands and on the continent. ACOSTA relates, that in his time (upwards of an hundred years ago) the European sheep were so multiplied, that it was an ordinary thing for a Spanish Grazer to be possess'd of ten or twenty thousand sheep.

DAMPIER relates, that the horses and black cattle are increased as much as the sheep; and has given us a particular description of the Spaniards hunting and hocking (or hamstringing) the wild bulls and cows that are found in their forests. The Hocker, as he calls him, is mounted on a good horse, bred up to the sport, that knows when to advance or retreat, without giving his rider any trouble to manage him. The hunter carries a pike-staff, arm'd at the end with a sharp iron, of the form of a crescent, with which he rides after the game full-speed; and, having overtaken it, strikes his iron just above the hock, and hamstring the beast: Whereupon the horse wheels off; for the bull or cow immediately faces about, and makes at the huntsman with all its force; but, finding the horse too swift for him, turns tail again. Whereupon the hocker renews the charge, if the hamstring be not quite cut through with the first stroke; and, having sufficiently lamed one of his hind-legs, then ventures to attack the creature in front, and strikes one of the knees of his fore-legs with his hocking-iron: The beast thereupon falling down, the huntsman immediately dismounts, strikes a great butcher's knife into the beast's poll, a little behind the horns, so dextrously, that he cuts the string of the neck (in DAMPIER's phrase) at once, and down falls the creature's head: Then the hocker mounts again, and pursues fresh game, leaving the skinners that follow him to take off the hide, which is all they regard, in some parts of the Spanish West-Indies, wild beef is so plentiful. But 'tis said, the Spaniards hunt only the bulls and old cows, leaving the young cattle to breed; whereas the English and French kill them without distinction: But the English found their error in Jamaica; for when that island was first taken, the fields and woods were well stock'd with cattle; which being destroy'd by the soldiers, the island suffer'd very much for want of them, 'till Sir THOMAS LYNCH, the Governor, sent for a fresh supply of cattle from Cuba.

The same writer observes, that the wild cattle of Mexico are the fattest in the dry season, viz. in February, March and April, when the English Logwood-cutters, in the Bay of Campeachy, frequently hunt them in canoes; for then they come down to feed among the rushes in the mouths of the rivers and creeks of the sea, and are easily shot. When the beast finds itself so closely pursued in this manner, that he can't escape, he faces about, and runs full tilt at the boat, striking the head with that force, that he drives it back twenty or thirty paces, and then scampers away again, if he is not kill'd by their shot; and their principal care is to keep the head of the boat or canoe towards the

VOL. III.

creature, for if he strikes it on the side, he oversets it. But to return:

Besides the beasts already mentioned, which the Americans had in common with us, they had also several kinds of Red and Fallow Deer, Hares, Rabbits, Foxes, Otters, Wild-cats, Pole-cats, Squirrels, Porcupines, Monkeys, Jackals, &c.

The beasts peculiar to America, which this continent did not produce, are, their Pecaree and Warree, the Opossum, the Moose, the Guanoe, the Flying-squirrel, the Sloth, the Armadillo, the Rackoon, the Ounce: And there are some amphibious animals, particularly the Musquash and the Beaver; but, as I remember, the last are to be found in the north part of our continent.

The Pecaree is a little, black, short-legg'd animal, that has some resemblance of a Hog: They herd together in great droves; and what is most remarkable, is, that the navel of the creature grows upon its back, and, if it be not cut off as soon as the Pecaree is kill'd, it immediately corrupts the whole carcase, which is otherwise very good food.

The Warree is less than the Pecaree, and has its navel in the usual place; but in shape is much like the former: The skin is thick, covered with hair that looks like a coarse fur. Both the Pecaree and Warree are wild fierce creatures, and will engage man or beast: The Indians hunt them down with their dogs, and then shoot or kill them with spears.

The Opossum is a small beast, about the size of a Fox, and grey as a Badger; and is remarkable for its false belly, in which she preserves her young ones when she is pursued. There is a very particular description of this Animal in the *Philosophical Transactions*; to which I refer the reader.

The Moose is said to be something like a Red Deer in his head and neck: He has horns also like a Deer, near two yards wide; but is as big as an Ox, and slow of foot: His flesh equal to beef, and his hide makes good buff. These are found chiefly in the north, and not in warm climates.

The Guanoe is shap'd like a Lizard; the body as big as a man's leg, but grows tapering towards the tail, which is very small: They have four short feet and claws; are of various colours, dark and light brown, of a dark and light green, some of them yellow, and others speckled; and their flesh very good food, as well as their eggs. But I should have ranged these among the amphibious animals, for they live in the water as well as upon the land.

The Flying-squirrel has a very small body, and a loose skin, which he extends like wings, and is borne up by the wind; but how far he can fly, travellers don't inform us, probably not many yards.

The Sloth is about the bigness of a large Spaniel; has a round head, small eyes, and very sharp teeth and claws: He feeds on the leaves of trees, and frequently kills them, not leaving a single leaf on the tree he visits; but he is so many days in getting down one tree, and climbing another, that tho' he be fat when he comes down, he grows lean before he gets up to the top of another: He is eight or nine minutes, according to DAMPIER, in moving one of his legs three inches: Nor will blows make him mend his pace; he seems insensible of stripes, and can neither be frighted or provoked, as the same gentleman tells us he has frequently experienced.

The Armadillo was so called by the Spaniards, from its shell resembling the scales of armour; is as big as a Sucking-pig, and has a long body inclosed

CHAP.
VIII.

closed in a thick shell, which is join'd under the belly : This shell opens, and it puts out its head and legs when it walks ; but, upon the apprehension of any danger, the creature draws in both its head and legs like a Land-tortoise, and, tho' it be tofs'd from place to place, will not move out again : It has strong claws, with which it digs holes in the ground like a Rabbit. The flesh is esteemed good meat.

The Ra-
coon.

The Racoon, according to DAMPIER, are only a species of Rats, but four times as large, and burrow in the earth like Rabbits.

Rabbits
different
from ours.
The
Ounce.

They have Rabbits also of a different species from ours, as large as Hares, and without tails.

The Ounce, or Tyger-cat, seems to be only a small species of Tygers : They are said to be fiercer than those of a larger size, and more mischievous ; nor are these peculiar to America : The East-Indians inform'd me, that they have the same sort of small Tygers in their country : But there are a species of Deer without horns in Mexico, which I don't meet with any where else.

Deer
without
horns.
Peruvian
Sheep.

As to the Lama's, or Camel-sheep, as they are call'd, from the form of their heads and necks resembling a Camel's : These are of a very different make from our Sheep, used to carry burdens, and twice as large. But as these were only found in Peru, and other parts of South America, I shall treat of these, and several other beasts peculiar to that country, when I come to describe that part of the Spanish dominions.

Beavers,
&c.

There are several other animals also found in North America, particularly Beavers, of which many surprising stories are told ; and these will be considered, when I come to treat of New-England and Canada.

Manatee.

As to the Manatee, DAMPIER, in his First Volume, describes it in the following manner : He says, it is about the bigness of a Horse, and 10 or 12 foot long : That the mouth of it is like a Cow's ; and it has great thick lips : " The eyes no bigger than a small pea, and the ears only two small holes on each side of the head." The neck is short and thick, bigger than the head : The largest part of the creature is its shoulders : It has two large fins before, and under each of these fins the female has a small dug : From the shoulders to the tail the animal lessens gradually : The tail is flat, and about 14 inches long ; and from the head to the tail it is round and smooth, having no fins but those two already mention'd : The flesh is white, and extraordinary sweet wholesome meat. DAMPIER adds, " That they never come on shore, or into shallower water than where they can swim : " That the Musquito Indians strike them as they swim in the water with an harpoon, which the creature runs away with ; but, a long line and a float being fasten'd to the harpoon, they let it run 'till the animal has tired itself, and then draw it to shore. But DAMPIER seems to be mistaken in great part of this relation ; or, rather, he makes the Manatee a very different creature from the Sea or River-horse : For he says, in his Second Volume, p. 102 of his Second Part, that the Mountain-cow (as he there calls this creature) is shap'd like a Cow in body, but her head much bigger, more compact, and round : That she has no horns ; " her eyes are round, full, and of a prodigious size : " That she has great thick lips, but not so thick as a Cow's lips ; and " her ears in proportion to her head, rather broader than those of the common cow : " That her neck is thick and short ; " her legs shorter than ordinary : " That it has a long tail, thin

of hairs, and no bob at the end, and coarse thin hair all over her body ; her hide near two inches thick ; her flesh red, and the fat white : That it is sweet wholesome meat ; and the creature weighs five or six hundred weight : That it was " always found in woods," near some large river ; and feeds on thin long grass and moss, which grows on the banks of rivers ; but never on good grass, as other cows do : That when her belly is full, she lies down to sleep on the brink of the river, and at the least noise " slips into the water, where, sinking down to the bottom, she walks on the ground."

These relations, the reader must observe, are widely different ; and, as DAMPIER acknowledges he never saw any of these animals, it is evident, he was imposed on in one of these accounts. I shall give the reader therefore two other descriptions of the River-horse, or Cow ; the one from my friend Captain ROGERS, late Governor of the Bahama Islands ; and the other from KOLBEN, which I have already mention'd in the description of the Cape of Good Hope.

The Captain assures us, that the Hippopotamus, or Sea-horse (as he calls this animal) lives as well on the land as in the sea and rivers : That it is shap'd like an Ox, but bigger, weighing fifteen or sixteen hundred pound : That it is very full-bodied, cover'd with hair, and of a mouse-colour ; thick, short, sleek, and very beautiful when it first comes out of the water ; the head flattish on the top : That it has no horns ; but large lips, a wide mouth, and strong teeth, four of which are longer than the rest, viz. two in the upper jaw, one of each side, and two in the under jaw : That the latter are four or five inches long ; the other two shorter : That it has large broad ears, great goggle eyes, and is very quick-sighted : It has a thick neck, strong legs, but weak foot-locks ; the hoofs of his feet are cloven in the middle ; his tail is short and tapering, like a swine's, without any bob at the end : The creature is commonly fat, and very good meat : It grazes on the shore, in wet swampy grounds, near rivers or ponds ; but retires to the water, if pursued : When they are in the water, they sink down to the bottom, and there walk as on dry ground : They will run almost as fast as a man ; but, if chased hard, they will turn about, and look very fierce, like a boar, and fight, if put to it. The natives have no wars with these creatures, says the Captain ; but we have had many conflicts with them, both on shore and in the rivers ; and tho' we commonly got the better, by killing some, and routing the rest ; yet, in the water, we durst not attack them, after the following accident, which had like to have proved fatal to three men, who went in a small canoe to kill a single Sea-horse, in a river which had eight or ten foot water. The horse, according to his custom, was marching at the bottom of the river ; and, being espied by these men, they wounded him with a long lance, which so enraged the beast, that he rose up immediately, and, giving a fierce look, he open'd his jaws, and bit a great piece out of the gunnel or upper edge of the canoe, and was like to have overfet it ; but presently sunk down again to the bottom, and the men made off, for fear he should return. " These the Captain met with on the South-east coast of Africa."

KOLBEN informs us, that there is a creature called a Sea-cow, at the Cape of Good Hope, which always feeds on grass ashore, and only runs into the sea for its security : That the head of it re-

sembles

CHAP. VIII. *semble rather that of a horse than a cow : That it is as large as a rhinoceros, and of the same colour ; but the legs something shorter : That the nostrils are very large, out of which it spouts water, as it rises from the sea or the bottom of a river : That the hoof is not cloven, and the tail like that of an elephant, with very little hair on it ; and that it has no hair at all on the body, and the female suckles its calves as other cows do, which he had often seen : That the skin of the creature is tough, and near an inch thick ; so that a musket-ball will scarce penetrate it, which is the reason they usually aim at the head to break his skull.*

That, on each under jaw, the animal has two large teeth, the one straight, and the other crooked, about the thickness of a cow's horn, and running a foot and half out of its mouth ; which teeth weigh each of them about ten pound, are exceeding white, and never change yellow, as ivory does ; and therefore are more valuable.

That, when this creature is wounded in a river, or near the shore, the natives follow her in boats by the blood, and with hooks and grappling-irons fish up the carcase, which, he says, is a good load for a waggon : That the flesh of this creature is so much admired by the Dutch at the Cape, that they give twelve or fifteen pence a pound for it : That the lean and fat is valued as much as the lean, melted and used like butter in cookery, and some eat it with bread.

The antients describe the Hippopotamus of the Nile in much the same manner as KOLBEN does the Sea-cow of the Cape : And Mr. THEVENOT, an author of good credit, says, when he was in Egypt, in the year 1658, he saw one of these animals that was kill'd near the Nile : That it was about the bigness of a camel, of a tawney colour ; the hinder-part made much like an ox, and the head like a horse : That its eyes and ears were small ; but it had great open nostrils, thick large feet almost round, and four claws ; the tail like an elephant, and had not more hair than there is upon an elephant : That, in the lower-jaw, it had four great teeth half a foot long ; two of them crooked, and as big as the horns of an ox ; and the other two straight, but standing out in length ; and that some Janizaries shot it as it was grazing on the land : It received several shot before it fell, the bullets hardly piercing the skin ; but one, that happen'd to hit the jaw, brought it down : And that these monsters are very rare in the Nile, there having been no such animal seen there for many years before.

Upon the whole, it seems to me, that the Sea-cow and River-horse, called by the antients Hippopotamus, are the same animals ; but the Manatee is of a different species : For the first is an amphibious creature, with four legs, that feeds on shore ; the other a pure fish, without legs : For such is DAMPIER's first description ; and so the rest of the Buccaneers describe the Manatee, and tell us, their Musqueto Indians struck them often, and their ship's crew lived upon them some time ; and therefore they could not easily be mistaken in the shape of the creature ; neither would they have omitted to tell us, that it had legs, if it had any. And I am in some doubt, whether the Hippopotamus, or River-horse, was ever seen in America ; but if I find reason to alter my opinion, upon farther enquiry, I shall not fail to acknowledge my mistake before I conclude the description of America.

Crocodiles of Alligators. As to their Alligators (which are certainly a species of Crocodiles) these are so numerous, and have done so much mischief, both to the natives and the Euro-

CHAP. VIII. peans, that there is no room to doubt of their being bred in America. They are amphibious animals, accustom'd both to land and water ; shap'd like a lizard, twenty or thirty feet in length : They have four short feet, or rather claws, on which they crawl ; the head is flat, their eyes large, and their back cover'd with broad scales, resembling armour, and as impenetrable ; and some of them so large, 'tis said, that they have actually swallow'd men whole ; at least, there are such stories generally believed in the countries where Alligators or Crocodiles are found. These animals seem to move with the greatest strength and agility in the water, and will run a good pace by land, but cannot easily turn about ; so that a man turning to the right or left, easily avoids them : They lie waiting for their prey therefore, by the river sides, in the flags and rushes ; and so much resemble the trunk of an old tree, that travellers have been unwarily surprized by them on shore. Tho' they are of that prodigious bulk, they proceed from an egg no bigger than a turkey's, which is hatch'd in the warm sand, as is generally believed ; nor is it to be conceived how it should be hatch'd otherwise. They lay a great number of eggs, which are most of them eaten or destroy'd by fowls, or other animals, or they would swarm in these hot countries. As to the Crocodile's weeping over a man he has kill'd ; and the little bird Trochileus, that is said to live upon the meat she picks out of the Crocodile's teeth ; or the Rat Ichneumon, of whom there is a tradition that he jumps into the Crocodile's mouth, and eats his way out again through his belly ; I presume there is no need to caution the reader to give but little credit to such fictions : Tho' it were to be wish'd, that historians would not so frequently indulge a poetical vein, which makes it difficult sometimes to distinguish between true and fabulous relations. But to proceed.

There is an animal, which DAMPIER calls *The Squash*, bigger than a Cat, and its head like that of a Fox, with short ears and a long nose ; the legs short, and runs up trees like a cat ; the body is cover'd with a fine yellow hair, and the flesh very good meat. DAMPIER says, it eats like pig. That the young ones may be tamed, and are as diverting as a monkey.

The Monkeys of Campeachy, the same writer relates, are the ugliest he ever saw : They are much larger than a hare, and have great tails two foot and a half long ; the body and upper part of the tail cover'd with coarse long black hair : They keep together twenty or thirty in a company, and ramble over the woods, leaping from tree to tree ; and if they meet with a single person, he is in danger of being torn in pieces by them : That he was very much afraid on meeting a party of them in a wood, tho' he had a gun in his hand ; for they surrounded him, chattering and making a terrible noise ; some of them broke the dry boughs and threw at him, while others scatter'd their water and dung about his ears : That they hung themselves by their tails on the boughs over his head, and seem'd to threaten him all the way he pass'd : But where two or three people are together, they usually make off ; and it is merry enough to see the females scamper away with their young ones under their arms, or upon their backs. This species of monkeys are very untractable, and hardly ever tam'd.

As to the feather'd race, we find in Mexico, Parrots, Parroquets, Macaws, Quams, Curasoes, Cockrecoes, Bill-Birds, Humming-Birds, Eagles, Vultures, Doves, Pigeons, Subul-Jacks, Black-birds, Turkeys, and tame poultry ; Pelicans, Cormorants,

morants, Bats, and a multitude of other fowls and birds, which are not found in this part of the world, and many of which have not yet received any names, or at least the Europeans are not acquainted with them.

Parrots and Parrokites are so well known amongst us, that they need no description.

The Macaw is not so common: He is shap'd much like a Parrot, but twice as big; the feathers of the body are of several bright and lively colours, particularly red, blue and green: It has a bushy tail, with two or three long straggling feathers, red or blue; the pinions of the wings of some of them are red, and of others blue; and their beaks yellow: They make a great noise in the morning, resembling a hoarse voice; but they will imitate the voices of the Indians, and their way of singing; as also the voice or noise of any bird or animal almost; and may be taught to talk. The natives tame them, and, when they are used to their houses, suffer them to fly to the woods in the day-time, among those that are wild, and they return in the evening to the house or plantation they belong to. There are great plenty of these birds in Mexico; and they are not only extremely beautiful and entertaining, but their flesh is well tasted, tho' it is black and pretty tough.

The Quam is a wild land-fowl, of the bigness of a Hen-Turkey, and has a bill like that fowl; the feathers of a dun-colour; his tail short, and darker than the rest of his feathers: It feeds upon berries and other fruits, and the flesh is very good food.

The Curaçoe is larger than the Quam, but much of the same shape: The cock has a crown of black or yellow feathers on his head, with red loose flesh on his neck, like a Turkey-cock; but the hen has neither: They have a big gross voice, which is listen'd to by the natives, having something melodious in it: The flesh is tolerably good, but the bones so noxious, that the natives bury them, and will not suffer a dog to eat them; and the Europeans, 'tis said, use the like caution; for that a dog runs mad, if he eats one of their bones.

The bird call'd by the English the Carrion-crow, is black, and as big as a Raven; has a bald head and reddish neck like a Turkey, and lives altogether on carrion, from whence it has its name. The huntsman has no sooner kill'd his game, but they immediately flock together from all parts, several hundreds of them, and will devour the carcase of a beast in an instant, if not prevented. Some of these Carrion-crows are white, but in all other respects like the former.

The Subtil-Jack, as the English call it, is as big as a Pigeon; the feathers generally black, but the tips of the wings yellow. It has obtain'd this name from the cunning it seems to exercise in securing its nest, which is always hung by a string at the extremity of the bough of some high tree, that stands alone. Some trees are surrounded with such nests, which hang down 2 or 3 foot from the twigs they are fasten'd to; the string that fastens them, according to DAMPIER, being made of long twisted grass; but GEMELLI says, it is made of hair: However, both agree as to the nests hanging on the bough of a tree, by a string of its own making; and GEMELLI adds, that the bird sings sweetly.

There are also several sorts of birds, to which the English have given the name of Bill-birds, from their bills being almost as big as their bodies.

The Cockrecoes are of the colour of a Partridge, but something less, and their legs longer: They delight in creeks and watery places, and are remark-

able for their calling and answering one another morning and evening. They are esteemed delicious food.

The bird call'd the Cardinal, is about the bigness of a Wood-lark; of a scarlet colour; has a beautiful tuft of feathers on the head, and sings sweetly: For these the Spaniards give ten or twelve crowns a bird, to send into Spain. There is another bird of the same beautiful colour, but less, and does not sing.

They have also a small bird, of the bigness of a Tygrell. Thrush, call'd the Tygrell, or Little Tyger, from its spotted feathers.

The Cacalototol is of the size of a Black-bird, but of a yellow colour, and sings well.

The Silguero's are black and white, of the bigness of a Sparrow, and highly valued.

They have two sorts of Pheasants; the one of a dark colour, with black wings and tails, which they call Gritones; and the other, which are much larger, call'd Royal, from a tuft which appears like a crown upon their heads.

Their poultry, or dunghill-fowls, differ little from ours, but are something less: Their Quails are of the same colour as those of Europe, but their flesh is not so good, according to GEMELLI, who mentions another bird, called Guachichil, or Suck-flower, because it is always seen flying with a flower in its mouth; but is never known to rest on the ground, as he was inform'd by the natives: It will stick its beak into the bough of a tree, and remain there several months; and thus they often take it sleeping.

The Humming-bird is a little feather'd animal, not much bigger than a large Wasp: It has a black bill, like the point of a needle; and its legs and feet are proportionable to its body: Its wings move when it flies, like those of a Bee, and make a perpetual humming; from whence it obtain'd its English name: It resorts to fruit-trees and flowers also, like the Bee when it is gathering honey; but keeps in perpetual motion, sometimes on one side the flower, and then on the other; now approaching, and then retiring from it, for several minutes. There are two or three sorts of them, of as many several colours: The largest are black.

Their birds of prey are Eagles, Vultures, Hawks, and the Carrion-crow, already mention'd: Their water-fowl, Geese, Ducks, Curlews, Herons, Crab-catchers, Pelicans, Cormorants, Fishing-hawks.

They have three kinds of Ducks; the Muscovy Duck, and another, which perch upon old trees without leaves, and seldom light upon the ground; and they have another kind of Ducks, like ours, that never perch upon trees.

There are two sorts of Curlews also; the largest sort as big as Turkeys, with long legs and long crooked bills; the feathers of their bodies of a dark colour, and their wings black and white; their flesh black, but pretty good food: The other Curlews are half the bigness of the former, and their flesh much better tasted.

Their Herons are not different from those of Europe.

The Crab-catcher is of the same shape and colour as the Heron, and has its name from feeding on small Crabs not bigger than Pigeons eggs.

The Pelican is a web-footed fowl, almost as big as a Goose, and of a grey colour: Its legs are short, the neck long, the bill seventeen or eighteen inches long, and two inches broad; the fore-part of the neck and breast cover'd with a soft loose skin, like that

CHAP. that of a Turkey-cock's: It is a very heavy fowl, and seldom flies much above the water; and usually sits on the tops of the rocks, a little distance from the shore, either for its security, or to look out for prey; and is esteem'd pretty good meat. It is remarkable for a bag or purse in the neck, in which it keeps a reserve of prey after the appetite is satisfied.

Cormo- The Cormorant is of the shape and size of a nat. Duck, and the bill and feet like a Duck's; the feathers on the body black, only white on the breast: They live on small fish, and will perch on trees by the water-side to watch for their game.

Fishing- The Fishing-hawk is of the size and shape of an hawk. English Sparrow-hawk, and sits on the stump of a tree or a rock by the sea or river-side, from whence he flies at the small fish, which are his prey, and snatches them out of the water without wetting his wings: He does not swallow the fish whole, as most other fowls do that prey upon fish, but tears it in pieces, as our Hawks do the birds they strike.

Bat. The Bats of this country are as large as Pigeons, travellers inform us, which is not at all improbable; for in the East-Indies, and some other hot countries, they are much larger.

Insects In all hot countries there are abundance of poisonous and troublesome insects and vermin, and Mexico has its share of them; such as Snakes, Scorpions, Centapees, Spiders, Toads, Flies, Musketoos, and Pismires.

Snake. There is in Mexico, as Mr. DAMPIER relates, a yellow Snake, as big as the small of a man's leg, 6 or 7 foot long; a lazy animal, that takes little pains to hunt for its prey; but lies concealed in cover, and surprizes the Lizards, Guanoes, and other small animals, as they pass by: The flesh of it is eaten by some people; and my author says, he has tasted of it, but did not much relish it. He says, his brother Logwood-cutters inform'd him, that some of these snakes are as big as an ordinary man's waist, and strong enough to hold a bullock by the horns: But he is so good as not to require us to give entire credit to the latter part of the story. There is also a green Snake, about the bigness of a small cane, and 4 or 5 foot in length: These lie among bushes and trees full of leaves, and prey chiefly on small birds. Here is also a dun-colour'd Snake, about 2 foot long, that frequents houses, and kills mice and other vermin; and is so harmless a creature, that no body endeavours to kill him. There are a great many other species of Snakes in America, and particularly the Rattle-snake, which will be described in their proper places.

Scorpions. Their Scorpions and Centapees do not differ from those of other countries already described; but Mr. DAMPIER mentions an animal, which he calls a Gally-wasp, that I don't remember to have met with any where else: It has, he says, some resemblance of a Lizard; has four short legs, and is of a dark brown colour; delights in low marshy grounds, and is very venomous.

Spiders Their Spiders, the same writer observes, are of a monstrous size, particularly one, that is near as big as a man's fist; has long legs, and two black teeth, or horns, two inches in length, and as sharp as a thorn: That these Spiders are clothed with a yellowish down as soft as velvet: But he could not tell whether they were venomous or not. There is no doubt, but Spiders, Toads and Rats grow to a prodigious size in all hot countries; though, 'tis possible, travellers may enlarge a little in the describing of them.

CHAP. The Ants, or Pismires, are another plague in a very warm climate. Here are great black Ants, whose bite is said to be almost as painful as the sting of a Scorpion; nor are their small yellow Ants less dreaded, which come in such swarms sometimes, that a man shall be covered with them in an instant: They have nests on the bodies of great trees, DAMPIER relates, as big as hog'sheads, in which they live all the winter; and here they preserve their eggs: In the fair season they quit their nests, and swarm in the wood-lands and high grounds; but are seldom found in meadows or watery places. There are another sort of black Ants, with long legs, that come into houses, run over their chests and beds, and search every place: Wherever their leader marches, the rest follow him in such crowds, that they are two or three hours passing by: However, they usually quit the house before night; nor do they seem to be so mischievous as the African Ants, that will, according to some travellers, devour a sheep in a few minutes; and men with difficulty escape, by setting fire to them.

There are another sort of insects, that sufficiently try the patience of the natives, and are much more mischievous to strangers, in hot countries, viz. Muskitoes, or Gnats, which swarm in all countries that are hot and moist, and will not suffer a man to rest night or day, but are perpetually buzzing about his ears: When a person first comes on shore, his face shall be so swell'd by their stings in a night's time, that his acquaintance can scarce know him; and, though their stings have not this effect, after we have been sometime in the country, yet they are always very troublesome.

GAGE, in his Survey of this country, says, there is an insect, call'd by the Spaniards Migua, which is common in all parts of it almost, and so small, that it can scarce be discern'd. This creature usually strikes into the feet or legs of a man, but seldom into the hands, or any part of the body; from whence he conjectures, it is bred in the dust of the ground: They make the part they strike into burn and itch, and at first it appears black, and no bigger than the point of a needle, when they may be easily pick'd out; but if they are let alone, they get farther into the flesh, and lay a great many nits or eggs, which increase to the bigness of a great pea, and itch intolerably; and, if the part be rubb'd or scratch'd, immediately festers, and endangers the losing of the limb. Some, he says, hold it best to take them out as soon as they first perceive the part itchy, but people do not know at first what is the matter with them, and the creature soon gets too deep to be dislodged; and therefore they are usually let alone 'till they have laid their little bag of nits or eggs, which appears like a blister through the skin, and then, with the point of a needle, they dig round it, and take the bag out whole, for if it be broken they breed again. If any person would avoid this vermin, the same writer says, he must not go bare-legg'd, or lay his shoes or stockings near the ground. The Indians, however, that go bare-foot, are seldom troubled with them, which he supposes proceeds from the hardness of their skins. The Europeans therefore suffer most from these insects. GAGE himself relates, that he was two months under the Surgeon's hands, having scratch'd the part where one of these vermin enter'd his skin 'till it fester'd, and was in great hazard of losing a leg: And some gentlemen, lately arrived from America, inform me, that there cannot be a more troublesome

CHAP. VIII. troublesome insect than this is, against which scarce any thing can secure them.

Leg-worms. DAMPIER also mentions Leg-worms, that he met with in the Bay of Campeachy: He says, he perceived a swelling in one of his legs, that was very painful to him; and, drawing it to a head, there came out two small worms, of the bigness of a hen's quill, and three quarters of an inch long; and that each of them had three rows of black, short, stiff hair, running quite round them.

The Shining Fly. The Shining-fly is an insect common to the East and West-Indies: These, in the night-time, appear like so many stars, at a little distance, when they rest on the boughs of a high-tree, as they frequently do.

Bees. As to Bees, they have several sorts, which make their nest in trees, or in the holes of the rocks; from whence the natives get a great deal of honey, with which they make some of their strongest liquors. WAFER doubts, whether some of these Bees have stings, because he saw the Indians put their naked arms into the nests without being stung.

Cochineel insect. The insect, call'd Cochineel, is still more profitable to the Mexicans and Spaniards than the Bee: It is bred in a fruit that grows on a shrub about five foot high, and full of thorns: There is a red flower on the top of the fruit, which falls down, and covers the fruit when it is ripe and begins to open; so that no rain or dew can wet the inside: The flower being scorched and withered away in a day or two, by the heat of the sun, the fruit opens as wide as the mouth of a pint pot, and the inside is, by that time, full of these small red insects, which have curious thin wings. When the Indians perceive the fruit opens, they spread sheets under the trees, and shake them; whereupon these insects take wing, and hover for a little while over the tree, and then fall down dead into the sheets, the heat of the sun killing them, as my author supposes. When they fly up, they appear red; but when they fall down, they are black. However, they are used in dyeing the finest scarlet: Some people infuse them in coffee and other liquors, to raise their spirits, or give them fresh vigour; and they are probably used in medicine; but physick is not my province.

The Mexicans did not know the value of this insect 'till the Spaniards came amongst them, and had none of the trees that produce them, but those that grew wild in forests; but the Spaniards and Indians have now large plantations of them.

Locusts. The Locust is an insect that brings destruction with it wherever it comes, and is found in almost every hot country at one time or other: They are much like Grasshoppers, but bigger; and fly in such numbers, as Mr. GAGE observes, that they hide the face of the sun, and darken the brightest day. While he was in Mexico, a cloud of these insects visited that part of the country where he resided, lighting upon the trees and standing corn, and, in one night, devour'd both the fruit and leaves of the trees, and consumed the corn in every field where they fell: The highways were so pester'd with them, that there was no travelling in quiet; and neither the plantations of sugar or indico escaped them.

Upon the approach of this wing'd army, all people were commanded out into the fields, with trumpets, brass-pans and kettles, and every thing that would make a noise, to frighten them away; and, according to Mr. GAGE's observation, the fields of those husbandmen that made most noise escaped best: He was of opinion, that some entirely saved their corn and fruits by this stratagem. However, such numbers were left upon the ground, that they were

forced to dig trenches, and bury them; and the next year the people were afflicted with a contagious distemper, little inferior to the plague; he calls it a fever in the bowels, which carried off the patient in four or five days: But, notwithstanding this distemper was very fatal to the Indians, the Spaniards were not much afflicted with it; and, indeed, at Surat in the East-Indies, when the natives are swept away by the plague in vast numbers, the Europeans usually escape; which we were apt to ascribe to the good liquor we drink, the natives having scarce any other beverage than water. But this cannot be the reason of escaping any contagious distemper in America, where the people drink almost as much strong liquor as we do.

I proceed, in the next place, to enumerate the Fish: several sorts of fish that travellers take notice are found in the American seas, lakes and rivers.

The Paracood is about three foot and a half long, and eight or ten inches round, and haunts the lakes, islands, and places near the shore; and, 'tis said, will attack a man in the water. It is a firm well-tasted fish; but some of them have been found unwholesome food. DAMPIER says, he has known men poison'd with them at some seasons of the year; and WAFER relates, that people have had their hair and nails come off after eating them.

The Gar-fish is of the shape of the former, but less; and has a long sharp bone in his snout, like the Sword-fish; only as the Sword-fish's bone is flat, and indented like a saw, this of the Gar-fish is fashion'd like a spear, round, smooth and sharp at the end, and about a foot long: They swim very swift, and will leap out of the water frequently, flying as it were just above the surface for twenty or thirty yards, and then, wetting their fins, spring forward again, darting themselves with such force, that they will strike their bony spear through the sides of a canoe, or the body of a man, if they meet with him in the water. These are esteem'd well-tasted wholesome food.

Mullets and Snooks are plentiful in this part of Muller; the world; and the Ten-pounder, in form much like a Mullet, but so full of bones there is scarce any eating them, is found here.

The Spanish Mackerel are in shape and colour like those of Europe, but a yard long or more, and nine or ten inches about. These are esteemed excellent meat.

There are three sorts of Flat-fish, called the Stin-Raspray, the Raspray, and the Whipray: They are any of them about a foot and a half broad; and the Raspray is mightily valued for his rough skin, which makes good shagreen, and will rasp any thing like a file.

The Old Wife is also a flat fish, and very good meat; as is the Cavally, a small slender fish, taken upon this coast.

The Turpom is a good firm fish, of fifty or sixty pound weight, and said to resemble a Salmon.

The Sculpin is a fish surrounded with little sharp bones; but, when his skin is stripp'd off, he is very good food: It is generally about a foot long.

The Manatee is the best fish on the coast, which has been already described among the amphibious animals: I shall only take the opportunity here to acquaint the reader, that this is certainly a fish, and never goes on shore, as the Hippopotamus, or River-horse, does; neither does he resemble that animal, either in size or form. The Manatee is generally taken in the sea, and sometimes in creeks and the mouths of rivers; but never quits the water, according to the best information I can get.

CHAP. VIII. Tortoise. Of Tortoise, or Turtle, as the seamen call them, there are several sorts: Some are Sea-tortoise, and have fins; these seldom come on shore, but to lay: Others live, for the most part, on the land; have claws, and will run a good pace. Some weigh upwards of three hundred pound, and others not five. DAMPIER gives a very particular description of the several sorts of American Tortoises: He says, the Land-tortoises they met with at the islands of Gallapagos in the South-sea were very large and fat, and no Pullet was better eating; and that some of the biggest of them weigh'd an hundred and fifty, and two hundred weight, being two foot six inches broad on the Callapee, or flat shell, that incloses the belly: That there is such plenty of these tortoises at those islands, that a ship's crew of five or six hundred men might subsist on them for several months, without any other provisions. Then he proceeds to describe the several sorts of tortoises; one of which is called by the Spaniards the Hecatée, that lives for the most part in fresh water, and seldom comes to land: These weigh ten or fifteen pound, have small legs, flat feet, and slender long necks. A second sort are called Tenapen, which are much less, scarce half so big as the former; the convex shell on their backs naturally finely carved and clouded: These live in bogs or watery plashees, or on the firm land near such places. Both these are very good meat.

Sea-tortoise. As for the Sea-tortoise, or Turtle, he observed there were four sorts, viz. the Trunk-turtle, the Loggerhead, the Hawks-bill, and the Green-turtle. The Trunk-turtle is the largest, the shell on their backs higher and rounder than the rest, and their flesh rank and unwholesome. The Loggerhead is so called on account of his great head, which is much bigger than that of any other turtle: The flesh of these also is rank, and never eaten, but in cases of necessity. The Hawks-bill is the least, and so denominated from his mouth resembling that of a Hawk's-bill: These are but indifferent food, tho' better than the Loggerhead; and it is the shell of these that is so much esteem'd for making boxes, cabinets, combs, and other toys. The Green-turtle is so called from the greenness of its shell: It is very thin, transparent, and better clouded than the Hawk's-bill; but only used in inlaying-work, the shell is so very thin: Their flesh is the sweetest of all turtle; the fat yellow, and the lean white; and in some places they are so large, that they weigh two hundred pound, and upwards; but in the Bay of Campeachy they are not so big, and the fat is green, the lean of a brownish colour. The turtle that haunt the keys, or small islands, south of Cuba, are of various kinds; some bigger, others less; the flesh of some green, of others dark brown, and a third yellowish: And with these the English at Jamaica usually are supplied; the markets are every day plentifully stock'd with them, and they are the usual food of the common people. The Green-turtle live on grafs that grows at the bottom of the sea in four or five fathom water.

Every species of turtle, according to DAMPIER, lay their eggs in the sand, and lay three times in the season, at every time fourscore or an hundred eggs, about the bigness of an Hen's egg, but round, and cover'd only with a white tough skin or membrane. In the Bay of Honduras are several islands where the Hawks-bill turtle lay their eggs; and there are some sandy bays on the continent near Vera Cruz, in the Gulph of Mexico, where they breed. When a she-tortoise comes out of the sea to lay, she is an hour, at least, before she returns again; for she always goes above high

water-mark; and if it be low water when she comes ashore, she must rest once or twice (being very heavy) before she comes to the place; and, having found a spot to her mind, she makes a great hole with her fins in the sand, where she lays her eggs, and then covers them up two foot deep, and returns to sea, leaving the sun and the warm sand to hatch them. Those that make it their business to catch tortoise, wait for them when they come on shore to lay, and, turning them on their backs with poles, the creature can never get up again. It is very easy to intercept them, they march so slow, and two men will turn a great many in one night; but some of them, 'tis said, are too big and heavy for a single man to turn: They are frequently struck by the seamen with a spear or fising, which the sportsman darts at them from the yard-arm, striking through the shell; and, a line being fasten'd to the staff, he draws them up into the ship.

Mr. DAMPIER remarks, that the tortoises, at the time of their breeding, leave their usual haunts for two or three months, and resort to other places, sometimes above an hundred leagues distant, to lay their eggs; and he is of opinion, that they eat nothing during this season. He observes also, that the male always accompanies the female when she goes to lay, and never leaves her 'till she returns: That they are both very fat at the beginning of the season; but before they return the male is so lean, that he is not eatable; but the flesh of the female is good to the very last, tho' it is not so fat as at the beginning: They are nine or ten days, 'tis said, in the act of generation in the water, the male on the female's back; nor is the male to be frighten'd or drove away at these times; she indeed endeavours to get away, if a boat approaches when they rise to blow or take breath; but the male grasps her with his two fore-fins, and holds her fast; and a very bad striker may strike them both at such times. It seems, a Sea-tortoise cannot remain in the deep, without coming up to the surface of the water to blow or take breath once within eight or ten minutes. Those that are not good meat, afford however a great deal of oil.

These animals live to a very great age, at least we are sure the Land-tortoises do so; for Archbishop LAUD put one into his garden at Lambeth 100 years ago, which I saw there very lately. This creature makes a hole in the ground, about Michaelmas, every year, where it lies all the winter, and appears again about Easter; and is supposed to eat nothing while under ground; some of the Lambeth family having had the curiosity to weigh him a little before he disappears, and when he comes up again, and they find him some pounds lighter in the Spring than he was the preceding Autumn.

I don't find they want any shell-fish in the American seas, that we have here; and they have Oysters and Muscles of a prodigious size. FUNNEL mentions some Rock-oysters he met with, so large, that one of them would dine several men: But the most valuable oyster is the Pearl-oyster, found in the Gulph of Nicoya, the Gulph of California, and in several other parts of the Mexican coast. These are about the size of our middling oysters, but flatter and thinner; the pearl is found at the head of the oyster, between the meat and the shell, and some will have twenty or thirty small seed-pearls about them, and others none at all: The shell of the oyster is more beautiful on the inside than the pearl itself: The flesh, however, is less valuable than that of any other oyster, and scarce eatable. The Indians dive for these oysters in five, six, seven, or eight

CHAP.
VIII.

eight fathom water, and bring up ten or twelve oysters at a time; and those on board the vessel open them as they are brought up. The Spaniards, 'tis said, destroy'd a great many thousands of the Indians soon after the conquest, by compelling them to dive and drudge for oysters beyond their strength: A pearl was more valued by them than a hundred of these poor wretches lives: They had no mercy on them therefore, but kept them in the water frequently 'till they lost the use of their limbs, or died in the service. And thus it was that the natives of the Bahama islands in particular, who were esteem'd excellent divers, were destroy'd.

Conch.

The Conch is another large shell-fish, form'd like a Snail: The colour of the shell within is like mother of pearl; but the outside of it rough: The flesh of it is very good eating, after it has been well scour'd with sand.

As to the Lobsters, Crabs, Prawns, Shrimps, and other shell-fish, they have in common with us: These need no description. They have, in their lakes and rivers, fish like our Jacks and Carp, and plenty of others, that are excellent food, that will be described, in treating of other parts of America. I shall proceed, in the next place, to enquire into their vegetables.

CHAP. IX.

Of the Mexican vegetables, viz. their forest and fruit-trees, corn, herbage, roots, and flowers; and also of their husbandry.

Vegeta-
ble.

THE woods on the tops and sides of the mountains, and in the upland country, are either fine forests, or delightful groves of trees, of various kinds, large and tall, with little or no underwood; so that a man rides through them with pleasure: Whereas on the drown'd lands, near the coasts, and at the mouth of rivers, there is nothing but Mangroves, Bamboe-canes, Log-wood, and Shrubs, with bushes and brambles, through which it is difficult to penetrate. There is not much timber in the low-lands.

The Cot-
ton-tree.

The Cotton-tree, for its size and its use, is one of the most remarkable in this country: Of these there are two sorts, the white and the red: The white Cotton-tree grows like the oak, but is much larger and taller; the body is straight, and clear from knots or boughs to the head, where it spreads out its great limbs horizontally like the Oak. The bodies of these trees are some of them three or four-score foot high, and ten or twelve in diameter; the bark is grey and smooth; the leaves are like those of the Plum-tree, oval and indented on the edges, and of a dark green; the leaves fall off the beginning of April, but, the young ones sprouting out at the same time, it is always green: It bears a pod as big as a small Walnut, which bursts when it is ripe, and then the cotton falls, or is blown away. This sort of cotton is of little use, unless to stuff quilts or pillows; the cotton that is spun and wove into cloth, grows upon a shrub. The red Cotton-tree is not so large as the white, and bears no cotton. The wood of both is very soft, spongy, and light, and easily wrought; but the red is the hardest. Of the white the Indians make their canoes and peria-goes, which differ only in their dimensions; the canoe being small, and holding but two or three men, and the peria-goe three or four-score men: However, the largest are made out of the body of one single cotton-tree. These the Indians used to burn hollow, or form with their flint hatchets, 'till

the Europeans taught them the use of iron. The Indians also use this wood in erecting their slight huts; but it is by no means fit for more substantial buildings, being softer than our Willow; nor will it last long converted into boats or canoes, unless it be frequently pitch'd and tarr'd, and great care taken of it. The reason they make use of this wood for canoes, is because the body of the tree is so large, the wood light, and easily wrought. DAMPIER calls it a weed; but observes, it is the largest plant that grows in America.

CHAP.
IX.

Their Cedar-trees are exceeding tall and large, and used chiefly in building; the wood is very red, of a fine grain and fragrant smell; and this timber is so plentiful in Mexico, that whole towns are built with it. This wood also makes the best and most durable canoes, tho' not so large as the cotton-tree: But it is a mistake, DAMPIER observes, that the worm will not take it; for he had seen several canoes, made of it, that were worm-eaten. There are some white Cedars, that differ from the former only in their colour. Of Oaks and Fir-trees also there is great plenty in Mexico: So that they want no manner of timber, either for building houses or ships.

They have several kinds of wood proper for dying, particularly Logwood, which grows chiefly in the Bays of Honduras and Campeachy, on the overflow'd grounds, among the Mangroves. DAMPIER, who was a Logwood-cutter, says, it is much like our white Thorn, but a great deal bigger: That the rind of the young branches is white and smooth, and set with Thorns; so that it may be easily mistaken for white Thorn: But the body and old branches are blackish, and the rind rough, and the leaves resemble those of the white Thorn: That they chuse to cut the old black rind-trees, which have but little sap; for the sap and outside is white: The heart, which is red, is only used in dying; and therefore they chop off the white sap 'till they come to the heart; and, after it has lain a little while, it turns black, and will tinge the water it lies in like ink. Some trees are five or six foot in circumference; and these they cut out into logs fit for a man's burden; for they carry them on their shoulders to the boats; and it is a very ponderous wood.

There is another kind of wood mention'd by DAMPIER, which he calls Blood-wood, used in dying reds: He says, it is more valuable than Logwood, and grows in the Gulph of Nicaragua.

There are three sorts of Mangrove-trees, according to DAMPIER, black, red and white. The black is the largest, growing sometimes to the bigness of a moderate Oak, and about twenty foot high. It is very hard serviceable timber, but extraordinary weighty. The red Mangrove grows usually by the sea-side, or by rivers and creeks, and from several roots of the bigness of a man's leg, which, about six or eight foot above the ground, join in one body, that seems to be supported by so many artificial stakes. Where this sort of tree grows, it is extremely difficult to march: For these roots or stakes, are so interwoven, that the traveller is often forced to cut his way through: And DAMPIER says, he has gone half a mile, stepping from one root to another, without setting his foot upon the ground. The inside of the bark is red, and used in tanning leather; and some have conjectured, that this is the same with the Jesuits, or Peruvian-bark: But of this I shall enquire farther, when I treat of Peru. The white Mangrove is the least of the three, and of no great service: And neither the black or white Mangrove proceed

CHAP. IX. proceed from such stakes as the red does, but grow from their roots like other trees. It is the red Mangrove that over-runs the flat country near the sea, and grows in water most part of the year; and from this tree it is, that those bogs and morasses are usually called Mangrove-land, in our books of travels.

Bamboo. There is another tree, if it may be called such, that grows on the same kind of land, and usually amongst the Mangrove-trees, and that is the Bamboo, a large knotted hollow cane, that grows to the thickness of a man's leg, and sometimes as big as his middle. These Bamboos serve for measures; and they convert them into vessels to hold their liquors, when saw'd off at the joint; and put them to several other uses.

Mahoe. The Maho-tree is of the bigness of an Ash. The bark looks ragged like tatter'd canvas; and it will strip off in strings from the top to the bottom: Of this they make ropes, and even cables. Having stripped off the bark in great flakes, they then divide them into smaller strings, which they beat as we do Hemp, and afterwards twist into ropes: Of these strings they also make fishing-nets.

Light-wood. The Lightwood-tree, so called from the lightness of the wood, is of the size of an Elm, straight and well-bodied, and somewhat resembles Cork: It is so exceeding light in the water, that three or four blocks of it, of the thickness of a man's thigh, and four foot long, will make a rafter on which three men may go out to sea; and the Indians sometimes make large rafters of it to carry their goods along the coast; which on the coast of the South-sea are called Bark-logs.

White-wood. There is another tree, which has obtained the name of Whitewood, from its exceeding whiteness. The body of it is about as thick as a large nine-pin, and 18 or 20 foot high: The wood hard, close, and ponderous, and of a very fine grain, and esteem'd fit for inlaying and cabinet-work. The rest of their forest-trees will be described in treating of other parts of America.

Fruit-trees and fruits. Cabbage. I proceed, in the next place, to the description of their fruit-trees and fruits, among which I range the Cabbage. This is a tall slender tree, frequently 90 or 100 foot in height. DAMPIER says, he measured one after it was cut down, in the Bay of Campeachy, that was 120 foot long; and there are some much longer. There are no boughs on it, but at the head; and there the branches are of the bigness of a man's arm, and 12 or 14 foot long. About 2 foot from the trunk, these branches shoot out long narrow leaves, about an inch broad, which grow so regularly on each side, that the whole branch seems but one leaf. The fruit is found at the top of the tree, amidst the branches. It is about a foot long, and six inches round; of the form of an ordinary Cabbage, and surrounded with young leaves. According to DAMPIER's description, it is as white as milk, and as sweet as a nut, if eaten raw; and is very good boil'd. There hangs down also from the top of the tree great bunches of red berries, of about six pound weight, like bunches of Grapes; but these are only food for their hogs, not being at all palatable. The body of the tree is mark'd with rings or streaks, from the top to the bottom, at half a foot distance the one from the other. The bark is thin and brittle, the wood black and hard, and the heart or middle of the tree is a white pith. They usually cut down the tree for the cabbage; for the gathering the fruit kills it, if they let it stand; and the climbing this lofty plant is as much trouble as the felling of it. The wood is used, in some places,

for boarding the sides of their houses; the body being easily split into four parts for that purpose. These trees appear extremely beautiful in the forests, spreading their fine branches above the heads of all other trees.

The Calabash-tree is short and thick, and the fruit grows among the boughs as Apples do; the shell is hard and thin, of a globular figure, and will hold from two to five quarts. There are two sorts of them; of the one, the fruit is sweet; of the other, bitter: The substance of both spongy and juicy. The Indians eat the sweet Calabash frequently on a journey; but it is not very palatable: The bitter is medicinal, and esteem'd a remedy for Agues. But what this fruit is most valued for, is its shell, of which the Indians make bottles, bowls, drinking-cups, and all kind of vessels for their meat and drink.

The Cacao shall be described next. This tree, full grown, and of the largest sort, according to DAMPIER, is seven or eight foot high to the branches, and a foot and a half thick: The boughs spread horizontally, like the Oak; and have dark green leaves, like those of the Plum-tree, but larger; and the nuts are enclosed in cods, which hang down by a tough stalk from the body of the tree, and from the larger branches; and there are usually about twenty or thirty of these cods upon a well-bearing tree. The cod, or shell, is almost half an inch thick, neither spongy nor woody, but of a substance between both, brittle and harder than the rind of a Lemon, and, like that, the surface is grained or knotted, but more coarse and unequal. The cods are, at first, of a dark green; but the side next the sun of a muddy red. As they ripen, the green turns to a fine bright yellow, and the muddy to a more beautiful red. They neither ripen, nor are gather'd at once; but, for three weeks or a month, while the season lasts, the Overseers of the plantations go every day to see which are turn'd yellow, not cutting more than one or two from a tree in a day. When the cods are gather'd, they are laid in heaps to sweat; after which, they break the rind or shell, and take out the nuts, which stick close together in regular rows, like the grain in an ear of Maiz. There are fourscore or an hundred nuts in a cod, according to DAMPIER (thirty or forty, according to FUNNEL; but ten or fifteen, says GEMELLI CARERI) about the bigness of an Almond. The young trees are raised from nuts, and bear in four or five years; and they have from five hundred to two thousand trees in a plantation, or Cacao-walk, as it is called. The young trees are shelter'd from the sun at first by Plantain-trees set about them; but, when they are grown to any bigness, the Plantains are cut down.

GEMELLI CARERI gives us this account of the tree and fruit. He says, the nut is planted in a hot and dry soil: That it springs up within a fortnight, but does not grow above three spans in two years, at which height it must be transplanted; and then the Spaniards set them in rows, eighteen spans from each other. A stake is set up to support them, and Plantains and other trees planted about them, because they thrive best in the shade: However, the root must be kept warm, and defend-ed from too much wet, and from a species of worms that are very prejudicial to them. Within the space of five years, it is as thick as a man's wrist, and seven spans in height; and then it bears. Its leaves are like the Chestnut, and it blossoms all over like the Jessamin: From the blossom shoots out an ear, or cod, like that of Indian-wheat, which is at first

CHAP.
IX.

green, and of a chestnut colour when ripe; but sometimes yellow, white, or purple. Within the ear (or shell) are found the Cacao-nuts, with a white down upon them; being from ten to fifteen in number. These ears are gather'd about the full of the moon; and the nuts, being taken out, are kept drying in the house, in the shade; then laid three days in the sun, and afterwards in the house, 'till they are well dried.

Venella.

The Venella, or Bainilla, call'd by the Spaniards Bexuco, which is usually mix'd with the Cacao-nut to make Chocolate, is a sort of cane, which twines about the Orange-tree, or any other, like Ivy: It produces a long green cod, which, when gather'd and dry'd in the sun, is hard and blackish. He observes, that the Europeans to every pound of Cacao add a pound of Sugar, and an ounce of Cinnamon: But neither the Indians, or the Spaniards of America, use any Venella's, esteeming them unwholesome. The best Chocolate, according to the Indians, is made with Cinnamon, adding to every pound of Cacao two ounces of Indian-wheat. This liquor was drank by the Indians (without Cinnamon) before the Spaniards arrived there; but they have improved it, and it is so common now at Mexico, that there is scarce a Negroe or a common Porter but drinks it every day, and the better sort of people four times a day. GEMELLI observes, that Cacao-nuts go in the markets of Mexico instead of small money, twelve or fifteen of them being about the value of a penny; but they rise and fall in their value, according to the plenty or scarcity of this fruit.

Plantains
and Bananoes.

Plantains and Bananoes are fruits very common here, as well as in Africa and the East-Indies. The Plantain fruit is of the size and shape of a Bologna sausage; the rind yellow, and very tender, which being stripped off, we find a soft luscious pulp, very agreeable to some palates: It has the largest leaf of any plant. The Bananoe is much the same kind of fruit, but less; and both of them are eaten raw, or roasted, by the natives all day long. They steep them also in water, and, adding some honey to them, make a liquor tolerably strong and pleasant.

The Pine-apple.

The Pine-apple also is common to the East and West-Indies. It is of the shape of one of our Pine-apples, but much larger; the rind full as rough, but easily pared off: The fruit is yellow, and as firm as a Peach; and is generally said to have the taste of every delicious fruit. Nothing can excel those I met with in the East-Indies; but they were held to be hot and feverish. The Spaniards, who preserve all manner of fruits, esteem this the best. The reader will find a full description of the tree and fruit, as also of the Plantain and Bananoe, in the First Volume of *Modern History*, which treats of the East-Indies.

Sapadillo.

The Sapadillo resembles the Pear-tree in its size and figure, and the fruit appears to the view like that of the Bergamot-pear. When first gather'd, the juice is white and clammy, and the pulp hard; but, after it has lain two or three days, it becomes soft and very sweet. In the middle of it are two or three black stones or seeds; and it is generally esteem'd an excellent cooling fruit.

Avogato
Pear.

The Avogato Pear-tree is of the size of the former, and not unlike it in shape; the fruit green, and as large as a Lemon, and, when ripe, turns yellow: It has a soft thin rind, which is peeled off; and the pulp is as soft as butter, but a little insipid; and therefore they usually mix it with sugar and lime-juice; and thus order'd, the Spaniards esteem it an excellent dish, eating often of it: And it is

the more esteemed by that people, according to CHAP. DAMPIER, as it inspires them with fresh vigour IX. for venereal encounters.

The Mammee-tree is a large, tall, straight-bodied Mammee-tree, without knots or branches for sixty or seventy foot in height: The head spreads its branches pretty wide: the fruit is round, and of the size of a French pippin; the rind yellow, and tough when it is ripe; the pulp yellow, and has in it two large stones as big as Almonds: It has a fine fragrant smell, and the taste is answerable.

The Mammee-Sappota-tree is not so large or tall as the former; the rind of the fruit thin and brittle, and the pulp a deep red, with a rough flat stone in it: This fruit is extremely well relish'd, and wholesome; and as generally eaten as any fruit in the West-Indies. There is also the wild Mammee-tree, which bears no fruit; but the timber, being very straight and tall, serves for masts for ships.

The Grape-tree is 7 or 8 foot high, and 2 or 3 in circumference; the fruit about the bigness of a common Grape, and grows in clusters, but has a great stone in the middle of it; the pulp is reddish, wholesome, and well tasted; tho' there is but little of it.

The Guava is common to the East and West-Indies; grows upon a shrub; the fruit green on the outside, perfectly round, and of the size of a Crab-apple; the rind is soft, and, being taken off, we find a yellow or reddish pulp, full of seeds: It has both a tart and a sweetish flavour, very agreeable to the palate; but most valuable for being of such an astringent nature, that it will either prevent or cure a Dysentery or Bloody-flux (the distemper that the Europeans are most liable to in all hot countries) if the patient has not neglected himself too long: And the Pomegranate has much the same effect. If our people were acquainted with the virtues of these, and some other fruits, when they first arrive in the East or West-Indies, we should not lose half the men we usually do; for they are to be had at any time of the year almost. The Guava is esteem'd more wholesome when it is green, than when it is ripe; for some have observed, when it is over-ripe, it has a laxative quality.

The prickly-pear is a shrub about 5 foot high, Prickle: that delights in a barren sandy soil, especially if it be near the sea, where the sand is brackish. It is so full of large strong thorns (from whence it takes its name) that nothing makes a securer fence. The fruit is as big as a large Plum, and opens when ripe like a Medlar, discovering a red pulp full of seeds; pleasant to the taste, and very cooling and refreshing; but colours the urine like blood, which has frighten'd strangers that were not acquainted with it: However, this is attended with no ill consequences.

The Bibby-tree has a straight slender body, naked Bibby-tree, of leaves, but full of thorns; sixty or seventy foot high: At the top it is full of branches, among which grows the fruit, being white berries of the bigness of a Nutmeg: They are very oily: The Indians beat them in a mortar, and boil the liquor that comes from them, which produces a bitter oil, that they anoint themselves with, and mix it with the colours they use in painting their bodies. They also tap the Bibby-tree, and it affords them a tart liquor, of the colour of Whey, which is fit to drink, after they have kept it two or three days.

Besides the fruits proper to Mexico, the Spaniards have introduced Oranges, Lemons, Grapes, Figs, and almost all manner of European fruits, except Nuts and Cherries: But the Grapes of this country

CHAP. IX. try will not make wine; nor do I remember any country between the Tropics, where wine is made of Grapes, unless in Peru, where they have not those excessive rains annually as they have in every other country that lies within the Tropics.

As to their Sugar, Indico, Otta, Silvester, and other dyes; Tobacco, Pepper, Ginger, and such plants as they have in common with the rest of America; I shall describe them hereafter, when I come to treat of the British plantations.

Gourds. But I must not forget their Gourds, which grow to a very large size, and either run upon the ground, or up the trees; the meat or pulp of some of them serving for food, and others for medicine: But they are valued most by the natives for their shells, which serve them for pails, bowls, and buckets.

Melons, &c. As to Melons, Cucumbers, and Onions, they have them in much greater perfection here, and in all hot countries, than in colder climates.

Silk-grass. There is also a very useful plant here, to which the English have given the name of Silk-grass. It pretty much resembles Flax or Sedge, and grows on the sides of hills. The leaves are as thick as a man's hand in the middle, and thin at the edges; a yard or two in length, and indented like a saw. The Indians cut them at a proper growth; then dry and beat them, and no Flax affords a better thread; and of these they make cordage and fishing-nets, stockings and hammocks: They also make a yellowish lace of the thread, which is worn by the Mestizo women.

Manchinzel-tree. There are still some other trees I have omitted, which deserve a particular notice, as the Manchinzel-tree, whose fruit is in smell, taste and colour like a lovely Apple, but less, and of a poisonous nature; inasmuch, that if any animal has been feeding on it, the flesh of the creature will poison the man that eats it. These trees have large bodies, fine spread heads, full of leaves; but are very low: The wood has a curious grain; and therefore is sometimes used in carving and cabinet-work; but the very sap, 'tis said, will raise blisters where it falls, as will the rain-water which runs from it, according to WAFER.

Tamarinds, Locust-trees, and a Bastard Cinnamon. They have also Tamarinds, Locust-trees, and a Bastard Cinnamon, in Mexico: And GEMELLI CARERI gives us this farther account of the Sapotes. He observes, there are four sorts of them: 1. The Black Sapotes, as big as a Walnut-tree, but the leaves smaller; the fruit round, and has a thin green rind; the pulp of the colour and taste of Cassia, with four small kernels in it. 2. The White Sapotes, as tall as a Pear-tree, and the fruit as large as a Pear; green without, and white within; and has four white kernels: This fruit inclines people to sleep. 3. The Sapote Borachio, or Drunken Sapote, so called from its inebriating quality: A pleasant tart fruit. 4. The Little Sapote, whose fruit is of a purple colour, and pleasant tasted; and as much valued as any fruit that grows in Mexico.

Granadilla. The Granadilla de China grows like Ivy, winding about some neighbouring tree 'till it perfectly covers it: The fruit is as big as a Hen's egg, white and yellow without, and white within; and has seeds like the Grape: There is a pretty mixture of sweet and sour in the taste. Most of these fruits are to be had, in the markets of Mexico, from March to September; and the Mammies and Black Sapote grow on the mountains all the year round.

Maghey-tree and liquor. According to GEMELLI, there is not a plant of more general use than the Maghey; for the leaves, he says, furnish the natives with thread for linnen

and cordage: It also yields Balsam, and a liquor as sweet as Honey; into which the Indians infuse a root that makes it ferment like wine, and it is of equal strength, making people very drunk. They distil a spirit from it also as strong as Brandy: This was so universally drank in the city of Mexico, GEMELLI relates, that the excise of it came to eleven hundred thousand pieces of eight (about two hundred and fifty thousand pounds sterling) per annum: But the Indians frequently getting drunk and mad with this liquor, and making an insurrection in the year 1692, when they set fire to the Viceroy's palace, and committed many other outrages, it was prohibited for some time: However, the duty being so considerable, GEMELLI says, there came orders from Spain to permit the making and drinking this liquor again, when he was at Mexico in the year 1698.

I proceed, in the next place, to enquire into the most remarkable balms, gums, and drugs, that are found in Mexico; among which are the Copal and Anime; both of them a kind of rosin, and not much unlike.

The Copal is very white and clear, and has a pretty good scent: Of this the Indians made incense and perfumes for their sacrifices in their temples; and, when the Spaniards first arrived, their Priests went out to meet them with little fire-pans, or censers, in which they burnt this Copal: And the Spanish Physicians now burn it under their patients noses, for diseases arising from the coldness of the head.

The Anime also is a white gum, or rosin, distilling from a great tree, and more oily than Copal: It has an exceeding pleasant smell, when burnt. This also is used by Physicians for pains in the head, and in plaisters and scar-cloths applied to the stomach.

The gum Tacamahaca is got by making incisions in a tree like a Willow: It has a very fine scent, and is of great use to dissolve swellings, remove pains in the limbs, and in many other cases: And the gum Coranna hath much the same effects.

The liquid Amber is obtained by making incisions in a fine fair tree that grows in Mexico. The bark of this tree, as well as the liquor distilling from it, has an exceeding sweet smell, but more when it is burnt; a little of it being sufficient to perfume whole houses, and even streets: It is mighty refreshing to the head, and, used in plaisters, dissolves swellings, and eases pains in the stomach or limbs.

The oil of Amber is drawn from liquid Amber, and is esteemed an excellent medicine for pains in the limbs, or dead palsies, the patient being rubbed with it.

The Balm, or Balsam, usually called the Balsam of Peru, is also found in Mexico. The tree that yields it, is of the size and figure of the Pomegranate-tree: It is got by making incisions in the bark, and is almost of all colours, viz. white, red, green, and blackish: It is used both in medicine and as a perfume; and the Indians applied it to the healing of wounds before the Spaniards arrived there. Taken inwardly, it is good for coughs and shortness of breath; for diseases in the bladder, and for obstructions: It strengthens the stomach, and removes pains in it; and is said to have many other virtues. When the Spaniards first made use of it to cure their wounded men, at the siege of Mexico, as they had been taught by their Indian allies, the cures were perform'd so suddenly, that they imagined there was something miraculous in it. The best sort of this balsam, which is obtained by incision, is called Opobalsamum. There is another sort they get by boiling the wood of the tree cut into small pieces, there arising

CHAP. IX. arising a kind of oil on the top of the liquor, which, when cool, grows thick, and is called Xylobalsamum.

There are three sorts of wood also found in Mexico, of great use in medicine, viz. Guaiacum, China Root, and Sarfiparilla.

Guaiacum. The Guaiacum is a tree as large as an Oak; the bark dry, but full of gum; the heart of the tree almost black, very hard, and ponderous: It has a small leaf, and yields a yellow flower, out of which proceeds a round fruit, of the size of a Crab-apple, with small kernels. The Physicians make a decoction of the wood and bark, cut into thin slices, for their patients; and it is held to be an excellent remedy for the French disease. It is said also to cure the Dropsy, and many other distempers.

China-root. The China-root we received first from China: But this is also a Mexican plant, and is said to have much the same virtues as the former, and to give relief in the Gout and Sciatica.

Sarfiparilla. The Sarfiparilla also is chiefly remarkable for its roots, which are very long and large. It is found in the province of Honduras. They sometimes make a syrup of it; but it is taken several ways, for the same distempers, as the China-root is taken.

Mechoacan. The root Mechoacan, which takes its name from a province of Mexico, where it is found, is another excellent medicine in the Dropsy, Jaundice, and many other distempers.

Cassava-root. The roots which serve the Indians chiefly for food, are the Cassava, or Cassabi-root, Yams, and Potatoes.

The Cassava-root something resembles a Parsnip. There are two sorts of them; the one sweet and innocent, the other poisonous: The sweet sort they roast, and eat as they do Potatoes and other roots: Of the poisonous sort they first boil and press out all the juice, then dry and grind it to powder, and make biscuit of it; and this is the only bread or flour they have in most parts of South America, and in some provinces of North America. But the natives, for the most part, in North America, make bread and flour of Maiz, or Indian-corn, as they did before the Spaniards came thither.

As to Yams, Potatoes, Rhadishes, &c. they need no description: I shall only observe, that all manner of European roots and fruits grow much larger, and come to much greater perfection there than here; and that the Spaniards have transported thither almost every species of herbs and sallads.

Corn and husbandry. I come now to speak of their husbandry. The Spaniards have carried over Wheat and Barley, Peas and Beans, and other European grain, which thrive very well in some places; but their principal grain is still (as it was before the conquest) Maiz, or Indian-corn, which is the food of Men, of Horses, Mules and Oxen. This they plant in little hillocks, like those in our Hop-grounds, at the beginning of the rainy season, in May or June; and reap in October when the fair weather returns. They may, and some of them do, plant this grain at other times, and it grows pretty well; but the Spring is the general seed-time; and their principal harvest falls in our Autumn.

This Maiz, or Indian-corn, we see frequently brought to England: The stem is as big as a small cane, and usually bears two or three heads or ears, in each of which are several hundred grains, set as close as possible; being of a yellow colour, and tasting much like our dry'd Peas, pretty strong; and the bread or cakes made of the flour is harsh and unpalatable, if it is not eat the same day it is made. This grain they also steep in water, and make strong drink of it, as has been observed already. They sow Eu-

ropean Wheat, Barley, Peas and Beans almost at any time, only contriving that the harvest may be in the fair season.

The Spaniards of Mexico, besides their arable, have large grazing-farms, in which one Grazier shall have several hundred head of Black cattle, and a great many thousand Sheep. During the rainy season, which lasts near half the year, and for some months after, they never want good pasture. When the meadows and low grounds are overflow'd, their hills produce plenty of grass. They are most put to it for fodder in February, March and April, when their grounds are burnt up; and there is very little grass to be met with, except on the banks of their lakes and rivers, and in the woods; then they have little else to feed them with, but Barley and Indian-corn, straw, and the blades that shoot from the Indian-corn, which is not much better than straw; for they make no hay in any hot countries.

As to the Indians, who have hitherto preserved their liberties, and are not yet under the tyranny of the Spaniards, they have only small plantations among the woods, at a distance from the Spanish towns; where they plant a little Maiz, Yams and Potatoes, with some few Plantains, and other fruits. The men cut down the timber, and clear the ground at first; but both the planting and gathering in the grain and fruits are left entirely to the women, as well as the business within doors: And as the unconquer'd Indians subsist chiefly by hunting and fishing, many of them, 'tis said, plant little or nothing, but rob the Spanish plantations, of which they look upon themselves the true proprietors, and furnish themselves that way with Corn, Cacao, and other provisions.

The Spaniards, beside their Maiz, Wheat, and other European grain, sow some Rice; for which this country (being flooded every year) is extremely proper, that grain growing in water: They plant Rice therefore soon after the rainy season begins, and it is fit to be moved by that time the fair weather returns. They have also large farms or plantations of Sugar, Tobacco, and Indico; but of the cultivation and husbandry of these I shall enlarge in the description of the British plantations, where they are brought to as great perfection as any where.

They are pretty much employ'd also in cutting Logwood in their Cochineal plantations, and looking after the Silvester, Otta, and other dying plants and herbs; in cultivating and dressing their Cotton; in the making of Salt, and in their fisheries, which are very considerable on their sea-coasts, and in their numerous lakes and rivers.

As to flowers, ACOSTA observes, that the Indians are extremely fond of them, and have great variety, which they make up into nosegays, and present to their superiors, when they have any favour to ask, or would testify their esteem and affection for them: That their great men are seldom seen without a nosegay in their hands; and they always present them to their guests at entertainments, expressing a great deal of art in the marching and disposing of the flowers: That they now use Spanish flowers, as well as those of the country; and that European flowers come to great perfection there; namely, Roses, Jessamin, Violets, Gilliflowers, and several others that have been transported from Spain. As to the names of the Indian flowers, ACOSTA does not mention them; only says, they have blue, red, violet, yellow and white, and a thousand different colours; which the Indians used to wear on their heads, as they did feathers, for ornament

CHAP. IX. *Flowers of urea.* **Flowers** *have very little scent in hot countries.* **name**: But he acknowledges, their flowers do not smell very sweet, unless they be the blossoms or flowers that grow upon trees; one of which he calls the Floripondro, which bears no fruit, but the flowers are larger than a Lilly, and remain upon the tree all the year round; the scent whereof is exceeding sweet and agreeable, morning and evening. Another tree bears a flower of the shape of a heart, whose scent is too strong and sweet to be borne with pleasure: And the tree Granadilla, the superstitious imagine, has the portraiture of the instruments of our Saviour's passion; as the nails, the pillar to which he was fasten'd, the scourge and crown of thorns, and the five wounds: But **Acosta** acknowledges, it requires a very lively imagination, and a great deal of faith, to discover these things.

But how beautiful soever the Indian flowers may be to the eye, every one, who has resided in hot countries, must know they have little or no scent (except those on their trees.) The sun appears to be a great enemy to fragrant flowers, where it shines with an intense heat. We may observe, even in this cool climate, that no flowers smell so sweetly in the heat of the day, as they do morning and evening. Therefore those who recommend Mexico for its odoriferous herbs and flowers, are certainly under a mistake; tho' it is true, they abound in sweet woods and aromatic gums, which make some amends for this defect. And thus having gone through their vegetables, as far as is consistent with a work of this general nature, I proceed to enquire into their minerals.

CHAP. X.

Of the Mexican minerals; their coin; their precious stones and pearls; and of their weights and measures.

Minerals. **I**T was an insatiable thirst after these rich treasures, that chiefly incited the Spaniards to visit the Mexican shores, and plant colonies in that new world. A zeal for the propagation of Christianity, which they pretended, was certainly a very laudable motive for their passing the Atlantick ocean; but had there been no Gold, Silver, or Precious stones to be found there, possibly the Adventurers had not been very numerous.

The Gold and Silver mines of Mexico are in the rocky, mountainous, and barren parts of the country; and, indeed, neither these or any other metals are found in a fruitful soil.

Gold *in mines.* Gold is found here either in grains, in dust, in the sands of rivers, or in stone in the mines. The grains are small pieces of Gold, like the seeds or kernels of fruit, which are found without the mixture of any other metal, and have no need of melting or refining: And **Acosta** assures us, he has seen these so large as to weigh many pounds; and sometimes they find pieces very fine and pure, like small round roots. But much the greatest quantity of gold is found in dust in the sands of rivers and torrents, after the rains have fallen; and it is the business of many thousand Indians and Negroes to take up and wash such sands, in bowls and basons, 'till they have separated the gold from the sand. As to the gold which is found in the mines, it is intermix'd, and in a manner incorporated, with great hard stones; some of which, the same writer relates, he has seen, that were half gold and half stone: That it runs in veins like silver, and is exceeding hard to dig and separate: That this gold is usually mix'd with silver or copper; and that which

CHAP. X. is incorporated with copper is the best. The gold seems to lie much nearer the surface than silver, it being found in large pieces at the roots of trees on the mountains, and wash'd into the rivers by the rains; and, as far as I can learn, if they do not find it pretty near the surface in the mines, they never dig so deep for it as they do for silver. Another observation they make is, that gold is usually found in very hot countries, and seldom in a cold climate; from whence some imagine, the sun has a great share in producing it. The purest gold in Mexico is found in the province of Veragua.

The reason that gold is more esteem'd than any other metal, **Acosta** observes, is, because it is the most durable and incorruptible; for fire, which consumes and diminishes other metals, amends this, and brings it to perfection. Golds keep its colour also, tho' it have often pass'd through the fire; and, notwithstanding the body is so firm and solid, yet is it the most soft and malleable, and the most easily wrought, of any other metal. But I take it, that the chief reason gold is more valued than other metals is, the scarcity of it, and the difficulty of coming at it; for iron, no doubt, is much more useful and serviceable than gold; and, were it as scarce, would be much more valued, all manner of tools, arms, and instruments of husbandry, being made of this metal, and no other so proper for these uses.

Acosta begins his description of Silver with the following passage out of the book of Job, viz. *Silver mines.* "Silver hath certain beginnings and roots in its veins; and gold hath a settled place where it engenders and thickens; iron, with digging, is drawn out of the earth; and stone, molten with heat, is turn'd into copper." Thus, says that writer, Job wisely shews, in few words, the nature of silver, gold, iron, and copper: But, methinks, very little of the nature of these metals is to be learnt from this passage. Thus much, however, may be observed from hence, That the ancients, in those very early ages, used to work such mines, and understood how to separate and purify such metals.

The same writer proceeds to observe, that the reason the second place among these metals is given to silver, is that it approaches nearer gold than any other; is more durable, less endamaged by fire, and more malleable; and even surpasses gold in its brightness, beauty, and sound: For the colour, says he, more resembles light, and the sound is more lively, than the other. But I must observe, as on the last head, that the principal reason silver has the second place in our esteem is, that it is more difficult to come at than any metal but gold; for iron is certainly much more useful than silver. But **Acosta** very justly observes farther, that there has been more silver found in America than in all parts of the world besides; tho' China and Guinea seem to have a greater plenty of gold.

The silver mines, as has been hinted already, are usually found in barren rocks and mountains; tho' they are sometimes met with in plain and champain fields. There are two several sorts of them; the one straggling here and there in spots, the other more continuous and fix'd. It is the fix'd mine that has the greatest depth and length; and these are said to resemble the branches and ramifications of trees and plants; and where they find one, they usually meet with a great many in the same place. The Indians, it seems, knew how to purify silver by fire, and to separate it from lead and other metals, before the Spaniards came amongst them; but they

CHAP. X. they knew nothing of the art of refining it by quicksilver, which the Spaniards use at this day. There are some sorts of silver-ore, which cannot be purified and refined by fire alone without quicksilver: This kind of ore they call poor, from its yielding but little silver, and great quantity of baser metals.

The veins where they find silver run between two rocks; the one commonly hard as flint, and the other softer and easy to break. The ore is very unequal; for in the same vein they find that which is very rich, and that which is very poor: The richest ore is of an amber colour, and the second sort that which inclines to black; a third is red, and a fourth of an ash-colour; and some of the ore is scarce to be distinguish'd from common stone, unless by those who are well skill'd in minerals. It is usual to draw from one quintal (or five hundred weight) of ore, thirty, forty, and fifty peso's of silver, of the value of thirteen ryals (six shillings and six-pence): And ACOSTA relates, that he saw some from whence was extracted two hundred and fifty peso's out of every quintal; but this is a very great rarity. The poorest ore yields from two to six peso's the quintal, or very little more: This the Indians look'd upon as rubbish before the Spaniards came, not being able to refine it by fire; but this is found to be much easier refined by quicksilver than the richest ore; and they use quicksilver now both in Mexico and Peru, which is found to extract more silver out of any ore than the fire will: But, as they have no mines of quicksilver in Mexico, as they have in Peru, the silver is refin'd at a much easier expence in Peru than it is in the country I am describing.

As the rich ore yields much silver, so it consumes a great deal of quicksilver; and that which yields but little silver, wastes but little quicksilver.

Refining
of silver.

The manner of refining silver, according to ACOSTA, is thus: They first grind or beat the ore to powder, and then sift it through a fine sieve: After which, they put the powder into vessels, and set it over furnaces, putting to every fifty quintals of ore five quintals of salt, the salt separating the earth and dross from the silver, and making way for the quicksilver to operate more effectually: Then they strain the quicksilver through a piece of fine linnen into the ore, stirring it about, so that it may the better incorporate with the other. Before they used furnaces, they mingled the ore with the quicksilver in great troughs, letting it remain some days, and then mixed and stirred it 'till they thought the quicksilver was well incorporated with the silver, which was about twenty days; but when they found that fire incorporated them much sooner, they set their vessels over furnaces, and, in five or six days, the quicksilver is incorporated with the silver. When the mercury has done its part, and assembled all the silver, leaving nothing behind, but is filled as a sponge with water, and has separated the silver from the lead and copper, with which it was engender'd; they put the ore into coppers and vessels full of water, turning it about with wheels, and washing of it: Whereupon the earth and dross goes off with the water that runs away, and the silver and quicksilver, being more ponderous, remains at bottom. Then they take it out, and wash it again in other tubs and vessels, until they have well cleansed the silver and quicksilver from all the dross: After which, they strain it through cloths, and make it into the form of sugar-loaves, of about an hundred pound weight each; on which they put earthen vessels or caps of the same shape; and, setting these over a violent fire,

the quicksilver exhales in smoke, which, striking against the earthen cap, thickens and distils like the smoke of a pot cover'd; and by a pipe, like that of a limbeck, they receive the quicksilver, which distils from it, the silver remaining without changing its form; but its weight is diminish'd five parts in six, and is light and porous like a sponge. Thus the quicksilver is separated from the silver; and of two of these loaves they make one bar of silver, of sixty-five or sixty-six marks weight, eight ounces in every mark, and then carry them to be touch'd and mark'd.

GEMELLI CARERI relates, that when he was at Mexico, in the year 1698, he went to see the silver mines of Pachuca; one of which, call'd Santa Cruz, was 224 English yards deep; and the other, call'd Navarro, was 195 yards deep: That out of the first, the ore was drawn up by wheels, which were kept in perpetual motion by four mules, and as one bucket came up another went down; and that they drain'd the mine of water the same way: That out of the mine, call'd Navarro, the Indians brought up the ore on their backs with imminent danger, climbing up many ladders, or rather upright posts with notches in them: for which they were paid four ryals (two shillings) a day, and at night were allowed to carry up as much ore as they could at once, and share it with the owner of the mine. The same writer relates, that he went to see the mines on a neighbouring mountain, where he found a little city of thatch'd houses, not less than twelve thousand Indians getting a livelihood by digging in those mines; adding, that there are, within six leagues of that mountain, no less than a thousand mines; and that out of one of those, called the Trinity, nine hundred or a thousand men were employ'd every day, and, within the space of ten years, had drawn forty millions of silver (I presume he means pieces of eight or crowns): And that it had cost them two millions to prop up those mines with timber, and throw out the water; and it was then become so dangerous, that there was no working of it: And, indeed, nothing is so common with the Spaniards of Mexico and Peru, as to dig mountains perfectly hollow, in search of silver, and leave nothing but a crust of earth and rocks, which it requires no small skill and labour to support, 'till they have exhausted the treasure.

But tho' the Trinity-mine was become impracticable, our author says they sunk another near it, no less rich; into which he had the curiosity to go and see the veins of silver; and, having gone down five ladders or stages, he was astonish'd to see how likely the mine was to tumble in, and would have gone up again, but the Miner, his guide, who carried a light in his hand, persuaded him to go down the rest; which he did, in great fear, because he found it difficult sometimes to clasp the post in his arms, in which the steps were cut, and fix his feet in the notches: But having, at length, gone down three times as far as the Miner told him it was, he came at last to the place where the workmen, with iron wedges, were splitting the hard ore, and made it fly about; but they inform'd him, that it was softer in some places, and of various colours.

When he was at the bottom of the mine, he began to reflect on the danger he run, not only of falling, but of the pestilential damps that frequently arise in these dismal caverns: After he had staid there about two hours, therefore, he went up again in the utmost terror, the ascent being exceeding difficult; and, when he got up into the open air again, he seem'd newly born into the world,

and

CHAP. X. and condemn'd the rashness of the attempt, wherein he thought he ran more hazards than he had done in travelling round the globe.

From this mine GEMELLI went to see the oar separated at the silver-works in Pachuca; where he observed the workmen, when the oar was brought to them, first broke it in pieces with hammers, to separate the metal from the tepate, or stone, that had no silver in it: After which, they sent the good oar to the mills to be reduced to powder, where they beat it as gun-powder is beaten in our mills. He afterwards proceeds to shew how it is refined; but, having taken this from Acoستا, I omit that part of his relation, and observe, that quicksilver being scarce at Mexico, the owners of the mines have much less profit than in Peru: Whereupon the King, instead of a fifth he receives there, takes but a tenth part of the silver here.

Any one may open a mine.

Any person, who discovers a mine of gold or silver in Mexico, may work it, paying the King's tenth of the product; and the King's officers assign the discoverer sixty yards round about the place he chooses to dig; beyond which space another may open a mine, leaving five yards between them for a partition: And, as they sink under ground, one may work into another's division, 'till he meets with his workmen; but then he must desist, and retire into his own part.

Four millions sterling produced annually.

All the silver dug in the mines of Mexico, or New Spain, is brought to the King's exchequer in the capital city, and enter'd there; except what is run and concealed, which amounts to a great deal: And it is related, that there are two millions of marks, of eight ounces each, enter'd in one year; out of which they coin annually, in that mint, seven hundred thousand marks into pieces of eight.

Silver coin.

There are five sorts of money coin'd in the mint of Mexico, viz. pieces of eight (of the value of four shillings and six-pence each) half pieces of eight, quarter pieces, single ryals (about the value of six-pence english) and half ryals.

There being some gold frequently mixed with the silver, they are separated in this manner; viz. The metal being run and converted into little balls, these are put into vessels, with aqua-fortis, to dissolve, and the gold remains at the bottom of the vessel like black powder: Then the aqua-fortis, containing the silver, is put into two glasses, their mouths fix'd together, and, fire being put to them, the silver remains in one of the glasses. The gold is afterwards run in a furnace, and cast first into round pieces, and then into bars; as is also the silver separated from it: And the gold is coined into pieces of sixteen, eight, four, or two pieces of eight; which are call'd crowns of gold.

Gold coin.

Officers of the mint at Mexico.

All the chief Officers of the mint at Mexico, such as the Treasurer, the Assayer, Cutter, Clerk, Weigher, two Guards, and two Alcalds, are appointed by the King; and all the inferior Officers by the Treasurer. The principal Officers purchase their places, and have the privilege of making them over, or assigning them to whom they please; but then the Officer that resigns must live twenty days after his resignation, to make it valid; and he, to whom the resignation is made, must acquaint the Viceroy with it within sixty days, and pay a third part of the value of his place to the King, and the other to his predecessor or his heirs.

Their salaries.

The Treasurer's place is worth between fifty and sixty thousand pieces of eight (four shillings and six-pence each) per annum; those of Assayer and Founder, settled for ever on the monastery and hermitage of the Barefooted Carmelites of Mexi-

co, fifteen or sixteen thousand pieces of eight per annum. The rest of the chief Officers have three thousand five hundred, and none of them less than eight hundred pieces of eight per annum. The Masters of the eight furnaces and twenty Coiners have each of them eight hundred or a thousand pieces of eight per annum, and the meanest servant earns a piece of eight a day, a great number of which being the Treasurer's slaves, he has the profit of their places.

No gold among the Indians.

As to the Indians, they had no coin of any sort when the Spaniards came amongst them; gold and silver served them only for ornament: Their traffick consisted in bartering and exchanging one thing for another; only the Cacao-nuts served them to purchase herbs and flowers, and things of small value; as they do still in the markets of Mexico, neither the Spaniards or Indians having any copper-coin.

As to weights, the Indians had none; but they had both dry and liquid measures, made either of Calabashes, Bamboe-canes, or wood, by which they distinguish'd quantity: And they had their numbers and characters, by which they adjusted the value of goods and the taxes imposed on them.

As to stones for building, there are in Mexico quarries of Jasper, Porphyry, and all kinds of excellent Marble; for of such stones, the Spanish historians relate, the palaces and temples of Mexico were built before the conquest.

Stones for buildings.

They mention also a great many precious stones and jewels in the ornaments of MONTEZUMA; but have not specified what they were, unless Emeralds and Pearls, and of these the world is furnish'd with great quantities from Mexico.

Precious stones and jewels.

The Emerald is a green stone, and, according to Acoستا, grows in a stone like Crystal; and he says, they seem by little and little to harden and refine: Some he had seen that were half white and half green; others all white, and some perfectly green, which were most esteemed: He had seen some of them as big as a nut; and there were others larger: But as to the Emeralds, mentioned by the antients in the temples of Jupiter and Hercules, several cubits long, of which pillars were form'd, he says, there might be green stones called Emeralds; but they were certainly false Emeralds, and not comparable to the true.

Emeralds.

With their jewels and precious stones I may very well range their Pearls; of which there are great quantities found on the coasts of Mexico, as well as in the seas of South America. Multitudes of Indians and other slaves have been destroy'd by the Spaniards in this part of the world, in fishing up the Oysters that contain them. These slaves, Acoستا relates, were forced to dive into six, nine, and even twelve fathoms water, in search of these Oysters, which are fasten'd to rocks and gravel in the sea; and that they continue above a quarter of an hour under water, as he himself had seen, being dieted in such a manner as might best enable them to hold their breath. The same writer observes, that Pearls differ much in their size, figure, colour, and lustre; and that it is very rare to find two of the same size, form and colour; and, when they do find two alike in all respects, it much increases the value of both, especially for ear-rings: He had seen several pair valued at a thousand ducats each; which, however, fell short of CLEOPATRA's two Pearls, one of which was valued at an hundred thousand ducats; and yet that Queen had the vanity, it seems, to beat one of them to powder, and swallow it at a draught, at a supper she made for MARK ANTHONY: And the

CHAP. X. the other, 'tis said, was cut in two, and hung in the ears of the image of Venus in the Pantheon at Rome. But, as they are more plentiful now, especially since the discovery of America, there are none of near that value at present; tho' they are not inferior to those the ancients mention, in any respect but the price.

CHAP. XI.

Of the traffick of Mexico; their carriages, inns, and way of travelling.

Traffick with foreigners prohibited.

THE people of Mexico, and the rest of the Spanish West-Indies, are prohibited trading with any but the subjects of Spain; nor are foreigners suffer'd to visit their coasts, unless the Assienists, who furnish them with slaves, and that under several restrictions, as will be related hereafter.

Notwithstanding which, the traffick of Mexico is one of the richest and most extensive in the world; for they trade with the Philippine islands near the Coast of China, through the South-sea, or Pacific-ocean; with Peru and Chili, through the same sea; and with Old Spain and the Spanish islands, through the North-sea and Atlantic-ocean. They carry on also a trade with our Assienists, or South-sea company, under certain limitations: All which trades are held lawful. There is also a very considerable smuggling or clandestine trade, carried on between the Mexicans and Indians on the one side, and the English, French and Dutch on the other; which five branches of their trade I shall endeavour to give some light into.

Their trade with the Philippines near China.

I shall first treat of their traffick with the Philippine islands, which are under the dominion of Spain, and lie between the 10th and the 20th degrees of north latitude, a little to the south-east of the province of Canton in China, lying 140 degrees of longitude from Mexico; which, reckoning sixty miles to a degree, makes it eight thousand four hundred miles from Mexico to Manila, the capital of the Philippine islands; and these the Spaniards sail in ten weeks, or three months, in going from Mexico to Manila, having a constant trade-wind from the north-east, and serene weather in 10 or 12 degrees of north latitude, which they get into as soon as they can; and have scarce any occasion to alter their sails 'till they arrive at the Ladrone islands, about four hundred leagues short of the Philippines, where they touch, and take in water and fresh provisions: And in this latitude the South-sea may well be stiled **PACIFIC**; for they scarce ever meet with any storms or bad weather all the way: But it is not so in their return from Manila, in the Philippine islands, to the port of Acapulco in Mexico: This is a voyage of incredible hazards and hardships, which no gain or advantages would induce a wise man to undertake twice; for, when they leave the Philippines, they are forced to abandon the pacific part of this ocean, and stand away to the north, 'till they come into 35, or perhaps 40 degrees, before they can meet with westerly, or even variable winds: And here they are toils'd with frequent storms, and their patience try'd by unconstant weather. **DAMPIER** observes, that this sea is very far from deserving the name of the Pacific-ocean, after we have pass'd the latitude of 30; and **GEMELLI CARERI** assures us, it is the most tempestuous of all seas. And yet this wide and tempestuous ocean must have been pass'd by the Chinese and the Asiatics, if we suppose they sent fleets and colonies from thence to people Mexico,

A tedious stormy passage from the Philippines to Mexico.

as some have fondly imagined. If the Europeans, now the art of ship-building and navigation is so much improved, and they have the compass to guide them, are six or seven months passing from Asia to America, and that with infinite labour and hazard; can any one, that has ever seen the China junks and Asiatic shipping, and knows what poor seamen they are even at this day, suppose that ever any fleets were sent from thence to America, in the early ages, sufficient to people that part of the world? Let any one but read **GEMELLI**'s description of his voyage on board the Spanish galcon from Manila, in the Philippine islands, to Acapulco in Mexico, and he will need no arguments to convince him, that America was never peopled by the Chinese, or any Asiatic nation, by sea: Some particulars whereof I shall take the liberty to recite.

This voyage, says **GEMELLI**, from the Philippine islands to America, may be looked upon as the longest and most dreadful of any in the world; as well because of the vast ocean to be cross'd, being a third (almost half, according to my author) of the terraqueous globe, with the wind always ahead; as for the terrible tempests that happen there one upon the back of another; and for the desperate diseases that seize people, who are sometimes so exceeding cold, and then so excessive hot, that it is enough to destroy a man made of steel, much more flesh and blood, where they have such indifferent food as sea-faring people feed on in long voyages.

For this tedious voyage, **GEMELLI** assures us, they were forced to lay in a thousand jars of water: And, at their first setting out, which was the latter end of June, the winds were so contrary, that they scarce sail'd three leagues in five days; and the heavy rains that fell at the same time, with the excessive heat of the climate, made the beginning of the voyage very uncomfortable. Before they got clear of the Philippines, he says, search was made to discover whether any of the seamen or passengers had filled their jars with merchandize instead of water; and several being found filled with pepper, China ware, and other goods, they were thrown into the sea; and the Captain took in two hundred jars of water more; under such apprehensions they were of being distress'd for water in this tedious voyage, where there is no land in the way to touch at.

The Spaniards, in sailing from the Philippine islands to America, always take advantage of the southerly monsoon, which sets in in May or June, on the coast of China, and blows 'till September or October; this carrying them as high as the latitude of 30 north, where they begin to meet with variable winds; it being very difficult for them to sail east, as the trade-wind is always in their teeth under the latitude of 30.

GEMELLI relates, that when they had sail'd into this latitude, the weather became very tempestuous and cold; and that several galcons have been cast away in that vast ocean, between the 30th and 40th degrees of north latitude: That, in this voyage he made from Manila to Mexico, the wind was oftner contrary than fair, and they were very seldom free from storms; besides which, they were forced to endure hunger, thirst, cold, sickness, and continual watchings: That they were almost eat up with the scurvy; their biscuit was full of little insects, and their allowance of water was scarce a pint in a day's time: That, at length, all their provisions grew naught, except their chocolate and sweet-meats; whereupon many of the seamen, that wanted these, fell sick, and the rest suffer'd such hardships,

CHAP. XI. Which it was impossible to perform before the compass was known.

Gemelli's account of this voyage.

The south monsoon sets them to the northward.

The hardships they suffer'd in this voyage.

ships, that they vow'd never to undertake the voyage again: And yet the seamen, when they arrived at the port of Acapulco in Mexico, for the sake of getting three hundred seventy-five pieces of eight (four shillings and six-pence english each) which the King allows them for returning to Manila, seem'd to slight their past sufferings, and went to the Philippines again, in the very same ship. He adds, that it was the latter end of January before they arrived at their desired port of Acapulco in Mexico, being about seven months after they set sail from Manila.

Thus much I thought was necessary to observe from GEMELLI, who made this voyage in the year 1697, to shew the length and difficulty of the passage from Asia to America at this day: From whence we may infer, how impracticable, and even impossible, it was for the Chinese, or any other Asiatic nation, to send colonies to America by sea; when navigation was in its infancy, and the use of the compass was not known. Nor do the difficulties of their passing to America by land, appear to me much less than those of their going thither by sea: For, in the first place, there has been no land yet discover'd between Japan and California, which are at least 80 degrees asunder; and, if there be any land within that space, it lies probably so far north, that it is neither habitable or passable, or we should have heard of the inhabitants by this time. Besides, if it might be pass'd at one time, it would have been so at another; and some people would have return'd from America to Asia, by the same way, in so long a tract of time as it is supposed that part of the world has been peopled.

But, farther, I believe it will be admitted, by all that are conversant in history, that the extremities of the north and south were peopled after that part of the world that lies in the more temperate climates; and that those countries which lie nearest the Poles are, at this day, and have ever been, more thinly inhabited than the temperate part of the earth. As to the Scythians of old, or the Goths and Vandals of later days, these none of them dwelt so far to the north as the natives of Lapland, Samoiëda, and their brethren of the north-east Tartary (which some men will have contiguous to America) do. And, if America was planted by colonies that went by land from the north-west or north-east part of our continent, it must be by a people that dwelt as far to the northward as Lapland extends: Against which I have still more objections than were mention'd in the introduction; and, first, if America had been planted by people from the extremity of the north, this must have happen'd so lately, and by such small colonies, that those countries could never have been so populous as the Spaniards found them. Every one knows, that Lapland, and all countries in those cold latitudes, are extremely thin of people: For one man they have there, we have an hundred at least here. How then can it be supposed, that they should plant one half of the globe?

A farther reason against the Laplanders, or any people dwelling so far north, planting America, is, that they were, and must be all cloathed; even their very faces and hands, in the winter-season, must be cloathed, or their noses and fingers would perish: For which reason the Laplanders are actually wrapped up in Furs from head to foot; whereas most of the Americans went naked almost when the Spaniards arrived there; and, I believe, there is scarce any instance of a nation, that had once worn cloaths, leaving them quite off again. If they had not occasion for warm furs to cover them all over, when

VOL. III.

they descended to warmer regions; yet it is not to be supposed they would have left off every rag of cloaths, and appeared without any, as many of the Indians did when the Spaniards arrived there.

Thirdly, Those northern people are the least polish'd, and have the meanest capacities, of any thing in human shape (the Hottentots not excepted); whereas the Americans were famous for their excellent parts and genius, and several pretty manufactures, as those of feathers, painting, &c. but, above all, for carving and architecture, which they perform'd to admiration, without the help of iron tools; far excelling any thing that was ever seen among the Laplanders; which makes it highly improbable they should derive their origin from them. And why should we endeavour to break through so many difficulties at last to people America from Asia, when there was so easy a way of doing it from Africa by sea, from whence the winds always sit fair for America, and the voyage is so short, that, considering the great fleets the Carthaginians had on those seas, it must have been a miracle if several of their ships had not been driven to America? Thus much I thought proper to add to my former argument, "That America was peopled from Africa, and not from Asia;" which the reader will excuse, when I had so fair an opportunity of introducing it again, in speaking of the commerce of the Spaniards between the Philippine islands and Mexico. I proceed, in the next place, to give a farther account of that traffick.

It seems, the Spaniards employ but two ships annually in this rich trade; but then they are of good force, and usually eight hundred or a thousand tons burden. These ships, according to DAMPIER, do not go together in company, but make the voyage alternately: One of them sets out from Acapulco in Mexico the latter end of March, or the beginning of April, and arrives at Manila in the Philippine islands some time in June; when the other is ready to sail from Manila to Acapulco in Mexico. This last ship, says the same writer, stretches away to the north, as far as 36, and sometimes into 40 degrees of north latitude, before she gets a wind to America; and falls in first with the coast of California, and then coasts along the shore to the south again, never missing a wind to bring her away from thence to Acapulco, where she usually arrives about Christmas. The course they steer.

The cargo of this ship consists of Diamonds, Rubies, Sapphires, and other precious stones, found in the East-Indies; of Cinnamon, Cloves, Mace, Nutmegs, and Pepper; of the rich Carpets of Persia; the Camphire of Borneo; the Benjamin and Ivory of Pegu and Cambadia; the Silks, Mullins and Calicoes of East-India; the Gold-dust, Tea, China-ware, Silk, Cabinets, &c. of China and Japan. All which amount to a prodigious value; this one ship having more riches in it than some whole fleets. The cargo of these ships.

The Merchants, GEMELLI relates, get an hundred and fifty or two hundred per cent. by this voyage. It was computed, the Pilot of the ship he sailed in would make twenty thousand pieces of eight; his Mates nine thousand each; the Captain of the galeon forty thousand; the Boatswain, who has the privilege of taking several bales of goods on board, gets an estate in one voyage; the wages of every Sailor, is three hundred and seventy pieces of eight; and the King's duties of this one ship amounted to fourscore thousand pieces of eight. The gains of the Merchants.

At the time this ship arrives at Acapulco from Manila, there comes in two or three ships from Lima and Peru. Trade between Mexico

21 K

CHAP. XI. Lima in Peru, very little inferior to the former in value, being laden with Silver, Quicksilver, Cacao-nuts, and other rich merchandize of South America; with which they purchase the merchandize of Europe and the East-Indies: For, in the months of January and February, a great fair is held at Acapulco; and a vast concourse of Merchants come from Mexico to vend the goods of Europe, and buy those of China, the East-Indies, and Peru. There are such crowds of people at Acapulco at this time, that all provisions are excessive dear, and a Negroe Porter will earn fourteen or fifteen shillings a day.

Silver carried from Acapulco to the Philippines and China.

The galeon from Manila, having sold all her effects, takes in a new cargo, chiefly of Silver, and returns in April, arriving at Manila again in the month of June, where she finds the other galeon, ready to sail to Acapulco. In the mean time, the ships of Peru, having furnish'd themselves with the merchandize of China, the East-Indies, and Europe, return to Lima.

Little coasting trade in Mexico.

There is very little traffick carried on by sea on the coast of Mexico; all goods are carried from Acapulco to the city of Mexico by mules and pack-horses; and from thence to Vera Cruz on the North-sea, in like manner, in order to be shipped for Europe; which brings me to speak of the trade between Old Spain and Mexico, or New Spain.

The trade between Old Spain and Mexico.

Thirty or forty ships carry on all the trade between Old Spain and the Spanish dominions in America; and these are almost all of them their own vessels, no trade being suffered to be carried on in foreign bottoms, except that of the Assientoists, already mentioned. The vessels used by the Spaniards, in transporting merchandize from Old Spain to America, are generally large and of good force, and called galeons: They sail in fleets annually from Cadiz, laden with the goods of almost every country on this side the Atlantic; the woollen Cloth and Stuffs of England, the Linnen and Lace of Holland and Flanders, the Silks of Italy and France, the Muslins, Silks and Calicoes of the East-Indies, with the Merchandize of China, Turkey and Persia, make up their cargoes, which belong indeed to almost as many different nations: At least the English, Dutch, Italians and French, are proprietors of great part of their cargo, and the Spaniards in a great measure their Factors; for when the galeons return from America, with the treasure for which these effects have been sold, it is most of it distributed amongst the Merchants and Factors of the four nations last mention'd. But so true are the Spaniards to their trust, 'tis said, that those in whose names the effects are sent over, and the returns made, scarce ever abuse the confidence that is placed in them, or betray their principals: For the reader will please to remember, that, by the laws of Spain, no stranger can, directly or indirectly, trade to the Spanish West-Indies, but he forfeits his goods.

Belongs to strangers.

The Government connive at it.

However, it cannot be supposed but the Government of Spain is very well apprized that this trade is in a manner carried on by foreigners, and, for very good reasons, connive at it: They know their own people are not able to freight these fleets; and, if they were not enabled to do it by foreigners, their American dominions must want all manner of necessities almost for cloathing and furniture. Besides, there is doubt, but the Spanish Merchants, Factors and Seafaring people have greater advantages from these effects passing through their hands, as well as by exporting them; and the revenues of the Crown must be vastly increased by the importation and exportation of them, which alone is a sufficient rea-

son for their conniving at this traffick, and encouraging of it: Tho' it must be confess'd, it would be much more for the advantage of the kingdom of Spain, to encourage manufactures at home, and traffick a little more with the product of their own country. But, since they are not easily to be brought to this, the next best thing they can do is, to turn Factors and Carriers for their neighbours, and supply their American colonies with the goods of foreigners.

The greatest part of the galeons sail to Carthagena and Porto-Bello, and are called the Flota; the other part, called the Flotilla, or Little Fleet, sail to Vera Cruz in Mexico. The former sell their merchandize chiefly at the fair of Porto-Bello, where they take on board the gold and silver, and other rich treasures, of Peru and Chili, in return for their merchandize. The latter sell their cargoes at the fair of Vera Cruz; to which place is brought the gold and silver of Mexico, with the gold-dust, precious-stones, and other treasures of China and the East-Indies; and with these the Flotilla is freighted, on its return to Europe.

The Galeons, on their going out, sail to the south-west, and get into the way of the trade-wind as soon as they can, which carries them into 11 or 12 degrees of north latitude; then, bending their course directly west, they leave the Caribbee islands on their right, or starboard-quarter, and continue their course to the westward, 'till they arrive at Rio de la Hacha, where they come to an anchor, and expresses are immediately dispatched to Carthagena, Panama, Porto-Bello, Vera Cruz, &c. to prepare the King's treasure for the galeons to take on board at their return. After which, the greatest part of the fleet sails to Carthagena and Porto-Bello, and the rest to Vera Cruz; the whole joining together usually, in their return, at the Havannah, in the island of Cuba; and, sailing from thence to Spain in company, take a very different course from that by which they came from Europe; for in their return they sail north through the Gulph of Florida, and continuing their course to the north-east 'till they come into the latitude of 36 or 40, where they meet with variable winds: They then shape their course as near to the east as the winds will permit them, 'till they come upon the coast of Spain; and are usually six or eight weeks in their passage. These fleets, 'tis said, have sometimes brought home near the value of sixty millions of pieces of eight (amounting to twelve or fifteen millions sterling) in gold and silver only; of which the King has a fifth, and great part of the remainder is distributed among the Factors of the several trading nations above-mention'd; the least share perhaps coming to the subjects of Spain.

CHAP. XI.

The course of the galeons to America.

From America.

Spain has the least share of the treasure.

There is a trade carried on also between Mexico and the Spanish islands of Cuba, Hispaniola, and Porto Rico; as also between Mexico and Terra-firma in South-America, by the Barlavento fleet, so called from its surrounding the Barlavento, or Leeward islands, annually.

Trade between the continent and islands by the Barlavento fleet.

This fleet comes to Vera Cruz in October or November, and remains there 'till March. It consists of six or seven sail of ships, of good burden and force, that serve both as men of war and merchant-men; for they are ordered to visit all the Spanish sea-ports in the North-sea every year, as well to supply one place with what another wants, as to prevent foreigners trading in their ports, and to clear the sea of Buccaneers or Pirates. From Vera Cruz this fleet sails to the Havannah, where they dispose of the merchandize they bring from Mexico: After which, they

CHAP. XI. they stand to the northward, through the Gulph of Florida, 'till they come into the latitude of 30 or 40; then they stretch away to the south-east, 'till they make the island of Porto Rico; and, having dispatch'd their business there, they continue their course to the southward, 'till they arrive at the island of the Trinity, near the mouth of the river Oroonoko, being the most easterly settlement the Spaniards have in the North-sea: From thence the fleet sails to Margarita, another considerable island near the main, coasting along to Comana, and so to Caracös; then they double Cape la Vela, and coast along by Rio de la Hacha, St. Martha, and Carthagena; on which coast they frequently meet with English and Dutch trading-sloops, and make prize of them: And, having staid some time at Carthagena, they proceed to Porto Bello; and, having visited the Bay of Campeachy, they return at length to Vera Cruz again. And this is the annual navigation of the Barlavento fleet about the coast of the Spanish West-Indies in the North-sea, as well on account of their trade, as to drive all foreigners from their coasts; which, however, they are not able to effect entirely. And this brings me to say something of the smuggling or clandestine trade that is carried on between the English, French and Dutch, and the Spanish West-Indies.

A clandestine and smuggling trade. I have already taken notice, that the Spaniards do not send more than thirty or forty ships annually from Old Spain to their territories in America, with the produce and merchandize of Europe; which is far from being sufficient to supply their extensive dominions in that new world. Indeed, most part of the merchandize carried over in the galleons is sold at the fair of Porto Bello, and bought up at extravagant rates, to be transported again by the South-sea to Peru; so that many of the Spanish provinces upon the North-sea would be destitute of necessary cloathing and furniture, and even provisions for their tables, if they were not supplied with them by foreigners. The English therefore from New-England, New-York, Jamaica, &c. the French from Hispaniola, and the Dutch from Curassaw, fit out sloops, with all manner of provisions and necessaries, which they know are wanting on the coast of Mexico, in order to trade with the Mexican Spaniards, who are no less ready to receive the goods of these foreigners, than they are to sell them, giving pieces of eight for what they buy; which makes this a very beneficial trade to the English, French, and Dutch. But then, if the Barlavento fleet, or the Spanish Guarda de Costa's, meet with such trading-sloops and vessels, they never fail to make them all prize; and sometimes seize on ships that have never been concerned in this clandestine trade, on suspicion; and, finding pieces of eight on board, have frequently procured them to be condemned; which has been the occasion of those many complaints our Merchants have made of the Spanish Guarda de Costa's, to the Parliament and Board of Trade; and which it is high time was settled, that our trade and navigation in the West-Indies may not be interrupted, and the fair Trader brought under such hardships as may discourage him from carrying on a trade to our plantations, which is, of all others, the most advantageous to Britain.

Logwood trade. There has been another trade or business carried on by the English in North America, which has occasion'd many disputes between the two nations of Britain and Spain, and is not yet adjusted; and that is, the business of Logwood-cutting in the Bay of Campeachy. This the English had follow'd, in a part of the country destitute of Spanish or Indian

inhabitants, for a great many years; and look'd upon it, that their long possession had given them at least as good a right to that part of the country, as the Spaniards had to any of the rest: And in some treaties the Spaniards seem to have yielded this business to the English. However, they have thought fit, of late years, to fall upon our Logwood-cutters, killed many of them, and carried the rest into perpetual imprisonment, not suffering them to be exchanged or ransomed. And thus have we been driven violently and unjustly from a very valuable branch of business, under pretence that because the Spaniards had forcibly settled themselves in one part of the continent, no other nation had any right to settle in another part of it: A rule, that we find the French are too wise and too brave to submit to. The Spaniards, indeed, the first of all Europeans, discover'd and sent colonies to America, and particularly to Florida; and yet we find the French make no scruple of settling in the heart of that country, and even in the neighbourhood of the Spanish settlements of New Mexico: Nay, after the Spaniards had been two hundred years in possession of the island of Hispaniola, the French took the liberty of making very considerable settlements in it; for this very good reason, That the Spaniards were not able to cultivate or people a tenth part of what they claimed in America; and it was highly unreasonable, that countries of a vast extent should remain uninhabited and uncultivated, only because the Spaniards were pleased to set up a title to them. And this sort of reasoning the Spaniards seem to allow of, by their neglecting to drive the French either from Florida or Hispaniola. While, on the other hand, our tame Britons are so extremely condescending, as to suffer the Spaniards to drive them from the Logwood trade in the Bay of Campeachy, which has been yielded to them by several treaties; and would frighten us also from extending our plantations in Carolina, Virginia, &c. farther to the westward, tho' we do it with the consent of the natives, only because they (the Spaniards) have the little Forts of St. Augustin and St. Matthew a little to the southward of us.

But, surely, if the French are permitted to settle in Florida, much more ought the English, who have so long been in possession of Virginia and Carolina (parts of Florida) and made such considerable improvements there, with the approbation of the natives who alone have a right of transferring their country to foreigners. And, I hope, neither French or Spanish assurance will ever prevail on our Governors to discourage the British subjects extending their trade or settlements to the westward, even through that part of Florida which the French have denominated Louisiana, and to the very banks of the famous river Mississippi; since we are at present at peace and in alliance with most of the nations that lie between Virginia and Carolina and that river; and actually traffick with them more than either the French or Spaniards yet do.

I proceed now to another branch of trade; namely, that which the English are entitled to carry on with the Spanish dominions in America, by virtue of the Asiento contract made between the two nations in the year 1713, and entitled, "The Asiento adjusted between their Britannick and Catholick Majesties, for the English Company's obliging itself to supply the Spanish West-Indies with Black slaves for the term of thirty years, to commence on the 1st day of May, 1713, and to end the 1st of May, 1743."

The

CHAP.

XI.

Preamble.

The preamble of this contract recites, That the French Guinea Company had formerly enjoy'd the benefit of the Asiento; and that their term being expired, his Catholick Majesty had determined to grant the same to the English Company.

ART. I. By the first article, her British Majesty undertakes, for the persons whom she should appoint Asientists, that they shall export to the Spanish West-Indies, within the said space of thirty years, one hundred forty-four thousand Negroes. viz. four thousand eight hundred Negroes in each of the said thirty years.

II. That for each Negroe, of the regular standard of seven quarters, neither old or defective, the Asientists shall pay to the Crown of Spain thirty-three pieces of eight (Escudo's) and one third of a piece of eight; in which sum shall be comprehend-ed all manner of duties.

III. That the Asientists shall advance to his Catholick Majesty two hundred thousand pieces of eight, which shall not be reimbursed before the end of twenty years; and then it may be deducted, by equal portions, in the ten last remaining years, after the rate of twenty thousand pieces of eight yearly, out of the produce of the duty on Negroes, which they are to pay in those years.

IV. The Asientists shall pay the said duties half-yearly.

V. It is declared, that the Asientists shall not be obliged to pay the said duties for more than four thousand Negroes yearly; the duties payable for the remaining eight hundred being given to the Asientists, in consideration of the interest that ought to be paid them for the money to be advanced as aforesaid.

VI. That the Asientists, if they find a demand for more Negroes, may import a greater number than four thousand eight hundred during the first twenty-five years; for which supernumerary Negroes they shall pay no more than sixteen pieces of eight, and two thirds of a piece of eight for each Negroe.

VII. That the Asientists may employ either British or Spanish ships in this commerce, provided that neither the Commanders or Seamen give any offence or scandal to the Roman Catholick religion, on pain of being punish'd, as they would have been in Spain for the like misdemeanors.

VIII. That the Asientists may import and vend the said Negroes in all the ports of the North-sea, and that of Buenos Ayres, at their choice, provided they do not import or land any Negroe, except in ports where there are royal Officers to search the ships and their cargoes, and certify the numbers of Negroes imported. And it is farther provided, that the Negroes, which are carried to the windward coast, viz. Sancta Martha, Cumana, and Maracaybo, shall not be sold by the Asientists for more than three hundred pieces of eight each, to encourage the inhabitants of those places to buy them. But as to the other ports of New Spain, its islands and Terra-firma, the Asientists are at liberty to sell their Negroes there for the best prices they can get.

IX. That the Asientists shall be at liberty to import into the river Plata, or Buenos Ayres, in four ships, twelve hundred of the said Negroes annually, and to sell them at such prices there as they can get; eight hundred of which shall be disposed of at Buenos Ayres, and the remaining four hundred serve in the provinces higher up the river, and in the kingdom of Chili. And it is declared, that her British Majesty, and the Asientists in her

name, may hold some parcels of land, to be assign'd them by his Catholick Majesty, in the river Plata, from the commencement of this Asiento, sufficient to plant, cultivate and breed cattle upon, for the subsistence of the persons belonging to the Asiento and their Negroes; and may build houses of timber only, but shall not throw up the earth, or make the slightest fortification: And his Catholick Majesty shall appoint an Officer to reside there, who shall have the command of all things relating to such lands; and all other matters, concerning the Asiento, shall be determined by the Governor and royal Officers at Buenos Ayres: But the Asientists shall not be obliged to pay any duties on account of the said lands.

X. In order to the carrying of Black slaves into the provinces of the South-sea, liberty is granted to the Asientists to freight, either at Panama, or any other port of the South-sea, ships of about four hundred tons each, to be navigated by such Officers and Seamen as the Asientists shall appoint; on board of which they may ship Negroes to all the other ports of Peru (and no others on that side) and to bring back the produce of their sale to the said port of Panama, as well in the fruits of the country, as in money, bars of silver, or ingots of gold, without being obliged to pay any duties for such silver or gold, it being stamp'd, and appearing to be the produce of their Negroes. And the said Asientists are at liberty to send from Europe to Porto Bello, and from Porto Bello to Panama, by the river Chagre, or by land-carriage, cables, sails, timber, and all other naval stores and provisions, necessary for the said ships; provided they do not sell the said stores, on any pretence whatsoever, on pain of confiscation, and farther punishments to be inflicted both on the buyers and sellers; and the Asientists, from that time, to be deprived of the privilege of sending such stores to the South-sea: Nor shall the Asientists, at the end of the said term of thirty years, be allow'd to carry the said ships to Europe.

XI. The Asientists are at liberty to employ English or Spaniards for the management of this Asiento, as well in the ports of America, as in the inland country; and the English shall be regarded and treated as the subjects of Spain, provided there do not reside in any one port more than four or six Englishmen, of whom they may send some into the countries where Negroes are allow'd to be carried, for the management and recovery of their effects.

XII. By this article two English ships of war, and another vessel, are permitted to carry over the Company's Factors to America.

XIII. The Asientists are allow'd, by this article, to nominate Judges-Conservators of the Asiento, in all the ports and chief places of America, provided they nominate some of his Catholick Majesty's Ministers; which said Judges are to have cognizance of all causes relating to the Asiento, exclusive of all Audiences, Tribunals, Governors, or Viceroy's, who are prohibited to intermeddle therein; and no appeal to lie from the Judges of the Asiento, but to the supreme Council of the Indies; and the President, Governor, or Dean of the said Council, is to be Protector of this Asiento.

XIV. No embargo shall be laid on the ships of the Asientists by the Viceroy's, or other Spanish Governors in America, for any cause or pretence whatever; but, on the contrary, they shall afford the said Asientists all the favour, assistance and succour they or their Factors shall desire, for the more speedy

CHAP. XI. *speedy fitting out, lading and dispatching their ships; affording them such provisions as they shall want for their voyages, at the current prices, on pain of being obliged, at their own costs, to make good all such damages as the Assientists shall sustain by such impediment or detention.*

XV. Nor shall any embargo be laid on the stock, goods or effects of the Assientists, or any of them seiz'd or detain'd by any Viceroy, Governor, Judge, or Officer, on any cause or motive whatever, on pain of their being punish'd, and paying, out of their own estates, the damages and losses the Assientists shall sustain; nor are the houses or warehouses of their Factors to be search'd, unless it is proved there has been some fraudulent importation; and then they are not to be search'd but by the assistance of the Judge-Conservator. And tho' prohibited goods may be seiz'd, the stock and effects of the Assientists are to remain free.

XVI. The Assientists are empower'd to employ such Mariners, Carriers, and Workmen, in lading and unlading their ships, as they think fit.

XVII. They are permitted to bring their goods from America, either in the galeons or their own ships, without paying any duties; but they are not allow'd to bring over Spanish passengers, or the effects of the Spaniards.

XVIII. During this Assiento, neither the French Guinea Company, nor any other persons, shall transport Negroes to Spanish America, but the Assientists, on pain of forfeiting such Negroes to the Assientists, who are empower'd to search such ships as they suspect are freighted with Negroes, and make prize of them, if any contraband Negroes are found on board; provided they first obtain leave of the Governor of the port.

XIX. The Assientists shall have power to navigate and import Negroes to all the northern ports of the Spanish West-Indies, and all others are prohibited to import them; his Catholick Majesty obliging himself, by his faith and royal word, to maintain the Assientists in the entire and full possession thereof.

XX. And if the Assientists shall be molested or disturbed by suits of law, or in any other manner, his Majesty will inhibit all other Courts to proceed therein, and take cognizance of such causes solely himself.

XXI. When the ships of the Assientists arrive at any port of the Indies with Negroes, the Captains thereof shall certify, that there is not any contagious distemper amongst them, before they shall be permitted to land.

XXII. Their ships shall be visited and searched on their arrival; and if any merchandize be found, besides the Negroes, and provisions for them, it shall be confiscated, and the Officers importing it shall be disabled to serve in the Assiento; and the Captain or Master of the ship, that suffers such goods to be brought on board, shall forfeit the value of them; and if he appear an accomplice, he shall be condemn'd to pay a forfeiture, be severely punish'd, and disabled to hold any employment in the service of the Assiento: But the ships, on board which such Negroes shall be, or the provisions brought for their subsistence, shall not be forfeited; and the persons who have the charge of them may go on with their traffick. And if it appears the Captain or Master was not an accomplice, he shall be obliged to deliver up the guilty person, but be free himself.

XXIII. The provisions put on shore for the subsistence of the Negroes shall pay no duties.

VOL. III. NUMB. CXVIII.

CHAP. XI. XXIV. The Assientists are obliged to pay the duties for all the Negroes landed, tho' they die before they are sold: But where the Factor desires a Negroe may be set on shore, only for the recovery of his health, and not for sale, they shall not be obliged to pay the duty for him, unless he live more than fifteen days on shore.

XXV. After the Assientists, or their Factors, have settled the duties, and sold part of their Negroes in one port, they may carry the remainder of their Negroes to any other port, together with their merchandize and treasure for which they have sold the first, without being obliged to pay any duties, except the common duties for the fruits and merchandize of the country, which they are permitted to receive in exchange for their slaves, where money is wanting; and they may sell such fruits and effects at the ports they go to, paying the accustomed duties for them.

XXVI. The ships of the Assientists may sail either from the ports of Great-Britain or Spain; but an account shall be given to his Catholick Majesty of what ships they dispatch yearly for the Negroe-trade, and the ports for which they are design'd: After which, they are at liberty to return, either with money, bars of silver, gold, fruits, or the merchandize of the country, being the produce of the sale of their Negroes. But if they return to the ports of Spain, the Commander of the ship shall give that Court an authentick register, by which it may appear what he hath on board: And if the ship return to Britain, an exact account shall be sent to Spain of their lading, that his Catholick Majesty may be fully inform'd thereof; provided that the Assientists shall not bring over any other silver, gold, or effects, but what shall be the produce of the sale of the Negroes.

XXVII. By this article, all prizes taken in time of war by the Assientists, on the coasts of Spanish America, are to be carried to Cartagena, or Porto Bello, and the goods sold by the King's Officers at the Fair of Porto Bello; three fourths of the produce whereof, after duties paid, to be enjoy'd by the Captors (together with the ship, tackle, guns, and furniture); and the other fourth by his Catholick Majesty.

XXVIII. Their British and Catholick Majesties are each of them to have a fourth part of the profits arising by this contract. And, as his Catholick Majesty ought to advance one million of pieces of eight, or a quarter of the sum adjudged necessary to carry on this trade, it is agreed, That if his Catholick Majesty shall not think fit to advance the said sum, the Assientists shall do it out of their own money, on condition his Majesty shall discharge the interest (out of what they shall be accountable to him for) after the rate of eight per cent. per annum, 'till they are reimbursed: And his Catholick Majesty is to name two Directors or Factors to reside at London, two more in the Indies, and one at Cadiz; who may be concerned, on his part, in all the directions, purchases, and accounts of this Assiento.

XXIX. The Assientists shall give in an account of their profits and gain, upon oath, at the end of the first five years; and, by legal instruments, certify the charge of the purchase, subsistence, transportation, and sale of the Negroes, and all other expences on their account; and also certificates of the produce of the sale in all the ports and parts of Spanish America: Which accounts shall be examined in the respective Courts of Great-Britain and Spain. And the said Assientists shall pay his Catholick

C H A P. XI. tholick Majesty's share of the said profits regularly and punctually.

XXX. If the amount of the gain made the first five years exceed the sum the Assientists are to advance, together with the said interest of eight per cent. they may reimburse themselves in the first place, and then pay his Catholick Majesty the remainder of the profits of his share: And this they shall do every five years during the term.

XXXI. The Assientists, after five years, also may reimburse themselves the quarter part and the interest, if they appear then to be gainers.

XXXII. The Assientists shall be allow'd three years, after the expiration of their term of thirty years, to adjust their accompts, and gather in their effects in the Spanish West-Indies.

XXXIII. The debtors to the Assientists shall be compelled to pay their debts, and the said debts be consider'd on the same foot as those due to his Catholick Majesty.

XXXIV. The Assientists shall be allow'd from time to time, to bring from Europe, or the British plantations in America, to the ports of Spanish America, where there shall be royal Officers, cloathing, medicines, provisions, and naval stores, for the use only of the Assientists, their Negroes, Factors, Servants, Mariners, and Ships, in vessels of about one hundred and fifty tons; giving a particular account of their cargoes, and the disposal thereof, to the Council of the Indies.

XXXV. For preserving the health of the Negroes, the Factors of the Assiento are allowed to hire parcels of land in the neighbourhood of their Factories, and to cultivate and plant the same, for raising fresh provisions; provided such cultivation be perform'd by the inhabitants, or by the Negroes.

XXXVI. The Assientists are allow'd to load a ship of three hundred tons, at the Canary islands, with such fruits as are usually taken on board there for America, once only during the said term.

XXXVII. This has nothing material in it that is not contain'd in the former articles.

XXXVIII. A Junta of three Spanish Ministers, the Fiscal, and Secretary of the Council of the Indies, shall take cognizance of all causes relating to the Assiento.

XXXIX. The concessions in former Assiento's to Portugal or France, not contrary to the contents of this, shall be construed in favour of the present, as if literally inserted.

XL. In case of a war between Britain and Spain, the Assiento shall be suspended: However, the Assientists shall be allow'd a year and half to remove their effects.

XLI. All laws in the Spanish West-Indies, prohibiting traffick with foreigners, &c. to be suspended, in favour of the Assientists, for thirty years.

XLII. His Catholick Majesty grants to the Assientists all favours, privileges, and exemptions, that were ever granted to former Assientists, not contrary to these articles.

An annual ship granted to the Assientists. His Catholick Majesty also, on condition that the Assientists shall not carry on any unlawful or clandestine trade, on any pretence whatsoever, grants them the privilege of sending out a ship of five hundred tons annually, to trade to the Indies, provided they give his Majesty a fourth part of the gain, and five per cent. out of the gain of the other three parts: And it is farther provided, that the Assientists shall not sell their merchandize, but at the Fair of Porto Bello only, when the galeons arrive there;

and then the merchandize or cargo of the said ship shall be free from all duties in the Indies.

The late Queen ANNE afterwards transferred to the South-sea Company the benefit of the Assiento contract, and granted them her fourth share of the profits arising by that commerce; and yet I don't perceive that company have reaped any advantage from it; for Sir JOHN EYLES, in a speech to the company, in the year 1731, giving them an account of this branch of their trade between the year, 1721 and that time, says, Tho' the report of their having lost two millions by this trade was not true; yet such were the misfortunes they had undergone in the course of that commerce, their effects in the Indies having been twice seiz'd on those misunderstandings with Spain in the years 1718 and 1727, they had gain'd little by it, tho' they were not out of pocket: That, upon the treaties of accommodation, restitutions had been order'd, and in a good measure complied with; yet were those interruptions of their commerce attended with great losses, the expences of their factories having been as great under those long suspensions of trade, as while it was carried on.

Then he mentions the frauds of the Captain of their annual ship the Prince William, who took in an hundred and fifty ton of goods at St. Christopher's, outward-bound, in breach of the Assiento contract; which had very much embarrass'd their affairs with Spain: And, indeed, such have been the misunderstandings between Great Britain and Spain, ever since the Peace of Utrecht, whereby the Spaniards yielded Gibraltar and Port Mahon to this Crown, and let us into the traffick of the Spanish West-Indies, that we have been great sufferers in our commerce in general with that nation of late, and seem in a manner to have lost the affections of that people.

The Spaniards were under a necessity of clapping up a peace in the year 1713, and compelled to yield to such terms as we thought fit to impose on them at that time: But it is evident, they had no intention totally to relinquish those important fortresses, or acquiesce long in our trading with their American plantations, by the repeated attempts they have made to drive us from both; nor will they ever be hearty friends with this nation, probably, as long as we insist on the performance of those articles.

There is no doubt, but the Assiento, consider'd in itself, would be very advantageous to Britain: We send little, besides our own manufactures, to Guinea, to purchase those Negroes which we exchange with the Spaniards for gold and silver: The annual ship also goes to Porto Bello laden chiefly with British merchandize, for which she receives the treasures of Peru and Mexico in return. But still, if the French and other nations run away with the other branches of the Spanish trade, and we must ever remain in a state of hostility with that nation, whose friendship is of such importance to us (while we insist on those advantages we stipulated for at the treaty of Utrecht) it were better we had never insisted on them; better we had never possess'd Gibraltar, or traded with the Spanish West-Indies, if this should provoke that people to throw themselves into the arms of the French, and enter into a confederacy against us: For this may not only embarrass our affairs in Europe, but contribute more to the ruin of our plantation trade in America, than any thing that has hitherto happen'd. No doubt, it is the interest of Spain, as well as Britain, to prevent the French being too powerful in America; but if the Spaniards should, through pique and resentment,

C H A P. XI.

Qu. Anne transfers the Assiento to the South-sea company, and her fourth of the profits.

Nothing got by our traffick with Spanish America.

The Assiento, &c. sources of endless strife.

CHAP. XI. sentiment, connive at the encroachments of France in Florida, and other parts of the West-Indies, both we and they, may, too late, repent there were any misunderstandings between us; and that we did not, in time, consider our common interests, and oppose their establishing themselves in the neighbourhood of our settlements.

The Mexican carriages and way of travelling. I shall conclude this head with the Mexican carriages and way of travelling. It seems, the country is so mountainous, that in their inland traffick they use scarce any waggons or wheel-carriages; but all merchandize is carried on Mules or Pack-horses from one province to another; and, before the Spaniards transported Mules and Horses thither, all burdens were carried to the most distant places on the backs of Tameies, or Porters. Their Princes and Great men were carried also on men's shoulders, lying or sitting on a kind of couch, with a canopy over it, not much unlike the Palankins, in which people are carried in the East-Indies at this day. There were no beasts fit for draught or burdens in the country. Indeed coaches are in use at Mexico, and in some other great towns, at present; but it is impracticable travelling long journeys over their mountains in coaches; and therefore they generally ride on Mules in the hilly parts of the country, and on Horses in the plains.

Their houses. They have some few inns upon their roads, but usually miserable houses, and destitute of tolerable provisions, if we may credit GEMELLI CARERI; and they are such a distance from each other in some places, that travellers are glad to take up their lodging under trees and poor huts, where they suffer pretty much from the snows and excessive cold on the mountains, as they do from the sultry heat and dust in their valleys, unless in the rainy season, when most of the plain country is covered with water, and every little brook a torrent: But travelling in that season is almost impracticable in the provinces of Mexico.

CHAP. XII.

Of the history and government of the ancient Mexicans.

BEFORE I treat of the government of modern Mexico, it may be proper to enquire into the history and government of its ancient inhabitants; and of these particulars, Father ACOSTA, who resided a considerable time in the Spanish West-Indies, and wrote the Natural and Moral history of that country, in the sixteenth century, hath given us the best account. Indeed all the rest of the histories I have met with, relating to the original and antiquities of the people of Mexico, seem to be chiefly copies and transcripts from that author; and particularly that of GEMELLI CARERI's, who acknowledges himself obliged to him for this part of his history: And ANTONIO DE HERERA seems to have used great freedom with him, finding ACOSTA's account supported by the concurrent relations of the best writers of those times.

The first inhabitants of Mexico. ACOSTA relates, that, according to the tradition of the Mexicans, that country was first inhabited by a wild and barbarous people, who went perfectly naked, lived on the game they took in hunting, and on fruits and roots; never planting or manuring the ground: That they dwelt in caves of the rocks and mountains, or under trees; building no houses, nor associating together in communities, having scarce any religion or government amongst them: And assures us, there were some such people that inhabited the mountains of Mexico in his time, being call-

ed Chichemeca's and Otomies, from their savage way of life.

The next people that possess'd this country were the Navatlacas, who give no other account of their original, but that they came out of seven caves. These were seven nations, or rather tribes, that anciently dwelt between the 30th and 40th degrees of northern latitude; but, about the year 820, began to remove to the southward, and possess themselves of that country, now denominated Mexico, or New Spain; which they did very gradually; for they did not move all together, only one tribe at a time; and that so leisurely, planting colonies by the way, that it was the year 900, according to our computation, that the first tribe, called the Suchimilcans (or Gardiners of Flowers) fix'd themselves on the south bank of the Lake of Mexico, founding a city there, and calling it after their own name.

The second tribe were the Chalci, who quitted their first seats a great while after the Suchimilcans, and, arriving on the banks of the Lake of Mexico, fix'd themselves next to them, and built a city, calling the name of it Chalcas.

The third tribe, call'd the Tapeneca's, or People of the Bridge, came next to the Lake of Mexico, and inhabited the west-side, building a city there, and calling the name of it Acapazulco, or Ants-Nests, from their multiplying so fast. And the fourth tribe, called Culhua, or the People of the Bending Mountains, from whence they came, planted the east-side of the lake, and built the city of Tescuco.

The fifth tribe were the Tlatelvica's, who, finding all the lands possess'd about the lake, continued their march over the mountains, and possess'd themselves of the valley of Quernavaca, or Eagle Valley; where they built a city, and gave it the same name. And the sixth tribe, called the Tlascalteca's, went still farther, and possess'd themselves of Tlascala, or the Country of Bread-Corn, so denominated from its fruitfulness: And here, it is pretended they met with a race of giants, who for some time defended their country against the new-comers; but were, at length, driven to the mountains and inaccessible parts of the country, as the rest of the Chichemeca's and Otomies had been by the other tribes.

Three hundred and two years after the peregrination of the first tribe, according to ACOSTA, the seventh tribe, call'd Mexicans, from their leader Mexi, set forward towards the south, to find new seats; being told, as 'tis said, by their god *Uitziliputli* (or his Priests) that they should obtain the dominion of all the tribes that went before them, and possess a country abounding in gold, silver, and precious stones, feathers and rich mantles. To which prophecy they gave such credit, that they began their march, carrying the image of their god with them in a chest, or ark, on the shoulders of four of their chief Priests; to whom, says ACOSTA, their god revealed what way they should take, and what accidents they should meet with. By these Priests also he gave them laws, instructed them how they should offer sacrifices to him, and in the other rites of religious worship: Nor did they ever remove their camp, but by the command of their god; the Priests directed when they should decamp, and how long they should remain in any place. And the first thing they did, wherever they came, was to erect a tabernacle in the midst of their camp, for the ark to rest in upon an altar: And they continued their wandrings for many years before they came to the promis'd land. Thus did the Prince of darkness,

CHAP.
XII.

darkness, says Acoosta, in all things, make these people imitate the children of Israel in their march from Egypt to the land of Canaan.

This tribe of Mexicans, like the former, made several long halts, remaining a great while in many places, building towns, and cultivating the ground, and, when they removed, left colonies of their people behind them, 'till they came to Mechoacan, or the Land of Fish, where they would have set up their rest; but their god appeared angry with them, and killed many of the Mexicans in one night, for presuming to stay here: Whereupon they proceeded to the lake of Mexico; and, the lands about it being possess'd by the former tribes, they, partly by force, and partly by treaty, obtained leave to settle on some islands in the lake, agreeing to pay a certain tribute for what they were permitted to possess. Soon after, the Mexican Priests inform'd their people, that their god *Uitziliputli* had appeared to them in a dream, and commanded the Mexicans to fix themselves in that part of the lake where they should find an Eagle perching on a Fig-tree that was rooted in a rock; which they immediately went in search of, and found a Fig-tree growing out of a rock, and on it a most beautiful Eagle, looking at the sun, with her wings display'd, and holding a little bird in her talons: Upon the sight of which, they all fell down, and worshipped the Eagle; and afterwards built a city on the very spot, to which they gave the name of Tenochtitlan, or the Fig-tree on a Rock; and the arms of the city (which afterwards obtained the name of Mexico, from their first leader) were an Eagle, with her wings display'd, looking on the sun, holding a Snake in her talons, and standing with one foot on the branch of an Indian Fig-tree; to which the Emperor CHARLES the Vth added a Castle Or, on a Field Azure, to express the lake, with a bridge over it, and two others on the sides, on which are two Lions Rampant.

The Mexicans, having first erected a tabernacle in the midst of the rock, or island, for their god *Uitziliputli*, then, by the Priests direction, laid out the four quarters, or wards, of their town, which now go by the names of St. John, St. Mary Rotunda, St. Paul, and St. Sebastian; every ward having its tutelar deity, or guardian, assign'd to it; as had also every one of the subdivisions of the several wards.

The Mexican Chiefs afterwards falling into parties and factions, and being at the same time insulted and oppressed by the other tribes, to prevent the ruin that threaten'd them, resolv'd to elect a King, that might have the government of their State, and send them out to war; and, not being able to agree upon any one of their own tribe, they made choice of ACAMAPIXTLI, the grandson of the King of Culucan, under whose administration they soon began to make a considerable figure; which drew upon them the envy of the neighbouring tribes; and the King of Azcapuzalco, 'tis said, did not only exact an increase of tribute, but required some things of them that were looked upon as impracticable, with no other view than to fall out with the Mexicans, and expel them the country: One of which demands, the story says, was, that they should supply him with a quantity of corn that should grow in the water of the Lake; which they performed by the advice of their god, or his Priests, who directed them to make floats of canes and rushes, and to lay earth upon them, which, being sow'd with grain, yielded considerable crops, and enabled them to pay their tribute: But, what-

ever truth there may be in this relation, certain it is, the Mexicans had floating-islands, or gardens, on the water, with fruits and flowers upon them, which they row'd to what part of the Lake they pleas'd: A curiosity, that I don't remember to have met with in any other part of the world, and deserves as much to be admired as the hanging-gardens of Babylon. But to proceed: The King of Azcapuzalco continued to impose several other hard and whimsical kinds of tribute on the Mexicans, who remained in a manner vassals to that Prince fifty years.

In the mean time, ACAMAPIXTLI, the first King of the Mexicans, died, having reigned forty years, and very much improved the city, by buildings, canals, aqueducts, and bridges: He left several children, but appointed none of them to succeed him; telling his subjects, that as they had freely elected him their Sovereign, so he now left them at liberty to chuse whom they pleas'd to succeed him. And this generous confidence in his subjects had the effect he probably foresaw it would; for they had no sooner perform'd the funeral obsequies of ACAMAPIXTLI, but they made choice of one of his sons for their King, whose name was VITZILOVITLI, or the Rich Feather; whom they crown'd and anointed with a divine ointment, as they called it, being the same with which they us'd to anoint the images of their gods. This Prince, by the advice of his Council, married the daughter of AZCAPUZALCO, who thereupon remitted all their tribute, but a couple of ducks and some fish, which he took as a testimony of their subjection, and that their country was a province of his kingdom.

VITZILOVITLI and his Queen dying, the Mexicans chose his son CHIMALPOPOCA their King, out of regard to his grandfather AZCAPUZALCO, though the young Prince was but ten years of age: But the grandfather dying soon after, the Tapenecans, his subjects, treacherously murder'd the minor King of Mexico, which occasion'd a war between the two nations; for the management whereof the Mexicans chose IZCOALT their fourth King, a Prince of great courage and experience, being the son of ACAMAPIXTLI, their first monarch, by his concubine.

This Prince declared war against the King of AZCAPUZALCO, and, having made his nephew TLACAELEEC his General, perfectly subdued his enemies, and divided their country among his Mexicans: After which, he made a conquest of Tacuba, Cuyoacan, the Suchimilca's, and all the tribes that inhabited the banks of the Lake; and became the most potent monarch that had been known in that part of the world; but died after a prosperous reign of twelve years.

Hitherto the Mexicans in general had all of them a voice in the election of their Kings; but TLACAELEEC the General, who had now a great influence in the Mexican State, shewing them the inconvenience of these popular elections, persuaded them to transfer their right of electing a Sovereign to six electors, viz. to the Kings of Tezcucan and Tacuba, and four Princes of the royal blood; which the people consented to, and were never after suffered to intermeddle in elections.

These electors (probably) by the direction of the General, chose his nephew MONTEZUMA their fifth monarch, who first instituted the custom of the elected King's sacrificing some of his enemies taken in war by himself at his coronation; and, to set his successors an example, he invaded the Chalci, made several prisoners, and sacrificed them on the day of his

CHAP. his inauguration. He also drew blood from his ears
XII. and legs before the sacred fire in the temple; which
was another ceremony he required future Kings to
imitate him in at their coronations. The same day
the several provinces brought him their tribute in
kind, consisting of gold, silver, rich feathers painted,
cotton, cloaths, cacao, and other fruits; grain,
venison, and whatever the kingdom afforded:
Whereupon he made a grand entertainment for those
who came to attend the Solemnity.

He afterwards continued the war against the Chalci,
who having taken the brother of MONTEZUMA
prisoner, would have made him their King; but he
refused the honour they intended him, and killed
himself rather than engage against his brother.
Whereupon MONTEZUMA increased his forces,
and made an entire conquest of the territories of the
Chalci; and his General TLACAELEEC soon after
subdued all the nations bordering on the North and
South-seas, except the Tlascalans, which tribe, says
ACOSTA, they suffer'd to retain their independency;
that they might have an enemy to exercise their
youth in the discipline of war, and to furnish them
with prisoners to sacrifice to their gods. MONTE-
ZUMA also applied himself to regulate the Civil Go-
vernment and the Officers of his household, and built
that celebrated temple in Mexico that was dedicated
to their god Uitziliputli, and died after he had
reigned twenty-eight years.

The electors, assembling on this demise, would
have set the crown upon the head of their General
TLACAELEEC, who had contributed exceedingly
to the enlargement of their territories, and settling
the Civil Government; and, when he refused to ac-
cept it, they chose the person he was pleased to re-
commend to them; namely, TICOCIC, one of
the sons of the deceased King; but he, proving an
unfortunate Prince, was poison'd by his subjects, af-
ter he had reigned four years: Whereupon the
electors, by the advice of the same General, chose
AXAYACA, another of the sons of MONTEZUMA,
for their Sovereign; and the General TLACAELEEC
dying soon after his election, AXAYACA
gratefully constituted his eldest son General of the
Mexican armies; and, having solemnized the ex-
equies of TLACAELEEC with great splendor,
march'd with his army, to the southward of Mexico,
two hundred leagues, subduing the provinces of Te-
coantipique and Guatulco; from whence he brought
several captives, whom he sacrificed at his coronati-
on. ACOSTA relates, that he afterwards inva-
ded the country of TLATELULCO; and that his
enemies, in order to surprize him, metamorphos'd
themselves into frogs, and other animals; which
ACOSTA seems to have been so weak as to be-
lieve; And, indeed, it must be admitted, that
ACOSTA had a pretty deal of credulity and super-
stition in his constitution; but, making an allow-
ance for these foibles, he is esteem'd a good author.
To return to our history: AXAYACA died after he
had reigned eleven years; and the electors thought
fit to chuse AUTZOL, one of their number, his
successor; who added Guatemala, and several o-
ther large provinces, to his dominions: He also re-
built and beautified the city of Mexico; but, endea-
vouring to bring a river of fresh water into the town,
drowned great part of it: However, he found means
to draw off the water again, and repair the damage.
And here ACOSTA entertains us with another whim-
sical piece of Mexican tradition. He says, when the
King was about to turn the river into Mexico, being
told by a certain Magician that he would drown the
country by it, he order'd the man to be apprehended,

designing to put him to death; but that the Magi-
cian preserved himself some time, by turning him-
self into the form of an Eagle, then into a Tyger,
and afterwards into a Serpent: However, that he
surrender'd himself to the King at length, and was
executed. AUTZOL, having reigned eleven years,
died; and MONTEZUMA the second was elected
King, being the same Prince that sat upon the
throne when the Spaniards first invaded Mexico.

This Prince was elected by the unanimous suffra-
ges of the electors, and the approbation of all his sub-
jects; for he was, or appeared to be, the best qua-
lified for that high dignity, of any of the royal fa-
mily; wife, valiant, generous, affable, and en-
dow'd with every other royal virtue. He refused the
crown when it was offer'd him; and was in a man-
ner forced to accept it: But he no sooner ascended
the Throne, than he gave his subjects good reason
to believe his humility and condescension were coun-
terfeited, only to render himself popular; for he
commanded that no Commoner should be admitted
into his Court, or hold any place or office under him:
He would be served only by his vassal Princes and
Nobility; and made it death, 'tis said, for any Ple-
beian to look upon him. However, they admit, he
caused justice to be duly administer'd throughout his
empire, and severely punish'd his Officers and Ma-
gistrates that were guilty of corruption or oppression:
That he was also a great General; ever returned
victorious from the wars, and added several provin-
ces to his dominions.

It was in the fourteenth year of his reign, anno
1517, when the Spaniards first appeared upon his
coasts. In the following year, 1518, CORTEZ
arrived, and so amazed the Mexicans with his ship-
ping, artillery, and hories, that in the opinion of
ACOSTA, they would have submitted to any terms
the Spaniards would have imposed, without striking
a stroke, or offering at a defence; if that would
have satisfied the Spanish General. The Mexicans,
at first, looked upon these foreigners as Gods, or
good Angels, sent for their protection. ACOSTA
observes the same. But they, by their outrages and
devastations, soon gave the Indians occasion to alter
their opinion, and dread them as a kind of evil
Genii sent to destroy them. But, having already
given a full account of the negotiations and transac-
tions between MONTEZUMA and the Spaniards, I
shall not weary the reader with a repetition of them;
only observe, that MONTEZUMA the second is
looked upon as the last of the Mexican Emperors;
for tho' there were two elected afterwards, one was
set up in the life-time of MONTEZUMA, which
made his election void; and the other was taken
prisoner by CORTEZ, before he was well settled on
the throne, and at length put to death by that Ge-
neral, under pretence that he was engaged in a con-
spiracy against the Spaniards: Nor do authors agree
in the names of either.

I proceed in the next place, to enquire into the
learning and qualifications of the Mexicans, that we
may be the better able to judge what credit is to be
given to this history: And, for ought appears to
me, they had neither letters or characters, as the
Chinese have, to express their meaning by; statuary
and painting were the only ways they had to record
what was past: An image or picture, with a crown
on its head, signified a King; and an image, habi-
ted like a Priest, a Priest: But they had no word or
character that would express either, as the Chinese
have. There were some few things indeed that re-
presented others, and may be stiled hieroglyphicks;
as the painted wheel, that distinguish'd their age;
and

CHAP. XII. and lesser circles, their years: And this brings me to speak of their kalendar.

Their kalendar. This they regulated and adjusted by the motion of the sun making his altitude and declination the measure of times and seasons. Their year consisted of three hundred sixty-five days, and was divided into eighteen months, to each of which was assign'd twenty days, which made three hundred and sixty; but then there were five more, a kind of intercalary days, which they added at the end of every year, to make it answer the course of the sun; during which five days, 'tis said, they gave themselves up entirely to pleasure, or at least a relaxation from business; tradesmen shut up their shops, no causes were heard in their courts of justice, and even their sacrifices and the service of the temple were disused at these times. At the end of the five days, the new year began, which happen'd on the 26th of our month of February. Their weeks consisted of thirteen days each, distinguish'd in their kalendar by different figures; and their age consisted of two and fifty years, or four weeks of years; for the describing whereof they made a large circle, which they divided into two and fifty degrees, allowing a year for every degree: In the center of the circle, the sun was painted, from whose rays proceeded four lines of different colours, which equally divided the circumference, leaving thirteen degrees to each semidiameter; and these divisions served as signs of their Zodiack, upon which their ages had their revolutions, and the sun his aspects, prosperous or adverse, according to the colour of the line. In a larger circle, inclosing the other, they mark'd, with the figures of animals, plants, weapons, or other instruments, the most remarkable occurrences that happen'd; which, however, they seem'd conscious, could not be perfectly understood by posterity; and therefore schools were instituted, wherein the youth were taught to celebrate the great actions of their ancient heroes, and to repeat the most memorable transactions of the preceding ages; on which they relied much more than on their hieroglyphicks. So that their history, at last, must be resolved into oral tradition; and how much this may have been alter'd or corrupted, by design or negligence, we may guess, by what has happen'd in other parts of the world. For my part, I never yet met with that nation whose traditions could be relied on; even the Egyptians, Grecians, and Romans, and of later days the Chinese and East-Indians, we find have mixed so many improbable relations with their story, that we know not what to make of their ancient history; much less can we depend upon the Mexican, where they had neither the use of letters or characters to transmit the actions of their ancestors to posterity.

The end of the world expected at the conclusion of every age. At the end of every age, the Mexicans were taught to expect the end of the world, and prepared themselves to take leave of it: On the last night they extinguish'd their fires, neglected their food, and abandon'd themselves to sorrow; not daring to take their natural rest, but remained with their eyes fixed towards the east, till they saw the dawn of the succeeding day appear; and then prepared to welcome the Sun, and salute him, both with vocal and instrumental musick, on his first appearance: They also congratulated each other that a new age was begun, and they should no more be in danger of the like calamity for two and fifty years; for which blessing they crowded to their temples, to give thanks, and sacrifice to their gods, and to receive from their Priests new fires from the altar; concluding the day with songs and dances, and other expressions of their joy.

CHAP. XII. I proceed, in the next place, to enquire into the government of the ancient Mexicans, which, it appears, was at first popular or republican; but falling frequently into factions, which had near endanger'd the ruin of their state, they elected ACAMAPITLI their first King, soon after their arrival on the Mexican lake; and all his successors were elected afterwards, as has been related already; at first by the whole community; but, on the death of IZCOALT, the Kings of Tacuba and Tezcuco, and four Princes of the royal blood, assumed the privilege of electing their King or Emperor; and the rest of the Nobility, as well as the People, were ever after excluded from having any share in the election.

Ceremonies of the coronation. The King elect, after the reign of MONTEZUMA the first, was obliged to invade some neighbouring nation, if the Mexicans were not at that time engaged in war, and to bring home a certain number of captives, to be sacrificed at his coronation: And, on his return in triumph, was met by the Nobility, Ministers of State, and chief Priests, and conducted to the temple of the god of war; where, after the sacrifice was ended, he was clothed by the Electors in the imperial robes; a golden sword, edg'd with flints, was put into his right hand, and into his left a bow and arrows; by which he seems to have been invested both with the civil and military powers: After which, the King of Tezcuco set the crown upon his head, as first elector of the empire: Then one of the ministers made a speech in the name of all the Mexicans, congratulating him upon his accession, and putting him in mind of the duties incumbent on those who were raised to sovereign power; and, above all, with what attention and diligence he ought to apply himself, to promote the happiness of the people committed to his care: Then the High Priest anointed him with a thick balm or oil, as black as ink; blessed the King, and four times sprinkled him with a consecrated water, putting a mantle over his shoulders, painted with skulls and human bones, to put him in mind, says my author, that Princes were subject to mortality. They also used some drugs at the coronation, to preserve him from diseases and enchantments. After which, he offer'd incense to the god Uitziliputli, and took an oath to maintain the religion and customs of his ancestors. He also took an oath, 'tis said, that, during his reign, the sun should give his light, and the rains fall in their proper seasons; and that there should be no inundations, famine, or pestilential diseases: Not that the people of Mexico thought these things in the power of their Sovereign; but they put him in mind that his conduct should be such as not to draw the vengeance of Heaven upon them; being sensible, that the publick sometimes suffer'd for the faults of their Governors.

The Courts of their ancient Kings. Having seen the prince crown'd, it may be proper to say something of his Court, especially in the time of MONTEZUMA the second, who lived in the greatest splendor of any of their monarchs. He had, as DE SOLIS relates, two sorts of guards; one of soldiers, with which the courts of the palace were in a manner crowded; and the other of Noblemen, introduced in this Prince's time, consisting of two hundred, who daily attended in their turns, not only as a guard, but to add to the splendor of the Court.

He had also no less than three thousand women in his palace, being the most beautiful young ladies the Governors of the several provinces could pick out, to adorn the royal palace: These were taken from their relations either with or without their consent, as a tribute due to their Prince; and among them there

CHAP. XII. there were two, the daughters of some of the vassal Kings, whom he treated with great regard; and these the Spanish historians call his wives, and give them the title of Queens, probably because there was some sort of contract or ceremony used before he took them to his bed.

Their women. There was a perpetual succession of women in the palace; for the King frequently gave them to his Courtiers and Favourites in marriage, and supplied their places with others, which were daily sent up by his officers: And, while they remained in the palace, it seems, they were as strictly watch'd and guarded, as in a Mahometan Seraglio, by the good old Prudes and Gouvernantes, who had the care of the royal Concubines.

This Prince appeared but seldom in publick; and when he admitted any of his vassals to petition him, they were not suffer'd to look him in the face. He eat alone, but in great state, having above two hundred dishes at his table, which were distributed among the Nobility in waiting when he had done with them: Beside which, tables were kept for all others who resided in the palace, or whose business or employments brought them thither.

The King sat at table on a little stool, and the room was divided in the middle to keep off the crowd: Three or four of the eldest Courtiers waited within the rail, and near it stood an Officer to receive the dishes, which were brought in by young ladies richly dress'd. The dishes, which were of fine earthen ware, and the table-linnen, were every day distributed among the servants, being never used twice. He drank out of golden cups frequently, a privilege never allow'd to his subjects; tho' he sometimes drank out of the shell of a Cacao-nut, or other natural shells.

There were generally attending at his table three or four buffoons, who did not only divert him with their impertinence, but frequently acquainted him with things that others durst not name; which, 'tis said, was his principal reason for entertaining them.

Having repos'd himself a little after dinner, he was entertain'd with such vocal and instrumental musick as his country afforded; their instruments consisting chiefly of horns, hollow canes, or sea-shells, and wooden drums; and might entertain those that never heard better, but does not seem to be much admired by the Spaniards.

Courts of justice. As to their Courts of Justice, there was one supreme tribunal in Mexico, consisting of twelve Judges, who determin'd all appeals from the respective provinces; and both the town and country had their proper Judges and Officers, who heard the parties, and determin'd causes in a summary way. There could be no bills and answers, no written declarations or pleadings, where there was no such thing as writing: But the Judges were usually govern'd by the decisions of their predecessors and ancient custom, unless the royal authority interpos'd.

The crimes of treason, murder, sodomy, and adultery, were punish'd with death; and some authors add, that robbery and theft were punish'd in the like manner; but others relate, that the first theft was only punish'd with loss of liberty: However, all agree, that corruption in the Judges and Magistrates was punish'd capitally; and that bribery in an Officer or Minister was never pardon'd; into which this Prince examined more narrowly than any other offence whatever.

Military power. There was also a Council of war establish'd at Mexico, which regulated all things relating to the militia; for the soldiery were more favoured than any set of men in the empire, and more rais'd their

CHAP. XII. fortunes, and acquired posts and titles of honour in this profession than any other. In every great town the military men were distinguish'd from the rest of the inhabitants, by several privileges and immunities; and their armies were easily rais'd, every Cacique and Governor of a town or province being obliged to bring a certain number of men into the field upon a summons. And it is said, by DE SOLIS, and several other Spanish historians, that MONTEZUMA had thirty vassal Princes in his dominions that could each of them bring an hundred thousand men into the field. These Princes commanded their respective troops in person, but received their orders from the Generalissimo, which was usually the Emperor himself in any war of consequence; these Princes esteeming it very impolitick to trust large armies to the conduct of any subject.

There were several military honours instituted, Honours. for distinguishing and rewarding those who had behaved well in the army; some were created Knights of the Eagle, some of the Tyger, and others of the Lion, who bore the device of their respective orders on their habits. There was still a superior order of Knighthood, to which none but Princes, and those of the blood royal, were admitted; which the Emperor himself was of: These had their hair tied back with a red string, and a number of tassels hung down their shoulders, according to the exploits they had perform'd, a new one being added every time they performed any signal action.

There was still another Court, or Council, which Revenues of the Crown. had the management of the royal revenues which arose from the produce of the gold and silver mines, and from the tributes or taxes paid in kind of the fruits of the earth and their manufactures; which were said to be greatly increased in the reign of MONTEZUMA the second, who compelled his subjects, whether tradesmen or husbandmen, to yield him one third part of their profits; and the poorest people were obliged to work in the publick buildings, without any other wages than their food, when required. As to the Nobility, indeed, they were not obliged to pay taxes; but they were, by their tenures, required to serve in the army, with a certain number of their vassals, or give their attendance at court, upon every summons.

The last Council I shall mention, is the Council of state, to which all others were subject. This was compos'd of the six Electors of the empire, and usually held in the presence of the Emperor; four of the members always residing in the royal palace, without consulting whom the Emperor scarce ever determin'd any thing of consequence: They were the last resort in all cases, and without their advice were no laws made or alter'd.

CHAP. XIII.

Of the modern government of Mexico, and of the forces and revenues of that viceroyalty.

MEXICO, like the Spanish provinces in the old world, is govern'd by a Viceroy, Government of modern Mexico. and each of the larger divisions of that viceroyalty has its Court of audience, to which all the lesser provinces and districts are subject. The Viceroy, or Governor, is President of each Court of audience; and the Alcald-Majors, Fiscals, and Counsellors of State, are Members of it. These take cognizance of all causes, criminal or civil, within a certain circuit round the city where the respective Courts are held, in the first instance; and, by way of appeal, of all causes which are removed from the Courts of inferior Judges, within their several jurisdictions, parti-

CHAP.
XIII.

particularly from the Courts of the respective Alcalds, Rigidors and Corrigidors of the respective towns and districts. Those cities which have not a Corrigidor for their chief Magistrate, have a Rigidor, or Alcaid-Major, who has a certain number of Rigidors, or Aldermen, for his Assessors, who determine all causes within their several districts. Those towns which are not cities, have their Alcalds only, from whose sentence the people may appeal to the Courts establish'd in the cities, and from them to the Court of audience.

In the Viceroy is vested the supreme military power, and he has the nomination to many civil and military employments; but most of the principal posts are filled up by the King, or the Council of the Indies in Old Spain; to whom also there lies an appeal from the Courts of audience in Mexico: And the Spaniards make it an inviolable rule never to prefer any Mexican, tho' born of Spanish parents, to any considerable post in the Indies. These must be all natives of Old Spain; and the term of the Viceroy's administration is usually limited to five years; but sometimes he amasses wealth enough in that time to purchase a continuance in his office for another five years. And the misery of it is, that such Governors are sent over usually as are necessitous or covetous; and, having given great sums to purchase their places, are forced to oppress all under them, to make up what has been extorted from them by the Ministers in Europe: They therefore usually sell all the posts they have to dispose of, without regard to the qualification or merit of the person preferred; so that there is a train of bribery, corruption, and oppression, that runs through the whole administration: And, as the Spaniards oppress each other, it is not to be supposed, that the poor Indians, that lie at their mercy, escape better.

In the towns that are purely Indian, the Spaniards constitute the same sort of Magistrates, and the Government is administer'd in the same manner by Indians, as it is in the Spanish towns by Spanish Magistrates: But there are some tribes of Indians that are rather in alliance with the Spaniards than subject to them. However, most of the Indians acknowledge the King of Spain for their Sovereign; and their Chiefs accept a staff with a silver head, which is in a manner a Spanish commission to govern their own people. These the Spaniards are cautious of disoblighing, and suffer them to live according to their own laws and customs; only sending Missionaries amongst them, to endeavour, by fair means, to make them conform to their religion and government: For, if the Spaniards attempt to compel or force them to submit, DAMPIER relates, whole towns of them will fly to the woods and mountains; and, if they are accidentally discover'd, they will remove again, which is not very difficult for them to do, having scarce any household-stuff but their hammocks and calabashes; and they soon build them new huts when they come into another part of the country, and raise a plantation sufficient for their subsistence. The Indians who have no dependance on the Spaniards, have some Chief they obey as their Prince, who acts the part of a General when they take the field, and that of a Judge in time of peace; and, in his determinations, is govern'd by ancient custom: But, it seems, he enters upon no business of consequence, without consulting the heads of their tribes or families.

The forces
of Mexico.

The regular forces the Spaniards have in the viceroyalty of Mexico are very inconsiderable: In the Metropolis there are scarce five hundred soldiers; and at Vera Cruz, the port of the greatest

consequence on the North-sea, they have not half that number; and their fortifications are as contemptible as their garrisons. There is scarce a town, of any name, near the coast of the North-sea, but has been taken and plunder'd by the Buccaneers more than once, tho' these Rovers seldom consist of more than a thousand or fifteen hundred men: These small bodies have in a manner defied all the militia of the country; tho' they have frequently remained long enough on the coasts for the Spaniards to assemble their whole posse, yet have they generally carried off their booty in spite of them. The same Buccaneers have fought their royal fleets on the South-sea, taken some of their stoutest ships, and seldom been unsuccessful in their encounters with the Spaniards, by sea or land. And if the Buccaneers and Privateers have appeared so much superior to all the forces the Spaniards have in that part of the world, what might not an English or French squadron of fifteen or twenty men of war, and five or six thousand land-forces, effect in the Spanish West-Indies? We see the Scots fix'd themselves at Darien with much less force; and, had not the English themselves opposed and discouraged that expedition, it would not have been in the power of the Spaniards to have removed them. And, indeed, it is not the want of power, but the want of inclination, that has prevented the English fixing themselves in the richest parts of the Spanish West-Indies. Our Governors seem to have been of opinion, that we should lose more by dispossessing the Spaniards of their acquisitions in the new world, than we should get by the conquest, if we succeeded. And, I must confess, I am entirely of that mind; for tho' we might come in for a share of their gold and silver, yet, if we lost our traffick by it, we should be no gainers in the end. I look upon it to be the interest both of Great Britain and Spain, to live in perpetual amity and good understanding, and to unite their whole powers to oppose the encroaching French, particularly in Florida, to which France hath already given the name of Louisiana; for if the French succeed there, as they will be very uneasy neighbours to the British plantations, they will be much more terrible to the Spaniard on the side of Mexico, which lies contiguous to it; since the gold and silver mines in Mexico may be supposed to draw them sooner that way than to the British plantations, where there is nothing that can come in competition with those treasures: Nay, the Spaniards can never secure their mines in Mexico from the French, but by introducing the English into the western part of Florida, before the French are too well establish'd there. The English would be their best barrier for their Mexican dominions: They find the French have already driven them from their forts at the mouth of the river Mississippi, and some of their settlements on the frontiers of New Mexico; and they may assure themselves they will advance to the mines, if they are not disappointed by the English. It is therefore undoubtedly the interest of Spain to cultivate a good understanding with Great Britain.

Nor is it less our interest to have the Spaniards for our friends: If we do not drive them into the arms of France, we may have the cloathing of the greatest part of the Spanish West-Indies; and we shall not only lose that most valuable branch of our trade by quarrelling with them, but, should the Spaniard be provoked to join with the French in Florida, they would greatly distress our colonies that border on that country, and put a stop to our extending our plantations to the westward. And tho' this

CHAP.
XIII.The interest
of Britain
and Spain
to unite
against the
French in
America.

CHAP. XIII. this would be a great step to their own destruction, we can't be assured they will never take such measures; for we find pique and resentment go a great way, and that Courts, as well as private men, are sometimes governed more by passion than reason. And if both our foreign traffick and plantations must evidently suffer by our quarrelling with Spain, it is not the possession of a mine or two that would be an equivalent for them. Besides, if ever we should attempt to make ourselves masters of any part of the Spanish West-Indies, we shall infallibly be opposed by the French, and perhaps by the Dutch, and other European nations. We have already suffered in our trade by quarrelling with Spain: A great part of the woollen and other manufactures and merchandize, they formerly took from us, are now furnish'd them by the French and Dutch; and where trade has found a new channel, it is difficult to reduce it to the old one. I hope, therefore, both Britain and Spain will consider their mutual interests better for the future. We are not possess'd of the mines of Mexico indeed; but great part of the treasure the Spaniards dig there flows into this kingdom, as has been observed by others, in return for our manufactures: They have the labour, but we already share the profit with them. On the other hand, Spain will not fail to be protected by us against the encroachments of the French, if they use us well; and I don't know any other Power that can protect their American dominions against that potent and enterprizing people.

The revenues of Mexico. The revenues the King of Spain receives from the viceroyalty of Mexico are very considerable, and arise principally from three branches, viz. 1. The King's fifth or tenth of the treasure dug out of their mines; 2. From the duties of excise and custom; and, 3. From the rents and services by which they hold their estates, and the produce of their husbandry and manufactures.

Arising from the mines. GEMELLI CARERI informs us, that the King has but a tenth of the silver in Mexico, though he has a fifth of the silver of Peru, because the Mexicans are at a very great charge in purchasing quicksilver to refine their silver; whereas the Peruvians have mines of quicksilver in their country. Gold, however, pays a fifth to the King, both in Mexico and Peru. The same gentleman relates, that when he was at Mexico, in the year 1698, the King's part for that year came to six hundred thousand marks, every mark eight ounces of silver (which must make twelve hundred thousand pounds sterling of our money); and that the Assayer assured him, the King's share came to eight hundred thousand marks, or sixteen hundred thousand pounds sterling, in the year 1691: And the King's part of the plate of Peru comes to four times as much at least.

Excise and customs. The customs and excise also must raise a great deal of money; for the same GEMELLI informs us, that the King's duties paid by the Manila ship, in which he came from the East-Indies, amounted to fourscore thousand pieces of eight; and those ships which arrive from Peru and Europe annually, also are vastly rich, and pay very high duties to the Crown. The same writer relates, that the excise on a spirituous liquor, drawn from the plant Maghey only, amounted to eleven hundred thousand pieces of eight per annum in the city of Mexico.

Rents and services. The third branch of the revenue, viz. the rents and services due to the Crown, must be equal, if not superior, to either of the former branches; for GAGE observes, that the poorest married Indian pays four, six, and, in some places, eight ryals (four shillings) per ann. to the Crown; and others

in proportion to their estates. There are lands also held immediately of the Crown, that pay very great rents. Others are held of the Encomendero's, that resemble our Lords of Manors, or rather the ancient Barons; to whom their tenants pay a large portion of the produce of their grounds and manufactures in kind: And these Lords hold of the Crown by certain tenures or rents; for all lands there, as with us, hold mediately or immediately of the Crown, and the owners of them contribute to the support of the government, either by their personal service, or the rents they pay in lieu of such service.

CHAP. XIV.

Of the religion of the Mexicans, ancient and modern.

THE people that inhabited this country immediately before the Mexicans, according to tradition, were the Chichimeca's, who are represented by the Mexicans, that dispossess'd them of their country, as a very brutish generation, without religion, without government, without cloathing, ignorant of husbandry, building, and every other art and science.

But, notwithstanding they are said to be without Religion, the Spanish historians, most of them, agree, that this savage people worshipped the sun and moon, and sacrificed fowls and other animals to them.

And GEMELLI CARERI relates, that when he was at Mexico, in the year 1698, being carried to the village of Teotiguacan, which signifies a place of gods, about a days journey from that city, to see some Indian antiquities; he found two pyramids of earth, with steps from the bottom to the top, like those of Egypt; the one being the pyramid of the moon, and the other of the sun: That two sides of the pyramid of the moon were two hundred Spanish yards in length each, and the other two hundred and fifty Spanish yards in length (a Spanish yard being near a fourth less than an English yard). He had no instrument to take the height, but he guess'd it to be fifty English yards: That there once stood on the top of this pyramid a vast idol of the moon (of human form, as I understand him) made of a hard coarse stone, which the first Bishop of Mexico, out of a religious zeal, caused to be broke in pieces: However, there lay then three great pieces of it at the foot of the pyramid: That within the pyramid were several vaults, where Kings had been buried; for which reason the road to it was called Micaotli, or the Highway of the Dead; and about it were several little mounts, or tumuli, supposed to be the burying-places of their Great men.

Our author afterwards viewed the pyramid of the sun, called Tonagli, which stood two hundred paces south of the former; and he found two sides of it three hundred Spanish yards in length, and the other two about two hundred; and it was a fourth part higher than that of the moon: The statue on the top of it was broken; but, however, the best part of it then remained there, being too large to be easily removed. This image had a great hollow place in the breast, where the figure of the sun was placed; and all the rest of it had been covered with gold, as was the image of the moon; and he found some great stones at the foot of the pyramid, that were part of the arms and legs of the idol.

According to their traditions, these pyramids were built by the Ulmeco's, a people which came by sea from the east; which gave some Europeans reason to think they were erected by an eastern people.

CHAP.
XIV.

reason to conjecture, they were colonies of the Egyptians and Carthaginians, who sometimes joined in their naval expeditions to the western coasts of Africa and the islands in the Atlantic ocean.

GEMELLI adds, that the Mexicans do not pretend to know when these pyramids were erected; and Dr. SIGUENZA, a learned Spaniard, looks upon them to be almost as ancient as the Flood. Certain it is, says my author, there was formerly a great city where they stand, as appears by the vast ruins about them: They must have been built by a people who inhabited the country before the Mexicans the Spaniards found there; for it appears, the Mexicans came from the north but four or five hundred years before the Spanish conquest; and, consequently, they could not be the founders of these pyramids, the structure whereof they don't pretend to have any traditions or memoirs.

Religion
of the
Mexicans.

I proceed, in the next place, to enquire into the religion of the Mexican tribes, who succeeded the Chichimeca's; and these, according to ACOSTA, DR SOLIS, and other Spanish writers of figure, acknowledged one supreme God as well as the Peruvians, and worshipped the idol *Uitziliputli* as the image of this great God: But they contradict themselves in other parts of their history; telling us, that *Uitziliputli* was their Mars, or God of War; and that he had a brother, named *Tlalock*, of equal power; and that the like prayers and sacrifices were made before each of them. How then, could the idol *Uitziliputli* be adored as the one supreme God? Besides, the same writers acknowledge, that there was not one Indian nation that had a word in their language, or any term, that signified God. Indeed ACOSTA says, the Peruvians did worship a being, to whom they gave the names of *Pachamat*, *Pachansa*, or the Creator of Heaven and Earth; and of *Ufapu*, the most Admirable; which I shall consider of when I treat of Peru. But neither he, nor any other writer I have met with, will pretend to say, that the Mexicans gave any of their gods such titles or appellations. Indeed, most of their writers copy from ACOSTA, and give us nothing more, unless their own conjectures; and ACOSTA tells us, that their Missionaries were forced to use the Spanish word *Dios*, both in Mexico and Peru, when they spoke of God; the natives having no word of the like import.

If the Mexicans had any god which they imagined presided over the rest, it was the Sun. It is evident, they had a great veneration for this planet, from the speeches of MONTEZUMA, and their ascribing whatever was great and wonderful to his direction and influence; but they had no image of the sun or moon in the temples of Mexico, as the former inhabitants of the country (the Chichimeca's) had: Either they imagined it unnecessary to make any resemblance of those glorious luminaries, which appeared to them every day; or, rather, they imagined they governed the world by the mediation of inferior deities; and therefore built temples, and paid their devotions only to the latter, as mediators for them to those mighty beings they did not think themselves worthy to approach directly: For this seems to have been the opinion of other idolaters, both Pagan and Christian. I proceed therefore, in the next place, to enumerate the principal idols the Spaniards found in the temples of Mexico.

Their
idols *Vitziliputli*,
Tlalock,
Tescalcupa.

The first idol the Spanish writers mention, was *Uitziliputli*, and the second *Tlalock*; which the reader will find already described, p. 142, 143. The third idol was *Tescalcupa*, called the god of

penance; to whom they addressed themselves in their distresses, and in their fasts. It was an image of human form, carved out of a black shining stone, and represented sitting on a chair in the middle of the altar: The hair was tied up with a golden fillet: He held four darts in his right hand, and in his left a golden mirror; and in the same hand a fan, made of feathers of all colours.

CHAP.
XIV.

The fourth image was the Mercury of the Mexicans, represented under a human shape, and called *Quitlalcoatl*: He was more particularly address'd to by merchants and tradesmen.

They had also a goddess called *Tozi*, or our *Tozi* great grandmother; a deity of their own framing; for, it is reported, their god *Uitziliputli* directed them to demand of the King of Culiacan his daughter, for their Queen; which being complied with, they put her to death, steal off her skin, and put it on a young lad, and ever after adored her as their goddess.

Another idol was formed of a paste composed of the flour of several sorts of grain mixed with honey; which they obliged their prisoners to adore that were destined to be sacrificed: And this brings me to enquire into their human sacrifices, with which the Spaniards charge them; making these a colour for all the outrages they committed in America. They insist, that a people, which made the sacrificing their own species the chief part of their religion, ought to have been extirpated. But the Spanish Bishop of Chiapa, who resided in Mexico at the time of the conquest, and was sent over thither to enquire into these matters, and to protect the Indians against the barbarous usage they met with from CORTEZ and his fellow-adventurers; assures us, that most part of the charge was false: That instead of the Mexicans sacrificing thousands and twenty thousands annually, as those adventurers reported, they never sacrificed fifty in any one year. And, for ought I can learn, they neither sacrificed beasts or men constantly; but only on some grand festivals, or in the time of some general calamity, such as famine, or ill success in war, to appease their angry gods, as the Phenicians and Carthaginians did, from whom it is highly probable they were descended. "These adventurers, says the good Bishop, invented such stories to justify their own barbarity. It may truly be said, that the Spaniards, since their arrival in the Indies, have annually sacrificed to their adored goddesses avarice, more people than the Indians sacrificed in an hundred years." And, if their own writers have reduced these sacrifices from twenty thousand per annum to fifty, possibly there is very little truth in the rest of those relations we meet with, of their sacrificing men, much less eating them.

An idol
made of
dough-
paste.

All writers agree, that their Priests offered incense four times a day to their gods; but those that speak of the sacrificing men to their idols, mention it as done upon extraordinary occasions only, and no part of their constant worship. If we might believe some authors, indeed, they did not only sacrifice men, but eat them; and had shambles of human flesh in their markets. But, as I should with great difficulty believe this of any people, it being a thing so generally abhorred by all men I have ever seen or known; I should believe it less of the Indians than any other people, since it is agreed, that they lived for the most part on fruits, roots and herbs, and very little on flesh of any kind. The same Bishop of Chiapa informs us, they were temperate and abstemious to a very great degree; and that one Spaniard would eat as much as four Indians usually

Their hu-
man sacri-
fices mag-
nified to a
great de-
gree.Their eat-
ing human
flesh not to
be relied
on.

CHAP. usually did. And it is very strange, if such a people should feast on human flesh, which, I am apt to think, is a stronger food, and harder to digest than that of any other animal; it must create a strange disorder in men that generally lived so abstemiously. And, as I am inclined to doubt of many of the stories we meet with in the Spanish historians, relating to human sacrifices; so I must absolutely reject those relations that charge the Indians, or any other nation, with devouring their own species. It is strange, if there ever were such a people in America, there should be none of them left at this day. There are many nations, yet unconquer'd by the Europeans, who still retain their ancient rites and customs in other particulars; and yet I can't learn there is one cannibal amongst them.

I shall proceed, however, to give a fair and impartial account of the religion of the Mexicans, as we find it in Father Acosta the Jesuit, from whom most of the other Spanish writers have transcribed their relations; only premising, that tho' this Father be an author of very good credit, where he relates what he saw himself; yet he seems to have had a great share of credulity and superstition in his constitution, as will appear from the pretended miracles he relates upon trust, and the credit he requires his readers to give them.

A resemblance between the Mexican and Christian rites. And, in the first place, Acosta observes, that the Devil has taught the Mexicans to imitate both Jews and Christians in the worship and service of their idols: That they had their Temples, Priests, Sacrifices, Sacraments, Prophets, and Ministers, as the people of God had: And then proceeds to describe the Mexican temples; of which having treated already, I shall, in the next place enquire into the Priest's office.

Their Pope. Their chief Priest, he informs us, was stiled their Papas, or Pope, vested with sovereign authority, and held his office by inheritance, as the rest of the Priests of *Uitzliputli* did: But that the other Priests were elected or dedicated to that office in their infancy.

Incase offered to their idols. That the daily employment of their Priests was to offer incense to their idols: This they did four times within the space of twenty-four hours, viz. at break of day, at noon, at sun-set, and at midnight; when they sounded their drums and trumpets: The chief Priest in waiting, being clothed in a kind of surplice, took fire from the altar at midnight; and, having incensed the idol, was followed into a chappel by the rest of the Priests and Officers of the temple; where they perform'd a very rigorous penance, lashing and cutting themselves till the blood follow'd, and then besmear'd their faces with their own blood.

The Priests and Religious also fasted five or ten days before their grand festivals; and some of them cut and disabled themselves in such a manner, as to render them incapable of enjoying women: Neither did they drink strong liquor, or indulge themselves in sleep, most of their penances being perform'd in the night-time.

The manner of sacrificing men. Their sacrifices come next to be consider'd. Acosta relates, that the captives design'd to be offer'd, being brought to the foot of the temple-stairs, were met by one of the chief Priests, who presenting them the image made of the flour of Wheat, Maize and Honey, declared, that "This was their god;" and, after some other ceremonies, one of these unhappy men was led up to the platform on the top of the steps, where he found six Priests ready for the execution; two seiz'd upon his arms, two on his legs, a fifth put a wooden col-

lar about his neck; and, having thrown him on his back on a pointed stone about 4 foot high, the sixth, being the chief Priest, ripped open his breast with a knife edg'd with flint; and, tearing out the heart first, presented it to the sun, and then threw it in the face of the image of *Uitzliputli* (or some other image) which stood on an altar in the chappel just before the place of execution: Then the body was thrown down the steps, and, being taken up by those that took him prisoner, was carried away, boil'd, broil'd, or otherwise cook'd, and serv'd up for the entertainment of their friends, who feasted on the flesh of the sacrifice. And thus, according to this writer, were fifty and more sacrificed in a day sometimes. The hands and faces of all the sacrificing Priests were painted black when they officiated; and the chief Priest had on a red robe or mantle, with a crown of feathers of various colours on his head, pendants at his ears, and jewels hung on his lips. The rest of the Priests had painted coronets on their heads, and were clothed in white robes.

At some of their festivals, they staid a captive, and cloath'd another man in his skin, who went through the streets begging the charity of the people, who gave liberally on these occasions, the money being applied to the service of the temple.

Sometimes they would stake a prisoner down, and giving him weapons, suffer him to defend himself against the sacrificing Priest; and, if he were too hard for the Priest that attack'd him, they gave him his liberty, otherwise he underwent the same fate as the rest.

Their festivals, 'tis said, were usually celebrated with human sacrifices. The last day of every month, which consisted of twenty days, they sacrificed some captives, and ran about the streets, clothed in their skins, to beg money, in the manner above related.

A captive also was annually given to the Priests, to be the representative of their god. This man they clothed with all the robes and ornaments of the idol he was to personate, and gave him the same name; and he was honoured and adored all that year as the idol was, lodged in the best apartment in the temple, feasted and entertain'd by those of the first rank, and, when he went through the streets, he was attended by their Princes and Nobility; he play'd upon a pipe, or flute, and the people ador'd him as he pass'd: But at the end of the year he was sacrificed, and sent to increase the number of their gods.

The Priests put both the King and People upon these barbarous sacrifices, according to Acosta, who says, "They were weary of them when the Spaniards arrived amongst them, and were determined to have left them off themselves."

In their great feast of *Uitzliputli*, which was held the beginning of May, their Nuns (for they had cloisters of Nuns and Friars belonging to every temple) made an image of their god in paste, of the flour of Maize and Honey; which having dress'd up, and seated on an azure throne, the Nuns, who at that feast call'd themselves the sisters of *Uitzliputli*, carried it in procession on their shoulders to the area before the temple, where a set of young Friars received it, and carried it on their shoulders to the steps of the altar, where the people came and worshipped it, throwing dust on their heads.

They afterwards went in procession with the image to a mountain, a league distant from Mexico, taking a tour through several of the neighbouring villages: After which they returned to the temple

CHAP. XIV. in a triumphant manner, sounding their drums and trumpets, covering the idol with roses, and strewing the ground with all manner of flowers.

Their
commu-
nion.

Then the Nuns took paste, and made it into the form of human bones, which were laid at the feet of the idol, and being consecrated by the Priests, were called, *The Flesh and Bones of Uitzliputli*: About which they sung and danced, and paid the same divine honours to them as to the idol itself. After which, the Priests stripped the idol of paste of its ornaments, broke that and the bones in pieces, which they distributed to the people, bidding them "eat the flesh of their god;" the whole ceremony concluding with a sermon or exhortation of the Priests.

Feast of
Tescali-
puta.

On the 19th of the same month of May, was annually celebrated the feast of *Tescalipura*, when the Priests absolved the people from their sins. The temple gates being opened, one of the Priests appeared, and blew a horn, turning himself to the four winds: After which, he took up dust and put in his mouth, pointing to the heavens; in which he was imitated by the people, who sigh'd, wept and mourn'd for their offences; and prostrating themselves on the ground, implored the divine mercy. The horn was blown for ten days successively, viz. from the 9th to the 19th of May; all which time was spent in weeping and mourning; and, on the last day the image of the god *Tescaliputa* was carried in procession, two Priests walking before it with censers in their hands; and, every time they censured the people, they lifted up their hands to heaven, adoring the sun and their idol: And, during the ceremony, the penitents scourg'd themselves with whips and knotted cords.

After the procession, the people made their oblations, consisting of gold, silver, the fruits of the earth, or of their labour. They also set all manner of delicious meats before the idol, which were afterwards carried by the servants of the temple to the apartments of the Priests; the whole ceremony concluding with the sacrifice of the person who had been the living image of the god of penance the preceding year, and the usual songs and dances at such solemnities.

Feast of
Quitzal-
coatl.

The next festival I shall mention, is that of *Quitzalcoatl*, the god of trade. Forty days before this feast, the Merchants purchased a beautiful young slave, without any manner of defect, to be the living representative of this god; and, having wash'd and purified him, they clothed him with the same robes and ornaments with which the idol was adorn'd he was to represent: They danced, sung, and adored him; furnishing him with every thing that could render life desirable: But, nine days before the intended execution, they put him in mind of his approaching fate; and, if he appear'd to be dispirited and melancholy, they ply'd him with intoxicating liquors 'till he returned to his usual gaiety, and became insensible of his sufferings: And, on the night of the feast-day, about twelve o'clock, they sacrificed the unhappy wretch in the usual manner, ripping open his breast, and taking out his heart, which they first offer'd to the moon, and then threw in the face of the idol, tumbling the body down the stairs of the temple, which the Merchants took up, dress'd, and eat with their friends.

It is not pretended, that the Mexicans had any constant daily sacrifices, either of men or other animals: But our author relates, that they adored the god of hunting; and, at certain seasons of the year, used to surround the woods and mountains, where they expected to meet with wild-beasts, or

game: And, having lighted fires on all sides, and driven the beasts to the centre, there they used to kill, and offer them to this god, who was placed on an altar on the top of the mountain thus invaded.

CHAP. XIV.

The inhabitants of Honduras, Yucatan, Nicaragua, and the rest of the provinces, had idols of different figures, that were worshipped with different rites: But most of them, we are told, sacrificed men on some occasions, particularly those of the district of Tlascala; and the island of Cozumel, on the coast of Yucatan, was famous for such sacrifices, as well as for its oracles. But we are inform'd, that the Priests here, as well as the Pagan Priests of old, used to abuse the people with pretended answers from their idols, which they themselves pronounced unseen from a hollow place, where they stood conceal'd.

I shall take an opportunity here to recite some of the miracles related by Father Acoſta, which have any relation to these sacrifices, or other parts of their religion.

He says, that some Spaniards standing at the foot of the temple stairs, when a body that had been sacrificed, and the heart pulled out, was rolled down, the body spoke to them, and cry'd, "Knights, they have slain me;" adding, that it is no incredible thing for a person to speak after his heart is pull'd out.

Miracles
related by
Acoſta.

The second miracle he relates, was done by a Spanish soldier, who having committed some capital crimes, fled to the Indians in the mountains to conceal himself; and observing the Indians in great distress for water, and that they in vain called on their gods for rain, advised them to erect a Cross, and offer up their prayers to it for relief; which they did, and there immediately fell abundance of rain, which so convinced the Indians of the virtue and holiness of the Cross, that they applied to it in all their distresses, obtaining whatever they demanded; which induced them to break their idols in pieces, and apply themselves to the Christian Priests to be baptized; and that the province was ever after called *The Holy Cross of the Mountain*. However, Acoſta is so good to tell us, that this miracle-working soldier was afterwards taken by the Spaniards, and hang'd for new offences, not being able to leave his wicked courses.

The same writer proceeds to inform us, that some Spanish soldiers, who wander'd about in Florida several years, cured whole towns and provinces of their diseases, by saying over some prayers of the church, and signing their patients with the sign of the cross, without administering any medicine to them.

He observes also, that in several battles a horseman was seen in the air, mounted upon a white horse, with a sword in his hand, fighting for the Spaniards; and at other times the image of the blessed Virgin appeared fighting for them.

So very credulous and superstitious are the best Spanish authors, that treat of the conquest of Mexico: From whence it is natural to infer, how little their accounts are to be depended on, where it is their interest to traduce the Indians to advance the glory of their church, or magnify the actions of those pretended conquerors that destroy'd the inhabitants of that new world.

Notwithstanding 'tis pretended, that the Mexicans sacrificed twenty and fifty thousand men in one year, we find, when the same authors come to give a particular account of their religion, they confess, that on some of their greatest festivals they were contented with the life of one single victim; which it is not probable they would, if they had sacrificed such numbers at other times.

It

CHAP.
XIV.

W

It is observable also, that in some parts of their history, they represent them rejoicing at these sacrifices, cooking, dressing and eating the victims with an uncommon gust; and yet, in other passages, we are required to believe, that they detested human sacrifices, were put upon them only by their Priests, and were determined to have left them off before the Spaniards came: So inconsistent are these writers with themselves. And we find the Bishop of Chiapa, who was upon the spot at the time of the conquest, absolutely denies the Indians sacrificed such numbers as was pretended, or any thing near so many.

I can't help taking notice also, that their historians relates, that the legs and arms only of the sacrifice were chosen to eat, the body being neglected and thrown away; whereas in other animals, the loin, the breast and rump are looked upon as the choicest pieces, and the legs the most indifferent food. They also give us pictures and cuts of the Indians roasting human flesh on spits; whereas, every one knows, they roast no kind of flesh, but stew or broil (which they call barbacuing) their meat. From whence I am confirm'd in my former opinion, that the Indians never eat any human flesh; and if ever they sacrificed men, it was but very seldom, and upon extraordinary occasions. But to proceed in the description of their religious rites.

Convents
and mon-
neries.

Within the bounds of every temple there were two convents, the one of Nuns, and the other of Friars: The Nuns were clothed in white, and called the daughters of penance, being admitted into the cloister at twelve or thirteen years of age, when their heads were shaved: Their business was to keep the temple clean, and dress the sacred meats presented to the idols, and afterwards eaten by the Priests; and they made the furniture and ornaments for the temple, and the idols it contain'd: They rose at midnight to attend the service of the temple, and perform the penances imposed on them; and it was death to suffer their chastity to be violated while they remained in the cloister; but then they were to continue here but a few years; after which, they were allowed to leave their cells, and marry.

The young Friars were admitted at eight or nine years of age, had their crowns shaved, and attended the service of the temple also: They were obliged to live abstemiously, and practise great austerities; but were, however, at twenty years of age, allowed to go into the world, and marry. There were no such things among the Mexicans as vows of perpetual virginity and chastity; but, at proper ages, both Nuns and Monks entered into the married state, which render'd their condition preferable to that of cloister'd Catholics.

Circumci-
sion and
baptism.

The Spanish writers also relate, that the Mexicans had the rites of baptism and circumcision amongst them; by which they initiated young children, especially those of noble extraction, into their religion.

Confessi-
on.

Their Priests also obliged their people to come to confession, and enjoin'd them penance, after the manner of the Roman Catholics. Thus the rites of the Mexicans and Spaniards being pretty much the same, the latter had little more to do than to give them one set of images for another, and require them to direct their devotion to different objects represented by images consisting of the same materials their former idols were made.

Oracles.

Another part of the Mexican religion, or superstition, consisted in consulting their idols as to future events: But I find the Priests, for the most part, deliver'd their oracles; or, if the idol itself was ap-

ply'd to, there were some pious frauds used to impose on the bigotted enquirer. The voice, indeed, proceeded from the place where the image stood; but it was the voice of a man, artfully placed in or behind the image, and not the voice of a demon (as some have supposed) that resolved their doubts. And, to me, the Idol-priest, the Conjurer, and the Physician, seem to have been the same person, only acting different parts: They all pretend to charm away distempers, and do a multitude of other feats, above the power of nature; which every one is at liberty to believe or reject, as he is disposed, these being no articles of faith.

As to the Christian religion, which the Spaniards boast they introduc'd into this new world, it appears, that the first adventurers, CORTÉZ and his companions, studied nothing less than the conversion of the Indians, whatever they pretended: They only summoned the Indians to submit to the Pope and the Emperor CHARLES the Vth; and, on their refusal, to become Christians (before they were at all instructed in the Christian rites) they seiz'd their country, murder'd many millions of them, and enslav'd the rest: And afterwards, when these abuses were in some measure redress'd, and Missionaries sent over, they perfectly dragoon'd the Indians that were left alive into Christianity, driving 'em by hundreds and thousands into the rivers to be baptized, on pain of having their throats cut. One of these Missionaries boasted, to CHARLES the Vth, that he had baptized above thirty thousand Indians himself: And GAGE relates, that it was frequent, in his time, to baptize the Mexican Indians before they were at all instructed in the doctrines of Christianity. See GAGE's *Survey of the West-Indies*, p. 357, &c.

The same writer relates, that there are Missionaries sent over from Spain to every province in Mexico, from all the religious orders, annually; and that it is very seldom that any considerable dignity in the church of Mexico is conferred on a native of that country, tho' born of Spanish ancestors; which has created an implacable enmity between the Clergy that are natives of Mexico, and called Crioli, and those that are natives of Old Spain. The same policy is used in relation to posts in the Civil Government, as has been observed already: Most of the superior Governments and Offices are filled with the natives of old Spain, who treat the Crioli, or Mexican Spaniards, with great contempt; from whence, some have been inclined to think, the latter would be ready to revolt, and join any foreign Power that should appear in the West-Indies, to free themselves from the Spanish yoke. But as that of France would be still more insupportable to the Spanish Indians, and they are too much bigotted to their superstition to submit to Hereticks, it is highly probable, notwithstanding their aversion to the Spanish Administration, they would all unite against a foreign invader; and whatever European shall attack them, ought to depend on his own force, and not rely much on the disaffection of the natives.

GAGE's other observation, however, in relation to the Missionaries sent from Spain, "That they are frequently Monks of very little merit, and of lewd lives," may be true enough; for, so we find it in other countries, men of worth and character are seldom fond of travelling and undergoing such hazards and fatigues as are to be met with in passing the seas, and changing the climate; and therefore leave these missions to those whose necessities or slender reputation at home induces them

CHAP. XIV. to go abroad: Not but that there have been men of very great worth found sometimes among these Missionaries.

GAGE insinuates, that the principal motives that draw the Spanish Clergy over to America, are a view of gaining great riches, to free themselves from the confinement of their cloisters, and enjoy an unrestrained liberty; for it is frequent for a Priest to lay up ten or twelve thousand crowns in ten years time, who has but an ordinary cure in Mexico, and to live plentifully and luxuriously all the time, and be in a manner adored by the common people there.

The loose lives of the Monks and Missionaries. He was amazed, he said, to find the Monks in the Mexican cloisters and the parochial Clergy rivaling the quality in their dress and luxurious way of life: They drank, they gamed, they swore, they wench'd, and made a jest of their vows of poverty; getting money enough, many of them, to return to Old Spain, and purchase bishopricks.

The Laity proportionably lewd. And as to the Laity, he says there is not a more bigotted or a lewder people upon the face of the earth: A present to the church wipes off the odium of the greatest crimes; and that the way the people are instructed in their religion here, as in Old Spain, is by plays and theatrical entertainments in their churches.

There is scarce any part of the history of the Gospel but is the subject of a play, which the lowest of the people are taught to act; one personates our SAVIOUR, another PILATE, a third HEROD, and so on: And as their churches are exquisitely fine, so is their musick, both vocal and instrumental. The Clergy collect the most harmonious voices, and have them taught not only to sing anthems, but merry songs; and in their cloisters they have masques, dances, and all manner of entertainments the Laity in this part of the world indulge themselves in: And yet have they their seasons for penance and mortification, particularly in Lent, when the people do not only keep a strict fast, but lash and cut themselves unmercifully in their processions. This is the exercise of the Holy-week before Easter, and in case of an earthquake, famine, or other general calamity, when they endeavour to appease the wrath of Heaven by such austerities.

CHAP. XV.

Of the marriages of the Mexicans; of the education of their children, and of their funerals.

Marriages. According to ACOSTA, the Mexicans were married by their Priests in the temple: The bride and bridegroom standing before him, he took each of them by the hand, and demanded, if they were agreed to marry; and, on their answering in the affirmative, he tied a corner of the woman's veil to a corner of the man's mantle; and, leading them in this manner from the temple to the bridegroom's house, he made the bride surround the fire (that was kindled in the middle of the house for that purpose) seven times: After which, the man and woman sat down by the fire; and thus the marriage was concluded without farther ceremony, and consummated the same night. But if the man did not find his bride a virgin, she was returned the next day to her friends, which was no small reproach to the family. On the contrary, if he had no objections to her virtue, the bridegroom gave a handsome entertainment to the wife's friends the next day, made them considerable presents, and sacrifices were offered to the gods on the joyful occasion. A schedule was afterwards made of all the

jewels, cloaths and goods the wife brought with her, which her father kept; and, in case of a divorce, which happen'd frequently where they could not agree, all the effects mention'd in the schedule were return'd, with the wife, to her friends: And, it seems, people once divorced were prohibited coming together again, by the Mexican laws, on pain of death.

ACOSTA, in speaking of their marriages, does not inform us, whether polygamy was allowed amongst them; but, in other parts of his history, he confirms the relations of other writers, who unanimously observe, that their Kings and Great men had a great variety of women, both wives and concubines. Adultery (that is, the enjoying another man's wife) was capital; but neither polygamy or concubinage were deemed any offence against their law: Even the common people had probably more wives than one, because they were so far from being a charge to a man, that they might well be reckon'd part of his stock, as well as his slaves; for the wives of the common people cultivated the grounds, carried the husband's baggage and provision in every expedition, whether in war, in hunting, or upon a journey: They also spun and wove their cloaths, and did all the business of the house besides; consequently, the more wives a man had, the richer he must be: Whether they brought fortunes with them or not, they improved and increased his estate every day.

WAFER, who resided a great while among the Indians of Darien, adjoining to Mexico, relates, that the fathers of the bride and bridegroom only were concerned in tying the matrimonial knot. He does not mention any Priests being concerned in it; adding, that, seven days after the contract was made, the bride's father deliver'd her to her husband; when all the Indians for several miles round were invited to an entertainment, and every one of them brought the married couple a present, consisting of provisions and fruits. The men also brought their tools, to clear a spot of ground for a plantation for the married couple, and assist in building them a house: which being finish'd in seven or eight days, the men sat down to drinking, continuing at it night and day 'till all the liquor was spent; the women waiting upon them, and taking a great deal of care of their drunken husbands when they found them disorder'd. And, notwithstanding the wives are put to all manner of drudgery in their plantations and houses, and carry the baggage on journeys, WAFER observes, they do all this readily and cheerfully: That they have no quarrels with their husbands, or with one another, and are extremely good and courteous to strangers: That their husbands also are very kind to them: He never knew an Indian beat his wife, or give her a hard word, all the while he was amongst them; and, indeed it would be very hard, if they should abuse their wives, when they are contented to be their slaves.

A woman is no sooner deliver'd of a child, but she and the infant are immediately wash'd in some river: After which, the child is swathed or tied to a board, and the mother suckles it with the board at its back: It also sleeps in a hammock thus fasten'd to a board. And, when they grow up, the boys are bred to their father's exercises, namely, shooting, fishing, or hunting; while the girls are taught husbandry as well as housewifery, and to spin and weave. He adds, that the Prince of that country (who was a Pagan, and not at all subject to the Spaniards) had seven wives; and, whenever he

CHAP. XV. went a long journey, so contrived matters, that he had always a wife at the end of every stage.

Marriages of the Musquito Indians. The Musquito Indians, who inhabit the province of Honduras, allow of polygamy also, or a plurality of wives, as we are inform'd by one of our own countrymen, who resided amongst them about the year 1699: Nor do they marry 'till they have cohabited some time together, and try'd whether their humours and every thing else are agreeable; and then the man, to make sure of his wife, gives her father a present, enters into a contract with him for his daughter, and the bargain is ratified at a notable drinking-bout, where the friends on both sides are made as merry as heart can wish. And as these Musquito men frequently make long journeys, or go abroad in the service of the English and other foreigners, they do not take it amiss if a friend cohabits with their wives in their absence, provided they take care of them and their children.

Of Indians subject to the Spaniards. As to the Indians that are subject to the Spaniards, and obliged to profess themselves Christians, DAMPIER informs us, their Priests oblige them to marry when the lads are fourteen, and the girls twelve: And if they are not then provided with a spouse, the Priests find one for them. And in this, it seems, the Civil Government concur, looking upon it that married people make the best subjects: A wife and children are the surest pledges of a man's fidelity. An Indian seldom leaves his family, and retires to his untamed countrymen in the mountains, after he is married; but becomes an industrious and profitable member of the commonwealth, paying duties both to the Church and his Civil Governors. The marrying them so young also renders the country the more populous, which was impolitically deprived of its inhabitants by the first Adventurers. Nor do the Spaniards only take care to see the young Indians married to each other, but they encourage, or at least suffer, the native Spaniards, and the Criolli their descendants, to marry with the Indians; whereby the Americans are so incorporated and allied to many Spanish families, that they are in a manner become the same people in several towns and provinces. The like policy the French observe in their American plantations; while the English stupidly prohibit their people marrying with the Indians, and consequently lose many advantages in planting and establishing themselves, which other European nations have.

Impolitic in us not to marry with the Indians. The Spaniards, French and Portuguese also endeavour to make the natives profelytes to their religion, wherever they come; representing, at the same time, all Protestants as impious and barbarous monsters of men, and so far from being Christians, that they are perfect Infidels, and strangers to all virtue and morality: Which the poor Indians, who are incorporated with them by marriage, and now bigotted to their superstition, are too apt to believe. They entertain insuperable prejudices therefore against our nation, and have scarce any opportunities of being undeceiv'd. Thus the nations above-mention'd daily securing their interest in the natives, by the two strongest ties of blood and religion, our frontier settlements must ever remain exposed to the invasions of their Indians. It will be very difficult to defend and establish them where the French or Spaniards lie in our neighbourhood, and continually incite the Indians in alliance with them to fall upon our colonies; especially as we use no arts to countermine our rivals, and ingratiate ourselves with the Indians, as other nations do. This is the true reason we have yet penetrated no farther into the continent; nor shall we ever be able to bring over many

Indian nations to our interest, unless we employ more CHAP. XV. Missionaries to instruct them in our faith, and encourage our people to intermarry with them. Our colonies, indeed, are yet more powerful in North America than either those of France or Spain, and we can supply the natives with what they stand in need of on easier terms than either of those nations can; but still they are shy of us, and do not appear hearty friends. The French and Spaniards frequently distress our settlements, only by stirring up the Indians against them, tho' they have scarce any forces of their own to back them; but were our people suffer'd to intermarry and incorporate with the Indians, and some pains were taken to bring them over to our religion, Florida, and most part of North America, would, in a few years, become entirely British; and our plantations might enjoy perfect tranquility, without a rival in that part of the world.

The ancient Mexicans, Acosta observes, were exceeding careful of the education of their children: *Mexican education.* They had almost publick schools and academies belonging to every great temple, where their masters studied the genius of the children under their care, and qualified them for the church, the state, or the army, according as they were inclined: They suffer'd them to take but little sleep, obliged them to live abstemiously, to carry burdens, and perform the roughest exercises; and those design'd for the army were obliged to attend the camp, and give proofs of their courage, before they were admitted to be enrolled among the soldiery, which was esteemed the most honourable employment of all others.

The young ladies also were educated in convents, instructed in the principles of religion and virtue, taught to paint and match beautiful feathers, and such other works as might render them useful and agreeable when they enter'd on the married state. Both sexes were taught to sing and dance, and to repeat the heroick actions of their ancestors, and other remarkable occurrences in their history; which, in some measure, supplied the want of books and records; for, tho' they had some characters and hieroglyphicks amongst them, these were far from enabling them to form a tolerable history: They could give but a very dark and confused account of what had happen'd two or three hundred years before the arrival of the Spaniards, whatever some writers may have suggested to the contrary.

The author of the *Conquest of Mexico*, written *Funerals.* about an hundred and forty years since, as well as ANTONIO DE HERRERA, informs us, that the Mexicans sometimes burnt, and at others, buried their dead: That their Princes and Great men were generally burnt, and their ashes, being afterwards collected, and put into an urn, were then buried: That the funeral solemnity was perform'd by their Priests, and the places of interment were usually their gardens or court-yards, tho' some were buried within the walls of their temples, and others in the fields or woods; the Mexican Emperors had burying-places appropriated to their family some distance from Mexico.

Soon after the party died, the corpse was wash'd; and, being dress'd in the mantle the deceased usually wore in his life-time, and set upright, all his friends and relations came and took a solemn leave of him. The corpse was carried to the place of interment, attended by the Priests, who sung mournful funeral songs, and play'd upon their wind-musick. And where a Prince was to be interr'd, the Nobility and Officers of state attended the procession: They were buried with their arms, and in their habits. In some places, abundance of treasure and precious moveables

CHAP. XV. moveables were thrown into the grave with them, and a great number of slaves and officers killed to bear their Great men company. But this seems to have been practised more in Peru than Mexico. I question whether any slaves were put to death at the burial of a Great man in Mexico. But the Spanish writers have very confusedly intermixed the rites of several countries, which makes it difficult to distinguish what were their respective customs.

The state of departed souls. The same writers assure us, that the Mexicans believed that the soul was immortal, and that there was another state, where every one was to be rewarded according to his works; but they had no notion of the resurrection of the body. They held also, that there were nine different places to which departed souls were sent, according to the time of their respective ages, and the different lives they had led; but that the place of the greatest happiness was near the Sun: This was to be the portion of the brave who died in battle, and of such as had been sacrificed to their gods. Some of the latter were canonized, and even deified; which might be some excuse for their sacrificing men: They imagin'd, they did them no injury, when they depriv'd them of a life of care and anxiety, and sent them to share the joys of paradise, or, rather, to be number'd with the gods.

CHAP. XVI.

Of the province of New-Mexico.

New Mexico. Situation and extent. **N**EW MEXICO, or Granada, is bounded by unknown lands on the north; by Florida on the east; by Mexico, or New Spain, on the south; and by the Bay or Gulph of California, which separates it from California, on the west; lying between the 28th and 45th degrees of northern latitude, according to the Spaniards; and between 100 and 130 degrees of western longitude, from the meridian of London. But whether we should extend or contract these limits on the north and east, I will not pretend to determine. We know no people north of New Mexico. The Spaniards, if they please, may call the countries theirs as far as the Pole; but there is not a twentieth part of the country, within the bounds already described, either peopled or cultivated: And how far we should extend the limits of New Mexico to the eastward on the side of Florida, is equally uncertain; no one having attempted to fix the bounds between these two countries, unless the French, who have introduced that imaginary country of Louisiana into their maps in the room of Florida, bounding it with the British Plantations on the east, and New Mexico on the west. But if the English should (as I see nothing can prevent them, but their own sloth and negligence) extend their settlements to the westward, as far as the river Mississippi; and the Spaniards theirs to the eastward, as far as the same river, which may easily be done, as their settlements already come very near the banks of that river; Louisiana, probably, will be no more heard of in a few years.

All the countries north of the Gulph of Mexico formerly called Florida. Certain it is, that all those countries which now go under the name of the British Plantations on the continent of America on the east, and those to which the Spaniards have given the name of New Mexico on the west, with all those countries that lie between them, and to which the French have given the names of Louisiana and New France, on the first discovery, went under the name of Florida. As to the English and the Spaniards, they have been a considerable

time possess'd of the east and west parts of this country, and have peopled and cultivated it in many places; and the English traffick with the natives as far eastward as the river Mississippi: Whereas the French have only here and there an inconsiderable fort, near the mouth of the river Mississippi, or in Canada; by which they pretend to entitle themselves to the whole country of Florida, and will never want a pretence for excluding both the English and the Spaniards from the whole, if ever they are strong enough to do it. Tho' forty years ago they had scarce any footing in the country, they have denominated Louisiana, and are not at this day possess'd of more of it than the county of Middlesex contains; tho' the country they lay claim to is a fine square of fifteen hundred miles of a side, the most temperate, fruitful and beautiful spot of earth upon the face of the globe; from whence it obtained its ancient name of Florida. If we suffer the encroaching French to establish themselves there, and drive us from this terrestrial paradise, when nothing is so easy as to prevent it, by uniting our forces with the Spaniards, both nations richly deserve to enjoy the fruits of their supine negligence. But to return to New Mexico: We know little more of it, than that it abounds in rich silver mines, and has some of gold: That it is an exceeding fruitful country, well water'd with rivers, and abounding with the same plants and animals as our plantations of Virginia and Carolina do; and, according to the Spanish accounts, is very thinly inhabited by scatter'd clans or tribes of savage people, who live chiefly by what they take in hunting, and on the fruits of the earth that grow spontaneously; neither building towns, or cloathing themselves, or being acquainted with any art or science.

GEMELLI CARERI, who was at New Mexico in the year 1698, gives us the following account of that country. He says, part of it is newly conquer'd, and there remains still much more to conquer. As to the natives, he was inform'd, they were such skilful archers, that they would hit a sixpence thrown up into the air, and shake all the grain out of an ear of corn without breaking it off: That they are great lovers of Mule's flesh; for which reason they often robbed travellers, and carried away only the beasts, leaving behind the chests of silver, which they do not value: That they paint their bodies, and pricking the skin render the colours indelible. The King of Spain maintains six hundred horse in New Mexico, with an allowance of four hundred and fifty pieces of eight per annum to each man; but the soldiers have the least part of it, the Governor putting most of it into his own pocket; for he sells them all manner of cloathing and necessaries, and, setting his price upon them, makes the soldiers give twenty pieces of eight for that which is not worth two; and, by such means, makes his post worth three hundred thousand pieces of eight per annum. The Spanish soldiers in this country are arm'd with a shield, musket, and half-pike, or spear; not to fight (says our author) but to hunt them out like wild beasts: They are order'd by the Government not to kill this savage people, but to bring them in, that they may be instructed in their religion, and civilized. Thus an hundred and fifty leagues have been conquer'd to the westward, tho' the people endeavour'd to defend themselves with their bows and arrows. The worst is (says GEMELLI) that, being five hundred leagues from the city of Mexico, those barbarians quickly revolt, knowing there cannot be supplies of soldiers sent against them suddenly. The country is plain, and

CHAP. XVI. and convenient for carriages for some months every year; but the King's forces are obliged to pass such wide deserts, that they usually intrench every night, and keep guard, for fear of being surpriz'd by the savages. The Franciscans have the charge of the conversion of these wild people, called Chichimeca's, who are rather atheists than idolaters, and have brought a great number of them to live like men; but their wild nature always inclines them to solitude. The country is so thinly peopled, that they travel several days journey without meeting with a village; for which reason the Viceroy has sent several families thither of late years to people it, the soil plentifully producing all things that are sowed or planted in it, even of the fruits of Europe: And there are, besides, rich mines of gold and silver. The length of the way not allowing travellers to carry their quilts to lie on, the Jesuits that go to their missions in this country have learnt of the Indians to carry before them, on their saddles, mattresses and pillows made of leather, which at night they blow full of wind, and they are as soft as a feather bed.

The enter- prizes of the Spaniards in Florida. The Spaniards formerly over-ran great part of the eastern as well as western Florida, but made few settlements in it. The gold and silver mines of Mexico were so attractive, that they in a manner abandon'd this fruitful country again, retaining only the forts of St. Augustine, St. Matthew, and some other inconsiderable places on the confines of Carolina: None of which I should envy them, if they would unite with Britain against France. There is room enough in Florida for the Spaniards, the English, and the natives; and, indeed, more than they can cultivate: But it is impossible they should enjoy any part of it in quiet, if the French are suffer'd to establish themselves in what they call Louisiana. There is no medium: The French must either be driven from Florida, or they will drive both the English and Spaniards out of it; and, indeed, out of all their American plantations: Therefore, as the Earl of SHAFTSBURY said in relation to the Dutch, *DELEND A EST CARTHAGO*. The French are a much more formidable enemy, both in the old and new world, than any other Power; and, I hope, Great Britain and Spain will discover their mutual interest before it be too late. The Spaniards can never do Britain any hurt, but by confederating with the French: Nor is it our interest to fall out with, or encroach on the Spaniards; their plantations take off our English manufactures, and, while we maintain a good understanding with them, are almost as advantageous to Britain as our own: Whereas, if the French are allow'd to fix in Florida, we not only lose our trade; but our very plantations. To return to New Mexico.

Some writers have subdivided it into twenty or five and twenty provinces, and furnish'd us with the names of as many towns, the capitals of the respective provinces: But, as they have not given us the situation, boundaries, or description of any of these provinces, and most authors agree, that not one twentieth part of the country is yet inhabited or cultivated; I shall content myself with observing, that Santa Fé, the capital town of New Mexico, is situated in 36 degrees odd minutes north latitude, a little to the westward of the North River; and that it is a Bishop's see, and the residence of the Governor; and said to be regularly built of stone.

California described. I shall conclude this chapter, and the description of the Spanish dominions in North America, VOL. III. NUMB. CXIX.

CHAP. XVI. with the best account I could get of California, which may well be look'd upon as a part of New Mexico, since it is joined to it by a narrow isthmus, or only separated from it by the Bay or Gulph of California; and, if not under the same Governor, is subject in a great measure to Spanish influence, as will appear hereafter.

California, formerly deemed an island, is laid down in our latest charts and maps as a peninsula adjoining to the continent of New Mexico. It is bounded by unknown lands on the north; by the Bay or Gulph of California and a narrow isthmus, which separate it from Old and New Mexico, towards the west; and by the South-sea on the south and west; stretching in length from the Tropic of Cancer to the 45th degree of north-latitude; and lies between the 115th and 136th degrees of western longitude, reckoning from the Meridian of London. It is of an unequal breadth, narrow in the south, and growing broader towards the north; indented by many considerable bays and gulphs of the sea; said to be about fifteen hundred miles in length, and three hundred in breadth in the broadest part.

This country was first discovered by CORTES, (who had the honour of subduing Mexico) in the year 1535; but the Spaniards did not, 'till very lately, penetrate far into it, contenting themselves with the rich Pearl-fishery on the coast.

The celebrated Sir FRANCIS DRAKE touched upon this coast in the year 1578, and took possession of it in the name of the then Queen of England, giving it the name of New Albion; but the British Government has never thought fit to attempt any farther discoveries in California; and it is at this day, or will be in a very short time, in the power of Spain, and annex'd to their Mexican dominions, as we may conjecture from the following description of that country.

In the letters of the Missionary Jesuits, we meet with one written by FR. MARIA PICOLO, who relates, "That in October 1697 (being then in New Mexico) he embark'd, with Father SALVIETERRA and a guard of soldiers, for California, in order to attempt the conversion of the natives of that country; and that having pass'd the Bay of California, and landed their people, the natives, imagining they came to dispossess them of their pearl-fishery, as others had endeavour'd to do before, attack'd them with great fury, throwing at the Spaniards abundance of darts and stones: But, being repulsed by their guard, the people became more tractable, and enter'd into a parley with them; and, when they understood the Missionaries came with no other intention than to instruct them in the Christian religion, they express'd a great deal of joy, and suffer'd them to settle four missions in their country, some of which extend to the coasts of the South-sea. Here they spent five years in learning the languages of the several tribes, and in preaching to the people; and had an opportunity of making the following remarks on that country.

"California, this Father observes, is pretty well laid down in our common maps: That the heats in summer are very great along the sea-coasts, and it seldom rains; but the air of the inland country is more temperate, and the heats not so excessive: It is the same in winter in proportion. In the rainy season there are floods; but, when that is over, instead of rain, the dews fall in such plenty every morning, that one would think it " had

Situation and extent.

The Jesuits description of California.

CHAP.
XVI.

“ had rained ; which renders the earth very fruitful. In the months of April, May, and June, there falls with the dew a sort of Manna, which congeals and hardens upon the leaves of reeds, from whence they gather it : It is as sweet as sugar, but not altogether so white.

“ The climate must needs be healthful, if we may judge of it by ourselves, and those that were with us ; for, during the five years we were in this kingdom, we continued very well in health, notwithstanding the great fatigues we underwent ; and of the other Spaniards there died but two, one of which was a woman, who occasioned her own death, by imprudently bathing herself when she was near lying-in.

“ There are in California large plains, pleasant valleys, excellent pastures at all times for great and small cattle, fine springs of running water, brooks, and rivers, with their banks cover'd with Willows, Reeds and wild Vines. In their rivers they have plenty of fish, especially Cray-fish, which they keep in reservoirs 'till they have occasion for them. There is also plenty of Xitames, of a better taste than those of Mexico. So that we may conclude California to be a very fruitful country. On the mountains there are, all the year long, Mescales, a fruit peculiar to this country ; and, in most seasons, large Pistachio's of several sorts, and Figs of different colours. The trees are very beautiful ; and, amongst others, that which the Chinos (who are natives of the country) call Palo Santo, bears a great deal of fruit : From this they draw excellent Frankincense.

“ As this country abounds in fruits, it does no less in grain, of which there are fourteen sorts, that the people feed on. They use the fruits of trees and plants, and among others those of the Yuca (or Cassavi) to make bread of. There are excellent Skirrets, a sort of red Strawberries, of which they eat plentifully : Citrons and Water-melons of an extraordinary size. The land is so good, that most plants bear fruit three times a year ; so that, with some labour in cultivating it, and skill in managing the water, they render the country extremely fertile. Nor is there any sort of fruit or grain, but what they gather in great abundance, which we experienced ourselves ; for bringing with us from New Spain, Indian-wheat, Peas, Lentils, &c. we sowed them, and had a very plentiful increase, tho' we had not any cattle or proper instruments to till the ground.

“ Besides several sorts of animals that we knew, which are here in plenty, and are good to eat, as Deer, Hares, Rabbits, we found two sorts of Deer that we knew nothing of ; we call them Sheep, because they somewhat resembled ours in make. The first sort is as large as a Calf of one or two years old : Its head is much like that of a Stag, and its horns, which are very large, like those of a Ram : Its tail and hair are speckled, and shorter than a Stag's ; but its hoof is large, round, and cleft like that of an Ox. I have eaten of these beasts ; their flesh is very tender and delicious. The other sort of Sheep, some of which are white, and others black, differ less from ours : They are larger, and have a great deal more wool, which is very good, and easy to be spun and wrought. Beside these animals, that serve for food, there are Lions, wild Cats, and many others, like those in New Spain. We brought to California some Cows, and store of

“ small cattle, as Sheep and Goats, which would have increased very much, had not the necessity we were once in obliged us to kill the greatest part of them. We also brought with us Horses and Colts, to stock the country, and began to breed up Hogs ; but, as these do a great deal of damage to the villages, and the women are afraid of them, we have resolved to extirpate them.

“ As for fowls, there are in California all that are in Mexico and New Spain, as Pigeons, Turtle-doves, Larks, Partridges, of an exquisite taste, and in great quantities ; Geese, Ducks, and many other sorts, both of river and sea fowls.

“ The sea affords plenty of very good fish : They take Pilchards, Anchovies, and Tunnies ; which last they catch with their hands on the shore. We often see Whales, and all sorts of Tortoises. The shores are filled with heaps of shells, larger than those of Mother of Pearl. The Salt they have is not from the sea, but out of pits : It is as bright as Crystal, and so hard, that they are often forced to break it with hammers : It is a very good commodity in New Spain, where Salt is scarce.

“ California has been known near these two centuries, and its coasts are famous for the Pearl-fishery, which has made the Europeans so desirous of establishing a trade here. It is certain, if the King would erect a fishery here, at his own charge, he might draw great advantage from it. Nor do I doubt, but that there are mines to be found in several places, if they were sought for ; since the country is under the same degree as the provinces of Cinulao and Sonora (in Mexico) where there are rich ones.

“ Tho' heaven has been so bountiful to the Californians, and the earth brings forth of itself what it does not produce elsewhere without a great deal of labour and pains ; yet they make no esteem of the plenty and riches of their country, contenting themselves with what is only necessary for life ; they take little care for the rest. The inland parts of the country are very populous, especially towards the north : And tho' there is scarce a town, but what has twenty, thirty, forty, or fifty families in it ; yet they have no houses, but defend themselves from the heat of the sun in the day-time under the shade of the trees ; and of their leaves and branches make a sort of roof against the inclemency of the night. In the winter they shut themselves up in caves in the earth, and live there together little better than so many beasts.

“ The men go naked, at least all were so that we saw : They wear about their head a fine linnen fillet, or sort of net-work ; and about their neck, and sometimes about their arms, for ornament, Mother of Pearl, in divers figures, very finely wrought, and prettily intermix'd with little round fruits, somewhat like the beads of a chaplet. They have no other arms than bows and arrows, and a sort of spear or lance, which they always carry in their hands, either to kill game, or defend themselves ; for their towns are frequently at war with each other.

“ The women wear, from their waist down to their knees, a kind of apron made of reeds, very neatly wrought, and platted together : They cover their shoulders with the skins of beasts, and wear about their heads, like the men, a very curious kind of net-work ; which our soldiers find

“ so

CHAP. XVI. " so convenient, that they make use of them to tie
" up their hair with. They, as well as the men,
" have necklaces of Mother of Pearl, mixed with
" the stones of some sorts of fruit and sea-shells,
" hanging down to their waist; and bracelets of
" the same.

" The common employment both of men and
" women is spinning: They make their thread of
" long plants, which serve them instead of Hemp
" and Flax, or else of a cotton-like substance found
" in the shell of some sorts of fruit. Of the finer
" thread they make the ornaments above-mention-
" ed, and of the coarser, fishing-nets and sacks, or
" bags for several uses. The men moreover, of
" certain plants, whose fibres are very close and
" thick set, and which they are well skilled in work-
" ing, employ themselves in making dishes and o-
" ther kitchen necessities, of all fashions and sizes.
" The smaller pieces serve for drinking-cups; those
" that are larger for plates and dishes, and some-
" times for umbrello's for the women; and the
" largest sort for baskets to gather fruit in, and
" sometimes for pans and basons to dress their meat
" in: But they take care to keep them perpetually
" moving while they are over the fire, for if the
" flame catch them they are soon burnt.

" The Californians have a great deal of vivacity,
" and are naturally addicted to raillery, as we found
" when we began first to instruct them; for if we

" committed any error in their language, they jested
" and made sport with us: But after we were grown
" better acquainted with them, if we committed any
" faults, they civilly advised us of them. And if
" at any time we explained any mystery or point
" of morality, not conformable to their prejudices
" and errors, they waited for the Preacher after
" sermon, and disputed against him with a great
" deal of force and wit. If we could give them
" good reasons for it, they listen'd very attentively,
" and, when convinced, submitted, and did accord-
" ingly. We have not found amongst them any
" form of religion or regular worship, only they
" adore the Moon, and cut their hair (as I remem-
" ber) in her decrease, in honour of their deity,
" which they give to their Priests, who employ it
" to several superstitious uses. Every family is a
" distinct State, and hath different laws and cus-
" toms, which is plainly the reason that they are so
" often at war with one another."

Captain ROGERS, our countryman, late Go-
" vernor of the Bahama islands, touch'd at California
" in the year 1709, in his voyage round the globe,
" and confirms many of the particulars mention'd by
" this Jesuit: Neither do I perceive he contradicts
" him in any material circumstance, which inclines
" me to give the more credit to that Father's descrip-
" tion of California.

C H A P. I.

Of the province of T E R R A - F I R M A .

CHAP. I.

Spanish dominions in South America.

Terra-Firma, the countries included under that name.

Its situation and extent.

Terra-Firma Proper described.

HAVING finished the description of the Spanish dominions on the continent of North America, I enter on the state of their territories in South America, which are divided into six large provinces, viz. 1. That of the Terra Firma; 2. Peru; 3. Chili; 4. Patagonia, or Terra-Magellenica; 5. Paragua, or La-plata; and 6. the country of the Amazons.

1. And first I shall treat of Terra-Firma; under which name I comprehend, 1. Terra-Firma Proper; 2. Cartagena; 3. St. Martha; 4. Rio de la Hacha; 5. Venezuela; 6. Comana; 7. New Andalusia; 8. Caribiana; 9. Guiana; 10. Paria; 11. New Granada; and 12. Popayan.

These countries, comprehended under the general name of Terra-Firma; are bounded by the North-sea or Atlantic-ocean, on the north and east; by Peru and the country of the Amazons, on the south; and by the South-sea, and the province of Veragua in Mexico, on the west; being upwards of two thousand miles in length from east to west, and generally about five hundred miles in breadth from north to south.

The province of Terra-Firma Proper, which frequently goes under the name of Darien, is bounded by the North-sea on the north; by the gulph or river of Darien, which separates it from Cartagena on the east; by Popayan and the South-sea on the south; and by the same sea and the province of Veragua on the west; lying between 8 and 10 degrees of north latitude, and between 78 and 83 degrees of western longitude. The most exact boundary of this province on the west, is a line drawn from the fort at the mouth of the river Chagre on the North-sea, to the town of Nata on the South-sea; and the truest southern boundary, a line drawn from Point Garrachina, on the south part of the gulph of St. Michael, in the bay of Panama, directly eastward to the river of Darien. It lies in the form of a bow or crescent, about that noble bay of Panama, being about 300 miles in length, and 60 in breadth, from sea to sea. I am the more particular in describing the situation of this province, because it is, in proportion, the richest, and of most importance to the Spaniard, (as it would be to any European nation that should possess themselves of

it) and has been the scene of more action than any province in America. Its situation, both on the North and South-seas, and on the confines of North and South America, and the gold mines, gold sands and pearls with which this province and the adjacent seas are replenished, render it invaluable, and make it the darling object of all enterprizing people.

The face of this province is thus described by the English Buccaneers, who have often traversed it: They tell us, the surface is very unequal, consisting of exceeding high hills, and long deep valleys: That the valleys are water'd with rivers, brooks, and perennial springs, with which the country abounds; some of them falling into the North, and others into the South-sea, most of them having their sources in a ridge or chain of mountains that surmount and over-top the other hills, running the whole length of the isthmus parallel to the coasts, spreading along, and bending as the isthmus bends. This vast ridge of hills is nearest the coast of the North-sea, seldom more than ten or fifteen miles distant from it. WAFER observes, when he passed over them, that the hills between these mountains and the South-sea were nothing, in comparison of them: That those hills did not only appear much beneath this high ridge, but the clouds were considerably below them, and intercepted their sight of the country, and all their people grew giddy with the height, when they had climb'd to the top; but this giddiness went off again as they descended lower. The hills between this and the South-sea are covered with fine tall woods, with little or no under-wood to interrupt the passage: But those on the north side, are full of bushes, bamboes and mangroves, near the shore, that render them almost impenetrable.

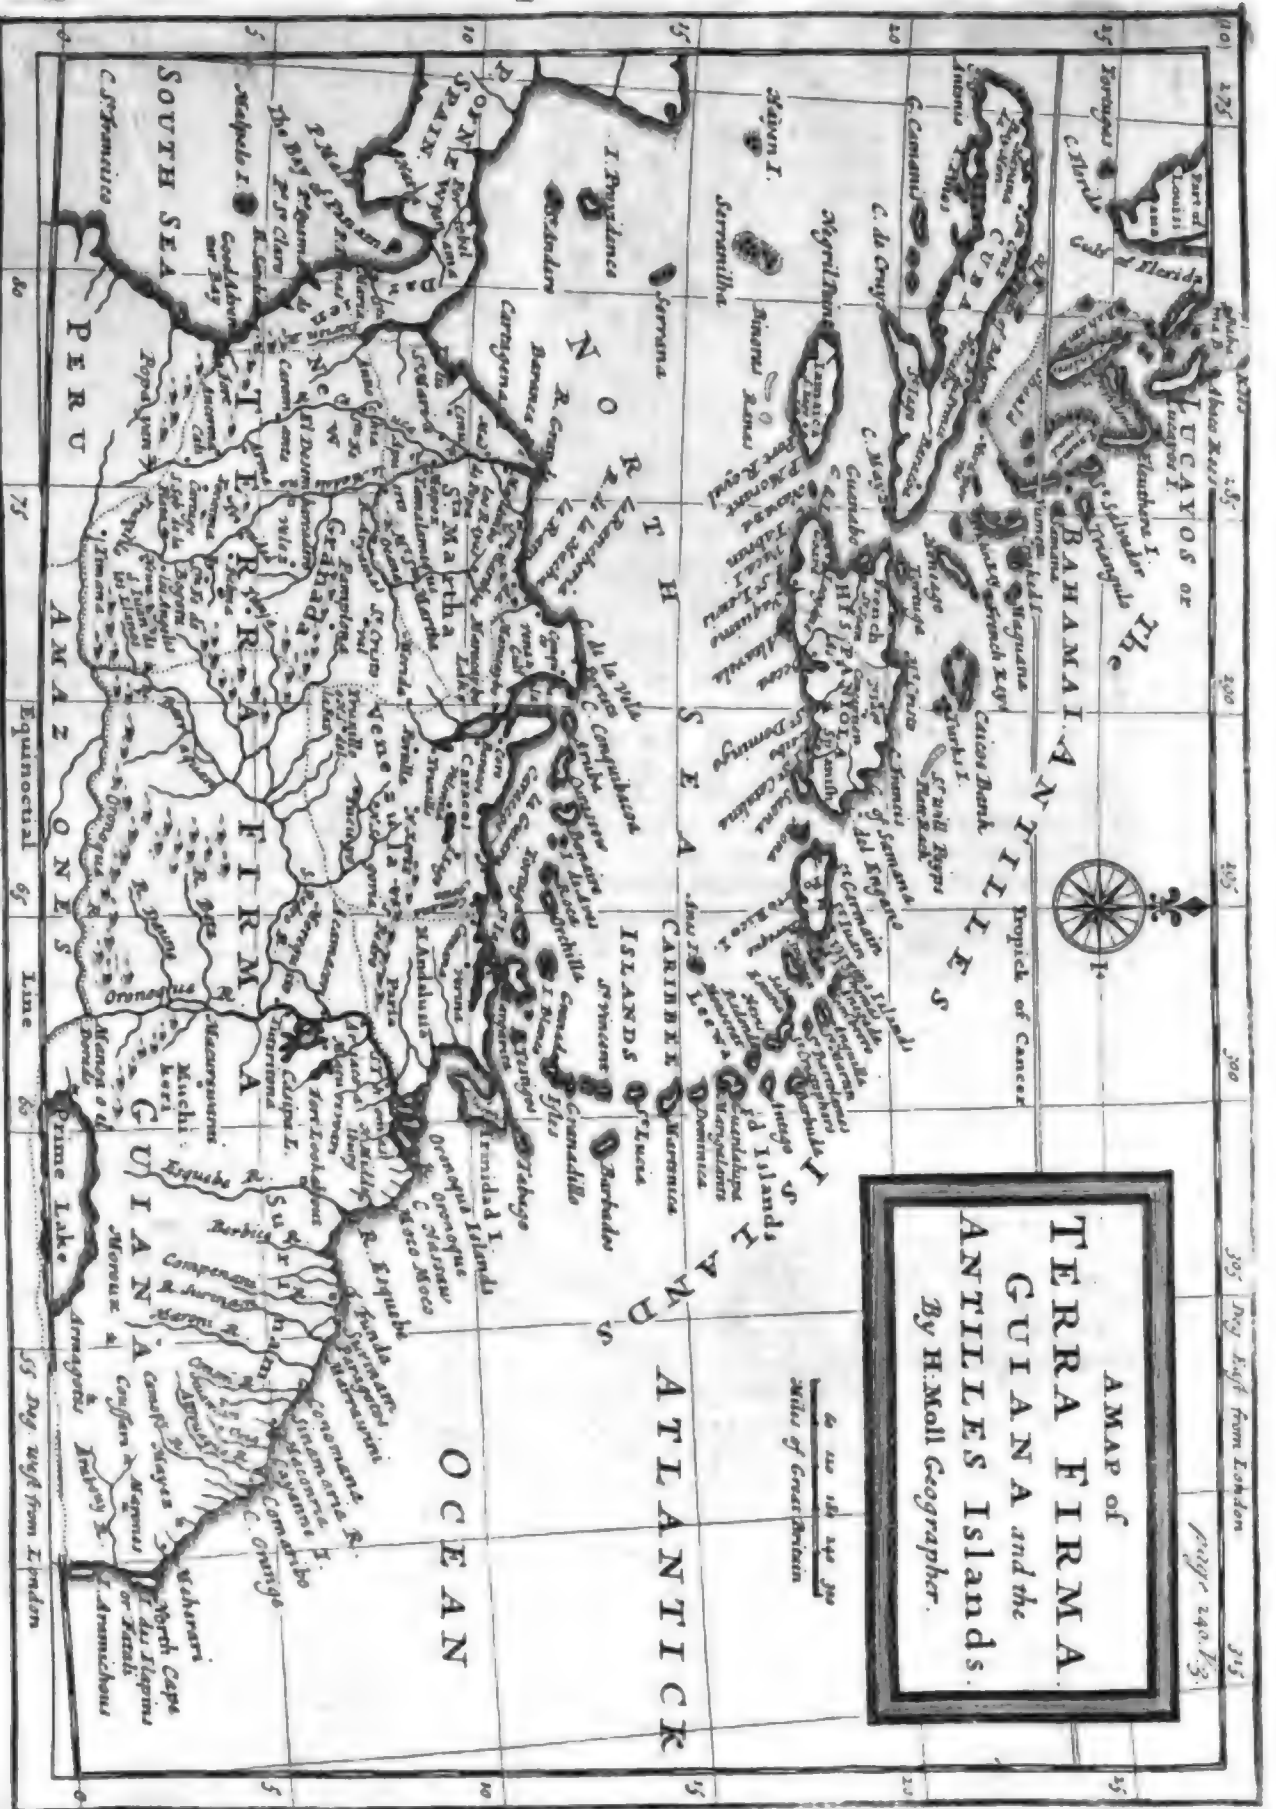

The rivers on the isthmus, are some of them pretty large, but few of them navigable, having bars of sand at their mouths. Those on the north side, rising in the high ridge of mountains, have generally a very short course, running precipitately into the sea, tho' there are exceptions to this rule, some of them having a winding course through the valleys, almost from the South to the North-sea.

The chief rivers are, 1. the river, or rather gulph of Darien; 2. the river of Conception; and 3. the river

CHAP. I.

ANTILLES Islands.
By H. Moll Geographer.

5

CHAP. I. river Chagre on the North-sea; 4. the river of St. Mary's; 5. the river Congo; 6. the river Cheapo; which last three fall into the bay of Panama.

Darien river. 1. The river or gulph of Darien, the eastern boundary of this province, rises in the south; and running directly north, upwards of an hundred miles, falls into the North-sea, near Golden island. It is six or seven leagues wide at the mouth, but hath not above six foot water in a spring-tide. It is deep enough within the bar for great ships, and navigable, fourscore or an hundred miles; but, as no vessels of burthen can get over the bar, there is very little traffick carried on upon it.

Conception river. 2. The river of Conception rises about the middle of the great ridge of mountains, and running precipitately to the north-west, falls into the North-sea over-against an island called La Sounds-Key, being one of the Sanbalas islands. This river is pretty broad, and makes a good appearance at the mouth, but has a bar also, that prevents any ships of burthen getting in; however, it is fine riding in the channel at the mouth of this river, between the islands and the main-land, which form a pretty good harbour.

Chagre river. 3. The river Chagre, the most navigated of any river of this province. It rises not far from Panama on the South-sea, and taking its course to the north-west, finds a way through very deep winding valleys, falling into the North-sea ten leagues to the westward of Porto Bello: Upon this river therefore is embarked all the merchandize that is sent from Panama to Porto Bello for the galleons, except the gold and silver, which are carried directly over land upon the backs of mules to Porto Bello.

Santa Maria river. 4. The river Santa Maria, or St. Mary's, which rising on the mountains on the North-east part of this province, runs to the westward, and falls into the gulph of St. Michael's on the south side of the bay of Panama. This is a pretty large navigable river, and considerable, on account of its lying in the neighbourhood of the gold mines, and for the rivulets which fall into it; in whose sands are found abundance of gold. One of these is called the Golden River: Hither the Spaniards come with their slaves from Panama, and other towns, in the dry season, which lasts three months, to gather gold. These brooks at that time not being more than a foot deep, the slaves take up the sand in little wooden dishes, in which they find such a quantity of gold, that in some seasons, 'tis said, they carry off eighteen or twenty thousand pound weight of pure gold, out of that brook alone, which goes by the name of the Golden River.

Congo river. 5. The river Congo rises in the mountains on the east part of this province, and running to the south-west, almost parallel to the river of Santa Maria, falls into the same Gulph of St. Michael's to the northwards of it. It is a large river, navigable for great vessels within the bar, but so shallow at the mouth, that it is very difficult entering. There are a great many small streams fall into this river, both on the east and west.

Cheapo river. 6. The river of Cheapo, which rising in the mountains near the North-sea, first bends its course to the westward, and then turning to the south, falls into the bay of Panama, seven leagues to the westward of that city. It is a considerable navigable river, and runs a long course; but has the same misfortune as the rest, to have a bar at the mouth, that large ships cannot enter it.

Air and seasons. This province being very narrow, and lying between two great oceans, viz. the North and South-seas, is observed to have more wet weather, than

any other place within the Torrid Zone. The CHAP. I. rains usually begin here in April or May: In June, July and August they are very heavy; and it is extreme hot at this time, whenever the sun shines out: There are then no breezes to cool the air; but it is, in my author's phrase, glowing hot. In September, the rains begin to abate; but it is November or December, and sometimes January before the fair season returns: So that the country is very wet for two thirds, if not three quarters of the year. But in the wettest season, there are some fair days, with only a tornado or thunder-shower now and then. The floods and torrents caused by these rains, often bear down trees, which dam up the rivers, overflowing all the neighbouring plains. The low countries appear at this time like one great lake. The coolest time of the year, is after the rains, about Christmas; when the fair weather approaches.

The chief towns in Terra-Firma Proper, are, Chief towns. 1. Panama; 2. Porto Bello; 3. Venta de Cruzes; 4. Cheapo; 5. Nata; 6. Conception; 7. Santa Maria; 8. Scuchadero; and, 9. (lately) New Edinburgh.

1. The city of Panama is situated in 9 degrees of Panama north latitude, and 82 degrees of western longitude, city. reckoning from the meridian of London. It stands upon the finest and most capacious bay in the South-sea, and is built with brick and stone, being surrounded by a stone wall, fortified with bastions and other works, planted with great guns both towards the sea and land. It lies in the form of a half-moon upon the bay, affording a most beautiful prospect, all the best houses and publick buildings appearing above the walls: And what adds to the prospect, are the beautiful orchards and gardens, and the pleasant country about it, diversified with hills, valleys, and delightful groves. There are no large woods or marshes near Panama, but a fine dry champaign land (according to DAMPIER) not subject to fogs. The island of Perica, three miles distant, is the port to Panama: For the water is so shallow near the town, that great ships cannot come up to it, tho' small vessels lie close to the walls.

This town, according to FUNNEL, contains upwards of six thousand houses, eight parish-churches, besides the cathedral, thirty chapels, and several monasteries and nunneries. It is a Bishop's see, Suffragan to the Archbishop of Lima in Peru; the seat of the Governor and of the Courts of justice of this province. But what renders it most considerable, are the treasures of gold and silver, and the rich merchandizes of Peru, which are lodged in the magazines of this town 'till they are sent to Europe, as well as the merchandize sent over by the galleons from Spain, to be transported to the several cities and provinces of Peru and Chili.

Old Panama stood about four miles to the east- Old Panama destroyed by Sir Harry Morgan. ward of this city, and was destroyed by the Buccaneers commanded by Captain HARRY MORGAN (afterwards Sir HARRY MORGAN, an Englishman) in the year 1670; which is too remarkable an occurrence to be omitted in this place; especially, as it shews how easily the Spaniards might be dispossessed of this important town and province, if we should be compelled to fall out with them; which I am confident we never shall, if Spain understands her true interest, and does not too much interrupt our commerce with the British plantations.

Captain MORGAN was the son of a rich yeo- His his- man, of a good family in Wales, who having a tory mind to see the world (about the year 1652, during CROMWELL's usurpation) agreed with the Master

CHAP. I. Master of a ship of Bristol (or some other port in the neighbourhood of Wales) to carry him to Barbadoes, whither the ship was bound; which the treacherous seaman performed; but sold his passenger for seven years to a planter of that island, as soon as he arrived. This practice of kidnapping young fellows, whom they enticed on board, with false representations of the country, and an assurance of making their fortunes in the plantations, being very common in those days.

Having served his seven years, and obtained his liberty, he transported himself to Jamaica; where, finding two ships of Buccaneers ready to put to sea, he resolved to go on board one of them; and, having met with success, in three or four voyages, he and some of his comrades determined to purchase a ship and set up for themselves: Accordingly, they bought a vessel for their purpose; and, chusing **MORGAN** their Captain, they cruised upon the coast of Campeachy, where they took several Spanish prizes, and returned with their booty to Jamaica.

Vice-Admiral to Mansvelt the Buccaneer.

MANSVELT, a celebrated Buccaneer, was at this time at Jamaica, fitting out ships for an expedition against the continent; and, being informed of the bravery and conduct of **MORGAN**, offered to make him his Vice-Admiral, which our Adventurer accepted of; and they set sail from Jamaica, with fifteen vessels, great and small, mann'd with five hundred men, of which the greatest part were French and Dutch. Their first attempt was against the island of St. Catharine's, or Providence, which lies fifty leagues north-west of Porto Bello, and then in possession of the Spaniards; and altho' the island was of it self naturally strong, and fortified with several forts and castles, they soon made themselves masters of it, and left a garrison in the principal castle, designing to make this island a place of arms, from whence they proposed to plunder and harrahs the neighbouring continent, and then retreat thither with the booty they should acquire from time to time.

In pursuance of this project, they landed at several places in the province of Costa Rica, and plundered the open towns; but receiving advice that the Governor of Panama was marching against them with a great body of troops, they reembarked their men, and returned to the island of St. Catharine's: Afterwards **MANSVELT** came with his fleet to Jamaica, and applied himself to the Governor for a reinforcement of troops, to enable him to attack the Spanish settlements; which the Governor not complying with, **MANSVELT** sailed to the island of Tortuga, to invite the Buccaneers of that island to join him; but, while he was negotiating this affair at Tortuga, he fell sick and died.

In the mean time the Spanish General of the Terra-Firma, assembled a fleet and attacked the island of St. Catharine's, which surrendered to him on the same terms the Buccaneers had granted the Spaniards when they took it.

After the death of **MANSVELT**, Captain **MORGAN** commanded the Buccaneers of Jamaica; and, assembling a fleet of twelve sail, consisting of ships and great boats, with seven hundred bold seamen, English and French, he attacked the town of Puerto del Principe, on the north coast of the island of Cuba, and took it: In the plunder of which place, they found about the value of fifty thousand pieces of eight. But there happening a misunderstanding between the English and French, they parted company, and **MORGAN** returned to Jamaica with the English.

The Buccaneers having soon spent the money **CHAP. I.** they got by plundering Puerto del Principe, Captain **MORGAN** proposed their entering upon another expedition: and, tho' he did not acquaint them whether he designed to lead them, four hundred and sixty brisk young fellows offer'd to follow his fortunes, whom he embarked on a fleet of nine sail of ships and sloops; and being arrived upon the coast of Terra-Firma, let his people know, that his design was upon Porto Bello, one of the strongest, as well as the richest towns the Spaniards had on the North-sea: And his men (confiding in the conduct and bravery of their Commander) readily consented to engage in it. Some indeed did observe, that their number was but small to attack so considerable a place: But the Captain replying, "If our number is small, our hearts are great, and the fewer we are, the greater will be our share of the spoil," they appeared impatient to begin the attack, and desired he would lead them on: But, as the Captain was well aware of the hazard of the undertaking, and sensible the success must be very doubtful, if he did not use some stratagem to surprize the place before they could put themselves in a posture of defence; he landed in the dusk of the evening, at a distance from the town, and taking a Spanish soldier prisoner, that stood sentinel without the works, from whom he learned the condition the garrison was in, he surrounded one of the castles that defended the entrance of the harbour, before the people of the town knew he was landed, and ordered the soldier he had taken, to call to his comrades in the castle, and let them know, that if they did not immediately surrender, he would give them no quarter; and the garrison thereupon firing upon the Buccaneers, with great and small shot, the Captain ordered his men immediately to scale the walls; which they did in an instant, with their pistols in their hands (no men being so dextrous at clambering walls as seamen; and, tho' a stout resistance was made, the Buccaneers entered the castle at so many different places in the dark, that the garrison were confounded, and surrendered at discretion: Whereupon **MORGAN**, to strike a terror into the town and the rest of the castles, resolved to put his threats in execution; and, having shut up all the officers and soldiers in one room, set fire to a great quantity of powder he had placed underneath it, and blew up the castle into the air, with all the prisoners in it: After which, he stormed the city, and took it with very little resistance, ordering a party of his men to search the cloysters, and bring him all the Monks and Nuns they could find.

In the mean time, the Governor and principal townsmen retired into another of the castles, with their treasure and valuable goods, and the plate belonging to the churches, and play'd upon the Buccaneers from their artillery with that fury, that **MORGAN** was about to abandon the place, when some of his men possessing themselves of another fort, and crying out *Victoria*, gave him fresh hopes of success. Having caused ladders therefore to be made so broad, that three or four men might mount them a-breast, he forced the Monks and Nuns to fix them to the walls of the principal castle; and the Governor still continuing to fire both great and small shot, many of the Religious, men and women, were killed and wounded, crying out for mercy both to friends and enemies, each side seeming equally deaf to their cries: If they advanced, they were killed by the Spaniards; and if they retired, they were slaughtered by the Buccaneers. At length the Pirates mounted the walls, with their pistols

CHAP. I. pistols and earthen pots full of gun-powder and combustible matter in their hands, and drove the Spaniards from the walls, who thereupon threw down their arms, and cried quarter: Only the Governor refused to accept quarter, and compelled the Buccaneers to kill him, having first killed several of the enemy that endeavoured to make him prisoner, tho' his wife and daughter begg'd of him with tears to accept of quarter; to whom, 'tis said, he answer'd, "No; he had rather die like a soldier, than be hang'd for a coward."

The Buccaneers having made an entire conquest of the place, and secur'd their prisoners, fell to drinking and revelling, after their usual manner, compelling the women to submit to their embraces; and every thing was in such disorder the first night, that fifty men, 'tis said, might easily have retaken the place, and cut off every man of them: However, the next day, being recovered from their debauch, they fell to plundering the city, and torturing the inhabitants, to make them confess where they had concealed their wealth; some of them having thrown their jewels, money and plate into wells, and others buried them in the earth.

Fifteen days these Free-booters spent in search of treasure, and carrying it on board their ships; and, tho' they received advice that the Governor of Panama was assembling all the forces of Terra-Firma, to march against them, they made no great haste to quit the place, but remained here 'till they had victualled their fleet, and provided for another expedition: Captain MORGAN also demanded an hundred thousand pieces of eight, to redeem their city from the flames, assuring them, that if they did not send to Panama, and provide that sum, he would lay it in ashes, and blow up all the fortifications: But the Governor of Panama, instead of sending the sum demanded, immediately began his march, to rescue Porto Bello and the prisoners out of MORGAN's hands: Whereupon he possessed himself of a narrow pass, through which he knew the Spaniards must march; and, after a sharp engagement, obliged the Governor to retire with some precipitation; and, the people of Porto Bello were in the end compelled to pay the hundred thousand pieces of eight that were demanded to ransom the town and themselves.

The Governor of Panama, astonished that Porto Bello, and all its castles, should be taken by four hundred men, without great guns, or any breach made in the walls, 'tis said, sent to MORGAN, desiring to know what arms he made use of, to reduce so strong a place: Whereupon the Captain sent him a pistol, and some small leaden bullets, desiring he would accept of that pattern of the arms with which he had taken Porto Bello, and keep them a twelve-month, when he assured the Governor, he would come to Panama and fetch them away; which promise it seems, he kept faithfully, that city undergoing the like fate within a year or two.

Captain MORGAN having taken the best guns out of the castle, with such stores, arms and ammunition as he wanted, and nailed up and spoiled the rest of the cannon, set sail from Porto Bello for the island of Cuba, where he divided the spoil with his people, and found they had in ready money two hundred and fifty thousand pieces of eight, besides silks and other rich merchandize; with which returning to Jamaica, the private seamen soon consumed every shilling they had gotten with such infinite hazard, in wenching and drinking, which made money more plentiful in that island than ever it had been known before.

The next year Captain MORGAN assembled another fleet, and upwards of five hundred men, with which he took and plundered the towns of Maricaibo, and Gibraltar, situate on the lake of Maricaibo, in the province of Venezuela, and brought off the value of two hundred and fifty thousand pieces of eight: But of this enterprize I shall give an account when I come to treat of that province, and only observe, that his men having spent the money they got there, in the same manner they used to do their prize-money, were easily prevailed on by the Captain, to undertake another adventure. And indeed he had by this time gained such a reputation, by his bravery and conduct, and the many successful actions he had engaged in against the Spaniards, that every enterprizing seaman appeared ready to serve under him; of which the Captain, being well apprised, invited all seafaring men to come to the rendezvous he appointed at the island of Tortuga, near the north shore of Hispaniola, where he was sure to find a great many men fit for his purpose, and might victual his fleet with the cattle that run wild in the woods of Hispaniola.

The Captain arrived at Tortuga the latter end of October, 1670, and finding himself at the head of upwards of two thousand brave fellows, and between thirty and forty ships, employed part of his people in hunting and salting up beef for his fleet in the island of Hispaniola, and at the same time sent four ships and four hundred men to Rio de la Hacha on the continent, where he knew there was great plenty of Indian-corn to be met with, to procure a sufficient quantity of it to victual his ships for his intended expedition; in both which attempts he was very successful, getting both beef and corn enough for his purpose, within the space of five or six weeks.

And now, being ready to sail, he divided his fleet, consisting of thirty-seven ships, into two squadrons, constituting Vice-admirals, Rear-admirals, and other officers, to whom he gave formal commissions, to commit hostilities against the Spanish nation, and take their ships, declaring them enemies to his master the King of England. After which, he caused articles to be drawn and signed by his Officers; wherein it was agreed, that MORGAN and his men, the Admiral should have a hundredth part of all the prizes and plunder that should be taken; every Captain the shares of eight men for the expences of his ship, besides his own; every Surgeon two hundred pieces of eight for his chest of medicines, besides his pay and share; each Carpenter a hundred pieces of eight, besides his usual salary; and that the following rewards should be allowed for smart-money, viz. one thousand five hundred pieces of eight, or fifteen slaves, to every one who should lose both his legs; and one thousand eight hundred pieces of eight, or eighteen slaves, to him that should lose both his hands, at the option of the wounded men; six hundred pieces of eight, or six slaves, for the loss of one hand, and as much for the loss of one leg; and one hundred pieces of eight for the loss of an eye; and to him that should signalize himself in battle, by taking a colour, entering a breach first, or the like, a reward of fifty pieces of eight was to be allowed; which recompences and rewards were agreed to be paid out of the first prizes or plunder that should be obtained, after the respective events or accidents.

A council of war being afterwards held on board the Admiral, it was debated, whether they should attempt Carthage, Vera Cruz or Panama; and it was resolved to attack Panama, which town they imagined to be the richest of the three, tho' it was much

Articles
between
Morgan
and his
men.

CHAP. I. much the most difficult to reduce, being situated on the South-sea, where their ships and great guns could be of no use to them, and they must, of necessity leave a considerable part of their forces behind them to guard their fleet, nor were any of their people acquainted with the avenues to that city.

To obviate the last of these difficulties, it was determined in the first place to attack the island of St. Catharine's, or Providence again, which lies between forty and fifty leagues to the northward of the river Chagre; for here they were sure to find Outlaws and Banditti banished thither from the city of Panama, who were acquainted with all the by-ways to the town, and would probably enter into the service of the Buccaneers: Nor were they disappointed in their expectations; for the Spanish Governor of the island of Providence surrendering on the first summons, three Banditti, who were acquainted with all the avenues to Panama, offered to be their guides, on being promised to share in the expected plunder.

While MORGAN lay with his fleet at the island of Providence; in order to facilitate the grand enterprize, he dispatched his Vice-admiral BRODLEY, with four ships and four hundred men, to make themselves masters of the castle of Chagre, which stood at the mouth of the river of the same name: For by this river he proposed to transport his people in boats and canoes to the south side of the isthmus. But the taking this castle proved a more difficult and hazardous enterprize than had been expected: For the castle stood on a mountain at the entrance of the river; the top of the hill divided, in a manner, in two parts, by a trench or ditch thirty foot deep; nor was there any entrance to the castle, but by a draw-bridge over this ditch; there were four bastions, with batteries of great guns towards the land side, and two more that looked towards the sea; to the south side of the castle there was no possible access, the rock on which it stood was so very steep; the north side was encompassed by the river, which was very broad; and at the foot of the castle, or rather of the mountain, was a strong fort mounted with eight guns, which commanded the entrance of the river; from whence the way to the castle was by a pair of stairs hew'd out of the rock; and at the entrance of the harbour there were rocks under water, which made the coming in very hazardous: And, lastly, this terrible castle was garrison'd by upwards of three hundred regular European forces, as brave men as any the Spaniards had in their service. And yet, in these circumstances, did four hundred desperate Buccaneers venture to attack this almost impregnable fortress. They landed at some distance from the place, and marched through thick-woods and morasses, from day-light 'till late in the afternoon, that they might come to that side of the castle on which alone it was possible to approach it; and here they found themselves so exposed to the fire of the enemy, that they were once resolved to have turn'd their backs, and fled out of the reach of the guns, and were actually retiring, when one of their company that was wounded by an arrow shot from the castle by an Indian, drew the same arrow out of his body, and having wound some cotton about the head of it, fired it out of his musket at a thatch'd building within the castle, which was immediately in flames, and burnt with that fierceness, that it set fire to the magazine of powder, that blew up part of the wall, and threw it into the ditch; and while the Spaniards were put in the utmost confusion by this accident, the English entered the breach; which being defended by the Governor in person, they met with a very obsti-

The castle of Chagre taken.

nate resistance; the Spaniards with their fire-arms, CHAP. I. pikes, stones and swords, did all that could be expected from brave men: However, the Buccaneers forced their way through, and, after a very terrible slaughter, made themselves master of the castle. The Governor retir'd to the Corps du Garde, before which he planted two pieces of cannon, determining to ask no quarter, but to sell his life as dear as he could, but he was in a little time shot through the head; whereupon the guard surrendered. Out of three hundred and fourteen the garrison consisted of at the beginning of the attack, there were but thirty left alive, and of these twenty were wounded: Nor did the English take the castle without great loss; for of the four hundred Buccaneers, one hundred were killed outright, and seventy more wounded.

The prisoners related, that the Governor of Panama had notice three weeks before from Carthagena, that the Buccaneers were equipping a fleet, with a design to attack the city of Panama, and that upon this advice, he sent a hundred and sixty four soldiers to reinforce the garrison of the castle of Chagre, which did not usually consist of more than a hundred and fifty men: That the Governor had placed several ambuscades on the river, between fort Chagre and Panama, to interrupt their march; which, if they should escape, he had a body of near four thousand men, with which he proposed to engage them before they could approach that city; which intelligence did not at all dishearten Captain MORGAN: But as soon as he received advice of the taking of the castle of Chagre, he came with his whole fleet into the mouth of that river, but with so little caution, that his own ship and two more were split upon the rocks that lay under water, tho' he had the good fortune to save the men with their arms and ammunition. MORGAN was no sooner come on shore, but he entered the castle of Chagre in triumph, and immediately made preparations for his march to Panama, but neglected, it seems, to lay in such a stock of food as was necessary for so long a march through a barren country, where the enemy also had destroyed every thing that might be of service to his people.

Having selected twelve hundred men for this bold and hazardous enterprize, he left five hundred in the castle, and an hundred and fifty more to take care of the fleet, and embarked his troops and artillery on board such boats and canoes as he found in the river. Having sailed six leagues up the stream, he went on shore, and sent out parties in search of provisions; but they found all the villages and plantations deserted, and every thing carried off that could afford them any subsistence; and continuing his voyage the next day, he found the river impassable for large vessels any higher, and therefore was obliged to leave his great boats and artillery behind him, under a guard, and advance only with the canoes and small boats, some of his people going by land, and others by water, and suffering intolerable hardships for want of provisions; insomuch, that they were obliged to live on roots, and glad to eat leather and vermin, to preserve themselves from starving. At length, after six days laborious march, they arrived at Venta de Cruz, where the Spaniards of Panama embark their goods on the river Chagre for Porto Bello: And here they met with fifteen or sixteen jars of Peruvian wine, which the Buccaneers drinking plentifully of, and having eat nothing but trash for a week before, they every man fell sick; which made them conjecture the wine was poisoned: However, they found themselves pretty well the next day, and the river being navigable no higher, they

Morgan marches to Panama with 1200 men.

CHAP. I. they continued their march by land to Panama, being attacked by several parties of Spanish Indians, who killed and wounded several of their men with their arrows in the woods and defiles, through which they were obliged to pass, the way being frequently so narrow that ten men could not march a-breast: Nor did the heavy rains that fall at this season, and the morasses through which they were forced to wade up to the middle, incommode the Buccaneers less than the arrows of the Indians.

On the ninth day some parties of Spanish horse appeared, and threatened to oppose their march; but having ascended a mountain, and obtained a view of the South-sea and the Bay of Panama, they were so overjoyed, that they despised all danger, threw up their caps, sounded their drums and trumpets, and shouted as if they had already been masters of the city; and seeing a herd of cattle in the plain, they shot as many as they wanted, cut them to pieces, and roasted and broiled the flesh, without fleaving off the skin, in such haste were they to devour the meat, after they had been forced to fast so many days; and that night encamped, or rather lodged in the open air (for I don't find they had any tents with them) in view of the town, designing the next morning to begin the attack, but were prevented by the Governor's marching out against them with four regiments of foot and two squadrons of horse, a force much superior to that of the Buccaneers. However, MORGAN advanced, and joined battle with the Spaniards, who maintained their ground very resolutely for two hours, when victory declaring for our Welsh hero, the enemy turned their backs and fled, leaving six hundred of their friends dead upon the field of battle. The loss on the side of the Buccaneers also, was considerable: However, they press'd towards the city, and within three hours more scaled the walls, and became masters of the place, without making the least breach; for they had not indeed any artillery with them: MORGAN finding himself in possession of the city, gave out that all the wine was poisoned, apprehending that his men would get drunk as usual, and the Spaniards might rally and cut them in pieces, his numbers being yet so much inferior to the enemy: He placed his guards also in the most proper places to secure his conquest, and gave as great instances of his military skill and conduct, in preserving what he had so bravely won, as the most consummate General could have done; when, on a sudden, the whole city appeared in flames, having been set on fire in several places at the same instant; which some charge upon MORGAN, tho' 'tis admitted he gave orders for extinguishing it; others say, that it was set on fire by the inhabitants, to deprive the Buccaneers of the rich treasures and plunder they expected, which seems much the most probable; for why MORGAN should burn the town, before he had plunder'd it, and destroy the prize he had in his hands, is not easy to conceive.

But however it happened, all agree the fire continued several days, inasmuch that scarce a house was left standing in the place, which a little before contained two thousand houses magnificently built, all the beams whereof were cedar, and the furniture answerably rich; besides which, were five thousand houses more of the inferior tradesmen, and several beautiful churches and monasteries; for this, as has been observed, was the repository of all the treasures of Peru annually brought hither to be sent to Europe.

V O L. III.

While the fire continued, the Buccaneers encamped without the walls; but after it ceased, they returned, and quartered in the ruins, making a very strict search for the plate and money that was not consumed, of which they found great quantities melted down: They also discovered abundance of treasure hid in wells, and reservoirs of water, and out of a ship in the harbour they took two hundred thousand pieces of eight; and not content with this, 'tis said they tortur'd the miserable inhabitants various ways, to make them discover more, or offer large ransoms for their liberty; and, according to my author, they were more severe upon the Priests and Monks than any other people, knowing them to be possessed of very great treasures, either of their own, or belonging to their several churches and convents.

My Dutch author exclaims loudly also against the Buccaneers, for the innumerable rapes they committed, charging MORGAN their Commander, with being as guilty of these outrages, as his men: Particularly, he relates, that a beautiful young lady, wife to a rich Spanish merchant of Panama, refusing to submit to his embraces, he shut her up in a dungeon, and used her very hardly; but he acknowledges, the Captain afterwards, pleased to have found a woman that was not to be tempted to be false to her husband's bed, generously gave her her liberty. But to return from this digression; MORGAN having remained near a month in Panama, and collected the ransoms he required for his prisoners, loaded near two hundred beasts with the treasure he had got, and returned to Venta de Cruz, where he put it into boats, and conveyed it down the river to the castle of Chagre; but the Buccaneers finding there did not come more than two hundred pieces of eight to the share of every private man, began to threaten the Captain for concealing the most valuable part of the plunder; at least the French, and some other foreigners, among whom was our author, pretended to be highly disgusted: Whereupon MORGAN, having blown up the fortifications of the castle of Chagre, went on board his ship, and with only four sail of English, whom the foreigners suspected were in the secret, and shared with him the best of the plunder, returned to Jamaica: After which, the French joined their countrymen in the islands of Tortuga and Hispaniola, and the rest of the Buccaneers went in search of new adventures.

Captain MORGAN, and the Buccaneers that returned to Jamaica, brought with them four hundred thousand pieces of eight, and the Captain was not only knighted by King CHARLES II. for his bravery and conduct in taking Panama, but he was made one of the Commissioners of the Admiralty in that island; and the Earl of CARLISLE, Governor of Jamaica, returning to England for the recovery of his health, in the year 1680, left Sir HARRY MORGAN Deputy-governor there. However, upon the repeated complaints of the Spanish Ambassador, of the depredations of the Buccaneers in the Spanish settlements in the West-Indies, Sir HARRY was sent for over to England, and committed to the Tower, where he lay three years; and then his health being pretty much impaired, he obtained his liberty, but did not long survive his imprisonment, according to the best information I can get.

It may be thought strange, that the Government of England should encourage, or even connive at the depredations of the Buccaneers in the Spanish West-Indies, at a time when the two nations

CHAP. I.

Morgan brings 400,000 pieces of eight to Jamaica. Knighted for his bravery in taking Panama.

Some account of the reason of these attempts of the Buccaneers.

CHAP. I. tions were at peace in Europe. But nothing appears more frequent, than for the nations of Europe to commit acts of hostility on each other, in the East and West-Indies, without any regard to treaties or alliances concluded in Europe.

The Spaniards, by virtue of the Pope's grant to them of that new world, did for a great while make no scruple to fall upon the English, French and Dutch, and every other nation that attempted to make settlements in America: As they had discovered the country, they held that no other nation had a right to plant or inhabit it, tho' it was impossible they could use or cultivate a third part of the country, and had not obtained the leave of the natives to possess any part of it. This was a claim and pretension that the rest of the nations of Europe would by no means submit to, but in time planted great part of the islands and continent, which the Spaniards called their property; and as the Spaniards endeavoured to disturb these new settlements, took their shipping, and sometimes massacred their men. Tho' the English, for political reasons, did not think fit to declare open war against them in Europe, yet they suffered private Adventurers (who afterwards obtained the name of Buccaneers) to retaliate the injury, in order to bring the Spaniards to reason, and that they might be induced to suffer our shipping to trade with our own plantations and settlements without disturbance: Those therefore, that have given Sir HARRY MORGAN and his men the denomination of Pirates, have done them a great deal of injury; if it be considered, in the first place, that the Spaniards had no other title to America, than what was founded in force and usurpation; and that they at this very time oppressed and tyrannized over the Indian Princes, who alone had a right to this country; and would not suffer any other European nation to have any commerce with them, but fell in a hostile manner on all European shipping that appeared in those seas, whether they were at peace with Spain in Europe or not: which sufficiently justifies the Buccaneers in attacking their settlements, tho' the cruelties they are said to have exercised upon the People of Panama, and some other towns, are not to be excused: But these have possibly been greatly exaggerated by their enemies; for the person who wrote the history of the Buccaneers, acknowledges himself an enemy to MORGAN, and to have been highly disobliged by him, and therefore cannot be looked upon as very impartial in his relation. But admitting those stories of their barbarities are true; with what face can the Spaniards complain of cruelty, who tortured and massacred so many millions of Indians, but three score years before, and dispossessed them of this very country, without the least shadow of title to it? unless the Pope's grant, which all mankind (Papists as well as Protestants) laugh at at this day, being sensible, that neither they, nor any other European nation, can have a just right to any part of America that was inhabited, but what they gained by treaty with the inhabitants. And if the Spaniards fall upon the English, or any other nation, for trafficking with the Indians, and entering into alliances with them, we may justly repel force with force, and retaliate the injuries they do us. Sir HARRY MORGAN was indeed imprisoned at the instance of the Spanish Ambassador, after he had performed the greatest actions, perhaps, that ever man did, with such a handful of men, and in such circumstances, and had been in some measure rewarded for them by the Government, tho' they quarrelled with him afterwards. But he is not the

only brave man that has been sacrificed to Spain for reasons of state, when he ought to have had a statue erected to his memory: For he it is, has shewn us the way, if ever we should be compelled to fall out with Spain, to make our selves masters of the gold and silver mines. He has shewn us, that if we possess the Isthmus with a good force, and erect fortresses on the North and South-seas, we may with ease render ourselves masters of the treasures of North and South America: If a thousand men could effect such great things against their principal settlements there, what might not a royal fleet and army do? Tho' I am still of opinion this ought never to be attempted, unless the Spaniards compel us to fall out with them. The nation will get more by trafficking with Spain and the Spanish West-Indies, and improving our own plantations in Florida, than by possessing their mines. Gold and silver possibly may have the same effect upon us it has had upon them, render us indolent, and enervate our people, and Britain might become as despicable a nation in time, as Spain has been almost ever since they possessed Potosi.

2. Porto Bello is situated on a bay of the North-sea, in 10 degrees of north latitude, and 82 degrees of western longitude, about 70 miles north of Panama, and had this name given it by COLUMBUS, on account of the security of its harbour. Porto Bello described.

WAFER gives the following description of the harbour and town: Portobel, says this writer, is a very fair large and commodious harbour, affording good anchorage and shelter for ships, having a narrow entrance, and spreading wider within: The galleons from Spain find good riding here, while they take in the treasures of Peru, that are brought thither from Panama. The entrance is secured by a fort on the left hand going in, and by a blockhouse on the other side, opposite to it. At the bottom of the harbour lies the town, bending with the shore like a half-moon: In the middle of which, upon the sea, is another small low fort; and at the west-end of the town, upon an eminence, lies another strong fort, yet commanded by a neighbouring hill; and in all these forts, there are usually about two or three hundred men in garrison. The town lies open towards the country without wall or works; and at the east end is a long stable for the King's Mules. The Governor's house stands upon the eminence near the great fort at the west end of the town. It is an unhealthful place, the east end being situated in a low swampy ground, and the sea at low-water leaving the shore within the harbour bare, a great way from the houses, which having a black filthy mud or ouze, occasions very noisome vapours in this hot climate. From the south and east part of it, the country rises gradually in hills, which are partly wood-lands, and partly savannah or pasture; but there are few fruit-trees or plantations near the town.

Much the greatest part of the inhabitants are Indians, Mulattoes and Negroes, no Spaniard of any substance caring to reside in so unhealthful a place, tho' at the time of the Fair, it is so crowded with rich Merchants, that above an hundred crowns are given for a poor lodging, and a thousand crowns for a shop, during the short time that the galleons stay there, and all provisions are proportionably dear, tho' they are cheap enough at other times; and so subject is the place to pettilential Fevers, that five hundred people have died there during the time of the Fair only. No people ever experienced the unhealthfulness of this climate more than the English, when the Squadron under the command of Admiral The English lost their ships and men here without fighting.

CHAP. HOSIER lay before it, without being suffered to enter upon action, in the year 1727; For here we did not only lose Admiral **HOSIER**, but the seamen twice over; and what added to the misfortune was, that all the ships were so damaged by the worms, that it was with difficulty they were brought back to England again. We might have fixed our selves on the isthmus, with less expence of men, ships and treasure, than it cost us to lie here, and render the Spaniards our irreconcilable enemies, without acquiring the least advantage to our selves.

Venta de Cruz. 3. Venta de Cruz is situated on the banks of the river Chagre, where it begins to be navigable, about thirty miles to the northward of Panama: And here the merchandize brought isembark'd for Porto Bello, in order to be sent to Europe; but I don't find this place to be considerable upon any other account.

Chepo. 4. The town of Chepo is situated on a river of the same name, about twenty-five miles north-east of Panama, and eighteen or twenty from the sea, and is but a small place.

Nata. 5. Nata is a port-town on the west side of the bay of Panama, about seventy miles south-west of the city of Panama. Their chief dependance is on cattle, hogs and poultry, with which they serve the markets of Panama; for the country about that city is so very barren, that they would frequently be in danger of famishing, if they were not supplied by shipping with provisions from the towns that lie at a distance from it.

Conception. 6. The town of Conception is situated near the mouth of the river Conception, which falls into the North-sea, over-against La Sounds Key, one of the Sambalas islands; but I meet with no particular description of this place.

Santa Maria. 7. Santa Maria is situated 6 leagues from the sea, on the south bank of the river to which it communicates its name, in 7 degrees 40 minutes north latitude, about 30 leagues south-east of Panama, and is considerable on account of the gold mines in the neighbourhood of it, but does not seem to be of any great strength, the Buccaneers and Privateers having plunder'd it several times. The country about it is low and woody, and the ouze and mud on the banks of the river, occasions a noisome stinking smell, which makes the air very unwholesome.

Scuchadero. 8. Scuchadero, a small town situated on the north side of the same river nearer its mouth, but standing on a good dry soil, and open to the Gulph of St. Michael, from whence it is refresh'd by the sea-breezes. This is esteemed a healthful place; and what contributes to render it more so, is a fine rivulet of fresh water that runs by it, for the waters of this province are frequently brackish: The Spaniards therefore, who resort with their slaves to the gold mines and rivulets at the proper seasons, frequently come hither for their health and refreshments.

New Edinburgh. The last place I shall mention in this province, is New Edinburgh, or the place which the Scots gave this name to, when they attempted to make a settlement on the coast of Darien, or Terra-Firma Proper, and denominated the country about it New Calidonia. This fortress was situated on the continent, near the north-west point of the Gulph of Darien, in 9 degrees odd minutes north latitude, on a most excellent harbour (according to Dr. WALLARE) being about a league in length from the north-west to the south-east, half a mile broad at the entrance, and upwards of a mile broad within, and large enough to contain five hundred

fail of ships untouch'd from any wind that can blow: **CHAP. I.** The forts stood upon a peninsula, almost surrounded by the harbour and the North-sea, and the access to the peninsula so defended by rocks and precipices, that a very little art would have render'd it

impregnable; and there was as much land contained in it, as would have produced ten thousand hog-heads of sugar annually, if it had been cultivated (according to WALLARE) the soil being rich, the air temperate, and the water sweet; every thing contributed to render it healthful and convenient: The land abounded in venison and poultry, and the seas with the best fish; and what were still greater advantages, it stood in the neighbourhood of the richest gold mines in America, and a communication with the South-sea might easily have been open'd from thence by the way of the river Darien, and the Gulph of St. Michael's. The Scots thought themselves extremely fortunate in happening upon this important agreeable situation, which they tell us the English, Dutch and French, tho' they had been all over this coast, from Porto Bello to Carthage, never once discover'd, and the Spaniards themselves were strangers to it. Here it was the Scots arrived in the month of November 1699, in order to fix a colony of their countrymen on the continent; the occasion whereof it may be proper to mention in this place.

The Parliament of Scotland pass'd an Act in the year 1695, for erecting a Company to trade to Africa and the Indies: By which they were authorized to plant colonies and settlements in the East and West-Indies under his Majesty's Letters Patent, which they also obtained; and both the English and Hamburgh Merchants contributing very largely to this enterprize, they equipped several ships, which sailed with forces, and every thing requisite to plant a colony on or near the isthmus of Darien in the year 1698. They landed first on Golden Island, at the mouth of the river Darien; but not liking the situation, they went over to the continent, and built the fort of Edinburgh on the spot of ground already described, with the permission of the natives, calling the country which the Indians assigned them to plant and cultivate, New Calidonia. That part of the isthmus, which the Indians their friends then possess'd, the Scots inform us, extended along the North-sea, from the Gulph of Darien to Port Scrivan on the North-sea, being about an hundred and forty miles; and from Caret Bay, in the south-west part of the Gulph of Darien, to the head of the river Chepo on the south, about an hundred and fifty miles; the breadth in some places sixty, and in others an hundred miles, and upwards.

The Indian Princes within these limits were eight at least, all of them then at war with the Spaniards, and received the Scots into their country with a great deal of joy, in hopes of their assistance against their ancient enemies the Spaniards. The settlement went on prosperously at first; but the Spaniards complaining to the Court of England, and declaring that they should look upon this as an act of hostility, Darien having long been subject to that Crown, as they alledg'd: The English East-India Company also complaining of this settlement at the same time, as an infringement of their charter, the English Parliament thought fit to interpose and address King WILLIAM to recal his Patent to the Scots Company.

The Scots, on the other hand, sent up their Agents to the Court of England, to represent that this was no invasion of the Spanish dominions, because

They are well received by the Indian Princes.

The Spaniards and the English East-India Company oppose them.

CHAP.

I.

cause they were either never possess'd of that part of the isthmus; or, if they were, they had been driven from it by the natives, who were at that time in the actual possession of the country, and at war with the Spaniards, as they had been many years before the arrival of the Scots: But how much sooner the Scots might be in the right, such was the influence of the Court of Spain and the English East-India Company, that all measures were taken to ruin the Scots settlement. The English Ministry prevailed on the Hamburgers to draw their money out of the stock; and the Parliament of England threatened the Merchants of London, who had any shares in it, with their displeasure, if they did not disengage themselves: And orders being sent at the same time to Jamaica, and the English plantations in the West-Indies, not to suffer the Scots to furnish themselves with provisions there, or give them any assistance, our northern neighbours were unfortunately compelled to quit the enterprize, which we ourselves found reason to regret a few years afterwards, when France, in a manner, possessed herself of all the Spanish dominions, and among the rest, of this important place, which, had Britain remained possess'd of, she might easily have stopp'd those treasures coming to Europe, which so long enabled the French to carry on the second war against the Confederates. Another ill consequence this piece of injustice was attended with, was the making the Scots our enemies, and obliging us to purchase their friendship again, at the expence of almost four hundred thousand pounds; and whether any thing will perfectly satisfy them, but the subversion of the English Constitution, is still a question. On the other hand, the Scots offer'd to share the settlement with the English, and would have been infinitely obliged to them, if they had encouraged and supported it: Nor is there a spot of ground, it is agreed, on the continent of America, that could be of greater service to Britain, than that of New Edinburgh, if ever we are doom'd to have a war with Spain and France again.

Edin-
burgh.

Having taken a view of the principal places upon the continent of Darien, or Terra-Firma Proper, I proceed to give some description of the islands near the coasts of this province, both in the North and South-seas, which are very numerous, and of great use to sea-faring men, who traffick in those seas, tho' scarce any of them are inhabited.

Islands on
the coast
of Terra
Firma
Proper.

On the North-sea, at the entrance of the Gulph of Darien, lie three islands almost in a triangle, which form a very good harbour. The eastermost of the three, and the smallest, is called Golden Island: There is a fair deep channel between this and the main; it is naturally strongly fortified, being defended by a steep rock almost all round, except the landing-place, which is a small sandy bay on the south side. The island is moderately high, and cover'd with small trees and shrubs, and was recommended to the Scots India Company, as a proper place to fix their first colony on; but finding it barren, and destitute of provisions, the Scots pitch'd upon a place on the opposite shore (as has been observed already) which was excellent fruitful land, and no less scarce than the island. The largest of the three islands lies to the west of Golden Island, being swampy or marshy ground, and so beset with Mangroves, that it is difficult getting on shore. It lies near a point of the isthmus, which is the same sort of ground for a mile or two, and is scarce parted from the main-land, but at high-water, and even then ships cannot pass between.

The third, called the Isle of Pines, is a small island, north of the other two; and, rising into hills, is a good sea-mark: It is covered with tall trees fit for building, or any other use, and has a fine rivulet of fresh water in it.

Three leagues north-west of these, lie a multitude of small islands, extending as far as Point Samballas, generally denominated, the Samballas Islands; some of them lie one mile from the opposite shore of the continent; some two miles, and others two miles and a half from the shore, and about as far from each other, and there are navigable channels between them: The sea between this long range of islands and the continent, is navigable also from one end to the other, and affords every-where good anchoring in hard sandy ground: It is good landing either on the islands, or the main; and let the wind sit how it will, ships never want a good road to ride in on the inside of one or other of these islands, on which account this channel was the general rendezvous of the Buccaneers and Privateers on this coast, especially La Sounds Key and Springers Key (or Island) which do not only afford good shelter for careening, but good wells of fresh water not far from the surface, if they dig for them. But tho' it be such good riding on the inside of these keys or islands, there lies a ridge of dangerous rocks on the outside, at about half a mile distance; and there are others lie under water, between these islands and the Gulph of Darien.

The Samballas are generally low, flat, sandy islands, but have variety of fruit-trees and forest-trees upon them; particularly the Mammeees, Sapadillo's and Manchinel trees: Their shores also afford good shell-fish; but no people have thought fit to plant or inhabit any of them. From the Samballas islands passing to the westward by Port Scrivan, and the bay where the town of Nombre de Dios once stood, we arrive at the islands of Bastimento, being four or five in number, and lying about a mile from the continent: They are, for the most part, high land covered with wood; and one of them has a spring of fresh water in it. These, with the main-land opposite to them, form a good harbour, into which there is an easy passage, with the sea-breeze between the eastermost island and the next to it, and as good going out with the land-breeze the same way. A little farther westward, over-against Porto Bello, are two small flat islands without wood or water: They lie so near the continent, that there is but a very narrow channel between. Beyond the Bastimentos, to Porto Bello, the coast is generally rocky; and within the land the country is full of high steep hills, covered with wood, unless where they are cleared for plantations by the Spanish Indians tributary to Porto Bello; and these, in WAFER's time, ann. 1681, were the first settlements on the north coast of Darien under the Spanish Government: The Spaniards had then neither command over the Indians, or commerce with them to the eastward of Port Scrivan. The same writer indeed says, he was inform'd, the Spaniards had courted the natives since, and won them over to their party; but 'tis certain this was not effected in the year 1698, when the Scots landed on the isthmus; for they found all the Indians between the Gulph of Darien and Port Scrivan at open war with the Spaniards. I proceed, in the next place, to this description of the islands belonging to this province of Darien, or Terra-Firma Proper, that lie in the Bay of Panama in the South-sea.

CHAP. I. The Bay of Panama is of a semicircular form, and made by Point Garrachina on the south-east, and Panta Mala on the north-west, being about an hundred miles over, and three hundred in circumference, including the Gulph of St. Michael's at the mouth of the river of St. Mary's.

The Bay of Panama. The islands in it. The Kings or Pearl islands.

The Kings or Pearl islands, being low, woody islands, and very numerous, lie almost in the middle of this bay, stretching from the south-east to the north-west, in length about 14 leagues. The northernmost of them, call'd Pachique, lies 12 leagues south-east of Panama; and the southernmost of them, call'd St. Paul, 12 leagues north-west of Point Garrachina; and they are generally about seven leagues distant from the main-land of Darien.

These islands belong to the citizens of Panama, who keep Negroes here to plant and cultivate them: They afford some fruits, particularly Plantains and Bonana's, and in some of them Rice is sown; but many of them, especially the largest, are wholly uncultivated, and almost over-run with weeds, tho' it seems to be a fruitful soil that would produce any thing. These unplanted islands shelter their fugitive Negroes, who lie concealed in the woods in the day-time; and in the night rob the Spanish plantations.

There are narrow channels between most of these islands; only fit for boats to pass; but betwixt the islands and the main-land, is a channel 7 leagues over, where there is a sufficient depth of water, and good anchoring all the way: The prospects on each side extremely pleasant; for, on the continent, are little rising hills, always green; and the King's islands on the other side the channel are no less beautiful.

Chepelio island.

The island of Chepelio, situated 7 leagues east of Panama, and a league from the continent, is the pleasantest island in the Bay of Panama. It is about two miles over either way, partly high land, and partly valleys. The low-lands are planted with the best Indian fruits; such as Sapadillo's, Avagato Pears, Mammecs, Mammee Sapota's, Star-apples, &c. and the middle of the island with Plantains. The islands of Perico are three small islands, which lie before the city of Panama, about three miles from it, and may be called the port to that city, the great ships lying here, because there is not depth of water to approach nearer.

Tabago island.

The island of Tabago lies about six leagues south of Panama, being about three miles long, and two broad: A mountainous island, the north side whereof affords a pleasant prospect, appearing like a garden of fruit, surrounded with high trees. Close by the sea stand abundance of Cacao-nut-trees; and on this side a fine rivulet of fresh water falls from the top of the mountain. There is a small island on the north-west side of this, called Tabogilla; and another about a mile from it on the north-east, with a good channel between them.

Otoque island.

Otoque is an island south-west of Tabago; in which there are good Plantain-walks with Negroes upon them, belonging to the citizens of Panama, who look after them, and breed fowls and hogs for their masters, as they do at the Pearl islands. The island of Chucho is a small low woody island, that lies west of the Pearl islands, and does not appear to be either inhabited or planted; but could not be omitted, because it has a place in our maps: As has also that of Gallera, another small, flat, barren island, which lies between Point Garrachina and the Pearl islands, only remarkable for an engagement between the Spaniards and Captain HARRIS, who was attacked by them here, as he was sharing the

Gallera island.

gold with his men that he took in Santa Maria; but the Privateers made such a brave defence, that the Spaniards thought fit to retire, and leave them in possession of their plunder.

CHAP. I.

The soil of the isthmus of Darien, or Terra-Firma Proper, is good in the middle of the province, according to WAPER; but both the shores of the North and South-seas are generally either a dry barren sand, or drowned mangrove land, that will scarce produce any kind of grain. Mr. WALLACE indeed informs us, that his countrymen, the Scots, were so fortunate to meet with a spot of ground, where they built the fort of New Edinburgh, almost surrounded by the sea; the soil whereof was rich; the air temperate, the water sweet, and every thing about it contributing to make it healthful and convenient: That the land afforded Deer, Rabbits, wild Hogs, Guanoes, Turkeys, Pheasants, Partridges and Parrots; and the sea, Manatee, Turtle, and a vast variety of smaller fish, from the bigness of a Salmon, to that of a Perch.

The soil and produce of Terra-Firma Proper.

It is very possible, in the most barren and unhealthy countries, to meet with some small portions of it, that differ from the rest; and such was that, it seems, the Scots proposed to fix their colony upon: But still it is very certain, that the sea-coasts of this province are generally unhealthy, being excessive hot, and very wet two thirds of the year; and all travellers agree, that the mountains, which have mines in them, produce scarce any thing, but shrubs. The country about Panama, the capital city, is so exceeding poor, that their corn, flesh, and other provisions, are brought them by sea, from countries at a very great distance; and that city would be starved, if their communication with their neighbours by sea was cut off half a year; for tho' the heart of the country is said to be fruitful, yet very little of it is cleared of wood, or cultivated. As to the Indians, they are not very numerous; and they clear no more ground than just serves their respective families, sowing a little Indian-corn; and having small gardens in the woods, that produce Plantains and Potatoes, and some other fruits and roots; which, with what they take in hunting and fishing, furnishes them with a poor subsistence; and as to the Spaniards, they seem to be above working and cultivating the ground, both in the old and new world: The little that is cleared and planted in America, is done by the Negroes or the Indians; and though the country might yield good crops of grain and grass, if it were inhabited by an industrious people, yet, in the present situation of affairs, it affords but little provision, insomuch that our Buccaneers, the hardiest race of men upon earth, who have marched through it, and plundered the Spanish towns, have been more in danger of famine, than any other enemy: And should the English ever attempt to dislodge the Spaniards from the isthmus, they must carry a double stock of provisions with them; for I question whether the country would be able to subsist a thousand men in their march.

The air.

The Indians of Darien resemble those in the eastern provinces of Mexico; only it is observed, as they approach nearer the Equator, their complexions are darker. When they are engaged in hunting, fishing, planting, or any laborious exercise, they usually go naked, having their skins painted with various colours and figures; but they have their robes of ceremony (as WAPER informs us) both white and black, that are made of cotton linnen, and reach down to their heels; and the men wear coronets of cane on their heads, adorned with feathers:

CHAP. I. **thers:** Nor do they ever stir abroad without their arms, their bows, arrows, lances, and daggers, or great knives; and many of them of late use fire-arms, which they purchase of the Europeans.

WAFER observes, that both men and women are of a round visage; have short bottle noses; their eyes large, generally grey, yet lively and sparkling: They have high fore-heads, white even teeth, thin lips, and mouths moderately large, their cheeks and chins well proportion'd; and that they are in general finely featur'd, but the men more so than the women. Both sexes have long black hair, coarse and strong, which they usually wear down to the middle of their backs, or lower, at full length; only the women tie it together with a string just behind the head, from whence it flows loose like the mens. They suffer no other hair to grow, but that on their heads, their eye-brows and eye-lids. Their beards, and all below, are pulled up by the roots, as soon as any appears; and they have the same custom as the East-Indians and Africans have of anointing their heads and bodies with oil or fat.

A race of white Indians.

There are, it seems, among these dark complexion'd Indians, some that are perfectly white in the province of Terra-Firma Proper. Their skins, says my author, are not of such a white, as our fair people in Europe, who have some tincture of red in their complexion: Nor is it like that of our paler people, but a pure milk-white; and there grows upon their bodies a fine short milk-white down, through which however the skin appears. The hair of their heads and eye-brows also is white, growing to the length of six or eight inches, and inclining to curl. These people are less in stature than the other Indians. Their eye-lids are also differently form'd, bending like the horns of the moon; from whence, and their seeing so well by moon-light, the Buccaneers call them moon-ey'd. They cannot see at all in the sun-shine; and therefore scarce ever go abroad in the day-time, unless in dark cloudy weather. In moon-shiny nights they are all life and activity, says my author, skipping about like wild bucks, and hunting in the woods; for they are as nimble as the other Indians, tho' not so strong and big-boned.

They are contemn'd by the copper-coloured Indians, who look upon this white complexion as monstrous, and to proceed from some infirmity or defect: They are not a distinct race by themselves, but proceed from tawny parents on both sides: And though some have suspected these white children to be the issue of some Europeans upon Indian women, my author says, that it is not at all probable: First, because few Europeans come into this country: Secondly, because the issue of an European and an Indian is not white, but only a brighter tawny than the Indians: And, thirdly, this complexion is a different white, as has been observed already, from any thing seen amongst us; but it is very unaccountable, that the issue of these white Indians are not white like their parents, but copper-colour'd: And WAFER relates it as the conjecture of one of the Indian Princes, that this whiteness proceeds from the force of the mother's imagination, looking at the moon at the time of conception; but perhaps the reason of this very white complexion of the Darien Indians, and the very dark complexion of the Negroes, will be found out together: I shall only observe here, that though a great deal is ascribed to the strength of the woman's imagination in both cases; yet other causes probably concur to make such remarkable differences in the complexions of mankind.

CHAP. I. The men in this province, like those in Mexico, wear silver and gold plates in their noses, which hang down over their lips; and the women rings of the same metal. They have also pendants in their ears, chains of beads and shells about their necks, and other ornaments, as the Mexican Indians wear. Their houses also are built in the same manner, and their lodging is generally in hammocks: Nor is their food or exercise different from what has been related already of the other Indians, who have preserved their liberties, and are not yet under the dominion of the Spaniards; and therefore I shall not weary my readers with the repetition of these articles.

WAFER informs us, that the country was governed by the heads of their respective tribes or families, at the time of his being there in the year 1681; but that there was a Prince, named LACINTA, superior to the rest, in the south part of the istmus; and those on the north side paid him great respect. WALLARE, on the other hand, who was in Darien in the year 1693, says, the people, where the Scots were about establishing a colony, were under no formal government; but every Captain commanded his own river, bay, or island, where he resided; and that the Commander, who lived near the Samballas Point, could bring into the field all the people for 20 leagues round. What WALLARE therefore means by no formal government, I do not fully apprehend, unless he would intimate, that the General, who commanded them in war, had no authority over them at other times; or that they were not governed by laws, but by their Prince's will: However, WAFER assures us, they were governed by laws; and that murder, adultery and theft were punished by death, and rapes very severely.

Their government.

The reason the Indians of Darien have so long maintained their independency, notwithstanding it was the first province on the Terra-Firma the Spaniards discovered, and is of such importance to them, to be masters of, as it lies upon both seas, is, that the country, in many places, is inaccessible. The torrents that fall for two-thirds of the year from the mountains into the North and South-seas, are scarce passable by any but the natives. These and the thick woods cut off all manner of communication between Panama and Peru by land: There is therefore no road through the country; but whoever goes from Panama to Peru, is forced to go by sea. Our Buccaneers have ever found it extremely difficult to cross the country, from the North to the South-sea; but it would have been much more difficult to travel the length of the country, from east to west, as they must have crossed ten times more rivers than they did the other way: However, the country people, men, women and children, if we may credit WAFER, swim over these torrents frequently, and are in no danger of being overtaken, or surprized by the Spaniards; their horse finding it impracticable to march over their numerous rivers and mountains. And since the Spaniards have found it impossible to subdue this province entirely, and that other nations have treated with the natives, and endeavoured to establish colonies amongst them, they have at length seen their error in treating these Indians as enemies; and therefore, of late years, have endeavour'd to cultivate a friendship with them. However, as the natives are still in possession of the best part of their country, I cannot see why we might not treat with them, and endeavour to plant English colonies in the isthmus, if Spain persists in her depredations on our people in that part of the world,

The Darien Indians still preserve their liberty.

CHAP. world, and cannot by fair means be prevailed on to accommodate the differences between the two nations.

The importance of the isthmus to any European power. I have taken a great deal of pains, and been more inquisitive than ordinary, in searching out the state of this small province, because of the vast importance it would be to us to make settlements, and erect forts here, if we should ever be at war with Spain; and we may also conjecture, from this account, what a disadvantage it would be to us, if the French, or any powerful and enterprising people, should possess themselves of it: Since therefore we have it not ourselves, it is much better it should remain in the hands of the Spaniard, than any other nation; for they are a lazy indolent generation, who take off the manufactures of the rest of the countries of Europe, and give us the gold and silver of the Indies in return for them: Whereas, were any other people possess'd of those prodigious treasures, probably they would take but little of the manufactures of Britain, and become dangerous neighbours to us.

Carthage-
na pro-
vince. Carthagena, the second province of Terra-Firma-I am to describe, received its name from the capital city, and is bounded by the North-sea on the north; by the province of St. Martha on the east; by Popagart and New Granada on the south; and by the Gulph of Darien, which separates it from Terra-Firma Proper, on the west; and is said to be about three hundred miles in length, from north to south; and about two hundred in breadth, from east to west. The chief towns are, 1. Carthagena, the capital; 2. Madre de Popa; 3. Cenu; and 4. Tolu.

Chief towns. Carthagena is situated in a peninsula, on a bay of the North-sea, in 11 degrees north latitude, and 76 degrees of western longitude, lying about 100 leagues to the eastward of Porto Bello; and is said to have been so named by the Spaniards that founded it in the year 1532, either because they were natives of Carthagena in Old Spain, or because it resembled that harbour in the Mediterranean. But however that be, it is generally esteemed one of the strongest and securest ports in the West-Indies; which is the reason great part of the treasures of the rest of the provinces of the Terra-Firma are lodged here, to be put on board the galleons on their return to Europe. The galleons also dispose of great part of the cargoes they bring from Europe in this city, from whence they are distributed to the neighbouring provinces.

Taken by Sir Francis Drake. The town is built of free-stone, and has several fine churches and monasteries in it; but the Jesuits cloister and church excels all the rest. As to the form of the town, it is like others of Spanish foundation, with a square in the middle; from whence most of the streets run in parallel lines: It is wall'd round, and defended by forts, block-houses, and other works; which render it one of the strongest places in the West-Indies. However, Sir FRANCIS DRAKE took it by storm in the year 1585, and was much censured that he did not keep possession of it; for it would have enabled us to have commanded the navigation of those seas, and to have made what settlements we pleased upon the isthmus and the adjacent continent, from whence the Spaniards bring such prodigious treasures. The French Taken by the French. Admiral POINTI also had this city betray'd to him, in the year 1697, by a discontented Spaniard of the garrison; and, 'tis said, the plunder the French brought off amounted to eight or ten millions of pieces of eight. This city is a Bishop's see, Suffragan to the Archbishop of Santa Fé in Granada,

and the seat of the Governor and of the Courts of justice of this province.

2. Madre de Popa, situated on a high mountain, about fifty miles south-east of Carthagena, chiefly famous for a convent and chappel dedicated to the Virgin MARY, so vastly rich, that it is only exceeded by that of Loretto. Innumerable miracles are said to be wrought at this shrine; and pious Pilgrims from all parts of Spanish-America continually resort hither with their richest offerings: All their blessings, and all the misfortunes of their enemies, the Spaniards ascribe to the image of the Blessed Virgin, which is worshipped here, according to DAMPIER. When the Oxford man of war was blown up near Hispaniola, the Spaniards reported, that the Blessed Virgin, or rather her image, was abroad all night, and came home very wet; and often returns with her cloaths rent and dirty, when she has been out upon any expedition against the Buccaneers or Privateers that infest their coasts; thus being deem'd the grand patroness and protector of the maritime places, Merchants and sea-faring people. Her devotees, that inhabit the coasts of this and the adjacent provinces, are exceeding bountiful when they come in pilgrimage to this celebrated shrine; and particularly take care to furnish her with new cloaths and ornaments, instead of those they are taught to believe she has worn out or spoil'd in their service.

3. Zenu, or Cenu, situated upon a river of the same name, 10 leagues from the North-sea, and about 25 leagues south of Carthagena, most remarkable for the Salt that is made here, and its fisheries.

4. Tolu, situated on the North-sea, about 25 leagues south-west of Carthagena, celebrated for the excellent Balm or Balsam found in the neighbourhood of this town, from whence it derives its name.

The province of Carthagena is a mountainous woody country, the valleys tolerably fruitful; but I don't find there are any mines of gold or silver in it: Some emeralds, 'tis said, are found here; and the balm, gums and drugs it produces are in great esteem.

The principal river of this province is that of Rio Grande de Magdalena, which, rising to the southward of Granada, runs directly north, and afterwards divides the province of Carthagena from that of St. Martha; falling into the North-sea, in 12 degrees north latitude, about 24 leagues north-east of the city of Carthagena. This river is 2 leagues broad at the mouth, but large ships cannot enter it, on account of the rocks and sands that lie before; and the stream is so rapid, that they are forced to drag their boats up the river with men or horses. There is an island at the entrance of the river, which divides it into two channels.

3. The province of St. Martha is bounded by the North-sea on the north; by the province of Rio de la Hacha on the east; by New Granada on the south, and by Carthagena on the west; being about three hundred miles in length, from east to west; and two hundred in breadth, from north to south. This is a very mountainous country, and, according to DAMPIER, higher land than the Pike of Teneriff, or any other land in the known world, being seen at sea near two hundred miles. From these mountains run a chain of hills, almost directly south, quite through South-America, to the Straits of Magellan. Those which bound Peru on the east, and are usually call'd The Andes, are a part of them.

The

CHAP. I.	The soil produces Indian-corn and fruits ; and almost all manner of fruits and plants come to great perfection, which are carried thither from Old Spain : They have also mines of Gold and Copper in their mountains, Emeralds, Sapphires, and many other precious-stones. The sea-coasts are excessive hot, but their mountains cool, being cover'd with snow, even in this warm climate.	tops of these hills are barren ; but the lower part of them, and the valleys between, have a rich mould ; so that here is plenty of sugar, tobacco, corn, cattle, and rich pastures, and good store of venison, fish, fowl, and fruits. Their plantations of Cacaonurs are esteem'd the best in the Spanish West-Indies, of which they export great quantities, as they do of corn and salted flesh. There are also several gold mines in this province. These advantages have drawn great numbers of Spaniards and Indians hither ; and it has as many populous towns as any part of South-America ; the chief whereof are, 1. Chief Venezuela ; 2. Caracos ; 3. Maracaibo ; 4. Gibraltar ; 5. St. Jago de Leon ; 6. New Segovia ; 7. Tucuyo ; 8. Trugillo ; 9. Laguna ; and, 10. Maricapano.	CHAP. I. Produce.
Soil and produce.			
Air.			
Chief towns.	The chief towns of this province are, 1. St. Martha ; 2. Ramada ; 3. Baranca ; 4. Cividad de los Reyes ; and 5. Tamalameque.		
St. Martha.	1. St. Martha, the capital, which gives name to the province, is situated on a bay of the North-sea, in 11 degrees odd minutes north latitude, and 74 degrees of western longitude : It has a large harbour form'd by the continent, and two islands that lie before it. This town is a Bishop's see, and the seat of the Governor and Courts of justice.		Chief towns.
Ramada.	2. Ramada, situated also on the North-sea, to the eastward of St. Martha ; it stands at the foot of a mountain, and is remarkable for its copper mines.		
Baranca.	3. Baranca, situated on the east side of the river Grande, south-west of St. Martha ; a place of great traffick, the merchandize of New Granda being brought down thither by the river.		
Los Reyes.	4. Cividad de los Reyes, situated at the conflux of two small rivers, about a hundred miles to the southward of St. Martha ; of which I meet with no farther description.		
Tamalameque.	5. Tamalameque, situated on the east bank of the river Grande, two hundred miles to the southward of St. Martha, sometimes called the City of Palms, from the Palm-trees in the neighbourhood.		
Rio de la Hacha province, situation and extent.	4. The province of Rio de la Hacha, bounded by the North-sea on the north ; by the province of Venezuela, on the east ; by Granada, on the south ; and by that of St. Martha, on the west : It is a small province, and frequently reckon'd a part of that of St. Martha : It abounds in corn and cattle, and has a pearl-fishery upon the coast, and some salt works.		
Produce.	The chief towns are, 1. Rio de la Hacha ; and 2. Rancheria.		
Chief towns.	1. The town of Rio de la Hacha, situated near the North-sea, on a river of the same name, in 11 degrees odd minutes northern latitude, to the eastward of the town of St. Martha. This place has been so often plunder'd by enemies and Buccaneers, that the Spaniards abandoned it for a time ; but have taken possession of it again.		
Rio de la Hacha town.	2. Rancheria, situated on the same coast, about 20 leagues north-east of Rio de la Hacha, and inhabited chiefly by the Pearl-fishermen, that fishery lying about 4 or 5 leagues from the town.		
Rancheria.	5. The province of Venezuela, in which I include the district of Caracos, is bounded by the North-sea on the north ; by New Andaluzia on the east ; by Granada on the south, and Rio de la Hacha on the west ; being about four hundred miles in length, from east to west ; and three hundred in breadth, from north to south. This is the most northerly province of South-America, the Capes of La Vela and Conquibacoa lying in 12 degrees odd minutes north latitude. In this province we find abundance of exceeding high mountains and deep valleys, especially in the district of Caracos, which stretches along the North-sea for twenty leagues. This part of the country, DAMPIER observes, is a continued tract of high ridges of hills, intermixed with small valleys, pointing upon the shore from south to north ; the valleys not half a mile wide : And farther within land, the mountains are still higher, and the valleys so narrow, that the land appears like one great mountain at a distance. The		
Venezuela province.			
Situation and extent.			
Face of the country.			
		Both these towns of Maracaibo and Gibraltar were taken and plunder'd by LOLONOIS, Captain of the French Buccaneers, in the year — ; and afterwards by Captain MORGAN, in the year 1669 ; an enterprize that deserves to be recorded, being one of the boldest attempts that ever was made on the Spanish settlements in America ; of which we have the following relation from a person engaged in it ; viz.	Both the last towns taken by Sir Harry Morgan.
		Captain MORGAN, having assembled a fleet of fifteen vessels, of all sorts, mann'd with nine hundred and sixty men, appointed them to rendezvous at the port of Occa, a little to the westward of St. Domingo in Hispaniola ; where he propos'd to take in cattle, and victual his fleet. The Governor of Jamaica also order'd an English ship of thirty-six guns to join him, which MORGAN design'd for his Admiral : But as he was feasting his Officers, drinking of healths, and firing guns, on board this ship, it blew up, and three hundred and fifty of the men perish'd in her ; but MORGAN and his Officers, who were drinking in the great cabin, with about thirty more, which happen'd to be at some distance from the powder-room, escap'd with their lives. The loss of this great ship, with so many men, one would have thought should have discouraged MORGAN from prosecuting his intended enterprize, especially when seven more of his fleet were, by some accident, separated from the rest, and	

CHAP. I. and never join'd him afterwards. But the Captain, with eight small vessels only, of which the largest carried fourteen guns, and five hundred men, resolved still to stand over to the continent, and attempt the town of Maracaibo. Setting sail therefore from Hispaniola, he arrived at the island of Anaba, situated about 12 leagues to the westward of the Dutch island of Curaçow; and here having furnish'd himself with wood and fresh provisions, he set sail again, and arrived the next day at the mouth of the gulph of Maracaibo, the entrance whereof he found defended by two forts, which he attack'd with great vigour, and the Spaniards defended them with no less bravery the whole day, but in the night abandon'd them; and MORGAN took possession of the forts, in which he had another very narrow escape; for the Spaniards left behind them a kindled match near a train of gun-powder, which would have blown up all the Buccaneers in a few minutes, if it had not been discovered by Captain MORGAN himself, who, snatching up the match hastily, saved his own and the lives of all his people.

In these forts they found great quantities of small arms, ammunition and provision, and sixteen pieces of cannon, between twelve and twenty-four pounders: The next day, the Captain, having distributed the small arms and powder among his men, nailed up the cannon, and demolished part of the walls; order'd his fleet to get over the bar at the entrance of the lake, and advanced to the town of Maracaibo, which he found abandon'd by the inhabitants: Whereupon he posted his main-guard in the principal church, and sent out parties every way in search of the Spaniards; and, having taken about an hundred of them, he put several to the torture (as my author says) to make them discover their wealth: And having continued these practices for three weeks, he marched to Gibraltar, situated about 40 leagues further on the same lake; where being arrived, he was very warmly saluted, both by great and small shot, from the walls; but, after some resistance, this town also was abandon'd to the Buccaneers. MORGAN thereupon order'd out some parties in pursuit of the Spaniards, and two or three hundred were taken, and tortur'd by various ways (if we may credit our author) to make them discover their treasure and effects; and the Governor of Gibraltar, who had retired to an island in a river that falls into the lake, very narrowly escaped their hands, being removed further to an inaccessible rock but a little before the Buccaneers came to search for him.

MORGAN, having spent twelve days in pursuit of the Governor, through woods and bogs, and continual rains, returned to Gibraltar, with his men, so harrassed and fatigued, that fifty Spaniards, 'tis said, might have defeated and cut them to pieces in their march, if they durst have attack'd them; but so much were these Adventurers dreaded by the Spaniards, that they fled if they heard a leaf stir.

The Buccaneers, having remained full five weeks in possession of Gibraltar, and extorted five thousand pieces of eight from the inhabitants for ransoming the town from fire, began their march towards the mouth of the lake, taking along with them some of the principal Spaniards, as a security for the money the people had promised for their liberty: Being arrived at Maracaibo, they understood, that three large Spanish men of war waited at the entrance of the lake to cut off their retreat, which occasioned some consternation amongst the Buccaneers: However, Captain MORGAN put a good face upon the matter, and sent one of his prisoners to the Com-

mander of that Squadron, demanding of him a CHAP. I. considerable sum of money to redeem Maracaibo from the flames: To which the grave Spaniard sent the following answer, viz.

DON ALONZO DEL CAMPO ET ESPINOSA,
Admiral of the Spanish fleet, to Captain MORGAN, Commander of the Pirates.

" Understanding that you have dared to attempt
" and commit hostilities in the countries, cities and
" towns belonging to the dominions of his Catho-
" lick Majesty, my sovereign Lord; I let you
" know, by these lines, that I am come, accord-
" ing to my duty, to that castle which you took
" out of the hands of a parcel of cowards, and have
" repaired the fortifications, and remounted the ar-
" tillery you nail'd up. My intent is to dispute
" your passage out of the lake, and pursue you
" wherever you go: However, if you will submit
" to surrender the plunder you have taken, toge-
" ther with the slaves and prisoners, I will let you
" pass to sea without molestation; but if you refuse
" this offer, I will send for forces to Caracos, and
" put every man of you to the sword. Be prudent
" therefore, and do not abuse my bounty: My sol-
" diers desire nothing more ardently than to revenge
" on you the cruelties and outrages you have com-
" mitted on the Spanish nation in America. Da-
" ted on board the Royal Magdalen, lying at an-
" chor at the entrance of the lake of Maracaibo,
" April 24, 1669."

Upon the receipt of this letter, Captain MORGAN assembled his men in the market-place of Maracaibo; and, having acquainted them with the contents of it, he demanded if they chose to surrender their plunder, or fight their way through the enemy? And they answer'd unanimously, they would spend the last drop of blood in defence of their booty; and one of them propos'd the fitting up a great vessel they had taken in the gulph for a fire-ship, with which he engag'd to set fire to the Admiral: However, the difficulties of getting out of the lake by force appear'd so insuperable, that it was thought proper to make some further overtures to the Spaniards, in order to obtain a passage without fighting: And, 1. They offer'd to quit Maracaibo, without requiring any ransom for the town; 2. They offer'd to release their prisoners and one half of the slaves; 3. To release the hostages they had taken for the contributions required. But Don ALONZO reject'd these proposals with scorn, and would grant no other terms than those he first offer'd them: Whereupon the Buccaneers prepared to force their way through; and having fitted up their fire-ship with combustible matter, and disguis'd her like a man of war, they sail'd to the entrance of the lake, and came to an anchor in sight of the enemy, on the 30th of April, in the evening. The next morning early, being May-day, Captain MORGAN, weigh'd anchor again, and sail'd directly towards the enemy, with the fire-ship at the head of his little fleet; which the Spanish Admiral looking upon as the ship of the best force, was preparing to engage her, when he was suddenly clapp'd aboard, and grappled by the fire-ship; and tho' the Admiral made great efforts to disengage himself, he had the mortification to see his ship consumed in the flames with most part of his men. At which another of the Spanish ships was so terrified, that the Captain run her aground near the castle, and set fire to her himself; and the third was taken by the Buccaneers.

CHAP.

I.

After this victory, Captain MORGAN made a descent, and attack'd the castle; for, without being master of this fortress, he found it would still be very difficult to get out to sea, the channel for ships to pass lying just under it: But Don ALONZO, the Spanish Admiral, having thrown himself into the castle, with a numerous garrison, repaired the works, and mounted abundance of artillery on the walls; fix'd on the Buccaneers so briskly, that they were forced to retire to their ships, having had thirty of their men kill'd, and as many wounded.

MORGAN, after this repulse, enquired of his prisoners what forces the Spaniards had sent against him, and whether any more ships were expected to oppose his passage out of the lake. To which a Pilot, that belonged to one of the Spanish men of war that was burnt, answer'd, That their fleet at first consisted of six men of war; whereof the largest carried eight and forty guns, and another forty-four, which were equipped out in Old Spain, to cruize on the English Pirates, who infested their American plantations; but, being arrived at Carthagena, the two largest ships received orders to return to Spain, being judg'd too big to cruize upon these coasts; and Don ALONZO, the Vice-admiral, sailed with the other four to Campeachy, in quest of the English, and lost one of the four in a violent storm that blew from the north in that bay. From Campeachy, Don ALONZO sail'd with the three remaining men of war to Hispaniola, and from thence to Caracas on the continent; where he understood, Captain MORGAN had plunder'd Maracaibo and Gibraltar; and therefore determined to lie with his squadron at the mouth of the lake, to prevent the Buccaneers returning home with their plunder: And, tho' the Admiral received advice they were preparing a fire-ship, he slighted the intelligence, believing they had neither skill nor materials to fit out a fire-ship; and suffering himself to be surprized, Captain MORGAN had obtained that easy and unexpected victory.

The Pilot also informed the Captain, that one of the ships that was burnt had forty thousand pieces of eight on board: Whereupon he ordered one of his ships to fish up as much of the treasure as they could, and returned with the man of war he had taken, and the rest of his fleet, to Maracaibo; and sent a message to the Admiral, that he would entirely destroy that town, unless he gave him thirty thousand pieces of eight to redeem it from the flames, and five hundred oxen to victual his fleet; which the Governor refusing to comply with, the inhabitants, however, agreed among themselves to raise twenty thousand pieces of eight, and furnish him with the oxen he requir'd; which the Captain accepted, and received advice, about the same time, that the ship he left to fish up the treasure, had got fifteen thousand pieces of eight more. But still the great difficulty remain'd, how they should pass the castle, and get out of the lake: Whereupon Captain MORGAN sent another message to Don ALONZO, the Admiral, to let him know, he would hang up all his prisoners if he attempted to interrupt his passage. The Admiral, however, was not moved with this threat; but prepared to oppose the passage of the Buccaneers with all his force. Whereupon Captain MORGAN had recourse to another stratagem: He landed great part of his men, as if he intended to attack the castle a second time, which induced the Governor to remove most of his great guns to the land side, and place the best part of his forces there: But it was no sooner dark, than MORGAN reembark'd his men again; and,

suffering his ships to fall down with the tide, without one sail standing, pass'd the castle with his fleet before he was well perceived; and then spreading his sails, in an instant got out of the reach of their guns before they could do him any considerable damage; and the Buccaneers, not long after, arrived safely at Jamaica, with their plunder, which amounted to two hundred and fifty thousand pieces of eight, besides a vast quantity of rich merchandise.

6. The sixth province of Terra-Firma I shall describe, is New Andalusia; in which I shall comprehend the districts of Comana and Paria, and bound it by the North sea on the north; by the river Oronoque, which divides it from Caribiana, or Guiana, on the east; by the country of the Amazons on the south; and by the provinces of Granada and Venezuela on the west; extending in length, from north to south, five hundred miles and upwards; and in breadth, from east to west, between two and three hundred miles. The principal river which waters this country, and into which fall many other considerable streams, is that of Oronoque, or Paria, which rises in the mountains of Andes, in the kingdom of Peru, not far from the South-sea, and running directly east for near two thousand miles; then turns to the north, and, continuing that course above a thousand miles more, falls into the North-sea by several channels, between 8 and 9 degrees of north latitude.

The inland part of this country is mountainous, and covered with woods, intermixed with valleys and meadows that yield corn and pasturage; but it is not near so fruitful as that of Venezuela, or so full of towns and inhabitants: It is the most easterly province the Spaniards have in South-America; for tho' Caribiana, or Guiana, is usually included in their Terra-Firma, the Spaniards have very few settlements there. The produce of New Andalusia is chiefly Sugar and Tobacco, Brazil-wood, and some other valuable timber and woods for dying, with some gums and drugs. The Spaniards also have introduced most of the fruits of Europe here; and there was formerly a valuable Pearl-fishery on this coast. The chief towns are, 1. Comana, or New Cordaba; 2. Verina; and 3. St. Thomas.

1. Comana is situated on a bay of the North-sea, in 10 degrees north latitude, and 65 degrees of western longitude; said to have a good harbour, and surrounded with hills and woods; so that the town cannot be discerned 'till a ship enters the harbour: And it is a place of that strength, that we find they repulsed the Buccaneers who attack'd it in the year 1670.

2. Verina is situated on the same coast, a little to the eastward of Comana; being a small town, but remarkable for the excellent Tobacco that grows in the neighbouring fields.

3. St. Thomas is situated on the east side of the river Paria, or Oronoque, near its mouth in 8 degrees north latitude, and is the only considerable settlement the Spaniards have to the eastward of that river, as far as I can learn: The forces Sir WALTER RALEIGH carried over to plant a colony in this country, attack'd and took this town, which proved fatal to him; for he lost his son in the enterprise, and afterwards his own head, on the complaint of the Spanish Ambassador to the Court of England; the Spaniards being more apprehensive than ordinary of our fixing a settlement here, as it lay in the neighbourhood of some of their gold mines, which they were then beginning to work: But I don't find these mines have answered their expectations,

CHAP. I. pections, or that any others have been discovered of any consequence in this province.

The province of Guiana, or Caribiana. 7. The province of Guiana, or Caribiana, bounded by the Northern or Atlantic ocean on the north and east; by the country of the Amazons on the south; and by the provinces of Granada and New Andalusia on the west: It extends from the Equator to the 8th degree of north latitude, and lies between 50 and 63 degrees of western longitude, extending twelve hundred miles and upwards along the Atlantic ocean, viz. from the mouth of the river Oronoque, to the mouth of the river of Amazons. Some divide it into two parts, calling that on the sea-coast Caribiana, and the inland country Guiana.

European settlements in this province. Several European Powers have settlements on or near the sea-coasts of this country, particularly the Spaniards, the French and Dutch; but the natives are yet possessed of much the greatest part of it, and are not in subjection to any of them, unless upon the sea-coast. There are abundance of considerable rivers (besides those of Oronoque, and the river Amazon, already mention'd); and these, having their sources in the mountains on the south-west, generally run towards the north-east, and fall into the Atlantic ocean: The principal whereof are, 1. Esqueba; 2. Brebue; 3. Coratine; 4. Surinam; 5. Marwyen, or Maroni; 6. Cayenne; 7. Wia; 8. Cauwo, or Courwo; 9. Aperwacca, or Aprouaque; 10. Wiapoco; 11. Aracawo; and 12. Arabony.

The face of the country and air. The sea-coast of this country is generally low, and subject to inundations, such a multitude of rivers running precipitately from the mountains in the inland country during the rainy season. The air is excessive hot and unhealthful, especially in such parts of the country as are not cleared of the woods; but there are even here some elevated situations tolerably cool and healthful, where the air hath a free passage. Indeed the Europeans generally choose to fix their colonies near the mouths of rivers, among the salt-marshes and stinking ouze, for the convenience of importation and exportation; and such situations are unhealthful in all countries; but if they advance never so little up into the country, make choice of an elevated situation, and a hard firm soil, they find a very sensible difference, even in countries most dreaded by foreigners; of which we made a very happy experiment at Bencouli in Sumatra, which rotted all the Soldiers and Factors we sent thither for many years: But, upon removing the town to an eminence three miles distant from the former fort, we found the country as healthful as any other. From whence it is evident, that if we chuse a situation for health, we can scarce miss of it in any country; but if our view is solely to trade, and the convenience of navigation, we must be content to want that health we never sought after.

Indian towns. As for towns in this country, I find no other among the natives, who possess all the inland part of it, but straggling villages, consisting of poor huts, of the form of ordinary barns, which they frequently remove also, living a kind of vagrant life. Their furniture consists of little more than the hammocks they sleep in (which are sometimes fastened to the ridge-poles of their houses, and as often to the trees without doors) baskets, earthen-pots and pans, gourds and calabashes, that serve them for bowls, bottles, pails, and all manner of uses: These make up the rest of their household equipage.

The English settlements yielded to the Dutch. The English had formerly several settlements on this coast, which were yielded to the Dutch, by the

CHAP. I. treaty of Breda, in the year 1667; and the Dutch and French have still a great many forts and settlements here, with a good extent of country near the mouths of the rivers, which furnish them with sugar, tobacco, cotton, flax, skins or paltry drugs, dying-woods, and several other considerable articles: But I don't find they have met with any mines of gold or silver, which our first Adventurers expected.

Surinam the chief Dutch settlement. The chief Dutch settlement is that of Surinam, situated 5 leagues within the river of the same name, in 6 degrees odd minutes north latitude. They have given the name of Surinam to all the country about this fortress for several hundred miles; and look upon themselves as Sovereigns of it; and, indeed, these are the only considerable acquisitions the Dutch have had in America since the Portuguese drove them from Brazil, and the English from New York.

Cayenne the chief French settlement. The chief French settlement is that of Cayenne, situated on an island at the mouth of a river of the same name, in 5 degrees of north latitude, above 100 leagues to the northward of the river of Amazons. The island is about 7 leagues long, and 3 broad; well wooded and watered with rivulets; and has several good French towns upon it, besides villages of Indians, producing sugar, tobacco, Indian-corn, and other grain and plants, like the neighbouring continent; and is held to be more healthful, as it lies open to the sea-breezes. The Dutch Admiral Binks took it from the French in the year 1676; and the Count D'ESTREES, the French Admiral, recovered it the same year; and it was long contended for by France and Holland, but the French are now in possession of this island; and, as their settlements extend to the southward, as far as the Equinoctial, 'tis said, they have given the name of Equinoctial France to all the sea-coasts between the river of Cayenne and the river of Amazons.

The persons of the Indians of Guiana and Caribiana. As to the persons of the Indians of Guiana and Caribiana, their complexion is a dark copper-colour, as all those are that lie so near the Equator; but they resemble their more northern neighbours of Terra-Firma in size and features. Here are no nations or tribes of a gigantic or diminutive stature, as the first Discoverers pretended. Those who live in the neighbourhood of the Europeans wear some little cloathing, for decency sake; but the rest scarce any, either men or women: Tho' in ornaments most of the Americans seem to agree, as in plates and rings for their lips and noses; heavy strings of beads and shells about their necks, that reach almost down to their bellies; and in anointing and painting their faces and bodies: And, instead of beds, they use hammocks in most places, both of North and South-America. And as Giants, Dwarfs and Monsters seem at present to be expelled from this continent, tho' our first Discoverers met with scarce any thing else, the case seems much the same as to Canibals. There was not a province in America, where we were not assured there were tribes of these; but in Caribiana, the country I am now describing, we were told there was nothing else but devourers of their own species: That it was dangerous for a man to sleep near his best friend, lest he should take that opportunity of murdering him, in order to feast upon his carcase; and yet, for these last hundred years, we meet with no Canibals here, or any where else. That people have eaten one another, driven to it by famine, I make no manner of doubt; and an instance or two of this nature has been thought sufficient to denominate the whole country Canibals. Men may sometimes also have

CHAP. I. have sacrificed their own species to their gods; of which others have had such an abhorrence, that they made no difficulty to believe they eat the sacrifice, especially when it was usual to feast upon other animals sacrificed to idols by almost all people. But further, every nation, in countries where ignorance prevails, looks upon other nations, especially their enemies, as barbarous; and are perpetually making or telling stories to create in their acquaintance an abhorrence of them: And, as nothing is more detestable than the killing and eating our own species, all people almost seem to have agreed in charging this piece of barbarity upon their enemies, and those they have little acquaintance with. I make no doubt, but many of the American nations, as others had done in Asia and Europe, charged their enemies with this instance of barbarism; and, when the Europeans came amongst them, were full of these stories, which our credulous seamen took upon trust; and some of them, possibly, went so far, as to say they had seen the Americans kill, dress, and make a meal of their enemies: After which, no man was thought to have made any discoveries in that part of the world, who could not say he was conversant with those supposed devourers of human flesh. And this was the reason every traveller almost brought home some account of the Canibals he had seen in every other part of America, as well as this. But can we suppose that the Popish Missionaries, and others, would so often have ventured themselves in the inland and unsubdued parts of America, and especially in Caribiana, without a guard, as we are assured they have done, if they had not been satisfied these relations were fabulous? A very credible traveller informs us, indeed, that being about to pass through Caribiana, the many relations he had met with of their devouring their enemies and strangers, had made such an impression on him, that he communicated his fears to one of their Caciques, who could not help expressing his indignation, that he should entertain such thoughts of their people; declaring, that a foreigner might pass through their country with as much security as he could propose in travelling through any other. To this give me leave to add what I have observed before in treating of Asia: That it appears several nations, who have been charged with eating human flesh, have been so far from it, that they have eat no flesh at all; but lived upon roots, herbs, fruits, or pulse; scarce eating any thing that had life, some of them making conscience of eating any animal.

Our Buccaneers, who have traversed the most barbarous and uncultivated parts of America, and seem to be very ready to give into these stories of Canibals, have not, as I remember, been able to give us one instance of their having seen any one man eaten; only they tell us, that one of their comrades being taken by the Indians, they supposed he was roasted and eaten; because, the next day, they came to a place where a great fire had been made, and discovered human bones in the ashes: Which they might have done, if the Indians had only burnt their friend *in terrorem*, as well as if they had broiled and eaten him: Nor is it at all improbable, the man was burnt; for the Buccaneers have frequently committed such outrages, both upon the Spaniards and Indians, as to induce them to retaliate the injuries they have received, by putting them to the cruelest deaths. I shall conclude this topic with Mr. DAMPIER's opinion of the matter, who had visited as many parts of the world as any Englishman ever did, and especially several places

of America, said to be inhabited by Canibals, having been himself a Buccaneer.

CHAP. I. "As for the common opinion of Man-eaters, (says that gentleman) I did never meet with any such people; all nations and families in the world, that I have seen or heard of, having some sort of food to live on; either fruit, grain, pulse, or roots, which grow naturally, or else are planted by them; if not fish and land-animals besides: Yea, even the people of New Holland had fish amidst all their penury, and would scarce kill a man purposely to eat him. I know not what barbarous customs may have formerly been in the world: To sacrifice their enemies to their gods, is a thing that is much talked of, with relation to the Savages of America. I am a stranger to that also, if it be, or have been, customary in any nation there: And yet, if they sacrifice their enemies, it is not necessary they should eat them too. After all, I will not be peremptory in the negative; but I speak as to the compass of my own knowledge, and know some of these Canibal stories to be false; and many of them have been disproved since I went to the West-Indies. At that time how barbarous were the poor Florida Indians accounted, whom now we find to be civil enough! What strange stories have we heard of the Indians! Whole islands were called The Isles of Canibals (Caribbees); yet we find they trade very civilly with the French and Spaniards, and have done so with us. I do own, that they have formerly endeavoured to destroy our plantations at Barbadoes, and have hindered us from settling in the island of St. Lucia, by destroying two or three colonies successively; and even the island of Tabago has been often annoyed and ravaged by them, when settled by the Dutch, and still lies waste (tho' a delicate fruitful island) as being too near the Caribbee's on the continent, who visit it every year. But this was to preserve their own right, by endeavouring to keep out any that should settle themselves on those islands where they had planted themselves; yet, even these would not hurt a single person, as I have been told by some that have been prisoners amongst them. I could instance also in the Indians of Boca Toro and Boca Drago, and many other places where they do live, as the Spaniards call it, wild and savage; yet there they have been familiar with Privateers, but by abuses have withdrawn their friendship again. And as for the Nicobar people (an island in the Gulph of Bengal, reported to be inhabited by Canibals) I found them affable enough; and therefore did not fear them."

The relations of there being nations of Giants and Dwarfs in South-America, seems to have no better authority than their stories of Canibals. There may have been men seen above the common size there, and as we find some tall people in Ireland and Germany; but these are not common any where any more than a race of Dwarfs; tho' some travellers relate, they have seen nations, where a person 3 foot high was looked upon as a tall man amongst them.

But there is nothing the common people in every country seem to have been more universally agreed in, than in their notions of magic, witchcraft, and a visible and familiar conversation that some pretend to the black-art have with the Spirit of darkness; by whose assistance they gratify their revenge upon their enemies, foretel future events, and know things transacted at the greatest distance the very moment they are done.

Every

CHAP. I. Every nation of the Americans, and especially the Caribbees, pretend to have some such adepts amongst them; and this office of Conjurer or Diviner is generally assign'd to their Priests, possibly for no other reason, but because they are something superior to the common people in their experience and knowledge of nature; which has made many a man looked upon as a Conjurer in this part of the world, particularly the celebrated Friar Bacon; and it is not unlikely, that the Priest or Conjurer endeavours sometimes to contribute to the cheat, to keep up or advance his reputation among ignorant people.

Waser's account of the Indian Pawawers or Conjurers.

Mr. WAFER (Surgeon to a company of Buccaneers) who resided a considerable time among the Darien Indians in the year 1681, gives the following account of these Pawawers, or pretended Conjurers, of Terra-Firma: He says, enquiring of the Indians when they expected any ships, they sent for some of their Conjurers, who immediately went to work to raise the Devil, and enquire at what time a ship would arrive; and first, they made a partition in the house with hammocks, that the Pawawers might be by themselves; they continued some time at their exercise, and WAFER and his comrades heard them making most hideous yellings and shrieks, imitating the voices of all manner of animals; they beat also on their wooden-drums, sounded their court-shells, and had some string-instruments they play'd upon; making altogether a horrible noise: Then they broke out into loud exclamations, which were followed with a profound silence; and receiving no answer, after they had waited a considerable time, they came and turned all the Christians out of the house, and then went to work again, but still receiving no answer, after an hour or more, they made a new search, and finding some of the Christians cloaths hanging up in a basket, they threw them out of doors, and then fell to pawawing again: After a little time, they came out in a muck-sweat, and going down the river and washing themselves, they returned and delivered their oracle to this effect: "That the tenth day, from that time, there would arrive two ships; and in the morning of that day they should hear the first gun, and some time after another: That one of the Christians should die soon after; and that going on board they should lose one of their muskets." They were so particular also to tell them, that the Demon informed them, one of them would be an English ship; of the other they were doubtful, but said they were afraid it would prove a Spanish ship; which prediction, WAFER assures us, was exactly fulfilled, even as to that circumstance that one of the ships was Spanish, and under the command of a Spaniard at the time of the pawawing; but was afterwards taken by the English Privateer, which arrived with her upon the coast; and WAFER and his comrades were no sooner on board the English Privateer, but GORSEY one of their number died, having been overset and half drowned in going on board, and lost his musket, as the Pawawers had foretold.

As these things are no part of our creed, people are at liberty to give what credit to them they please; but WAFER's taking notice, that these Pawawers could do nothing as long as the Christians, or any thing that belong'd to them, was in the house, puts me in mind of the pretensions of the East-Indians to the like commerce with Satan, to whom (if we may believe them) he appears personally, and entertains frequent conversation with them in the night; but

VOL. III.

when any of our soldiers have offered to go with them, and be witnesses of their conferences with the Spirit of darkness, they always refused them this favour, alledging, he would not appear if any Christian was present, which smells strongly of a cheat; for many of our people, who resort to these countries, have not more Christianity than the Indians themselves, if we may judge by their morals: Satan need not be afraid to appear before them on account of their sanctity; and even WAFER tells us, in another place, that he gave very little credit to these appearances of the Devil; for, when one of these Pawawers told the company he appeared, and pretended to entertain a conversation with him, they saw nothing, nor heard any voice but their own.

As to religion, we are told, that these people have a great veneration for the Sun and Moon, as the Mexicans have; but pay them no divine honours, or apply to them in their distresses, but to inferior demons, to which our travellers have given the appellation of devils; though 'tis very possible, that the Indians, as well as the Pagans of old, look upon them as a kind of mediators to the supreme Deity, and worship them as such. They may also be apprehensive of mischief from an evil spirit, as the East-Indians are, and endeavour to appease him, by paying him divine honours; but most of the accounts we have yet received of these things, have very much the air of a fable.

8. New Granada, the next province I am to describe, is bounded by the provinces of St. Martha, Venezuela, and New Andalusia, on the north; by Guiana, or Caribiana, on the east; by the country of the Amazons on the south; and by Popayan on the west; being about six hundred miles in length, from the north-east to the south-west; and five hundred in breadth. This large inland country affords vast variety of hills and fruitful valleys; is well watered with navigable rivers, and esteem'd as healthful as any part of Terra-Firma. The chief rivers are, 1. The river Grande, or Magdalena, which, rising in the south, runs directly cross it; falling into the North-sea, to the northward of Carthagena. 2. The river Oronoque, which rising in Popayan, runs directly east the whole length of this province; and then turning to the northward, falls into the North-sea against the island of Trinidad.

Their mountains have mines of gold and silver in them: They have Cedar-trees, and a great deal of other good timber; and no want of Horses, Oxen, Hogs, Goats, Venison, Fish and Fowl; but the country is not proper for Sheep. Here is also great plenty of corn and fruits, both Spanish and American, Guaiacum, Balm, and several other valuable gums and drugs.

The chief towns are, 1. Santa-Fé de Bagota; 2. Tocama; 3. Pampeluna; 4. Velez; 5. Trinidad; 6. Palma; 7. Tunia; and 8. St. John de Lanos.

Santa-Fé de Bagota, is situated in the Lake Guatavita, a little to the eastward of the river Magdalena, in 4 degrees odd minutes north latitude, and 74 degrees of western longitude, in a plentiful country, that abounds in corn and cattle: This is the most considerable town in all the Terra-Firma; the seat of the Governor and the Courts of justice, and an Archbishop's see, to whom the Bishops of St. Martha, Carthagena, and Popayan are Suffragans.

2. Tocama, situated at the conflux of the rivers Magdalena and Pati, a little to the northward of Santa-Fé; remarkable for the salt-springs in the neighbourhood of it.

3. Pampeluna, situated at the foot of the mountains, 60 leagues north of Santa-Fé, has some gold mines near it.

4. Velez, situated almost in the midway between Pampeluna and Santa-Fé, near a remarkable volcano, by whose eruptions this and the adjacent towns are sometimes damaged and endangered.

5. Trinidad, situated on the river Magdalena, 20 leagues to the northward of Santa-Fé, near which, 'tis said, are found quarries of fine Marble, rocks of Crystal, Emeralds, and other precious stones.

6. Palma, situated thirty miles south-east of Trinidad.

7. Tunia, a fortress situated on a mountain four-score miles south-east of Trinidad, erected by the Spaniards to keep the Indians in awe, and received its name from the Indian nation that inhabits this part of the country.

8. St. Juan de los Llanos, or St. John of the Plains, situated on the river Baraguan, an hundred and thirty miles south-east of Santa-Fé, near which, 'tis said, there are gold mines; but as this is an inland country, seldom visited by foreigners, and the Spaniards industriously conceal the produce of it from the rest of the world, lest they should be tempted to disturb them in the enjoyment of these valuable acquisitions; it must be confessed, the accounts we have received of these places are very imperfect.

The last province I am to describe in Terra-Firma, is that of Popayan, bounded by the province of Terra-Firma Proper on the north; by New Granada on the east; by the Audience of Quito in Peru on the south; and by the Pacific ocean on the west; extending in length from north to south four hundred miles, and in breadth three hundred. A chain of barren mountains, almost impassable, runs through the country from north to south; some of which are volcano's, and in one of them the load-stone is found. Towards the shores of the South-sea the land is low and flat; and, as it rains near three quarters of the year, innumerable rivers and torrents fall from the mountains into the South-sea, in the sands whereof is found a great deal of gold-dust; and there are mines of the same metal in the mountains, which induces the Spaniards to build towns and reside in some parts of it, how uncomfortable soever it may be to live just under or near the Equator, where the heat and rains are extremely troublesome, as well as unwholesome.

The chief rivers are, 1. Bonaventura, which rising in the mountains, runs to the westward, and falls into a bay of the sea of the same name, in 4 degrees, odd minutes north latitude. 2. The river Tomaco, which rises in the same mountains, and running parallel to the former, falls into the South-sea, to the southward of it, in 2 degrees, odd minutes north latitude. 3. The river of St. Jago, which takes its course in like manner to the westward, and falls into the same sea, near the point or promontory of Manglars, about 20 leagues to the southward of Tomaco.

The chief towns of the province of Popayan are, 1. Popayan; 2. Agreda, or St. John de Paslo; and 3. Madrigal.

The city of Popayan is situated at the foot of the mountains, on a fruitful plain, in 3 degrees of north-latitude, and 76 degrees of western longitude. It is a Bishop's see, Suffragan of Santa-Fé; the seat of the Governor and of the Courts of justice; and is said to be a large town, and a place of good trade.

St. John de Paslo is situated upwards of an hundred miles south-west of Popayan, in a pleasant

plain, well watered with rivers; in the neighbourhood whereof are many sugar-farms; and they feed great herds of cattle in their savannahs, or meadows.

Madrigal lies an hundred and forty miles to the southward of the city of Popayan, in a barren country, but rich in gold mines.

I shall, in the next place, give some description of the remaining islands that lie on the coast of Terra-Firma (those near Terra-Firma Proper, both in the North and South-seas, having been already described.)

Those that lie in the South-sea, on the coast of Popayan, are, 1. Gorgona, a pretty high woody island, producing large tall trees, and several springs of good water, lies in 3 degrees north latitude, and 4 leagues west of the continent: The anchoring-place in a deep sandy bay at the west end of the island. It is about six miles in length, and four in breadth, but uninhabited; and at the east end is a small island that looks white with the dung of fowls; and another like it at the west end. The coast on the continent over against it is low land; but there are exceeding high mountains beyond in the inland country. Between the island Gorgona and the river Bonaventura, 25 leagues north-east of it, are several small rivers, in the sands whereof the Spanish Indians find gold-dust, that it washed down from the neighbouring mountains.

The island of Gallo lies 25 leagues to the southward of Gorgona, in a deep bay, on the north-east part whereof is good riding for ships. This also is pretty high land, well furnished with good timber, and has several springs of fresh water in it: There are also several fine sandy bays in the island, where a ship may be cleaned. The water is shallow all round the island; and both at the north and south points are several rocks, some whereof look like barns, and others like ships under sail. To the north-east, on the main land, 3 leagues distance, is the large river Tomaco; and a league and half within the river an Indian village of the same name, where shipping frequently touches to take in refreshments. From this river, a wood of fine timber-trees extends 10 or 12 leagues to the southwards, whither the Buccaneers and Privateers resort, when they want masts and other ship-timber; for neither the islands nor the neighbouring coast on the continent are inhabited by Spaniards, only they come hither in the dry season to search the sands of the numerous rivulets on this coast for gold.

The islands of Gorgona and Gallo have been frequently visited by the Buccaneers and other Adventurers, who take in wood and water, careen their ships, and wait for Spanish prizes here; these islands lying in the road from Peru to Panama. Near Cape Francisco, about 25 leagues to the southward of Gallo, Sir FRANCIS DRAKE took that rich prize from the Spaniards, called the Cacafogo, in which he found eighty pounds weight of refined gold, twenty-six tons of silver, and a considerable quantity of precious-stones and pearls: And, near the same cape, our countryman DAMPIER took two prizes from the Spaniards in the year 1704; but these were laden only with provisions, viz. Wine, Brandy, Sugar, Marmalet, Flour, Bacon, Chocolate, &c. that the Spaniards were carrying from Peru to supply the city of Panama. This Cape Francisco lies in 1 degree north latitude, and in 81 degrees, odd minutes western longitude.

To the southward of Cape Francisco lies Cape Paslo, just under the Equator, or rather 8 minutes south of it; which is another nation where our Privateers

CHAP. I. vateers use to wait for the Spanish plate-fleets going from Peru to Panama. The land near this cape is mountainous and woody.

I proceed in the next place, to describe the rest of the islands on the coast of Terra-Firma in the North-sea, which lie between the mouth of the river Oronoque on the east, and the entrance of the gulph of Venezuela or Maracaibo on the west.

Trinity island.

The principal of these islands, and the most easterly, is that of the Trinity, subject to the Spaniards; so named by COLUMBUS, who discovered it in his third voyage, ann. 1498. It is situated near the mouth of the river Oronoque, three miles from the continent of Paria, or New Andalusia; between 9 and 10 degrees of north latitude, and 60 and 64 degrees of western longitude; and is about 30 leagues in length, and 20 in breadth. The air is deemed unhealthy, but the soil tolerable fertile, producing Sugar, Cotton, Indian-corn and fruits, and the best Tobacco the Spaniards are masters of. The chief town is named St. Joseph, situated on a bay of the sea, over-against the continent. It was taken by SIR WALTER RALEIGH in the year 1595, and by the French in 1676, who, besides their plunder, extorted eighty thousand pieces of eight from the Spaniards, to ransom it from the flames.

Tabago island.

Tabago lies a little to the north-east of Trinity; but this belonging to Great Britain, will be described among the rest of the British islands in America.

Margaretta.

The most considerable Spanish island on this coast, next to Trinity, is that of Margaretta, situate in 12 degrees north-latitude, about 49 leagues to the westward of Trinity, and 7 or 8 leagues from the continent. It is about 16 leagues in length, and eight in breadth, high land; and had the name given it by the Spaniards, on account of the fine pearl-fishery they found there, which seems to be exhausted at present. The soil affords Indian-corn and fruits, and the Spaniards have introduced many of the plants and fruits of Spain; but they are forced to import all the water they drink from the continent; and there is very little wood or pasture to be met with on the island. The chief town is that of Monpater, at the east end of the island, defended by a good fort, where the Governor resides.

Salt Tortuga.

Salt Tortuga, 14 leagues to the westward of Margaretta, so named from its salt-pits, and to distinguish it from French Tortuga, on the north coast of Hispaniola and Tortuga, near the south cape of Florida; every one of which received their names from the numbers of Tortoises that resort thither at the season to lay their eggs. This Tortuga is a barren desert island, yielding neither corn or grass, and is not more than ten or twelve miles in circumference; only valuable to the Spaniards, on account of the salt they sell to foreigners, particularly to the inhabitants of the Caribbee islands.

Orchilla, Roca, Aves.

The islands of Orchilla, Roca and Aves, are small inconsiderable islands, situated to the westward of Tortuga, and scarce deserves mentioning, except for a good harbour in the middle of that of Aves, on the north side, whither the Buccaneers frequently resort to careen their ships, and take in fresh water. A French Squadron of men of war, commanded by Count D'ESTREES, was cast away on the rocks that lie before this island, in the year 1678, and not two of their ships saved.

Bonayre.

A little to the westward of Aves, lies the island of Bonayre, in form of a crescent, about 16 leagues in compass, and situated about 20 leagues north of the coast of Caracos: The middle of the island in 12 degrees, 16 minutes north latitude. This belongs to the Dutch, who have seven or eight soldiers here,

and five or six families of Indians, who plant Maize, Guinea-corn, Yams and Potatoes for their masters; but their chief employment is the looking after their Goats, of which the Dutch salt up great numbers every year: They have also some Horses, Cows and Oxen upon the island, and the Dutch make Salt at the east end of the island.

Nine or ten leagues farther to the westward, and about as many from the continent, lies the island of Curassow, or Querisao; the most northerly point of it in 12 degrees, 40 minutes north latitude. There is a good harbour on the south-east part of the island, where the Dutch have a considerable town, defended by a strong fort. The country is level, and feeds abundance of cattle; they have also some sugar-farms, and small plantations of fruits and roots; but DAMPIER observes, it is not so much esteemed for its produce, as its situation for trade with the Spanish West-Indies: Formerly the harbour was never without ships from Carthagen and Porto-Bello; the Spaniards purchasing a thousand or fifteen hundred Negroes at a time of them, besides great quantities of European commodities; but part of this trade has of late fallen into the hands of the English: However, the Dutch have still a very extensive trade in the Spanish West-Indies, sending ships of good force from Holland, freighted with European goods to this coast, from whence they make very profitable returns. Let the Spanish Governors prohibit this smuggling trade never so severely, the Spaniards stand so much in need of European commodities, that they will run any hazards to deal with the Dutch; and as it is their common interest to connive at this kind of traffick, the people cannot be very hearty in their endeavours to prevent it.

The island of Araba, or Oraba, lies 7 or 8 leagues to the westward of Curassow, at the entrance of the gulph of Venezuela, or Maracaibo, being about 5 or 6 leagues in compass. It is a level country, except only one hill, that rises like a sugar-loaf in the middle of it: This island also belongs to the Dutch, and furnishes Curassow with goats and sheep; and there are some few sugar-plantations in it. These are all the islands the Dutch are masters of in America; nor have they any thing upon the continent, unless Surinam in Guiana, or Caribiana.

Before I dismiss the description of Terra-Firma, it may be proper to take notice of the discovery and conquest of it by the Spaniards; of which we have not so large and particular an account as we have of the conquest of Mexico and Peru; this being reduced under the Spanish yoke by abundance of inferior Adventurers, who bought or begg'd the respective provinces, comprehended under the general name of TERRA-FIRMA, of the King of Spain; or usurped upon those that had obtained patents or grants from that Prince. These, after a miserable slaughter of the naked and defenceless Indians, fell out among themselves, and cut one anothers throats, scarce any of the Adventurers dying natural deaths, or by the swords of the Indians, but generally by each others hands.

COLUMBUS barely discovered this north-coast of South-America, from the mouth of the river Oronoque in the east, to Porto-Bello in the west; and tho' he went on shore in several parts of it, with an intent to erect forts, and plant colonies, in proper places, he was diverted from it, and did not fix one settlement upon that coast.

VASCO NUNEZ DE BALBOA, who attended General ENCISO in an expedition from Cuba to Darien, or Terra-Firma Proper, first settled a colony and built a fort on the west side of the Gulph

CHAP. I.

The Discoverers of Terra-Firma.

The first colony planted in Darien, or Terra-Firma Proper.

CHAP. I. of Darien, about the year 1510, to which he gave the name of Santa Maria el Antigua, or Old St. Mary's.

ENCISO, it seems, was very unfortunate in this enterprize, lost a great many men in several engagements with the Indians, and more by the hardships his people underwent for want of provisions; whereupon those that escaped, having a great opinion of the bravery and conduct of VASCO, to whose prudence they ow'd their preservation in a great measure, refused to obey ENCISO any longer, and elected VASCO NUNEZ their Commander, a man every-way qualified for great undertakings: And ENCISO thereupon returned to Spain, to complain of the desertion of his people, and get his commission confirmed and enlarged.

In the mean time, VASCO applied himself to make farther discoveries; and, in order to it, endeavoured to cultivate a friendship with CARETA the Cacique, who commanded that part of the country, which lies to the westward of the Gulph of Darien; and when he found he was not disposed to enter into a treaty with the Spaniards, he surpris'd the Cacique in the night-time, making him prisoner, and killing some of his people: But VASCO offering to give the Cacique his liberty, on condition he would furnish him with provisions, they made an alliance; and, to cement it the closer, the Cacique gave VASCO one of his daughters, a beautiful young Indian, for his wife; or, as the Spaniard understood it, for a concubine; and he us'd her with great tenderness, tho' he afterwards married a Spanish lady. VASCO also found two Spaniards in the territories of CARETA, that escaped thither out of a ship, and lived almost two years among the Indians, who were very serviceable to him, as interpreters, in his succeeding enterprizes.

Intimations given the Spaniards of the South-sea, and the treasure of Peru.

CARETA being engaged in war with PONCA, a neighbouring Cacique, at the arrival of the Spaniards, put them upon invading his territories; and PONCA finding himself unable to resist his old enemy, supported by these strangers, abandoned his country, where the Spaniards found considerable quantities of gold. COMAGRE, another Cacique, a friend of CARETA, voluntarily submitted to VASCO, and furnished him with gold to a considerable value; and the son of this Cacique, observing the Spaniards ready to fight about dividing their treasure, having handsomely reproved their covetous fordid temper, told them, he would direct them to a country where they would find as much gold and silver as their hearts could wish, if they thought it worth the while to undergo the fatigues, and run the hazards, that were necessary to obtain it; for the country lay beyond high mountains of difficult access, and they must afterwards traverse another ocean beyond those hills, before they came at it; and as they were to pass through the territories of several powerful Princes before they arrived at that sea, the Indian Prince advis'd, they should increase their forces to a thousand men, before they entered upon so great an undertaking.

VASCO NUNEZ DE BALBOA was overjoy'd to hear of countries thus abounding with treasure, and of another ocean; and upon this intelligence returned to Darien again, in order to make suitable preparations for the discovery of them. He also dispatched expresses to Hispaniola, and to Spain, with the joyful news; desiring such a reinforcement, as might enable him to reduce those countries under the obedience of his Catholick Majesty. He also sent over to Spain the value of fifteen thousand pieces of eight in gold, as a specimen of what those coun-

tries produced; and every man sent some present to his friends of the same metal: Upon seeing whereof, and hearing the representations that were made of the country, by those that were sent over, it was named Castilla del Oro, or Golden Castile; tho' it afterwards recovered the name, first given it by COLUMBUS, of Terra-Firma.

But these fortunate beginnings met with a considerable check from the divisions among the Adventurers; for VASCO, having no other authority than what the troops had conferred upon him, every one expected to have his advice attended to, and if he was not considered as he expected, became a male-content: So strong was the party form'd against him, that he was once compelled to quit the town of Darien to the mutineers; but a supply of an hundred and fifty men being sent him from Hispaniola, with a commission to be Captain-General of Terra-Firma, his enemies all submitted to him, and he continued his preparations for the discovery of the South-sea; tho' he received intelligence from Spain, that ENCISO had so far prevail'd in his complaints against him, that he would be soon sent for over, and another Governor appointed for that service. He considered, 'tis said, that if he prov'd successful in this expedition, it would probably obliterate all his faults; and if he did not, death would put an end to his cares.

He made choice therefore of two hundred Spaniards and a thousand Indians, whom he embarked on board a brigantine, and some canoes, the beginning of September 1513; and went by water to the territories of the Cacique CARETA, who had given him his daughter; and being joined by the forces of that Cacique, advanced towards the mountains, through the dominions of the Cacique PONCA, who fled at first at the approach of the Spaniards; but upon an assurance that VASCO intended no hurt to him, or his people, PONCA returned, and furnish'd the Spaniards with such provisions as the country afforded; for which the Indians were paid in axes, knives, and such other tools and implements as they valued most. This Cacique also furnished them with guides to pass the mountains, and with porters to carry their baggage.

VASCO continued his march up the mountains 'till he came to the territories of another Cacique, nam'd QUAREQUA, who assembled his forces, and made some shew of opposing their passage: This Prince, the historian relates, was cloath'd in a quilted cotton coat, which he wore as armour, and was sufficient to break the force of their country weapons (but his subjects were most of them naked) their arms being bows and arrows, slings, spears and darts, pointed and hardned in the fire, and clubs; but, upon the firing two or three muskets, these warriors all turned their backs and fled, imagining, says my author, that their enemies had the command of thunder and lightning, as they saw their men drop down dead at the time the guns were fired, and they heard the report: While the Spaniards, to increase their terror, and that the Indians might no more dare to oppose them, killed upwards of six hundred of these poor defenceless people as they fled, among whom was the Cacique QUAREQUA himself. The Spaniards had no horse with them at this time, and as the Indians were naked, and much swifter of foot, they would probably have escaped this slaughter, had not the Spaniards carried packs of great dogs with them, which overtook and worried these miserable people, 'till their cruel masters came up, and slaughtered them at pleasure. This was the way the Spaniards made war upon the Indians in almost every part of America; neither woods or mountains could

Several hundred Indians cut in pieces by the Spaniards.

CHAP. I. save the natives from their rage; they hunted them out, and tore in pieces men, women and children; which made the Americans, who at first took the Spaniards to be gods, change their minds, and look upon them as devils.

After this victory, as the Spaniards call it, they plunder'd the houses of the Indians, where they found great quantities of gold; and, what was still more barbarous, caus'd many of the people they found in them to be torn to pieces by dogs, under pretence they were Sodomites, tho' they had no manner of proof of it, as their own historian ANTONIO DE HERERA acknowledges.

From the place where the Spaniards landed, to the tops of the mountains, was reckoned about six days journey; but the want of provisions, and other interruptions, occasioned their spending five and twenty days in their march, before they arrived at the hills where the South-sea might be discerned: And now VASCO NUNEZ having notice, that they should have a view of that sea, on advancing a little farther, order'd all his forces to halt; and going up to the top of the hill alone, saw that vast ocean; whereupon he fell upon his knees, and with hands lifted up, gave thanks to heaven, that he was the first European who had seen it: Then calling up his men after him, great rejoicings were made upon the occasion; and an instrument was drawn up, importing, That here VASCO NUNEZ took possession of the South-sea, and all the countries bordering upon it, for the Crown of Castile. Crosses were erected, and great heaps of stones raised, and the King of Spain's name engraved on several trees: This was performed on the 25th of September 1513. The Indians stood amazed at all this formality, not being yet acquainted with the ambition and avarice of the Spaniards, who came to take their country from them, and had already swallowed this new world, and all its treasures, in their imaginations.

From this mountain, the Spaniards descending into the country of the Cacique CHIAPA, found that Prince and his forces assembled to oppose their march; but these also fled, on the firing two or three muskets; and many of them were slaughtered by the Spaniards, or torn in pieces by their dogs; which execution so terrified CHIAPA and his subjects, that they immediately submitted, and made the General a present of all the gold they had, in order to appease him; and the Spaniards took up their quarters in CHIAPA's chief town; from whence VASCO afterwards marched to the South-sea, and going into it up to his knees, again took possession of this sea, and all that belonged to it, for the King of Castile and Leon, and then returned to his quarters. He afterwards cross'd a great river, and made an incursion into the territories of the Cacique COCARA; and having destroyed some of his people, this Prince also submitted, and desired the Spaniards friendship, making them a present of his gold, for which he received European tools and toys in exchange.

VASCO NUNEZ arriving at a fine bay of the sea, on the 29th of September, gave it the name of St. Michael's, which it still retains: And the Caciques informing him, that there were some islands not far off, where great quantities of pearls were to be had, he desired them to bear him company thither; but they represented it was dangerous going thither in canoes at that time of the year: However, since he would not be dissuaded from the enterprize, they went off with him in their canoes, but were soon driven back again, and the Spaniards very narrowly escaped being drowned,

VOL. III.

CHAP. I. He afterwards invaded the territories of a Cacique, named TUMACO, which lay upon this bay; who being terrified into a submission, as his neighbours had been, presented the General with gold to a very great value, but much more in large pearls, which had received some damage by the fire the Indians 'till then used in opening the pearl-oysters: TUMACO also informed VASCO, that the coast extended without end to the southward, pointing towards Peru, where he said there were prodigious treasures of gold and silver to be found.

VASCO NUNEZ, having made these discoveries, resolved to return to Darien not directly, but took a circuit through the territories of several other Caciques, some of whom he subdued by force, and others voluntarily entered into alliances with him: But the conditions on which the Spaniards generally afforded them their friendship, were, that the Indians should deliver up the gold they were possessed of, and afterwards procure what they could more of the same precious metal, and send after them: Upon these terms the Spaniards engaged to remain for ever their good allies and protectors.

The General, being arrived at Darien, the 19th of January, 1514, was received by his people with transports of joy, when they understood the discoveries he had made, and the vast quantities of gold and pearls he had acquired; for he divided the treasure equally, as well among those that remained behind in the fortress of Darien, as among the troops he took with him; first deducting the King's fifth, which he immediately sent over to Spain; together with a full account of the situation of his affairs, desiring a reinforcement of a thousand men, to prosecute and improve the discoveries he had already made.

This news was very acceptable to the Court of Spain, and twelve or fifteen hundred men were embarked immediately for Darien, under the command of PETER DE ARIAS, or PEDRARIAS; as he is usually call'd, to whom the government of that province also was committed; and with him were sent over Father JOHN QUEVEDO, a Franciscan Friar, as Bishop of the place, with several other Monks of that order, to instruct the natives in the Christian religion.

But a more covetous and barbarous wretch was never sent abroad with a command, than this PEDRARIAS. He arrived at Darien the latter end of July, 1514, and was received by VASCO with all the respect due to his commission; but the government was no sooner surrendered to him, than he began a prosecution against the man who had made all those important discoveries, that he might engross the wealth of those countries to himself, and have no rival or check upon his savage disposition. Then he ordered his troops out every way, and without any regard to the treaties and alliances that VASCO had made with the neighbouring Caciques, plundered their countries, and massacred their subjects without mercy; and, above all, he endeavoured to establish a communication with the South-sea, in order to make himself master of the gold and pearls he understood were to be found on that side; but the Indians finding themselves thus slaughter'd and abused, notwithstanding their former submission, assembled their forces, and laying ambuscades, cut off a great many of his parties, and he was not for some time able to fix colonies in any part of the isthmus.

In the mean time, the friends of VASCO having represented the hardship of his case to the Court of Spain, and the important services he had done or

21 X

might

CHAP. I. might do the Crown, a commission was sent him to be Adelantado, or Lord-lieutenant of the coast of the South-sea, that he might prosecute the discoveries he had begun on that side; with orders to PEDRARIAS, to furnish him with such forces as were necessary for such an expedition: but VASCO however remained as a prisoner at Darien for some time: At length Bishop QUEVEDO interposed his good offices, and procured a reconciliation between the two Generals; and, in order to cement their friendship the stronger, VASCO married the daughter of PEDRARIAS. Soon after which he applied himself to the building of brigantines and vessels; the timber whereof he caused to be carried cross the mountains of the isthmus to the South-sea, and put together there; and these being destroyed by the worms in a short time, he built more on the other side, with which he sailed to the Pearl-islands in the Bay of Panama, and afterwards as far as Porto-Pinas in Peru; but some malicious Officer informed PEDRARIAS, or rather the Governor, pretending to be informed, that VASCO was about to renounce all dependance on the Crown of Spain, and to set up for himself, commanded him to return to Darien, and answer the accusation; which summons VASCO readily obey'd, being conscious of his innocence; but PEDRARIAS so managed the matter, that he got him convicted, by the forms of law at least, and caused him to be beheaded, to the great surprize of all men who were acquainted with the services he had done the Crown of Spain.

Vasco discovered Peru.

Is beheaded by Pedrarias.

Who reduces all the country as far as Veragua. Nata and Panama founded.

Nombre de Dios, and Porto-Bello founded.

And now PEDRARIAS, being without a rival, or any one to check his fury, ravaged the country in a terrible manner from sea to sea, and even as far as the province of Veragua, planting a colony at Nata, and another at Panama, on the South-sea. Nata, it seems, took its name from the Cacique, who was Governor of that part of the country when the Spaniards subdued it; and Panama, which was then only a small village, inhabited by Indian Fishermen, received its name from the employment of its inhabitants; Panama, in their language, signifying a Fishing-town. PEDRARIAS also founded another town on the North-sea, which was named Nombre de Dios, between which and Panama all the trade was carried on from the North to the South-seas, for some time; but the Spaniards, not liking the situation of Nombre de Dios, abandoned it afterwards, and built the town of Porto-Bello, removing the trade thither; and this still continues the most considerable port on the North-sea.

PEDRARIAS also reduced the provinces of Veragua and Nicaragua, by the forces he sent thither under the command of FRANCIS HERNANDEZ; but entertaining some suspicion that HERNANDEZ had too great a regard to his own interest, he serv'd him as he had done VASCO NUNEZ, and cut off his head, under pretence he was about to throw off his dependance on the Crown of Spain, and set up for himself; and expecting to be called to an account for the many outrages he had committed, both on the Spaniards and Indians, he quitted Darien, before his successor arrived there, and removed to his acquisitions in Veragua, where he looked upon himself to be out of the reach of justice; but what became of him afterwards, history does not inform us, only Father BARTHOLOMEW DE CASAS, Bishop of Chiapa, has given us a very melancholy relation of the numerous cruelties and ravages committed by this Commander, in reducing these provinces under the dominion of the Crown of Spain.

The cruelties of Pedrarias.

There landed (says the Bishop) in Terra-Firma, in the year 1514, a mischievous Governor, who

not only wasted and dispeopled the sea-coast, but plundered and ravaged large realms and countries, murdering infinite numbers of people from Darien to the province of Nicaragua, being upwards of fifteen hundred miles, full of people, governed by several Princes and great Lords in their respective territories, who were possessed of more gold than any Princes upon the face of the earth at that time.

This Governor and his Officers every day invented new torments, to make the Indians discover their gold; some they racked, others they burnt by inches 'till they expired in torments; and instances in a great Lord or Cacique, who having given PEDRARIAS the weight of nine thousand ducats to obtain his favour, ordered him to be set on the ground, with his legs stretched out, and then fastened to a stake: After which, he ordered fire to be applied to his feet, 'till he sent for three thousand Castellans more, and still continued to burn him 'till the marrow dropp'd from his bones, and he died in the most exquisite torment; all which was inflicted on this unhappy Prince, without any other provocation given the mercile's PEDRARIAS, than that he could not, or would not discover such a quantity of gold as he expected; and many other great Lords were used in the same barbarous manner, when they could not produce as much gold as was demanded of them: That another great Cacique, named PARIS, making his submission, and presenting the Spaniards with gold to the value of fifty thousand pieces of eight, they pretended to be satisfied with it, and agreed to march out of his territories; but returning again at midnight, they set fire to the town, massacred the inhabitants, and carried off the value of fifty or threescore thousand pieces of eight more: The Cacique himself however escaping, assembled several thousands of his subjects, overtook the Spaniards, of whom he kill'd fifty, and recovered most part of the plunder; which PEDRARIAS and his Officers severely revenged a little afterwards; for they sent another body of forces into the territories of the Cacique PARIS, and massacred or made slaves of all his people, insomuch that the Bishop assures us, when he wrote this relation, there was not of the natives one man, woman or child to be found in that country for 30 leagues, though it was before very populous.

That PEDRARIAS and his successors did not destroy less (in that Government only) than eight hundred thousand people, and plundered the country of several millions of gold, of which they did not send the King more than the value of three thousand crowns.

The rest of Terra-Firma, or the north part of South-America, from Darien to the river Orinoco, was subdued by private Adventurers, at their own charges; every one begged a certain extent of country of the Court of Spain, and used the natives as they thought fit, ravaging and plundering the several countries, and murdering or enslaving the miserable inhabitants, who were able to make but little resistance to these tyrants, as the Bishop of Chiapa calls them.

GRACIA DE LERMA brought the Indians of Santa-Marta under the Spanish yoke, about the year 1529: AMBROSE ALFRINGER got the grant of VENEZUELA, and carried over eight hundred or a thousand Germans thither about the same time, with whom he harassed the country in a terrible manner for some hundreds of miles to the southward, spending upwards of three years in this expedition.

CHAP. I.

CHAP. I. The province of Carthagea was begged by Don PETER DE HEREDIA, who enslaved the natives, and settled Spanish colonies there in the year 1532.

Gonsalo XIMENES DE QUESADA, and GEORGE FEDERMAN the Dutchman, with the rest of the Governors of these three northern provinces last mentioned, penetrated far within the land to the southward, and subdued that large province which now bears the name of New Granada, about the year 1535.

ALONZO DE HERERA, and ANTHONY SEDONY, made large discoveries and planted colonies in Guiana, Paria and Caribiana, now called New Andalusia, about the year 1533. The province of Popayan was discovered and subdued by SEBASTIAN DE BELALCAZAR, Governor of Quito, in the year 1536; and if we may credit the relation of the Bishop of Chiapa, whose business it was to enquire into the usage of the oppressed Indians, the conduct of all these Adventurers was rather more barbarous than that of CORTÉZ in Mexico, or of PEDRARIAS in Darien and Veragua.

Those who reduced Santa-Martha, he says, perfectly depopulated a country which was before crowded with people for the space of 400 leagues; nor were they content with barely massacring these miserable people, but so tortured and oppressed those that survived, that they chose death rather than to live under the tyranny of these barbarous Spaniards.

That they had carried into slavery two millions of people, from the coast of Guiana, or New Andalusia, many of whom perished at sea for want of provisions, and the rest in the mines; and that in the pearl-fisheries on this coast they destroyed many thousands more, by compelling them to dive for pearls beyond their strength.

In the province of Venezuela (tho' the people readily submitted to the Dutch and German Adventurers sent thither, and treated them with all the goodness and hospitality imaginable) they destroyed four millions of souls and upwards; and most of their Princes and Great men were rack'd and tortured 'till they expired, to make them discover the gold these savage Christians suspected they had concealed.

That they sometimes drove the Indians into barns, and threatened them with death, unless they redeemed themselves with gold; and when they had procured as much as was required for their liberties, then they used to imprison them again, and demand as much more; which, if they could not produce, they were shut up sometimes 'till they were starved; and others were cut to pieces, or burnt by hundreds, for not answering the expectations of their conquerors, as they called themselves.

Father BARTHOLOMEW DE CASAS adds, that those who had been eye-witnesses of the Spanish cruelties in New Granada, deposed on their oaths before the Court of Spain, that the Indian Caciques or Princes in that province quietly submitted to the Spaniards and Germans, with all their people, and were contented to become their vassals; and the several lordships and districts were divided among the Spanish and German officers and soldiers, with all the natives upon them, as their respective properties. That the Indians did not only cultivate the grounds for their new masters, and furnished them with provisions, but presented them with gold and precious stones to a very great value; which was so far from satisfying their avarice, that these new Lords proceeded to exercise all manner of cruelties on the miserable natives, to extort more gold from them.

That the greatest Prince of this country, named BOGATA (from whom the capital city was after-

wards called Santa-Fé de Bogata) was tortured by the General for several months, to make him discover his gold and emeralds; who, in hopes of being released from his tormenters, promised them at length to furnish them with a house full of gold; and dispatching expresses to every part of his dominions, brought in a prodigious quantity: But the house being not quite filled, he was still racked and tortured to make him produce more; which being impossible, he expired in torments under the hands of his merciless persecutors.

And as this great Prince had been used by the Spanish General, so his Officers and Soldiers used those of an inferior rank, torturing and burning them to pieces by inches, to make them discover their treasures: That it was a common thing to cut off the hands and noses of men in women in sport; and give them to their dogs: That when the poor natives fled to the woods and mountains, to shelter themselves from their rage, this was called a rebellion, and they were hunted out by dogs, torn in pieces, slaughtered, and thrown from the tops of the rocks by hundreds: And when any of them had secured themselves in inaccessible places, the Spaniards would treacherously offer them their lives and liberties, to induce them to surrender, and then cut them in pieces as soon as they had them in their power: That it was impossible to describe the mischiefs and cruelties of these monsters of mankind; and if they were suffered to go on, the inhabitants must be totally extirpated, and these populous and fertile countries become a wilderness (as in reality it happened not long afterwards, for upwards of 600 leagues) the Emperor's commands for redressing these outrages being very ill observed.

That these Adventurers here, as well as those in other parts of America, kept packs of great mastiffs on purpose to hunt and tear in pieces the Indians: It was an ordinary thing to kill an Indian, without any offence given them; and to lend a brother Spaniard a quarter of a man, as they would lend a neighbour a quarter of Pork or Mutton to feed their dogs; promising to return it in kind when they killed a slave.

That others would go out a hunting for Indians with their dogs as they would hunt wild beasts, and boast of their having killed twenty or thirty in a day: Which fact, how monstrous soever, appeared to be true, by the testimony of numbers of witnesses, on the trials of causes in the Courts of Spain, between the several Adventurers, who frequently fell out about the limits of their respective provinces, the distribution of the natives, and the rest of their plunder; and in these contests, the truth frequently came out.

CHAP. II.

Of the name, situation, and extent of Peru; and of the face of the country.

I DO not find that the natives had any general name for this country, only it was looked upon as the dominion of the Great King, or Emperor of South-America, who was called The Inca, and so it might be stiled the empire of the Inca's, as the East-Indies is called The empire of the Great Mogul.

As to the modern name of Peru, GARCILASSO DE LA VEGA gives us this account of its obtaining that appellation: He says, that VASCO NUÑEZ DE BALBAO having first discovered the South-sea, the King of Spain, as a reward of that service, constituted

CHAP.
II.

constituted him Admiral of that sea, in the year 1514, and Governor of all the kingdoms and countries he should discover in it. Whereupon VASCO built three or four ships, to go upon discoveries in that ocean, one whereof stretching to the southward beyond the Equinoctial-line, and sailing close by the shore, discovered an Indian Fisherman in the mouth of a river; who, while he stood staring at the ship as she was under sail (a most amazing sight to a man that had never seen one) they sent out their boat and surprized the Indian, making him their prisoner; and demanding of him by the Indians they carried with them (or by signs, according to DE LA VEGA) what country it was? He mistaking them, and supposing they had asked him his own name, answered BERU; and the Spaniards still seeming importunate to know something more, he answered, Pelu; which was the name of the river; or, according to some, is a common name in the language of those people for any river; however, from both these words the Spaniards formed another, and called the country Peru; and some of their writers, Piru; but however that was, the dominions of the Inca's, of which this was the most northerly province, have ever since gone under the name of Peru.

The limits
of the do-
minions
of the In-
ca's.

When the Spaniards arrived here, the country was divided by the Inca's into four grand divisions, the limits on the north being the river Passao, or the Azure river, just under the Equinoctial; the southern limits were the Aranco's, in 40 degrees of south latitude (now part of Chili) the eastern limits were the Cordelero's, or mountains of the Andes; and the western boundary the South-sea, or Pacific-ocean.

The limits
of Peru.

The limits of modern Peru are much the same now, except on the south; for the Spaniards still bound it by the province of Popayan (which extends to the Equator) on the north, by the mountains of the Andes on the east, by Chili on the south, and the Pacific-Ocean on the west; extending it from the Equator to 25 degrees of south latitude only; so that as the land extends, or runs from the north-west to the south-east, Peru must be near two thousand miles in length, and in breadth it is generally about two hundred; but in the south, it may be four or five hundred miles broad.

The face
of the
country.

The face of the country, according to ACOSTA, is very different, as it is distant from, or approaches near the sea. He divides the country into three long narrow slips, viz. 1. The Lanos, which are sandy plains that run along the sea-coast. 2. The Sierras, which are hills beyond those plains, intermixed with valleys. 3. The Andes, or Cordelero's, still further within the land, which are steep craggy mountains, far surpassing all the rest in height. The Lanos, which lie along the coast, are about 10 leagues in breadth; in some places more, in others less. The Sierras 25 leagues in breadth, and the Andes something more than 25 leagues over.

The Andes and Sierras are two ridges of mountains that run from north to south, parallel to each other for above a thousand leagues: Nor are the Lanos that lie between the Sierras and the sea-shore low land. Both DAMPIER and WAFER inform us, that Peru has generally a high bold shore, and that there is no landing on it, but at the ports, or in some particular bays: However, these plains may be called low in comparison of the Sierras that surmount them, and of the Andes that far surpass both, and are esteemed the highest land in the known world. Beyond the city of Casco, which lies in 14 degrees, odd minutes south latitude, the two ridges of mountains separate themselves to a greater distance, inclosing a fruitful plain of a vast extent,

which is called the province of Callao, watered by many rivers, and by the great lake Titiaca, which is fourscore leagues in compass; most of these rivers falling into the lake.

CHAP.
II.

The Lanos, or sandy plains near the sea, are perfectly barren, except some few valleys, into which they turn small winding streams, and that part of the coast which lies within 3 or 4 degrees of the Equator, where they have very heavy rains great part of the year.

The Lanos.

The Sierras also are barren hills; but then there are fine fruitful valleys between them, that yield all manner of grain and fruits; and these being temperate between the extremities of heat and cold, are best inhabited; for the Lanos by the sea are for the most part excessive hot: The Andes, on the contrary, are cold barren mountains, the snow lying upon them great part of the year. Timber and wood in general seems to be very scarce, here, and in all parts of Peru, unless near the Line, and there they meet with enough.

The Sierras.

The Andes.

ACOSTA, speaking of the unparallel'd height of the Andes, and of the disorders the air occasioned in all that passed them, says, he once resolved to make the experiment himself, and mounted one of the highest tops of these hills, called Pariacaca; that he went prepared for the adventure according to the best instructions he could get with several more who had the like curiosity; but notwithstanding all his precaution, when he came to mount the stairs or ladders near the top, he was seized with such pains, that he thought he should have fallen to the ground; and the rest of the company being under the like disorder, they all made haste to get down the mountain as fast as they could, none staying for his companion: That they were all taken with such reachings to vomit, that he thought they should have brought up their hearts; for not only green phlegm and choler came up, but a great deal of blood; and that this lasted for three or four hours, 'till they had descended to the lower part of the hill; and some of them purged violently: But generally this sickness goes off as they come down the hill, and is attended with no ill consequences.

And not only this passage of Pariacaca has these properties, but the whole ridge of mountains, called the Andes, for upwards of five hundred leagues; in what place soever people pass it they meet with strange disorders, but more in some parts than others; and those are more sensible of the ill effects who ascended from the sea, than those that ascend from the neighbouring plains; for he had passed the Andes, in four other different places, and always felt the like disorder, but not so violently as at Pariacaca; and the best remedy they found against it was to stop their mouths, noses, and ears, as much as possible, and to cover their breasts; for the air was so subtle and piercing, that it penetrated the entrails, not only of men, but beasts; and he had known horses so affected by it, that no spurs could make them move. And such is the height of the Andes, that the Pyrenees and the Alps were but as ordinary hills in comparison of them; from whence he concluded, that the air here was too pure and subtle for animals to breathe in (they requiring a grosser medium) and this he supposed occasioned that disorder in the stomach.

He observed farther, that the high mountains he had passed in Europe were only excessive cold, and made him cloath himself the warmer when he paked them; but the stomach and appetite for meat was still stronger, and they had no reachings to vomit there, as here; the outward parts only were affected: On the contrary, on the Andes, they were

not

CHAP. II. not affected with cold at the time of the year they passed them, either in their hands or feet, or any part of their bodies; only their entrails were affected, and that most when the sun was hottest; which confirmed him in the opinion, that the disorder proceeded from the pureness and subtilty of the air.

He adds, that this ridge of mountains is for the most part desert, without villages or habitations for men, not so much as to lodge a night in: Nor are there any beasts upon them, wild or tame, except their country sheep, whose great excellency lies in their climbing rocks and precipices, with burthens on their backs, where neither man nor beast can follow them. But to return to the mountains; he relates, that the grass upon them is frequently burnt up and black, and that these deserts are 25 or 30 leagues over, and 500 leagues long, tho' in other places he makes them but 20 leagues broad.

Pestilential blasts in other parts of Peru.

The same writer informs us, that there are other mountainous uninhabited deserts in Peru, where a sudden blast of air sometimes strikes a traveller dead in an instant: That the Spaniards formerly passed these mountains in their way to Chili, but now either go by sea, or by the side of these mountains, to avoid the danger, so many having perished in going over them; and others, that have escaped with their lives, have lost their fingers and toes, and been lamed. ACOSTA says, he was informed by General COSTILLA, who lost three or four toes in passing this desert to Chili, that they fell off without any pain; and that the same General marching over it once before with an army, great part of his men suddenly fell down dead, and their bodies remained there without stench or corruption: That he had relations of the same kind from others; and conjectured that these people were killed by the excessive coldness of the air, which preserved their bodies also from putrefaction after they were dead. But as he says in other places, that they met with these pestilential blasts in the valleys between the hills, I am apt to think they were rather hot than cold winds, and that it was the hot sands that preserved their bodies from corruption; for near the same latitude, viz. between 20 and 30 degrees north, in the deserts of East-India, Persia and Africa, we frequently meet with the Samiel, or hot winds, which have the like effects: And some English seamen, who have been ashore in this very country of Peru, assure us, that they have seen great numbers of bodies lying dead upon the sands there; particularly, our countryman WAFER relates, that landing with thirty more at Verneio, in 10 degrees south latitude, in search of water, and marching four miles up a sandy bay, they found the ground covered with men, women and children, which lay so thick, that a man might have walked on them half a mile. That these bodies to appearance seem'd as if they had not been dead a week; but when he handled them, they proved as dry and light as a sponge or a piece of cork: That he carried on board the body of a boy of about nine or ten years of age, designing to have brought it to England; but the seamen had a foolish conceit that the compass would not traverse aright so long as a dead body was on board, and compelled him to throw it into the sea. These people were very probably destroyed by such hot winds as we meet with in Persia, and the East-Indies, there appearing no signs of wounds or violence upon them; tho' WAFER said he was informed by an old man, that they buried themselves in the sands, to avoid the cruelties of the Spaniards in the preceeding age (which is scarce credible.) However, thus much will be agreed on all hands, that the heat of the sands and the dry-

ness of the Peruvian air preserved these bodies from putrefaction, whatever was the cause of their deaths. If it be objected, that the desert, ACOSTA mentions, was in a much cooler climate, viz. between 25 and 30 degrees of latitude; and therefore it could not be supposed the soldiers he speaks of were killed by the hot winds; it may be answered, that the deserts of Persia, Africa, and Arabia, where the like hot winds are met with, lie between the Tropic and 30 degrees of latitude; and that the heat is frequently as great in this climate as within 10 degrees of the Line; for the situation of the country, the length of the days, and the nature of the soil, contribute almost as much to extreme heat as the sun itself: Sandy valleys between hills are usually excessive hot, and the hot winds are occasioned by their blowing over a long tract of burning sand for some hundreds of miles; the sun also continuing longer about either Tropic, and the days being longer there than under the Equinoctial, that luminary gives more intense heat usually in countries seated near either Tropic, than it does in those about the Equator.

CHAP. III.

Of the seas, rivers, lakes, springs, winds, tides, air, and seasons of Peru.

THE only sea that borders upon Peru is the Pacific-Ocean, which obtained its name from the constant serene weather that reigns here from 4 degrees to 30 or 35 degrees south latitude, in which is comprehended part of Chili. If we go farther southward, this sea, tho' it still retains the name of the Pacific-Ocean, is as tempestuous as any other; and within 3 or 4 degrees of the Line they have the like variable winds and heavy rains, most part of the year, as we meet with in other seas in the same climate: And to the northward of the Tropic of Cancer (and sometimes within it) DAMPIER and other seamen relate, they frequently meet with storms and hurricanes, tho' this part of that sea also bears the name of the Pacific-Ocean. When I speak therefore of that which is properly the Pacific-sea, in this description of Peru and Chili, I would be understood to mean only that part of it between the 4th and the 35th degrees of south latitude; and from the American shore westward, indefinitely: Here we have no rain or dark clouds, says DAMPIER, tho' 'tis often so thick and hazy as to hinder an observation of the sun with a quadrant; and in the morning there is hazy weather frequently, and thick mists that wet a little; but there are not in this sea, says the same writer, any tempests, tornadoes, or hurricanes: Tho', north of the Equator, they are met with in this sea as well as in the Atlantic-Ocean: This Pacific-sea, however, at the new and full moon swells and runs with high long surges, or waves; but such as never break at sea, and so are safe enough. On the contrary, where they fall in and break upon the shore, they make it very dangerous landing. At Guiaquil, on the Peruvian coast, situated in 3 degrees south latitude, the tide runs very strong, and rises 16 or 18 feet perpendicular; but it does not rise so high on any part of the coast to the southward, where there are not such bays, or so many rivers, as there are here; for, according to DAMPIER's observation, the tides always run strongest and rise highest in gulphs or bays of the sea, and up the mouths of rivers. FUNNEL observes, that the winds in the Peruvian-seas, and on all the western side of America, from 38 degrees south, to 7 degrees north, are always southerly two points

Winds in this ocean.

CHAP. III. points upon the shore; so that where the coast runs due north and south, the wind is at south-south-west; and where the coast runs south-south-east, the wind is due south (except it be in the night, when the sea-wind generally ceases, and there comes a fine moderate gale from the land, which they call the land-breeze;) but DAMPIER observes, that on promontories and head-lands, and such places as lie open to the sea, they have scarce any of these land-breezes, it being in creeks and bays chiefly that they have the advantage of land-breezes.

DAMPIER also observes, that the southerly winds on the coast of Peru continue to blow 140 or 150 leagues from the shore before they alter; but then they may be perceived to come about more easterly; and about 200 leagues to the westward of that shore the true trade-wind sets in at east-south-east, which never alters 'till they have passed the Pacific-ocean, and arrive at the East-Indies.

But both DAMPIER and FUNNEL relate, that at Arica, which lies on the coast of Peru, in 18 degrees, odd minutes south latitude, for near 100 leagues to the southward, this sea is very subject to calms, within 35 or 40 leagues of the shore; but that these calms are not usual on any other part of this coast: It is observed also, that when the sun is in the northern signs, viz. from March to September, the sky is generally bright and clear: But when the sun retorts back to the southern signs, then the weather is frequently so thick and hazy, that they cannot take an observation, tho' they have no rain even then, either at sea or on the coast.

As to the weather on shore it is various, according to the situation of the land; the Lanos, or sandy plains by the sea-side, never have a drop of rain upon them; but frequently thick mists rise here. On the Sierras, or hills beyond, the rains fall when the sun is in the southern signs, as they do in other countries that lie between the Equator and the Tropic of Capricorn. And on the Cordelero's, or Andes, the high mountains that are situated farthest from the sea, it rains or snows two thirds of the year, and is excessive cold; and as the valleys between the hills, called Sierras, are the most fruitful parts of the country, their season for planting and sowing there is at the beginning of the rains, and their harvest at the return of the dry weather: Their vintage also is in the fair season, and their vines thrives best in those valleys near the sea, where there is little or no rain, and which are watered by rivulets that fall from the hills in the rainy season; but most part of the Lanos, or sandy plains by the sea-side, are barren deserts, bearing neither trees nor herbs; and are very little inhabited, except some few port-towns situated at the mouths of rivers.

ACOSTA, and other writers, have endeavoured to account for this everlasting draught on the sea-coast of Peru and Chili: They suppose, in the first place, that the country being a dry sandy soil affords no vapours, or not enough to furnish them with rain, tho' mists arise here. And, secondly, That the mountains called the Andes or Cordelero's are so exceeding high, that the clouds are stopped there, and can come no farther westward: But to this it may be answered, if the land affords but few vapours, one would think that the South-sea that adjoins to it might afford as many vapours as any other sea; and the wind constantly blows obliquely from that sea upon the coast. And as to the mountains of Andes intercepting the clouds that come from the eastward, this is not true in fact; for the Sierras or hills which lie between the Andes, and the Lanos or plains on the sea-coast, have their periodical rains,

as all other countries have that lie between the Tropics; tho' the plains on the sea-shore have no rain; and this is the more strange, inasmuch as the sea-coasts in other countries are usually more subject to rain and cloudy weather, than either the ocean at a great distance from land, or the middle of any continent; as the low countries in Holland and Flanders, that lie on the sea, have more wet and cloudy weather than either the middle of Germany or France; and in like manner, when we are at sea four or five hundred miles from land, especially between the Tropics, we have usually serene settled weather, and judge ourselves near land when we see thick clouds, which usually hang over it: Sea-men also observe, that tornadoes and hurricanes are more frequent and violent near land, than they are an hundred leagues out at sea, tho' in this peaceful ocean, and on the coast, they know not what storms or hurricanes mean; inasmuch that this sea is navigated by barklogs; and in these aukward floats they carry on great part of their coasting-trade from port to port, as they did before the Spaniards arrived there: These barklogs are only rough timber logs laid in squares a-cross each other, and built up two or three stories high; of which I shall give a more particular description, when I come to treat of their navigation.

I proceed in the next place to give some description of the most considerable capes, islands, and ports on the coast of Peru and Chili, from the Equator to 30 degrees of south latitude; and, 1. Of Cape Passao, which lies in 8 minutes south latitude, and 82 degrees of western longitude. It is an high round cape, with some few trees upon it; and further up in the country the land is mountainous and very woody. 2. Cape Lorenzo, in one degree south latitude; near which, shipping may furnish themselves with fresh water. This cape also is high land, and has some trees and bushes upon it: Five leagues west-south-west of Cape Lorenzo, is a small barren island, called La Plara, from its being the place where Sir FRANCIS DRAKE shared the plate with his company which he took out of the Spanish galeon, called the Calefogo. 3. Cape St. Helena, in 2 degrees, 20 minutes south latitude; near which is a small town of Spaniards and Indians, that keep store-houses of flour, salted flesh, fish, biscuit, and other provisions, with which they supply the shipping that touches there in their passage to and from Panama. The point itself is high land, and level on the top; but the land about it is low. 4. The island of St. Clara, in 3 degrees south latitude; it is pretty high land, covered with small trees. 5. Cape Blanco, in 3 degrees, 45 minutes south latitude (pointing St. Helena) makes the north point of the bay of Guiaquil, as Cape Blanco does the south point. The town of Guiaquil, which will be described hereafter, and gives name to the bay, is situated about 6 leagues up a navigable river, and is the port to Quitto. 6. The port of Payta, in 5 degrees, 15 minutes south latitude, a fine large bay, capable of containing an hundred sail of ships; the town consists of about fourscore houses, most of them Spaniards; and the bay is seldom without ships, it lying very convenient for the ships of Peru, in going to and from Panama, who put in here for refreshments that are brought down hither from Colon; for the town of Payta itself does not so much as afford fresh water. In this bay, the sea and land-winds succeed each other very regularly; the sea-winds blowing in the day-time south-and-by-west, and the land winds in the night-time, from the east. 7. The island of Lobos, in 6 degrees, 20 minutes south latitude, in which is an harbour

bour on the north-east, but no fresh water: The island is about two leagues in compass, but produces neither trees, bushes, or herbage. 8. The port of Malabrigo, in 8 degrees south latitude, which is known by a mountain near it of the same name.

Malabrigo port.

The best place to anchor in is, to leeward of the mountain, bringing it to bear due south: Here is five fathom water good fast anchor-ground. 9. Guanchaco, in 8 degrees, 15 minutes south latitude, being but an indifferent harbour, as it lies almost exposed to all winds; and there usually runs so great a sea upon the shore, that boats cannot go or come on board sometimes for three or four days;

Guanchaco port to Truxillo.

notwithstanding which, Guanchaco is a place of pretty brisk trade, being the port-town to the city of Truxillo, which lies six miles up the river; from whence, flour, wine, brandy, sugar, and marmalade are exported to Panama every year, in great quantities. 10. Cosma, a very good port, in 9 degrees, 50 minutes south latitude, and 78 degrees of western longitude; the common anchoring-place being at the mouth of a fresh water river. 11. Vermeio is a very good port, a little to the southward of Cosma; but here is no town or inhabitants, or any fresh water within a mile of the sea. The mountain Mongou, which lies about 7 leagues to the northward of this port, is said to be one of the highest mountains on the coast. 12. The port of Guara lies in 11 degrees south latitude, and 77 degrees of western longitude, near which is a mountain, with several pyramids on the top of it; and a little to the northward is the small port of Salinas, from whence they export great quantities of salt beef, both to Lima and Panama. 13. The island of Callao, a high barren island, 2 leagues in length, that has neither fresh water, wood, or any green thing upon it; and yet, on this barren spot, stands the town of Callao, the port-town to Lima, the capital of Peru.

Cosma port.

Vermeio harbour.

Guara port.

Salinas port.

Callao the port to Lima.

The port is defended by a strong castle, that has seventy brass guns mounted on the walls, close under which is the usual place of anchoring; and here the ships ride in six fathom water, good fast ground; tho' in all the bay and port of Callao, it is very secure riding; it growing shallow gradually from twelve to four fathom water; and the ships are defended from the southerly winds, which reign on this coast, by a small island.

This port of Callao lies in 12 degrees, 20 minutes south latitude, and is about 2 leagues distant from Lima. The Armadilla, or little Armada, sails annually from hence to Arica, where most of the silver and gold of Peru is embarked on board this fleet; and returning to Callao the latter end of March, the same treasure is transported in the month of May to Panama, and from thence by land-carriage conveyed to Porto-Bello, as has been intimated already. 14. The Port Ylo lies in 18 degrees south latitude, and is a good harbour; and near it is a stream of fresh water called the river Ylo, which is very rapid from the beginning of January till the latter end of June, when it begins to decrease, and in September it is quite dried up; which is the case of most of the rivers on the coast of Peru. 15. The port of Arica, situate in 18 degrees, 20 minutes south latitude, and in 72 degrees western longitude: Here the treasure brought from the mines of Potosi is constantly embarked every year for Lima. It is a good harbour, the best anchoring place close under mount Arica, in eight fathom water, where ships ride secure from the south winds. It is a large town, inhabited by Spaniards, Indians, and Mulattoes. 16. The port of Co-

Ylo port.

Arica port.

Copapo port.

piapo, a good harbour, defended from all winds, lies in 21 degrees south latitude; the inhabitants most of them Indians, who make good wine here, and have plenty of corn, flesh, fruits, and other provisions. 17. Coquimbo, situated in 30 degrees south latitude, at the foot of a mountain, in the form of a sugar-loaf; a rich city, driving a great trade with Lima and Panama, and is a very good harbour.

CHAP. III.

Coquimbo.

Altho' there is no other sea borders upon Peru but the Pacific-ocean, yet have they some lakes that may be called seas, if we regard the greatness of their extent.

Lakes of Peru.

The lake Titicaca (already mentioned to be 86 leagues in circumference) is situated in the province and valley of Callao, the middle of it being in 15 degrees south latitude, and 67 degrees of western longitude, reckoning from the meridian of London: Upon this lake they sail in ships, and other vessels, as upon the ocean; but 'tis subject to storms sometimes; for the first ship the Spaniards built upon it was broken to pieces by a tempest that drove it on shore. The water of it is not so salt as the sea, but too thick and foul to be drunk. There are abundance of large fish in the lake not esteemed wholesome food: There are also great shoals of small fish, very bony, but better eating than the former; and there are prodigious flocks of wild ducks, and other water-fowls, in it. The towns and villages bordering upon the lake are esteemed the most agreeable dwellings in Peru: From this lake issues a large stream to the southward, which forms another lake called Paria, not much inferior to the former in its dimensions, and has several islands in it. On the banks of these lakes are rich savannahs, or meadows, that feed great herds of cattle. There are also many lakes upon the mountains, which are the sources of several large rivers. Acosta mentions two lakes, particularly on the high mountains, one on each side of the great road leading from Arequipa to Callao; from one of which issues a river that falls into the Pacific-ocean, and from the other the river Apurima, said to be the principal stream that forms the celebrated river Amazon, which falls into the Atlantic-ocean, esteemed the largest river in the world.

The lake Titicaca.

This the best part of Peru.

Lake of Paria.

Lakes on the tops of mountains.

One of them the source of the river Amazon.

The same writer observes, that it is very strange there should be so many lakes on the tops of the mountains into which no rivers enter, and from whence many streams issue, and yet these lakes do not appear to be much diminished at any season of the year. Some conjecture, that these lakes proceed from melted snow, or rain; but this does not entirely satisfy him, he says, because there are several of these mountains on which there does not fall much snow or rain. He is of opinion, therefore, that they are springs which rise naturally; tho' he admits it probable, that they may sometimes be increased by snow and rain. He adds, that these lakes are so common in the highest tops of the Peruvian mountains, that there is scarce a considerable river but has its source in one of them: Their waters are usually very clear, but breed few fish, and those very small, the water being generally extreme cold.

However, the waters of some lakes in the valleys are extremely hot, particularly one in the valley of Tarpaya near Potosi, the waters whereof in the middle are so hot, that they perfectly boil up for more than twenty foot square, which is the spring; but the heat is so moderate near the shore, that the inhabitants frequently bathe in it. The waters of this lake, Acosta observes, are never known to increase.

A lake of hot water.

CHAP. III. increase or decrease, tho' they have drawn a stream from it that turns several mills for grinding their metals.

The springs of Peru. As to the Peruvian springs, they have great variety of them in that part of the country which is remote from the sea, but very few on the sandy plains near the shore: ACOSTA mentions one of a very extraordinary nature near the quicksilver mines in Guancavilca. This fountain, he says, throws out hot water, which, in running a little way, turns into stone, and forms a rock: of which stone the inhabitants build their houses, it being soft, light, and easily wrought, and yet very durable: As this water turns into stone after running a little way, the passages are frequently stopped up, and the stream alters its course as the rock increases, and is branched out into many small channels: There are also at Cape St. Helena, and many other parts of Peru, fountains of liquid matter called Coppey, very much resembling tar, or pitch, and put to the same uses by sea-faring men, to preserve their ropes, planks and tackle; as we learn not only from ACOSTA, but from DAMPIER, FUNNEL, and several other English Buccaneers.

Hot springs. As the Inca's-baths, as they are called, is a spring of water that issues out hot and boiling, and near it another as cold as ice, which those Princes used to temper and mingle together in their course to bathe in; and in the province of Charcas, the most southern province of Peru, are abundance of springs so hot, that a man cannot bear his hand in their waters.

A salt spring. At a farm near the city of Cusco is a fountain, the waters whereof in a short course turn into salt; which ACOSTA observes, would be an estate to a man in any other country, but is not valued in this, where salt is plentiful.

Salutary waters. The waters near Guiaquil are famous for curing the French-disease; which is the reason why multitudes of people resort thither continually; for no disease prevails more in Peru than this. These waters are supposed to receive their virtue from the roots of Saffiparella, which abound in this country, and communicate this healing quality to the waters that run by them.

Hot smocking waters. From the top of the mountain Balconotta, esteemed the highest in Peru, which in some places looks black, as if it was burnt, ACOSTA relates, there rise two fountains, which run different ways, and soon form two large streams: These springs, when they first issue from their respective rocks, are of an ash-colour, hot and smocking, and smell of burning coals; and thus they run a great way, 'till, mixing with other streams, they become cool, and lose that burning smell. The same writer says, he has seen another fountain in Peru, from whence there runs a stream as red as blood, and has from thence obtained the name of the Red River.

Waters as red as blood. Most of the rivers of South-America rise in the Peruvian mountains, that go under the name of the Cordelero's, or Andes, which run from north to south, from 10 degrees north latitude, to 50 south, almost parallel to the coast of the South-sea, and for the most part 40 or 50 leagues to the eastward of it.

and fall into the North-sea. Those rivers which rise on the eastward of the Andes, and fall into the North or Atlantic-ocean, have a very long course, and are some of them the largest rivers in the known world. Those that rise on the west side of the Andes, are rather torrents than rivers, made by the annual rains, which fall on the mountains, for the most part, between May and

CHAP. III. September, and before January are perfectly dry'd up; but as the mountains they fall from are exceeding high, and their course scarce ever more than 50 leagues, before they fall into the South-sea, their streams are so shallow and rapid, that scarce any of them are navigable.

The four principal rivers, that rise on the east side of the Andes, are, 1. The river Magdalena, or Grande; which rising in the province of Quitto, near the Equator, runs above a thousand miles directly northward, falling into the North-sea between Carthagena and St. Martha.

2. The river of Oronoque; whose source is near that of Magdalena, almost under the Line, and takes its course first to the eastward for sixteen hundred miles, and upwards; and then turning directly north, runs almost as far to the northward, falling into the North-sea, against the island of Trinity, in 8 degrees of north latitude.

3. The river of Amazons, generally held to be the largest river in the world, is formed at first by two streams, that rise near 11 degrees asunder; each of which, by different travellers, is said to be the true river Amazon. The first of these rises near Quitto, a little south of the Equator, and runs south-east; the other rises from the lake of Lauricocha, in 11 degrees south latitude; and running first northward 5 degrees, then turns about to the eastward, and unites its waters with the former: From thence the united streams run between three and four thousand miles farther eastward, being enlarged by a multitude of other considerable rivers, that fall into this stream, both on the north and south side, and discharges itself into the Atlantic-ocean under the Equator, being 50 leagues wide, at least, at the mouth; of which I shall speak more particularly, when I come to describe the country of the Amazons.

4. The fourth river, which rises on the east side of the Andes, and is very little inferior to the last, is the river of Plata; which rises near the town of Plata in Peru, in 20 degrees of south latitude; and running first to the eastward, 'till join'd and enlarg'd by many other streams, then bends its course directly south, 'till it comes into 34 degrees south; then stretches away to the eastward, falling into the Atlantic-ocean, in 35 degrees of south latitude, near the town of Buenos Aires, in the province of La Plata, being 30 leagues broad at the mouth of it; but this river will be further described also, in treating of the province of La Plata.

As to the rivers that rise on the west-side of the mountains of Andes, and fall into the Pacific-ocean; the chief of them mentioned by the Buccaneers, who have visited that coast, are, 1. The river Colanche, in 2 degrees south latitude; 2. The river of Guiaquil, in 3 degrees; 3. The river Payta, in 5 degrees, 15 minutes; 4. The river Ylo, which discharges itself into the sea, in 18 degrees; 5. The river of Arica, which falls into the same sea, near the town of Arica, in 18 degrees, 20 minutes; besides which, there are a great many other small rivers, that fall into the sea, within 18 or 20 degrees of south latitude; but farther southward, DAMPIER informs us, they did not meet with a river on the coast of Peru or Chili, once in 100, or 150 leagues. ACOSTA indeed mentions abundance of rivers he had crossed; but this must be either near the Equator, or in the province of Callao; where a great many rivers discharge themselves into the lakes of Titicaca, Paria, &c. and never reach the sea.

CHAP. IV.

The provinces the kingdom of Peru is divided into; its sub-divisions, and chief towns; and their public and private buildings.

CHAP. IV. **T**HE kingdom of Peru, like that of Mexico, is divided into three audiences, viz. 1. The audience of Quito; 2. The audience of Lima; and, 3. The audience of Los Charcas.

Peru divided into three audiences. Quito audience. The audience of Quito, the most northerly of the three, is bounded by Popayan on the north; by the country of the Amazons on the east; by the audience of Lima on the south; and by the Pacific-ocean on the west; being about four hundred miles in length, from north to south; and two hundred in breadth, from east to west; and is sub-divided into three provinces, viz. 1. Quito Proper; 2. Quixos; and 3. Pacamores.

Sub-divisions of it. Quito Proper. The province of Quito Proper lies upon the sea-coast, being bounded by Popayan on the north; by the provinces of Quixos and Pacamores on the east; by the audience of Lima on the south; and by the Pacific-ocean on the west; and is about two hundred miles in length, from north to south; and upwards of an hundred miles in breadth, from east to west.

Chief towns. The chief towns of Quito Proper are, 1. Quito; 2. St. Jago de Puerto Veijo; 3. Guiaquil; 4. Tombes; 5. Thomebamba; 6. Loxa; 7. Zamora; 8. St. Michael's; and 9. Payta.

Quito city. The city of Quito, the capital of this province, and of the whole audience, is situated in 30 minutes south latitude, and in 78 degrees of western longitude, at the foot of the mountains, which almost surround it. It is a rich populous city, built after the Spanish model, with a great square in the middle, and spacious streets running from it on every side; and a canal runs through the middle of it, over which are several bridges. It is the seat of the Governor, and of the Courts of justice; a University, and a Bishop's see, Suffragan to the Archbishop of Lima. They have a good trade in woollen-cloths, sugar, salt, and cattle; but their greatest riches proceed from the gold that is found in the adjacent mines and rivers: This, as all other countries near the Equator, is subject to annual periodical rains and floods, which make the town unhealthful. The Peruvian Emperor had made a conquest of Quito, which was the residence of the former Kings of this country, but a very few years before the Spaniards arrived there; and there are still to be seen the ruins of some of their palaces, and of the temple of the Sun, the chief object of their adoration.

There is a vulcano in one of the mountains near this town, whose eruptions have, more than once, endangered to the ruin of it.

Puerto Veijo. St. Jago de Puerto Veijo is situated on the coast, in 1 degree south latitude, a little to the eastward of Cape Lorenzo, in an unhealthful part of the country; near which, there was formerly a quarry of Emeralds, that made it much resorted to; but the quarry being exhausted, the town declined with it.

Guiaquil. Guiaquil is situated upon a navigable river, 6 or 7 leagues from the mouth of it, in 3 degrees south latitude, about two hundred miles to the southward of Quito; part of it lying on the ascent of a steep hill, and the other part in a bottom on a bog; it is divided into the new and old town, by the river that runs through it, and consists chiefly of one long street, about a mile and half in length; there are four or five hundred houses in the place, whereof

some are built of brick, and others of timber; **CHAP. IV.** but the common people have only huts of Bamboecanes: It contains also five churches; and several convents, some of which are built of stone; and it is defended by three forts, two whereof are upon the river, and the third and largest upon the hill. There being plenty of timber in the neighbourhood of this place, a great many ships are built here for the King of Spain; and it has a pretty brisk trade, especially in timber, and cocoa-nuts, for chocolate; they export also a great deal of salt, salt-fish, dried beef, rice and cotton; but there is no gold or silver mines near it, nor have they any corn, but Indian-corn: They are supplied with wheat-flour from Truxillo, and other southern parts, and with several sorts of good woollen-cloth, and strong bays, from Quito, where they are made; they receive wine, brandy, oil, olives, and sugar, from Pisca, La Nasta, and other towns farther south; and a market is held daily in boats and barklogs on the river, where flesh, fish, fruits, and other provisions, in which the country abound, are sold very cheap. Governor ROGERS relates, that the river is so wide at the mouth, that a man can scarce see cross the channel; that the country on the sides of it, is low, marshy ground, incumber'd with mangrove-trees and shrubs; that the tide flows above 18 feet perpendicular, and is quicker and stronger than that in the Thames; that the river is navigable 14 leagues beyond Guiaquil, for large vessels; and the tide flows 20 leagues above it.

Both the civil and military government of this town, and the territory belonging to it, according to the same writer, is lodg'd in the Corregidore, and his Lieutenant, tho' they have a Council for managing the affairs of the Government, and determining causes of consequence, which consists of the Lieutenant, two Alcalds, or Judges, who are Lawyers; the Alguizil, Major, a Sheriff, and eight Regidors, or Aldermen; from whom, however, there lies an appeal to the Court of Lima. The Officers of the Inquisition act more arbitrarily here, 'tis said, than in Spain itself. Their Magistrates and Officers, all, affect pompous titles; the Corregidore styles himself General; and his Deputy, Lieutenant-General; besides whom, they have a Camp-Master-General, a Serjeant-Major, a Commissary of Horse; four Dons, Captains of large companies of foot; and another Don, that commands two hundred horse; and yet have all these great Officers, with a proportionable number of troops under their command, suffered this important town of Guiaquil to be taken and plunder'd, by a handful of men, several times, which has given some occasion to think, that the American Spaniards are so much degenerated from their ancestors of Old Spain, that they might be driven from the West-Indies, as easily as they drove out the Indians two hundred years ago. Most of the towns within the jurisdiction of Guiaquil lie upon the river, and are governed by Lieutenants, appointed by the Corregidore, and can join him with their whole forces within two tides, which makes it the more to be admir'd, that they should so often suffer themselves to be surpris'd, as it appears they have been.

In the year 1687, the French Buccaneers came to an anchor in the mouth of the river Guiaquil, and sent a detachment of two hundred and sixty men up the river, in the night-time, who landed within cannon-shot of the town, about two hours before day; but the garrison was alarmed by the firing of a musket accidentally; however, they advanced, and attack'd the town at break of day; and

Guiaquil taken by the French Buccaneers.

CHAP.
IV.

and after a very little opposition, drove the Spaniards out of their forts, and took possession of the place, with no other loss, than nine men kill'd, and twelve wounded; however, they put to the sword nine hundred Spaniards, and took seven hundred prisoners of both sexes, among whom were the Governor and his family. Here they found abundance of pearls and precious stones, a great quantity of silver plate, and near an hundred thousand pieces of eight in money, besides a great deal of rich merchandize, particularly, they took a Vermilion Eagle, that had two large Emeralds for its eyes, said to belong to one of their churches; and nothing could be richer than the furniture of the Governor's house; they found also two of the King's ships upon the stocks, several galleys, and fourteen or fifteen barks; and the Governor agreed to ransom himself and family, the city, cannon, forts, and ships, at a million of pieces of eight; but the town being set on fire, either by design, or accident, the Governor refused to pay the ransom: Whereupon the Buccaneers cut off the heads of four of the prisoners, and threatened the rest, if the ransom was not immediately paid; however, they contented themselves, at length, with two hundred and sixty thousand pieces of eight; upon the receipt whereof, they released their prisoners, and retired to their ships.

The French relate, that the Spanish Friars had represented the Buccaneers as monsters and cannibals; and that some of the women, that were taken prisoners, were ready to grant them any favours, on condition they should not be devoured; especially, when they observed nothing shocking in their figure.

DAMPIER, and the English Buccaneers, attempted this town in the year 1685, and very narrowly missed surprising it: And Captain ROBERS, who had the Queen's Commission during the last war between the confederates and the French, took Guaiquil by storm, with very little loss, in the year 1703; and plunder'd it of some treasure, and rich effects; making the Spaniards pay thirty thousand pieces of eight, to ransom the town, and ships in the harbour: But most of the treasure was carried away, before the Captain made himself master of the place.

Guaiquil
taken by
Captain
Rogers.

Tumbez.

Tumbez, or Tumbes, is situated at the foot of the mountains, about 20 leagues south of Guaiquil, upon a good fresh-water river: Here the Spaniards, at their arrival, found a temple dedicated to the Sun, and abundance of Silversmiths in the place, who made vessels of gold and silver for the temple, and the palace the Inca had here; and they relate, that the walls of the temple were lined or covered with silver plate.

Thembamba.

Thembamba is situated on the great road of the Inca's, one hundred and sixty miles south of Quitto, in a plain, at the conflux of two rivers: Here also was a royal palace of the Inca's, and a temple dedicated to the Sun; both of them adorned with gold, and images made of Touch-stone and Jasper, of a very great value. In the year 1544, there were discovered gold mines near this place, incredibly rich.

Loxa.

Loxa also is situated at the conflux of two rivers, on the great road of the Inca's, in 5 degrees south latitude. It is a pretty large town, and has several monasteries in it.

Zamora.

Zamora is situated an hundred miles to the eastward of Loxa, well built with stone, and hath very rich gold mines in the neighbouring mountains of the Andes; and their rivers replenished with gold sands.

The town of St. Michael's is situated in 5 degrees south latitude, on the river Shuquimayo, 2 leagues east of the ocean, and as many from the port of Payta; a large town, chiefly inhabited by fishermen, and such as carry on a coasting-trade in barklogs, as far as Panama; by which many of them grow very rich.

CHAP.
IV.
St. Michael's.

Payta is situated in 5 degrees, some odd minutes south latitude, being one of the best harbours upon the coast, and the town pretty well fortified: But this has been describ'd already among the port-towns.

The province of Quixos is bounded by Popayan on the north, the country of the Amazons on the east, the province of Pacamores on the south, and by Quitto Proper on the west. The only town I met with of any note in this province is that of Quixos, situate about sixty miles south-east of Quitto, at the head of a river said to be one of the sources of the river Amazon.

Quixos
town.

The province of Pacamores is bounded by that of Quixos on the north, by the country of the Amazons on the east, by the audience of Lima on the south, and by Quitto on the west. The chief towns whereof are, 1. Loyola; 2. Valladolid; 3. St. Jago; 4. St. Francisco de Borgia.

Pacamores
province.

Loyola is situated in 6 degrees south latitude, and 74 degrees of western longitude.

Valladolid is situated seventy miles north-west of Loyola.

St. Jago de Montanas lies in 5 degrees south latitude, and 71 degrees of western longitude.

St. Francis de Borgia stands about sixty miles north of St. Jago de Montanas, on one of the branches of the river Amazon; but I meet with no other description of these four towns than their situation.

St. Francis
Borgia.

The audience of Lima, or Los Reyes, is bounded by that of Quitto on the north, by the country of the Amazons on the east; by the audience of Los Charcas on the south; and by the ocean on the west; being about eight hundred miles in length from north to south, but the breadth very unequal, and uncertain, not four hundred miles in any part, except on the south.

Lima audience.

The chief towns are, 1. Lima; 2. Caxamalca; 3. Guanuco; 4. Truxillo; 5. Pisca; 6. Guamanga; 7. Cusco; 8. Arequipa.

Chief towns.

Lima, the capital of this audience, and of the whole kingdom of Peru, is situated in 12 degrees and an half of south latitude, and 76 degrees of western longitude, on the banks of a river of the same name, about six miles from the sea, and as many from the island and port of Callao, lying in one of the most spacious and fruitful plains of Peru: It is built like other Spanish cities, having a large square or parade in the centre, with piazza's on every side; all the principal streets terminating in the square; on the sides whereof stand the cathedral, the Archbishop's palace, the Viceroy's palace, the treasury, the town-hall, the armory, or publick magazine, and a school or college of the Jesuits, where the Indian languages, and arts and sciences are taught.

Lima city.

There are, besides the cathedral, a great many parochial and conventual churches, a university, abundance of monasteries and nunneries of every order, and five or six large hospitals. The whole city being about four miles in length, and two in breadth; the air moderately temperate and healthful, considering the climate; prodigiously wealthy, and plentifully supply'd with provisions, and Indian and European fruits; and well watered with canals, that are supply'd from the river. The outskirts of

their

CHAP. IV. their houses make but a mean appearance, being built with bricks dry'd in the sun; many of them have only clay walls, and scarce any of them are more than one story high; the roofs exceeding light, cover'd with reeds and mats, and sometimes only a cloth, for which they give two very good reasons; one is, that they are subject to earthquakes; and the other, that the sun does not heat these roofs as it does tiles or slate: And they have no occasion to provide against wet or stormy weather, for it never rains on this coast, and they are never disturb'd by storms or tempests, but enjoy constant serene weather; and the heats are much abated by the sea and land-breezes. But this great city, thus happily situated, is not without its allays: The earthquakes they are frequently subject to must necessarily cast a damp on all their enjoyments; especially when great part of their town has been several times laid in ruins by them; particularly in the years 1586 and 1687; in the last of which years, the sea ebb'd so far from the shore, that there was no water to be seen; and after the sea had disappeared a considerable time, it return'd in rowling mountains of water, which carried the ships in the harbour of Callao (the port to Lima) a league up into the country; overflow'd the town of Callao, tho' situated on a hill, together with the fort, and drown'd both men and cattle for 50 leagues along the shore. The ships, 150 leagues at sea, to the westward of Lima, were sensible of it, as WAFER assures us, who was then in those seas: The ship he was in felt so violent a shock, he relates, that they thought they had struck upon a rock; but after their consternation was a little over, they cast the lead and found, but could find no ground; tho' the sea, which usually looks green, was then of a whitish colour, and the water they took up mixed with sand; which made them conclude the shock was occasioned by an earthquake; and a little after, they were informed there had been a terrible earthquake at Lima, at the same time. But to return to the town: The city is surrounded by a wall fortified with bastions, but of no great strength, if compared with European fortifications. However, as it is very populous, it may be strong enough to resist any force that can be brought against it in that part of the world. The plain of Lima, in which it stands, produces plenty of corn, wine, oil, sugar, flax and fruits.

Caxamalca. Caxamalca is situated at the foot of a mountain, in 7 degrees, odd minutes south latitude, on the great road of the Inca's, 30 leagues east of the Pacific-ocean. This was an ancient town when the Spaniards arrived there, and, if we may credit their writers, well-built, surrounded with a stone wall, and defended by a castle: On one side of the city stood the temple of the Sun, and on the other a magnificent palace of the Inca ATABALIPA, who was taken here in the year 1533, by PIZARRO, and afterwards murdered by him.

Guanuco. Guanuco is situated near the lake of Bombon, an hundred and fifty miles north of Lima, a well built town, and standing in a good air. Here also was a fine palace of the Inca's, and a temple dedicated to the Sun, when the Spaniards arriv'd.

Truxillo. Truxillo is situated on the banks of a pleasant river in the valley of Chinca, six miles from the port of Guancacho and the ocean, in 8 degrees, odd minutes south latitude. It is a handsome Spanish town, consisting of five hundred houses; the air healthful; the country fruitful; abounding in corn, wine, figs, oranges, and other merchandize and provisions, of which they export a great deal

to Panama, and the more northern settlements. CHAP. IV. The sea beats with that violence on the coast, that it is bad landing frequently at the port of Guancacho; that lies exposed to almost every wind.

Pisca, or Pisco, is a port-town situated in 14 de-grees south latitude, in a mountainous country; but the valleys produce good wine, and they export more of it than any town on the coast of Peru.

Guamanga is situated on the great road of the Inca's, in a fine plain, an hundred and eighty miles east of Lima. It is a well built Spanish town, and stands in a healthful air. The country about it abounds in corn and cattle; and it is considerable for the mines of gold, silver, copper, sulphur, and loadstone, in the neighbouring hills.

Cusco (the metropolis of Peru, during the reigns of the Inca's) is situated in 13 degrees, odd minutes south latitude, and in 70 degrees of western longitude, 350 miles to the eastward of Lima. It is built on the side of a hill, in the midst of a spacious plain surrounded by mountains, from whence there fall four small rivers that water the country, and altogether afford a most agreeable prospect from the town, which proudly overlooks the vale. The city itself also is watered by one of these rivers that runs through it, and supplies several canals that are cut through the principal streets.

The climate, here, is said to be exceeding temperate and healthful, and there is very little difference between summer and winter; the air rather dry than moist; inasmuch that meat hung up will keep without corrupting, and grow as dry as mummy if it hangs long; and this dryness of the air preserves the natives from Musketo's, Gnats, Flies, and all other noxious insects, which are scarce ever found here, tho' they are the plague of other hot countries.

The chief streets of the old town pointed to the four winds; and the houses were generally built with stone, cover'd with reeds, or thatch'd. The principal buildings in it were, the temple of the Sun, the palace of the Inca, and the castle.

What the form or dimensions of the temple of the Sun were, neither DE LA VEGA or any other writers pretend to describe; but relate, that amongst all their buildings, none was comparable to this temple: That it was enrich'd with the greatest treasures that ever the world beheld. Every one of their Inca's, or Emperors, adding something to it, and improving and perfecting what his predecessor had omitted.

It was built of freeze-stone, and lined or wainscotted (if I may use the expression) with gold plate, the cieling being of the same metal; however, the roof was no better than common thatch, that people not knowing the use of tiles or slate: It was divided into several chapels, cloisters or apartments; in the principal whereof, which stood towards the east, was placed the image of the sun, consisting of one gold plate that cover'd the whole breadth of the chapel, almost from the top to the bottom, and was twice as thick as the plates that cover'd the other walls.

This image, representing the sun, was of a round form, with all his rays and emissions of fire and light proceeding from him, much in the same manner as the European Painters draw him: On each side of this image were placed the several bodies of the deceased Inca's, so embalm'd, 'tis said, that they seem'd to be alive. These were seated on thrones of gold, supported by pedestals of the same metal, all of them looking to the west, except the Inca HAANA CAPAC, the eldest of the Sun's children, who sat directly opposite to it. Upon the arrival of the

CHAP. IV. the Spaniards, the Indians carried off and concealed the embalmed bodies, with most of the treasures of the temple; only the image of the sun was not removed, which falling to the share of a Spanish Nobleman, named MACIO SERRA DE LEQUICANO, known to our author DE LA VEGA, he play'd it away before sun-rise the next morning.

The temple had several gates cover'd with gold, the principal whereof open'd towards the north; and round the top of the temple, on the outside, was a kind of cornice a yard deep, consisting of gold plate.

The chapel of the Moon.

Besides the chapel of the Sun, there were five others of a pyramidal form. The first being dedicated to the Moon, deem'd the sister and wife of the Sun. The doors and walls whereof were cover'd with silver: And here was the image of the moon, of a round form, with a woman's face in the middle of it. She was called Mama Quilca, or Mother Moon, being esteem'd the mother of their Inca's; but no sacrifices were offered to her as to the sun. On each side of this image, were placed the bodies of their deceased Empreses, ranged in order; only that of MAMA OELLO, the mother of HUAYNA CAPAC, sat with her face towards the moon.

The chapel of the Stars.

Next to this chapel was that of Venus, called Chasca, the Pleiades, and all the other stars. Venus was much esteem'd, as an attendant on the Sun, and the rest were deem'd Maids of honour to the Moon. This chapel had its walls and doors plated with silver, like that of the moon; the cieling representing the sky, adorned with stars of different magnitude.

Of thunder.

The third chapel was dedicated to thunder and lightning; which they did not esteem gods, but as servants of the sun; and they were not represented by any image or picture. The chapel, however, was cieled and waincotted with gold plates like that of the sun.

Of the rainbow.

The fourth chapel was dedicated to Iris, or the rainbow, as owing its original to the sun. This chapel also was cover'd with gold, and a representation of the rainbow on one side of it. They had a great veneration for this Phenomenon, and whenever it appeared in the air, clapped their hands before their mouths, as a testimony of their regard for it, I presume; and not, as my author surmises, lest their teeth should drop out.

The Priests chapel or apartment.

The fifth apartment was for the use of the High Priest, and of the rest of the Priests, who were all of the royal blood; not intended for eating or sleeping in, but was the place where they gave audience to the Sun's votaries, and consulted concerning their sacrifices: This also was adorn'd with gold, from the top to the bottom, like the chapel of the Sun.

And tho' there was no other image worshipped in this temple but that of the sun, yet had they the figures of men, women and children, and of all manner of birds, beasts, and other animals, of wrought gold, placed in it for ornament, as big as life; and having many more than were sufficient for this purpose, the rest were laid up in chambers and magazines, piled one upon another; and still every year the people, at their great festivals, presented more gold and silver, which the Goldsmiths, who resided near the temple, and were dedicated to the sun, form'd into one figure or other, as the offerer desired; for besides the figures of animals, they made all sorts of vessels and utensils, as pots, pans, bowls, fire-shovels, and even spades and rakes for their gardens, of the same precious metal.

The royal palace.

DE LA VEGA does not give so particular a description of the palaces of the Inca's in Cusco, as could be wish'd. He only relates, they were vastly

large and magnificent, and mentions some particular rooms, and the manner of their building them: He says, there were galleries, or rather halls, two hundred paces in length, and fifty or sixty in breadth: One of which, in his time, was left undemolished, and converted into the cathedral church. He adds, that the Indians of Peru never raised one story above another in their buildings; nor did they join one room to another, but always left some space between the rooms, and perhaps a whole court or quadrangle, unless sometimes in the largest halls they built closets or withdrawing-rooms at the corners. He observes also, that when they had built the four walls of stone or brick, they erected pillars in the middle of the room, to support the roof; for they knew not how to cross their beams, or fasten them with nails or wooden pins, but laid their timbers upon the walls, and fastened them with withs or cords. These main beams they crossed with rafters, and fasten'd in like manner, and thereon laid a covering of thatch or straw a yard deep, extending the eaves a yard beyond the walls, which served for a pent-house. Besides their walls of stone, they had those of sun-dry'd bricks, which they formed in moulds, mixing the clay with straw; the least of their moulds being a yard long, a sixth part of a yard broad, and a sixth in thickness. These being dry'd in the sun, were laid upon each other in the shade; and after they had lain out of the sun and weather three years more, were used in building, cemented with the same clay, mix'd with straw; but they never attempted to make common clay or mud-walls.

Whenever one of the Inca's died, they lock'd up the room where he usually slept, with all the furniture, ornaments, gold and silver in it, and none were ever suffered to enter it afterwards, the place being looked upon as sacred; but they kept it in repair on the outside as long as it would stand. The like ceremony was observed as to all other rooms where the deceased Inca had slept, tho' it was but one night on a journey, or by accident: Therefore on the death of the Inca, they immediately fell to building a new apartment for the successor. The stones of these buildings were generally so well laid and join'd, 'tis said, that they needed no cement; and if any were used, it was a slimy liquor, like cream, which so united and closed the stones together, that no seam or crevice appear'd: And in many of the royal palaces and temples, for the greater magnificence, says PEDRO DE SIECA, they closed up the seams of their buildings with melted gold and silver; which afterwards occasioned the total destruction of most of them, the Spaniards subverting the very foundations, in hopes of finding treasure.

The furniture, or rather ornaments, of these palaces, like that of their temples, were the figures of men, beasts, birds and other animals, cast in gold; and on the walls, instead of tapestry, were plants and flowers irritated, of the same metal, intermixed with serpents, butter-flies, and other insects, that appear'd extremely natural.

I don't find they had any chairs; but the Inca himself sat on a stool made of gold, without arms or back, having a pedestal of the same metal: And they had no other bedding but blankets, or rather Beds, carpets, made of the wool of their country sheep, spread on the floor; which serv'd both to lie on, and cover themselves with; and in some parts of the country they lay in hammocks.

They had bagnios, and cisterns of gold also in their palaces; and all the utensils of their kitchens, and in the meanest offices about the palace, were of gold. Insomuch that PEDRO DE SIECA

They buried their treasures with them.

wild.

drew it, and perished in the enterprize; and seems to me, to resemble another expression that has been frequently made use of in this part of the world, where abundance of people have been destroyed by the labour and hardships imposed on them by tyrannical Princes, in erecting cities and magnificent works, to eternize their memories. In these cases, it is frequently said, "that the walls or the foundations were laid in blood, or cemented with the blood of so many thousand men:" Which metaphorical expressions have, indeed, by some unthinking readers been interpreted literally, or rejected as fabulous, when a very moderate share of reflection might have set them right.

To return to the castle: In the outward wall were found the stones of the largest size, which, DE LA VEGA was of opinion, were never dug out of any quarry, but loose rocks found in the mountains, and piled one upon another in a rustick manner, without polishing; but so well fitted, however, to each other, 'tis said, that there were no chasms or seams left open: A work so prodigious, that had they been masters of all our modern engines, it would have been thought beyond all human force to erect such another fortress.

Between each wall, there was a space of 25 or 30 foot, which was fill'd up with earth, and every wall had a breast-work on the top of it: Beyond these three walls, were three spacious towers, standing in a triangle, answerable to the bending of the walls, which were in the form of a crescent on this side, as has been observed already. The principal of these towers, which stood in the middle, and was called Mayoc Marca, or the round fortress, had a fountain of excellent water in it, brought a great way by a subterraneous aqueduct; but from whence, DE LA VEGA says, the natives themselves did not know; for these were secrets communicated to none but the Inca or his Council, possibly least an enemy should discover the stream, and cut it off, in case of a siege. In this fortress, the Inca's had an apartment, which was adorned and furnished with gold plate, vessels, and images of all kinds, of the same metal, like their other palaces. The other two towers on the right and left were both square, and contained rooms for the lodging and quartering the garrison, who were all of the blood of the Inca's, no others being admitted into any of them; the whole fortress being consecrated to the Sun for the exercise of arms, as the temple was for prayers and sacrifices.

Under the foundation of these towers was as much room as above; and they had a communication with each other by a subterraneous labyrinth, A labyrinth. so difficult to pass, that no stranger could find his way through without a guide, or a line fastened at the entrance, by which he might discover the turnings and windings in his return. This labyrinth, DE LA VEGA assures us, was remaining in his time, and he had been often in it; but the upper rooms were all ruined. In the framing these vaults, as they were ignorant of arching, they laid over great slabs of stone, which served instead of beams; and in these, and many of their works, the Inca's seem'd to have a view rather to their glory, than to the use or convenience of the building, as was the case of those Princes that erected the walls of Babylon, the pyramids of Egypt, and other structures that obtained the name of the world's wonders: Most of the new city of Cusco was built with the stones found in the ruins of this fortress.

From the grand market-place in old Cusco, issued four high-ways to the four quarters of the empire. Those to the north and south running upwards

Four great roads issue from the great square of Cusco.

pire.

of 500 leagues each, and were carried over mountains and valleys pitch'd with stone; in some places raised, in others sunk, to render it commodious travelling, and to facilitate the march of their armies from one province to another; but these will be more largely described hereafter, in treating of their roads.

Every nation of this extensive empire had quarters assign'd for their residence in the royal city of Cusco. The vassal Princes of every province, and especially the Caraca's, or conquered Princes, were obliged to send their eldest sons to Court, and build them a palace; about which all the natives of the same province, residing in Cusco, had their houses; and every people were obliged to retain the habits of their respective provinces, being chiefly distinguished by their head-dresses.

These institutions added to the splendor of the Inca's Court, the sons of the Caraca's, or vassal Princes, being obliged to wait at the Inca's palace in their turns, contributed much to the security of the Government; these young Lords remaining in a manner pledges of their fathers loyalty; tho' the reasons usually given for their attendance were, that they might be the better educated and instructed in the laws of the empire, and prepared for posts in the Administration: But whatever was the reason of the institution, by this means the Court language, and the manners and customs of the capital city, were communicated to the most distant provinces; and the Court, on the other hand, were justly informed of the state of their remotest territories.

Cusco
compared
to old
Rome.

DE LA VEGA, in describing Cusco, compares it to ancient Rome; for, 1. like Rome, he observes, it was founded by its own Kings; and 2. was the metropolis of many nations subject to its empire: 3. It might be compar'd to Rome for the excellency of its laws; and 4. for the admirable virtues and endowments of its citizens, who were famous for their politicks, as well as military discipline; civiliz'd, and freed from all barbarous customs: However, it must be confess'd, he says, that Rome had one great advantage, and that was in the knowledge of letters, whereby the fame of that city was render'd immortal: Whereas poor Cusco had nothing but memory, and tradition, to deliver its great actions to posterity. Rome, he insinuates, might be as much indebted to the pens of its historians, who had recorded their wise institutions, their victories and successes, and set them in an advantageous light, as to the heroes she had bred: Peru had abounded in men famous in arms and arts, but wanting the knowledge of letters, had left no other memory of their actions than what tradition had preserved, and transmitted to posterity in some few abrupt and scattered sentences deliver'd from father to son, which were also in a great measure lost by the entrance and invasion of a new people; for where an empire has had its period, being overwhelm'd by the power of a stronger nation, there, of course, the memory of actions and customs are lost; especially where letters are wanting to record them.

The new
city.

As for the city of Cusco since it has been rebuilt, 'tis sufficient to say, that it is purely Spanish. They have thrown it into large squares with their piazza's, from whence the principal streets, which are very long and broad, run in direct lines, and these again are crossed by other streets at right angles; and as it is divided into the upper and lower town by the river which runs through it, they have built several arch'd stone bridges on the river, for the more easy communication, instead of planks, which the Indians used in the old town, not understanding how to make arch'd bridges.

Besides the cathedral, there are several parochial and conventual churches, monasteries and nunneries of every order, and some noble hospitals, as well for Indians as Spaniards. And it must be said, for the honour of the Spaniards, that none take more care of their hospitals, and of sick and infirm people than they do in every part of the world. The Bishop of Cusco is Suffragan to the Archbishop of Lima, which the Spaniards have thought fit, since their conquest, to make the capital of Peru. I shall only add, that the gentlemen and citizens of Cusco (as the Indians had formerly) have most of them their country-houses in the pleasant and healthful valley of Yuca, thro' which there runs a fine river, that makes it one of the most fruitful valleys in Peru, and is now planted with almost all manner of Indian and European corn and fruits.

Arequipa, the last of the great towns I shall mention in the audience of Lima, is situated on a river that falls into the Pacific-Ocean, about forty miles south-west of the town, lying in 16 degrees, odd minutes south latitude, 100 leagues and upwards south-east of Lima, and 80 leagues south-west of Cusco. It consists of about three or four hundred houses, and stands in a country abounding in corn and wine; but is most considerable for the gold and silver mines in the neighbourhood of it. This town was founded by the Marquis PIZARRO, one of the first conquerors, and over-turned by an earthquake forty years afterwards; but the Spaniards liked the situation of the place so well, that it was soon after rebuilt; and it is now a Bishop's see, Suffragan to the Archbishop of Lima.

The audience of Los Charcas is bounded by the audience of Lima on the north, by the province of Paragua, or La Plata, on the east, by Chili on the south, and by the Pacific-Ocean on the west; being about seven hundred miles in length, from east to west, in the broadest part, and about the same breadth from north to south; but both the length and breadth very unequal. The chief towns in this audience are, 1. Potosi; 2. Porco; 3. La Plata; 4. Santa Cruz; 5. La Paz; 6. Chiquita; 7. Tiagunaco; 8. Arica; and 9. Hillo, or Ylo.

Potosi, which takes its name from the mountain at the bottom of which it stands, is situated in 22 degrees south latitude, 67 degrees west of London, in one of the most barren countries of America; there being neither trees or grass to be found near it, but the richest silver mines that ever were discovered; which has brought multitudes of people hither, inasmuch that it is said to be one of the largest and most populous towns of Peru: Nor is it ill supplied with provisions; all the countries round about, for 30 or 40 leagues, supplying their markets, where they are sure to be well paid for what they bring. As to the mines, which have rendered this town famous through the world, I shall describe them under another head; and only observe here, that there are several thousand people constantly employed in digging and refining the silver. So diligent have the Spaniards been since they discovered this mountain, that tho' it be 3 or 4 leagues in circumference, and one thousand six hundred and twenty-four rods (I presume it should be yards) high; it is now little more than a crust or shell, out of which they have taken most of its internal riches, and are daily in search of new mines. The Spaniards have erected a chapel on the top of the hill, to which they ascend by a narrow winding path; but the mountain is so exceeding cold, that it is scarce habitable; possibly, the chapel therefore was erected more for ostentation than devotion. There are also a great number of churches,

CHAP. churches, chapels, and convents in the town; for however the Religious seem to have renounced the world, it is observed, they are usually most numerous, where silver most abounds.

Porco. Porco is situated 10 leagues north-west of Potosi, considerable on account of its silver mines, before those of Potosi were discover'd; but the latter being richer, and not so much incommoded by water, Porco was in a manner deserted: However, 'tis probable, the mines of Porco will be resorted to again, since those of Potosi are in a manner exhausted, according to the relations of some travellers.

La Plata, capital of the province, received its name from the silver mines in the neighbourhood; which were the first the Spaniards wrought. It is situated on one of the sources of the great river La Plata, in 21 degrees, odd minutes south latitude, and 66 degrees of western longitude. The town stands in a fine plain, and in a much more fruitful soil than either Potosi or Porco; and is the see of an Archbishop, and the residence of the Governor and Courts of justice of this province; the inhabitants whereof are exceeding rich. The cathedral, with the rest of the churches and convents, are very magnificent; and the revenues of the Archbishoprick are said to amount to eighty thousand crowns per annum.

Santa Cruz. St. Croix, or Santa Cruz, of the mountains, is situated on another branch of the great river La Plata, 50 leagues to the eastward of the city of La Plata; but I meet with no particular description of the place.

La Paz. La Paz, or City of Peace, stands on the great road of the Inca's, 100 leagues to the northward of La Plata. It is a small town, pleasantly situated in a fruitful plain on the river Cajana, and has several gold mines in the adjacent mountains.

Chinquita. Chinquita is situated on the great lake Titicaca, in an exceeding plentiful country; and is a very wealthy town.

Tiguanuca. Tiguanuca is situated on the south end of the lake; besides which, there are abundance of fine towns and villages bordering on the lake, this being the pleasantest and most fruitful part of Peru, as well as the most temperate.

Arica. Arica lies in 18 degrees, 20 minutes south latitude, on the South-sea, 100 leagues north-west of Potosi, and is the port-town, where most of the treasure is embarked for Lima; but this has been already described among the ports.

Ylo. Ylo, or Hillo, is another small port, situated on the South-sea, about 20 miles north of Arica, in a fine valley, abounding in Indian and European fruits; and has been frequently plundered by the Buccaneers.

Of the Peruvian towns in general. In treating of the Peruvian towns, it is necessary to inform the reader, that before the arrival of the Spaniards, there was only one great town in every province; all the rest were villages, consisting of little huts or cottages, that did not deserve the name of towns: But in the Capital of every province was a temple belonging to the Governor, or vassal Prince; a temple dedicated to the Sun, and a convent of select Virgins, resembling those in the imperial city of Cusco; there were also four royal high-ways running through the whole empire, that center'd in the grand square, or market-place, of Cusco: And upon these high-ways were magazines and store-houses of the Inca's, sufficient to supply all the forces of the provinces in which they stood; the Indians had also noble aqueducts, by which they brought water into their great towns and corn-fields many miles, which render'd the most barren lands fruitful; as was the usage of the ancient Persians, and many other peo-

ple, where the soil was dry and sandy, like that of Peru.

I have already described the palaces of the Inca's, and the temple of the Sun at Cusco, by which model those in the other provinces were built. As to the convents of select Virgins, those seem to have been built like cloisters, with cells for the Virgins on the sides of them, without any upper rooms.

In the nunnery of Cusco, 'tis said, there were no less than fifteen hundred Virgins, all of the blood of the Inca's or Emperors: And in the convents of every province, the Nuns were the kindred of the vassal Princes, or of the Lords of the respective provinces. But, according to DE LA VEGA, these Nuns were not intended for the service of the temple of the Sun. On the contrary, no female was ever suffer'd to enter into these temples: Nor was any man admitted to come within the walls of these nunneries. But I shall treat further of their institution under the head of religion, and proceed to the description of their royal high-ways, of which AUGUSTIN CARETE gives the following relation: He says, that the Inca GUAYNACAVA, marching with his army from Cusco, to subdue the province of Quitto, distant 500 leagues from that capital, met with great difficulties in his march over almost inaccessible rocks and mountains. Whereupon returning victorious, he caused a specious way to be hewn out through the rocks; levelling the rough and uneven ground, by raising it in some places fifteen or twenty fathoms, and in others sinking it as much; and in this manner carried on the work for fifteen hundred miles (and future Inca's continued it as far to the southward.) He afterwards caused another way, of equal extent, to be carried through the plain country forty foot wide, which was defended by walls on each side: And along these ways were houses at certain distances, shady groves; and rivulets or reservoirs of water, introduced for the refreshment of his troops, or weary travellers, upon a march. At the houses erected by the Inca's on the great roads, says DE LA VEGA, travellers were supplied gratis with victuals, and other provisions for their journeys: And in case any traveller fell sick, he was attended and taken care of as well as he could be at his own house: But the truth is, says the same writer; no person was suffer'd to travel for curiosity, pleasure, or private business, but only in the service of the Inca, or the Lord of the province; all who had not orders, or licences at least, for travelling, were taken up as vagrants, and punish'd: But DE LA VEGA does not inform us within what limits the natives were confined: As I apprehend, they were at liberty to travel any where within the district of the particular Lord under whose government they liv'd, without a licence. The Inca's also had their palaces and houses of pleasure on the tops of the mountains in these roads; from whence they had the finest prospects in the world. But to proceed to their magazines. In every province, says DE LA VEGA, there were always two magazines, or store-houses; in one of which they laid up corn and provisions for the support of the natives in years of scarcity; and in the other, the provisions belonging to the temple of the Sun, and the Inca; besides which, they had smaller store-houses, built upon the high-ways, 3 or 4 leagues distant from each other; which the Spaniards make use of at this day, as inns, when they travel. All the estate of the Sun and of the Inca, within 50 leagues of the city of Cusco, was brought thither for the maintenance and support of the Court; the overplus whereof the Inca's distributed among the vassal Princes, and great Officers civil and military,

CHAP. IV.

Convents of select Virgins.

Their royal high-ways described.

Magazines.

CHAP. IV. tary, that attended at Cusco in their turns; only a certain portion of the revenue of the Sun, within those limits, was laid up in magazines for the use of the people of the respective districts.

The revenues arising in the provinces above 50 leagues from Cusco, were laid up in the King's store-houses, and from thence carried to the lesser store-houses, standing on the common road, consisting of ammunition and provision, arms, cloaths, shoes, and whatever else was necessary for an army in the field; from whence the forces were readily supply'd wherever they march'd; and the soldiery was never quartered upon the people, or in the least burthenome to them. There were magazines and store-houses also erected in the mountains and plains out of the road, at the distance of a day's march or two, near some rivulet; where an army might, at any time, be supply'd with arms and provisions of all kinds, and these were called Tombo's.

From their roads, we very naturally come to their bridges, by which they pass over rivers; and these seem to have been the meanest of all their works: They neither knew how to erect arches, or to fix piles in the middle of a stream to support a bridge; and therefore, whenever the stream was too wide to lay planks over from one bank to the other, they had a kind of floating-bridges fasten'd to each side, made of flags or rushes: And instead of ferry-boats, they had floats of calabashes, or rushes, to convey over travellers. It is related also, that they sometimes fasten'd ropes cross their rivers, and drew themselves over in baskets, sliding along the ropes.

Their carriages, and way of travelling.

As to their carriages, and way of travelling, it appears that they had no cattle fit for draught; every thing was drawn by men, how weighty soever; nor had they any beasts of burthen, but a kind of sheep, one of which would scarce carry an hundred weight, and will be particularly describ'd hereafter, under the head of animals: Most of their baggage therefore, was carried by Porters. Their Great men also were carried on chairs or couches, on the shoulders of men, or in hammocks; which last was the usual way of carrying sick people, and is still used in many parts of America.

CHAP. V.

Of the persons and habits of the Peruvians; of their genius and temper; arts, manufactures, food, exercises and diversions; diseases and Physicians.

Persons of the Peruvians. No Giants or Monsters.

THE Peruvians are generally of a middle stature. There are no nations of Giants or Pigmies, in that part of the world, as our first Adventurers related: Nor can I find any of those deform'd monsters in South-America, that Sir WALTER RALEIGH and his people were pleas'd to amuse us with.

The Inca, or royal historian, GARCISASSO DE LA VEGA, indeed, informs us, that there was a tradition in his time, that a race of Giants, some ages past, invaded that country, landing at Cape St. Helena, on the South-sea, in 2 degrees of south latitude; and refers us to the account PEDRO DE SIECA, the most circumstantial of the Spanish writers, gives of them; which, with the readers leave, I shall transcribe the substance of.

"There were, says DE SIECA, many ages since, men of an extraordinary size arriv'd in this country in great ships: Such was their stature, that an ordinary man reach'd but to their knees: Their heads were proportionably large, cover'd with long hair hanging down their shoulders, and they had great saucer eyes, but no beards. Some of

CHAP. V. "them were cloath'd with the skins of beasts, others naked, without any other covering than the long hair which nature had given them. There were, near Point St. Helena, some ruins of vast wells and cisterns, hewn out of the rocks, when DE SIECA wrote, which he supposed must be made by these Giants, to preserve fresh water in the dry season.

"They were no less put to it, he relates, for victuals than they were for drink; for one of these Giants eating as much as fifty of the natives, they soon wast'd the country, and made a famine in the place, 'till they found means to take great quantities of fish, with which they satisfied their voracious appetites.

"They liv'd but in ill terms with the natives; not only because they plunder'd them of their provisions, but took their women from them, who died in their rude embraces, or at least in childbirth: Thus these Giants having no women by whom they could propagate their species, were guilty of sodomy openly with each other; and were all destroyed by thunder and lightning, and an avenging Angel, in the very act; only their skulls and bows remained as an eternal monument of this judgment.

"PEDRO DE SIECA adds, that he heard some Spaniards say, that they had seen a piece of a hollow tooth of one of these giants, that weigh'd above half a pound; and others had seen a shank-bone of incredible length and bigness; and he thought the wells and cisterns, already mention'd, clear testimonies of their inhabiting this part of the country."

From hence it appears, that there had been no Giants in Peru for many ages before the Spaniards arriv'd there (which I look upon as a great point gain'd) and they had only an uncertain tradition that there ever were such people. As for the cisterns, hewn out of the rocks, greater things have been effected by men of an ordinary size; and as to a tooth or a single bone or two, pretended to be found there, since the scene is laid on the sea-coast, both the tooth and bone might belong to some great fish; for we find mistakes of the like nature in this part of the world.

I proceed, in the next place, to Sir WALTER RALEIGH's monsters: The writer of that expedition to Guiana in South-America says, As for the monsters of men, "they are said to be not seen by our men, but reported by the savages," with mouths in their breasts, and eyes in their shoulders; and of others, headed like dogs, which lie all day in the sea. These things are strange, says that author; yet I dare not esteem them fabulous, only suspend my belief, 'till some eye-witness of our own shall testify the truth. But as such monsters have never been seen since in South-America, Sir WALTER, had he liv'd in our time, probably would have made no scruple to have reject'd these stories as fabulous. But to proceed in the description of their persons: The Peruvians, as has been observed already, like other Indians, were of a middle stature, and of an olive complexion generally; but near the Equator of a perfect copper-colour; their hair, as that of all other people between the Tropics, always black; most of them had their heads shav'd; and the hair of their beards and other parts of the body was pull'd off from time to time with tweezers whenever any appear'd, except on their eye-brows and eye-lids. The several nations were distinguish'd chiefly by their head-dresses: Some wore whole pieces of cotton-linnen, wrapp'd about their heads like turbants; others had

CHA P. only a single piece of linnen tied about their heads: **V.** Some wore a kind of hats; others, caps in the form of a sugar-loaf; and a multitude of other different fashions there were of their head-attire, and these they never alter'd, but continued the same in their respective nations and tribes from generation to generation. But this is to be understood of the better sort of people; for the rest, as far as I can perceive, went bare-headed; at least, the Spaniards have represented them so, in the pictures they have given us of the Peruvians at the time of their conquest. The head-dress, cap, or turban, seems to have been granted to their chiefs as a mark of distinction: Their heads and bodies also were anointed with oil, or grease; and some of them used paint, like the rest of the Americans.

Their holiday-dress was a sort of shirt, and a vest without sleeves, and a mantle: They had also shoes, or rather sandals, on their feet, made of the skins of beasts untanned; but the common people usually went naked, except a small piece of linnen about their waists: They had scarce any cloaths on when they were at work, when they went a hunting or travell'd the road.

DE LA VEGA, speaking of the ancient Indians, and of some nations of them in his days, says, their manner of cloathing, or covering their bodies, was, in some countries, as immodest as ridiculous: That some had no other covering but what nature gave them; tho' others, perhaps for ostentation, girt a piece of cotton-linnen about their waists. He had seen some nations of South-America that went perfectly naked, in the year 1570.

That the women went naked as well as the men; only those who were married tied a string round their bodies, to which they fasten'd a cotton-clout about a yard square, which look'd like an apron; and where they had no linnen, they made use of broad leaves. So barbarous, says he, were the Indians in the hot countries, who were not under the dominion of the Inca's. And the people in the colder countries were cloathed only with the skins of beasts, or mats, and that rather to defend them from the weather, than out of regard to modesty or decency; concluding, that in his time there were some nations of Americans, both men and women, under the dominion of the Spaniards, and even their menial servants, that no arguments but force could prevail on to wear cloaths.

But wherever the Inca's had any power or influence, says **DE LA VEGA**, the people (he must mean the better sort of people) were decently cloath'd; in hot countries, their cloaths being made of cotton-linnen, and in colder of wool; but every garment was wove fit for the use it was design'd, without cutting, whether it were a shirt, a vest, or a mantle; they were all of a-piece, as they came from the loom, only dy'd into various colours that never faded.

In another place **DE LA VEGA** observes, that it was one of the establish'd laws of the Inca's, that no man should change the habit and fashion of his country, tho' he chang'd his habitation.

The principal ornaments of the Peruvians were their rings and jewels in their ears, which they stretch'd to a monstrous size, and occasion'd the Spaniards to give some of them the appellation of the People with great Ears. They had also chains of jewels and shells about their necks; but I don't find the Peruvians wore gold plates, or rings in their noses, like the Indians situate to the northward of the Equator.

ANTONIO DE HERERA relates, that when the Spaniards first invaded the north part of Peru, they

were oppos'd by a people that were stark naked, but painted, some red, and others yellow: But among these he informs us, there were some (probably their Chiefs) that had mantles, and other garments made of cotton, or of wool; and adorned with jewels.

The habits of the Peruvian women were not very different from those of the men, for these also are said to have worn vests and mantles; only as the men shav'd their heads, and wore caps or turbans, the women dress'd in their hair, which reached down to the middle of their backs, sometimes loose and flowing, and at others braided and twisted in several braids: And as the sun frequently changed their hair from black to a russet-brown, or red, they were at great pains to restore it to its original colour, dipping their hair into a black hot liquor, over which they would lie several hours in great uneasiness, till it was sufficiently tinged; nothing being esteem'd a greater beauty among the women than long shining black hair: And both men and women, at festivals; and other solemn times, frequently adorn'd their heads with flowers and beautiful feathers; but the Peruvians now follow the Spanish modes in every thing.

The Americans were no less surpriz'd at the complexion and dress of the Spaniards, than the Spaniards were at theirs; but admir'd nothing so much as their long beards, having never seen a beard in their country; and their glittering swords and fire-arms perfectly amaz'd them. However, as the Spaniards did not at first treat them in a hostile manner, they adored these white strangers as so many gods, and made them rich presents; but of this hereafter, when I come to their history: I shall only add, under this head of complexion and dress, that nothing amaz'd the Indians more than the blackness of the Negroes slaves the Spaniards carried with them. They could not believe this to be natural, having never seen a Black in America. They desired the Spaniards, therefore, to let them make the experiment, and try if they could not wash off the black paint (as they took it to be) which made the Negroe and his Masters exceeding merry.

As to the genius and temper of this people, if we were to credit the first accounts we received of them from the Spaniards, they were little better than brutes in human shape. They relate, that they sacrificed men, and even their own children, fed on human flesh, were guilty of sodomy, and all manner of vice. And this has been the general conduct of mankind (as has been observ'd already) to represent distant nations, and those they are enemies to, as barbarians. The great conquerors and heroes of antiquity among the Greeks and Romans always represented their enemies, and those they were pleas'd to make such, as strange unpolish'd animals; and one reason of invading and subduing them they pretend-ed was, to civilize and instruct them in better morals; as well as in arts and sciences: And such, it seems; were the pretences of our modern conquerors of Peru and Mexico; namely, to reform that new world, destroy idolatry, and establish the Christian religion there; tho' in the end it appears, they made them, in the scripture phrase, tenfold more the children of hell than they found them.

It is remarkable also, that the Inca's, or Emperors of Peru, gave much the same reasons the ancients did, for making war upon their weaker neighbours, and subduing all the nations in that part of the world under their dominion.

GARCILASSO DE LA VEGA, the royal historian, in the 7th chapter of his first book, relates, that he received the following account of the ancient inhabitants of this country, from one of his relations,

CHA P.

V.

The habits of the Peruvian women.

The genius and temper of the Peruvians.

The reasons people represent their enemies as barbarous.

CHAP. V. relations, a descendant of their Inca's, or Kings, as he himself was, (viz.) that they were like so many brute beasts, without religion or government; they neither ploughed or sowed, or cloathed themselves; they dwelt solitarily in caves or holes of the rocks; fed on herbs, roots, and wild fruits, and on man's flesh; enjoy'd their women, as well as lands, in common; and understood nothing of property: But that their father the Sun (as the Inca's and royal family call'd him) beholding the savage disposition of these people, sent a son and daughter from heaven to instruct them in the worship of himself (the Sun) to give them laws and precepts, to teach them to live in societies, cloath themselves, and cultivate their lands, and reform their barbarous customs; "constituting them (the Inca's) Lords and Princes over that people."

From whence it appears, that the Inca's of Peru, like the ancient law-givers, pretended to be descended from some god, who had conferr'd the dominion of those nations upon them; or at least had dictated those laws and rules they promulg'd and requir'd the people to observe. And DE LA VEGA tells us, chap. 12. of his 5th book, that the two principal motives or reasons the Inca's gave for making war upon their neighbours, and subduing them where they refused to submit tamely to their dominion, were, "the barbarity and ignorance of the people, and the violence and oppression they exercised over their subjects." And these have been the pretended motives of most of our heroes and conquerors on this side the globe; tho' 'tis evident, ambition is generally at the bottom of these specious pretences: We can never therefore make a just estimate of the characters of any people from the accounts we receive from those who have enslaved them, or usurp'd the dominion over them. They usually represent the conquer'd in the most shocking and frightful forms, in order to justify or excuse their own cruel ravages and oppressions.

No probability of human sacrifices or cannibals in Peru.

To proceed in the character DE LA VEGA gives of the ancient Peruvians. He says, they sacrificed men to their gods; were cannibals; had shambles of man's flesh, and made sausages of their guts; but he "reflects severely upon those Spanish writers who relate, that there were any such sacrifices, or any cannibals in Peru, since the Inca's reign'd there;" which was four or five hundred years before the invasion of the Spaniards; from whence we may very well conclude, that all the modern accounts we have of human sacrifices and cannibals in South-America from the Spanish writers are false. There were no such people when they arrived there, nor for four hundred years before, if we may credit DE LA VEGA, a native of Peru, who was better acquainted with their language, history, and customs, than any of the Spanish writers, and generally esteemed the best historian that ever wrote of that country. ACOSTA DE SIECA, and the rest of their historians are infinitely to blame therefore, in slandering that people, and abusing the world with such fabulous relations.

If it be admitted then, that there were no such barbarous people in Peru, no cannibals, or any human sacrifices there for four hundred years before the Spanish conquest, we may take it for granted, there were none there before that time; at least there could be no certainty of any such, the Peruvians having no possible way of recording their history, as they were destitute of letters; and for a tradition of four hundred years standing, it is not to be much valued, especially when it is evident, that the Inca's invented or encouraged such stories of the barbarity

of the conquer'd nations, as other pretended he could have done in our part of the world, to excuse or justify their own ravages and invasions, and to make the world believe they have been such mighty benefactors to mankind, by reducing them to a civiliz'd life, and abolishing such brutish customs as they found in the conquer'd provinces. I proceed now to enquire into the real character of the Peruvians when the Spaniards arrived there. BLAS VALERA (to whom DE LA VEGA seems to give entire credit, in this particular, lib. 2. cap. 33. of the *Royal Company of Peru*) says, that the people of Peru exceed most nations in the world in quickness of wit and strength of judgment; which appears in that, without the help of letters, they have attain'd the knowledge of many things which the learning of the Egyptians, Chaldeans, and Greeks, could never reach. If they had any thing that seem'd shocking to the Europeans, it did not proceed from the want of natural parts, or endowments of mind, but from their being unpractis'd in the fashions and customs of Europe, and their want of masters to instruct them in the liberal sciences; for such of them as had the advantage of masters, since the arrival of the Spaniards, became greater proficient than the Spaniards themselves, and would imitate any thing they saw so exactly, without being taught, that it surprized the European artists; and as to their memories, they generally exceeded the Spaniards, and would cast up their accounts, by knots, with more expedition than a European could by the help of cyphers.

The true character of the Peruvians.

As to their military skill and conduct, making allowance for circumstances, they appear'd also superior to the Spaniards. Let me see, says my author, the bravest Captains of France or Spain on foot, without horses, without armour, without spears, swords, or fire-arms; with no other cloaths than their shirts, no other head-piece than a cap of feathers, or garland of flowers; a shield made of a piece of a mat; and "let their diet be only herbs and roots of the field; then let us see how they will be able to oppose swords, spears, guns, &c.

Courage and military skill.

On the contrary, were the Indians arm'd, as the Europeans are, train'd up in the same military discipline, and instructed in the art of war by sea and land, they would be more invincible than the Turks, as experience has shewn; for whenever the Spaniards and Indians were equally arm'd, the Spaniards were defeated. No estimate can be made of the military skill or bravery of the Indians of Mexico and Peru, therefore, from the Spanish conquests in those empires, on account of the inequality of their arms, and above all, the invention of fire-arms, which was more terrible to them than all the rest, and seem'd to them something more than what was human and natural. "And in fact we find, that the Indians of Chili, having furnish'd themselves with European arms, are at this day a match for the Spaniards, and have driven them out of many places they possess'd themselves of in that country."

To return to the Peruvians. It is observ'd, that as they defended their country, as well as could be expected, with such arms as they had, yet when any province was conquered, and had submitted to the Spaniards, they remain'd faithful to them, however hardly they were used; and readily assisted them in the conquest of the rest of their country; being persuaded, that they ought to remain faithful subjects to those they had submitted to, how unjustly soever they were invaded, and might not attempt the recovery of their liberties afterwards.

Friar

CHAP.
V.
Hospitality.

Friar MARK, who went with some of the first invaders from Panama to Peru, says, they found the Peruvians extremely hospitable and kind; courteous in conversation, and friendly to the Spaniards, giving them gold and precious stones, male and female slaves, and all manner of provisions: Nor did they offer to commit any hostilities, 'till the Spaniards, by their outrages and cruelties, compelled them to stand upon their defence. It must be confess'd, that the Americans had made but little proficiency in the sciences, or indeed in mechanick arts, having never convers'd either with Europeans or Asiatics, and being destitute of instruments, and even of proper materials for forming them.

Morality.

There were, says DE LA VEGA, certain among them call'd Amanta's, who were subtle in their argumentation, and laid down certain phaenomena of natural things; but in regard they were unacquainted with letters, they could leave none of those conceptions they had form'd to posterity, unless some few principles discovered by the light of nature, which they represented by glyphicks, or some rude figures; however, in Moral Philosophy, they attained to a greater degree of perfection; for their laws and customs were their daily lessons, and the doctrine of good-manners being the study and business of the magistrate, an easy and constant improvement was made therein.

Natural Philosophy.

In Natural Philosophy they had studied little, and only knew things by their effects; as, that fire would warm them, and the like; and thus they learn'd something of medicine, and the virtues of plants and herbs, which experience and necessity taught them.

Astronomy.

As to their astronomy, they had observed the various motions of the planet Venus; the increase and decrease of the Moon. The Inca's also observ'd, that the Sun perform'd his course in the space of a year; tho' the common people divided it only by the seasons; and the end of their harvest, with them, was the end of the year: While the Inca's mark'd out the summer and winter solstices by high towers, which they erected on the east and west of the city of Cusco. When the Sun came to rise directly opposite to four of these towers erected on the east side of the city, and to set just against those of the west, it was then the summer solstice; and in like manner, when it came to rise and set against four other towers, it was the winter solstice: Which towers, DE LA VEGA says, were standing in his time. They had also erected marble pillars in the great court before the temple of the Sun, by which they observ'd the Equinoctials; and when the Sun came near the Equator, the Priests attended, and waited to see what shadow the pillars cast; and when the Sun at its rising came to dart a shadow directly from it, and at mid-day the pillars cast no shade, but were enlightened on all sides, they then concluded the sun to be in the Equinoctial, and crown'd the pillars with garlands of flowers and odoriferous herbs; and as they held the Sun then appear'd in its greatest lustre, this was one of their chief festivals, wherein they offer'd to this deity rich presents of gold and precious stones.

And as they describ'd their year by the course of the Sun, so their months were distinguish'd by the Moon, and their weeks were called quarters of the Moon; but they had no names for the days of the week but the order they stood in, as the first, second, third, &c. They were astonish'd at the eclipses of the Sun and Moon, and when the Sun hid his face, believ'd it was for their sins; imagin-

ing it prognosticated famine, war and pestilence, or some other terrible calamity.

When the moon was entering into the eclipse, and it began to grow dark, they imagin'd she was sick; and when totally obscur'd, that she was dying; and sounded their trumpets, kettles and pans; and every thing that would make a noise, to rouse her from this lethargy; and taught their children to cry out and call upon Mama Quille, or Mother Moon; that she would not die, and leave them to perish. They made no predictions from the Sun or Moon, or the conjunction of the stars, but chiefly from their dreams; or the entrails of beasts they offer'd in sacrifice; and when they saw the Sun set in the sea, as they might every night to the westward, they imagin'd the waters were divided by the force of the fire, and that the sun plunged himself into the deep, diving quite through the sea to appear next morning in the east.

They had so much skill in Physick, according to DE LA VEGA, as to know, that bleeding and purging were two necessary evacuations; and usually open'd that vein which was nearest to the pain; their lancet being a sharp-pointed flint set at the end of a small cane, which with a gentle filip cut it with less pain than one of our lancets.

They usually purg'd when the patient was but a little indisposed, and before the disease had prevail'd; but afterwards left him to nature and a regular diet; and their principal ingredient was a white root resembling a turnip, which being dry'd and powder'd, they took in water or their ordinary drink, and then the patient set himself in the sun, that his heat and blessing might contribute to the operation; and in an hour's time it began to work upwards and downwards in a violent manner, bringing away worms and all indigested matter, and yet left the body strong and vigorous, and with a very good appetite, which the same author says he twice experienc'd by himself.

Their physick was administred to the Inca's and Great men, by Botanists, that studied the virtues of their herbs and plants. These transmitted their secrets of this kind to their children, and were, in a manner, hereditary Physicians to the Royal family, and the Great Lords; but the common people cured one another by such prescriptions as they learn'd by tradition.

They had several herbs and roots which they apply'd to wounds with great success; but used neither plaisters nor ointments, and had no compound, only simple medicines. The Spaniards much improved their physick, having discover'd the virtues of many herbs and plants that grew in that hot climate, which the Indians were ignorant of; and particularly, that their Maize or Indian-corn was an excellent remedy against the Cholick and Stone, observing that the Indians, who eat this food chiefly, were never troubled with those Distempers.

They had only Geometry enough to measure their Geomies, and describe the bounds and limits of their provinces; but this, our author, says, he has seen well perform'd, particularly the city of Cusco, and the country about it, with the buildings, streets, hills, valleys, rivers, roads, &c. as well laid down and distinguish'd by lines and colours, as any of our modern Gasmographers could have done it.

Their Amanta's, or Philosophers, were Poets Poetry, also, and invented Comedies and Tragedies, which were acted on their festivals before the King and the Royal family; the Actors being the Great Lords of the Court, and principal Officers of the army; every one acting the part that was agreeable

CHAP.
V.

CHAP. V. able to his quality or post, and had no constant sets of Actors to personate others: The subject of their Tragedies were the victories and great actions of their ancestors, which seems to have been the best means they had of preserving the memory of what was pass'd; and yet in these it seems fiction had so great a share, that it was difficult to distinguish what was real from what was fabulous. In their Comedies, their husbandry, their household affairs, and their commerce with the world were represented, and the most remarkable follies in life exposed.

Musick. These Amanta's also compos'd songs and ballads; for they had both vocal and instrumental musick; some resembling our trumpets, flutes, and other wind-musick, but intolerably harsh and disagreeable to an ear used to softer sounds. They had also their string-musick, but not a whit better than the former.

Arithmetick. They seem to have been more perfect in Arithmetick than any science, and would cast up an account, subtract, multiply and divide by certain lines or threads of various colours tied in knots, which they call'd Quippo's, with more expedition than a European by the help of figures: And by these Quippo's they had the art of imprinting many things in their memories; and communicating their thoughts to others with the assistance of ill-drawn pictures or images; for they knew something of painting and statuary, as appears by the furniture and ornaments of their temples and palaces; every plant and animal almost being represented in gold or silver plate; and this brings me to treat of their

Mechanick arts. And first of their Gold and Silver-smiths, of whom, says the royal historian DE LA VEGA, tho' there were great numbers that labour'd constantly at their trade, yet were they not so skilful as to make an anvil of iron or any other metal, but made use of a certain hard stone of a yellowish colour, which they smooth'd and polish'd; nor had they learn'd to put handles to their hammers, but beat their plate with certain round pieces of copper or brass; neither had they any files or graving tools, or bellows for melting down their metals; but instead of bellows, had copper-pipes of a yard long, and small at one end, almost in the form of a trumpet, with which they blow'd up their fires. They had no tongs to take their heated metal out of the fire, but drew it out with a stick or a copper bar, and cast it into a heap of wet earth to cool; and as they had learn'd that the steam or effluvia arising from hot or melted metals were prejudicial to their health, all their founderies were in the open air without any covering. Their Carpenters had no other tools than hatchets made of copper or flint; no saws, augers or planes, not having learn'd the use of iron, tho' they did not want mines of that metal; and instead of nails, as has been observed already, they fastened their timber together with cords or withs: Nor had their Stone-cutters any tools but sharp flints or pebbles, with which they wore out the stone in a manner with perpetual rubbing; pulleys and other engines also were wanting for lifting and placing stones in their buildings; all was done by strength of hand, and multitudes were employ'd to remove a piece of stone or timber, which an ordinary team of horses would have drawn upon proper carriages: And yet under the want of all these things they rais'd strong and magnificent edifices, as appears by their buildings, already describ'd, the ruins whereof are seen at this day.

They used a thorn or a fine bone for a needle, and their threads were the sinews of animals, or the fibres of some plant, or of the bark of a certain tree. Scissars they had none, and their knives

were flint or copper; and under such disadvantages **CHAP. V.** (as my author observes) their needle-work was very indifferent.

Combs were made of the long thorns already mention'd, set on each side a piece of cane, which serv'd for the back of the comb; and the rasors they shav'd their heads with were no better than sharp flints; in which operation the patient underwent so much, that there was nothing the Spaniards carried over, was more acceptable to them, than steel rasors and scissars: They had no looking-glasses, but instead of them, the Peruvian Ladies made use of a round plate of polish'd brass or copper; and in this, the natives of the East-Indies agree with them, having no other mirrors at this day, but what they get of the Europeans.

As to ordinary working trades, there were no fraternities or particular men that applied themselves to these; but every man was his own Carpenter, Shoemaker, Weaver, Taylor, and Mason: Every man knew how to weave, make his cloaths, build his house, and cultivate his lands; and the women assisted in the most laborious employments.

But there were societies of Poets, Painters, Musicians, Goldsmiths, Engravers, Founders, and Accountants, who were employ'd in the service of their temples, and of their Princes and Great men; but ordinary and necessary works, as has been said, were done by the family: The common people instructed their children in them, and never hir'd servants, or call'd in foreign assistance; and for the polite arts, as they were not necessary to their subsistence, so they never troubled themselves about them.

Their woollen and cotton cloths, which they wove and dy'd into all manner of colours, were their principal manufactures; but no man was suffer'd to wear a garment, cap, or turbant, of different colours, but those of the royal blood.

Their carpets and blankets, on which they lay, were made of the wool of their country sheep, or the fine hair of their Goats; and their hammocks of cotton, or other net-work. In the hot countries, as has been observ'd, their garments were of cotton; and in the colder countries, of wool, wove exactly fit for the uses they design'd, and the pieces never cut.

They had little or no trade, either with foreigners, **Traffic:** or with one-another; every family having its plantation, and all necessaries almost within itself; only they sometimes truck'd or barter'd fruits and eatables with their neighbours, some grounds producing what others wanted.

The general food of the Peruvians, before the **Food:** Spaniards arriv'd amongst them, was Maize, or Indian-corn (which has been already describ'd, in treating of Mexico.) This they ground between two stones, and made thin cakes and biscuits of the flour, which they baked on their hearths or stoves: They also boil'd it, and made a sort of hasty-pudding of the Maize; and in some countries that did not produce Maize, they had a very small grain or seed, that was produced from a plant like Spinage; and this they converted to the same uses. In other parts, they had the Cassavy-root, which they boil'd & dry'd, and ground to powder; of which also they made thin cakes that serv'd them instead of bread: They eat also Potatoes, and other roots, and almost all manner of fruits raw, roasted and boil'd, which their country produc'd: Nor was there scarce an herb that grew, but what serv'd them for food, not as sauce or sallads, as we use them, but as substantial dishes: As to flesh, they eat very little, for their Inca's and Great Lords were masters of all the cattle, wild and tame,

CHAP. V. tame, and of all the game of the country, which the common people were not suffered to take or kill under the severest penalties. But there was a general hunting-bout appointed by their Princes once a year; wherein a great deal of venison and game was taken, and distributed to the people, who cut it in thin slices and dry'd it; and this, with the flesh of the tame cattle, which was also given them annually, serv'd for the whole year: They never eat joints of meat, or indeed any quantity of it as the Europeans do, but having cut their dry'd flesh in pieces, stew'd, and season'd it high with Axi or Pepper; they eat it as sauce to their other food, and as we eat Anchovies, or pickles, to relish our flesh. I don't know any country between the Tropics where the people eat great meals of flesh: In many places they eat none at all (much less human flesh). The Spanish historians observe, that one of their men eat ten times as much as an Indian. Their usual way of dressing their food was in pans or dishes over their stoves, on which they stew'd or bak'd it, and they roasted their roots and fruits in the embers frequently.

The usual times for eating, according to DE LA VEGA, were between eight and nine in the morning, and about sun-set in the evening; for they made but two meals a-day. However, they were not altogether so abstemious in drinking as eating. Their Gentry and Great men, who had little else to do, sate drinking great part of the day; and of the same Indian-corn that serv'd them for bread, they made a kind of malt, and brew'd good strong drink of it. The Maghey-tree also affords them a very strong intoxicating liquor; and they make a kind of wine of almost all manner of fruits, by boiling or steeping them in water; but the common people, I find, very seldom drank any strong liquors. The common beverage here, as well as in Mexico, was water with a little of the flour of Maize infused into it, being the same that our Buccaneers call Posole, or Poor Soul. But as they have both Palm and Cocoa-trees, there is no doubt but the Spaniards have taught them to draw Palm-wine, and drink the liquor of the Cocoa-nut, as they have taught them to eat and drink all manner of meat and drink that Spain affords; which, by the way, the Spaniards observe, has been no advantage to them; for such sort of meat and drink, they tell us, is by no means fit for people that live between the Tropics; and has introduced many diseases the Peruvians knew nothing of before, insomuch that they give this as one reason the natives of America do not multiply so fast as they did formerly, but rather decrease in their numbers at present; but whether this is not a mere pretence to conceal their own barbarity, who depopulated these countries by their cruelties and oppressions, and would now have us believe that the natives have been diminished by this alteration in their diet, I very much question: For 'tis certain, the wines the Spaniards have taught them to make of Grapes, will rather preserve their health than destroy them in that hot climate; and as people have no inclination to eat great quantities of meat there, they very seldom hurt themselves that way. *

Neither can I think, but that milk, butter and cheese, which the natives knew nothing of before the arrival of the Spaniards, must be a good wholesome kind of diet in that warm latitude; and of these they have a great deal at this day, now European cattle are multiply'd so prodigiously, as all writers agree they are; and I'm apt to think, one reason of that increase is, that neither Spaniards or Indians in that warm country are very fond of flesh of any kind.

V O L. III.

While I am treating of their food, it is very natural to speak of their feasts, of which they had many within the compass of a year; particularly four in honour of the Sun, and one at every new Moon; which I shall enlarge on under the head of Religion. They had also their feasts at the accession of their Princes, and upon every victory, or conquest, as with us: Feasts at their weddings and the birth or weaning of their children, and almost upon every joyful occasion, as in other countries. And at these the guests were entertain'd with vocal and instrumental musick, and dancing, and the men drank hard; but, according to DE LA VEGA, they always left off early in the evening, and went home; and rising betimes in the morning, return'd to the feast again; some of these entertainments lasting several days. Their Princes and Great men also at such times were entertain'd with tragedies and comedies, in which the Nobility and Great Officers acted the principal parts. Nor were there any constant sets of mercenary actors. However, according to DE LA VEGA, they did not speak their own sense, but their Poets compos'd the play, and put words in their mouths; which might be a proper and very easy way of instructing the young Nobility and Gentry in principles of morality and politics, and of forming their action, and giving them an agreeable address.

The exercising their arms, the lance or spear, the throwing darts, and shooting arrows, were other parts of their recreations and diversions; to which all the better sort of people were bred; and indeed we find part of the royal family of the Inca's addicted to war and warlike exercises (as others were to the service of their temples) and train'd up to hardships from their infancy, in order to make them good soldiers, and qualify them for posts in the army.

Hunting was another of their exercises and diversions; but this was not permitted to the common people: They were not to meddle with the beasts of chase or game, under the severest penalties; only once a year the Prince appointed a general hunting-match in some part of his dominions, contriving it so, that every place enjoy'd four years rest; during which space the game never were disturb'd, but had time to increase.

Of these hunting expeditions, DE LA VEGA gives the following account. He says, after the breeding-time was over every year, the Inca or Prince assign'd a certain part of the country for this diversion, appointing twenty or thirty thousand Indians to encompass a certain space of land, and beat 20 or 30 leagues round by the sides of rivers, and through woods and mountains; and they march'd along hooping and hollowing 'till the game came to be so straiten'd on all sides, that they could not get away, and were easily taken. As to wild beasts, such as Lions, Bears, Foxes, Mountain-cats, Serpents, and all venomous creatures, these they kill'd as they went along, and did not drive them into the circle with the game; which consisted chiefly of red and fallow Deer, and of the wild Huanacn, or Lama's, and Vicuna's, that is, the country Sheep and Goats, of which there was such plenty, before the Spaniards arriv'd there, that they frequently took thirty or forty thousand of these sort of deer and cattle at one hunting-match.

The female Deer they suffer'd to escape, except the old barren Does, which were kill'd. They releas'd also as many of the males as were thought necessary to propagate the species; and the rest being kill'd, their flesh was divided among the common people;

CHAP. V. people; they also shorn the Sheep, and divided the wool in like manner. But the fine air of the Vicuna's, or Goats, was reserved for the Inca and the royal family; for no other people might presume to wear garments made of it.

But besides these annual huntings, if I understand DE LA VEGA right, the Caraca's, or Great Lords, had every one the privilege of hunting and taking game within their respective territories or lordships; tho' the common people were not suffer'd to meddle with them at any time.

Before I conclude this head of their exercises and diversions, it may be proper to observe, that every Nobleman and Gentleman learn'd some mechanick art, such as the making of their arms, utensils of husbandry, cloathing, and the like, in which they busied themselves when they had nothing else to do; an idle slothful man being universally detested, and severely punish'd by the laws of Peru: Even their Women of quality carried their reels, spindles, and needle-work with them wherever they visited; nor was the Lady of the family ever found unemployed.

They were, according to DE LA VEGA, like the Chinese, courteous and ceremonious even to a fault in their visits and commerce with each other, always addressing their superiors, and even their equals and inferiors, in the most obliging and complaisant language; and yet these were the people that the first Spanish Adventurers represented as brutish and barbarous, and made this the pretence for taking away their country, and enslaving them; many of the Indians they charge even with sacrificing their own species and eating them; particularly here in Peru, ACOSTA, a celebrated writer, has the assurance to say, they sacrificed children at their grand festivals. Whereas, DE LA VEGA, who was a native of Peru, and better acquainted with their customs than any man that ever wrote, is positive there were no human sacrifices or cannibals in the dominions of the Inca's, which extended three thousand miles, while they govern'd Peru, which was four or five hundred years; and what there was before that time no man can pretend to say, there being no such thing as letters amongst them to record their actions. But to return to the exercises of the Peruvians. The being swift of foot was esteem'd

a very great accomplishment, and prizes given to those that excell'd at their foot-races by publick authority; for as there was no writing, every thing of importance was committed to memory: And if a distant Viceroy, or Governor, had any thing to communicate to the Emperor at Cusco, it was done by word of mouth, and that not by one express, but perhaps by forty or an hundred: For at every quarter of a league on the great roads were little houses or guard-rooms, where seven or eight of the Emperor's Messengers, or Pursuivants, always attended, who were of the better sort of people, and capable of receiving and telling a message very exactly, their heads being as well furnish'd as their heels: One or more of these were dispatch'd upon all affairs of state; and having delivered their message at the next stage, some of those ran and delivered the message to the next, and so on 'till they reached the Court; but they all carried their Quippo's, or coloured strings and knots with them, which as to numbers, and the qualities of many strings, assisted their memories very much, and prevented mistakes. And so swiftly did these expresses (or Chaquis) run, that the Court received the intelligence in twenty-four hours, tho' the Governor who

sent it was at an hundred and fifty miles distance: And in case of a rebellion or invasion, they had beacons on high hills at proper distances, which they fired, and thereby gave notice from one to another; so that the Court had intelligence of it in a few hours from the remotest part of their dominions.

CHAP. VI.

Of the Peruvian animals.

AS Peru and Mexico both lie for the most part between the Tropics, their animals, beasts, birds, and fishes are, for the most part, of the same species. I shall not therefore describe those again that have been treated of already in Mexico, but speak chiefly of such as seem peculiar to Peru. And first of those animals to which the Europeans have given the names of Sheep and Goats, because they resemble those animals more than any other we have in this part of the world.

The Peruvian Sheep I find in different authors are call'd by different names, as Paco's, Lama's, Huanacu, and Guanacu; and these are distinguish'd again by the tame and the wild, the large and the small kind. The large tame Huanacu, DE LA VEGA informs us, is of the bigness of a Stag, and resembles a Camel the most of any other beast, only it hath no bunch on its back: He hath a long smooth neck, his body is covered with a coarse wool, and the hide makes excellent leather. They are of a disposition, says BLOS VALERA, as gentle and tractable as the Indians themselves, being so tame that a child may govern them, and were the only beasts used in carrying of burdens when the Spaniards arrived there. The tame ones differ as much in colour as Horses do in Europe; but the wild are always of a chestnut-colour: The flesh of this creature is tender, and exceeding fine eating, and so wholesome and inoffensive, that it is the food of sick people, and preferred before Chickens; but what they were most valued for before Horses and Mules were imported was, their carrying burdens; all kind of merchandize being transported from one part of the country to the other, on the backs of these creatures. DE LA VEGA says, it was common to see eight hundred or a thousand of them in a caravan; and being very sure-footed, they would carry their burdens over rocks and precipices, where a man could hardly travel on foot: Their usual burden was about three or fourscore pound weight, with which they travelled nine or ten miles a-day; but were not to be driven beyond their usual pace; for if they were, they tired and lay down, and there was no getting them up again, though their burdens were taken off their backs; for which reason they had always forty or fifty of them unladen in their caravans; and when they observed any one of the laden Sheep began to tire, they eas'd him of his burden, and laid it upon one that was fresh.

They were no charge to their masters, who only took off their packs and turn'd them up to graze in the common fields at the end of every stage; tho' they would eat corn if it was given them: Nor was there any need of pack-saddles, the wool on their backs serving instead of them: And as they were cloven-footed, and had a callous spongy matter at the bottom of their feet, they needed no shoeing.

The lesser sort of Sheep, or Paco's, carry'd no burdens, but their flesh was almost as good meat as the former, and their wool long and much esteem'd, of which they made several sorts of stuffs for cloathing,

CHAP. VI. ing, dying it of various colours that never chang'd or faded. But the Peruvians neither milked the one or the other, or indeed any animal.

The wild Sheep, to which the name of Huanacu sometimes seems to be appropriated, afforded them wool, but not so fine as the tame ones; nor was their flesh so good meat. DE LA VEGA relates, that the males usually kept a watch on the hills while the females fed in the valleys; and when they discover'd any people coming towards them neigh'd like horses; whereupon the females fled to their cover, and the males always brought up the rear 'till they were out of danger.

Vicugnae, or Goats. The Peruvian Goats (call'd Vicugnae or Vicuna's) had that name given them by the Spaniards, because they resembled a European Goat more than any other animal. It is a long-legg'd creature, bigger than the largest Goat, without horns, and so swift of foot, that no Greyhound can take it, and therefore they are usually shot or snar'd. Their flesh is lean, tough and ill tasted, and yet in much esteem with the Indians on account of some medicinal and healing qualities it is said to have: And its wool, or rather fine soft fur, is much more esteem'd than the wool of their Sheep; for of this they make the finest garments and carpets, which were permitted to be worn and used only by the Inca's and the royal family. And as this wool is of a light chestnut-colour, they never dy'd it. These creatures commonly herd together in the highest parts of the mountains near the snows.

Bezoar-stone. ACOSTA relates, that in these and most of the wild cattle of Peru, the Bezoar-stone is found in their stomachs and bellies, and that there are sometimes two, three, or four together of different shapes, size, and colour, some as big as Filberts, others of the size of Pidgeons eggs, or Walnuts, and some as large as Hens eggs; and he had seen of them as big as Oranges, and they were also of several colours; some black, others white, dark, grey, green, and some look'd as if they were gilded, and were cover'd with many coats and skins. The Bezoar-stone is found both in the male and female, and all beasts that engender it, chew the cud, and usually feed upon the rocks in the snow. And as there are many herbs and venomous reptiles that poison the waters and pastures in this country, so there is one herb, which the Vicuna's and other beasts which engender the Bezoar-stone, run to by instinct when they find themselves poison'd, and by that means expel it: And the Indians are of opinion, that of this herb the stone in the stomach of these animals is compounded; from whence it receives that virtue against poisons, and produces many other wonderful effects; and this, our author observes, agrees with PLINY's relation of the Mountain-goats, which fed upon poisonous herbs without suffering any damage: But these seem to be very uncertain conjectures. Our author adds, that these stones are frequently form'd in the stomach, upon little pieces of wood, shells, or iron, which are found in the centre of the ball. Since these stones have been so much in esteem, the Indians have counterfeited them; and these counterfeits not producing the like effects as those that are real, have made some people question their good qualities; but ACOSTA assures us, he has seen many notable cures done by them.

Deer. There are red and fallow Deer in Peru, but much less than those of Europe; they were so numerous before the arrival of the Spaniards, that they came in droves into the villages, the common people never attempting to kill or take them, as they were royal game. They had also tame and wild Rabbits,

and these every man was at liberty to keep or take, and scarce a house was without them. CHAP. VI.

As to wild beasts, they had some few Lions, but neither so large or so fierce as those of Africa. They had still fewer Bears, and not any Tygers, unless upon some of the highest mountains of the Andes. Nor do I find they had any Wolves, so that people travell'd in great security, and their tame cattle were in no danger of being destroy'd by them as in Europe; which was very happy, especially as they had no Dogs capable of defending their flocks; and indeed they had no other Dogs but a kind of mongrels or lurchers that never bark'd. DE LA VEGA mentions a beast that is found on the mountains of the Andes in shape like a Cow, but less, and without horns; of whose hides they make buff and very strong leather: But he says, there are scarce any of the Pecaree or Warree (a kind of American Hog describ'd in Mexico) in Peru, or any where to the westward of the mountains of the Andes.

There are great numbers of Monkeys in this country of various kinds and colours, some with tails, others without, and some four times as large as the ordinary Monkeys. The account ACOSTA gives of their tricks and dexterity is scarce credible, and yet we find DE LA VEGA asserts he has been an eye-witness of the like.

Some of these Monkeys, says ACOSTA, are black, others grey, and a third sort are spotted. Their activity and motion is such, that they seem to have reason and discourse: They would leap from one tree to another; and when the distance was such, that one could not reach the place, they would hang themselves from the bough of a tree, one at the tail of another, and fetching a long swing, the lowermost with the help of the other would throw himself to the bough they aim'd at, and when he was there help'd his companions after him. These Monkeys, when they were tamed and taught, seem'd to equal Men in understanding. He saw one of Carthage that was often sent to the tavern for wine, his master giving him money in one hand and a bottle in the other: And when the creature came to the tavern, he would not deliver his money 'till he had receiv'd his wine; and if the boys met him by the way, and play'd the rogue with him, he would set down his bottle, and throw stones at them 'till he had clear'd his way, and then take up his bottle, and run home. And tho' he lov'd wine excessively; would never touch a drop without his master's leave: If he met with a woman well dress'd he would seize upon her cloaths, and be more familiar with her than she desired; concluding, that he thought there was no animal in the world so sagacious and so delighted with human society as this species of Monkeys.

It has been observed already, that there were not to be found either in Peru, or any other part of America, when the Spaniards arrived there, any Horses, Cows, Elephants, Camels, Asses, Mules, Sheep, or Hogs.

The first Horses and Mares were carried over about the year 1495, from Andalusia in Spain, to the island of Hispaniola and Cuba, where they multiplied prodigiously, and were from thence transported to Mexico and Peru, being of great service to the Spaniards in those conquests: They were so valuable that no man knew what price to set upon his horse, or indeed would part with him on any terms, only in case the master died, or return'd to Spain, his horse was set to sale, and the price was usually four or five thousand crowns; and my author relates that he was acquainted with a certain Spanish Gentleman, who seeing

CHAP.
VI.

seeing a Negroe boy leading a fine manag'd horse in the year 1554, offer'd ten thousand crowns for the horse and boy, which was refused by the Officer that own'd them; and a few days after, the horse was kill'd in a battle, and the master mortally wounded; but the price of horses soon abated, being turned loose into the fields, where they multiplied apace, and prov'd a better race than their Spanish sices, being broke and made fit for service at 3 years of age.

The Indians were a great while exceeding fearful of horses, and never thought themselves safe if they saw one loose in the streets, expecting to be trampled under foot; nor would any of them for a great while be persuaded to take up the trade of a Blacksmith (tho' they prov'd excellent artists in forming any kind of metal) lest they should be put upon shoeing of horses: And the Indian boys that were taught to dress their horses, could hardly ever be persuaded to mount them.

The Spaniards at first found some difficulty in breaking those wild colts that were bred in the mountains, but when they had once broke them, they became the most tractable animals in the world.

Cows and Oxen also were highly valued when they were first imported. DE LA VEGA relates, that he knew the first man that was master of a cow in Peru; and that the first oxen he ever saw at plow was in the valley of Cusco, in the year 1550, when a great many thousand Indians were assembled to see the novelty of the Spanish husbandry.

The first cows were only preserved for breeding; and when they had multiplied a little, and were brought into the market for sale, they were usually sold at two hundred crowns a-head; but in 1554 they were fallen to one hundred crowns a-piece, and in the year 1590 they were so mightily increased, that they were sold for twenty or thirty shillings a-head: And being suffer'd to run wild in the mountains, they were within a little time hunted in the manner described in Mexico, and kill'd for their hides, which made part of the cargoes of such ships as sailed to Old Spain: Their flesh it seems was little valued either by the Spaniards or Indians, which shews how absurd it is to represent the people who inhabit those hot countries between the Tropics as devourers of man's flesh, where they eat little or no flesh, and could not digest what we call a belly-full of meat if they did: I have seen cuts indeed in some histories of those countries where the natives are represented roasting of legs and arms of men upon spits; but such writers surely were little acquainted with the cookery of the Peruvians, who never saw a joint of any meat roasted 'till the Europeans came amongst them. The little flesh they had, as has been observ'd already, was cut into thin slices, and dried over a slow fire, so that it would keep several months: and when they dress'd it they stew'd a little of it with a good quantity of herbs, roots, fruits and pepper, in a pot, six or seven hours, and I don't find they had any other way of dressing their meat: So far were they from roasting whole joints either of men or animals upon spits.

A Jack-Ass it seems was in much esteem also in Peru at first, the Spaniards buying them to get mules out of their Mares: DE LA VEGA says, he knew one sold for near eight hundred crowns, and a Goat for an hundred, but these also multiplied so fast that they were become of little value in his time. Hogs were much dearer than Goats. PEDRO DE SIECA relates, that he saw a Sow and Pigs sold for near four hundred pounds, and that young Pigs were sold for a hundred crowns a-piece; but then we are to con-

sider how plentiful silver was in those countries at that time; and that the Spaniards would give any price for their own country food: These animals also multiplied in Peru to a prodigious degree; for DE LA VEGA relates, that he saw two Sows in 1558 that had two and thirty Pigs each.

There have also been some Camels carried over, but these have not increased much.

The first European Sheep DE LA VEGA saw in Peru was in the year 1556, when they were valued at forty and fifty crowns a-head, but they were increased so much in ten years time, that a Sheep might be had for a trifle; one reason of which may be, that there are no Wolves, or scarce any wild beasts to destroy them. And as they have great numbers of Sheep, so they have a proportionable quantity of wool, but not fine; all the wool I have seen in countries between the Tropics has been coarse, and more like hair than wool; and indeed the Spanish writers tell us, the wool of Peru serv'd only for the cloathing of the common people; the garments the Indian Princes wore were made of the fine hair or furr of the Vicuñas, or Mountain-goats.

There were not it seems either House-cats or Rats in Peru 'till the Spaniards imported them, and the Rats probably were carried thither in shipping against their wills; but they multiplied so fast, and grew so large on the coast of Peru, that in the year 1572 and 1573, they almost occasioned a famine, by eating up the corn as soon as it was sown, and by peeling the bark of the fruit-trees, and gnawing the roots; insomuch that they were forced to publish a proclamation, or act of state, that every house should lay Ratsbane to destroy them, and in the mean time that they should cover their meat and drink from the Rats, to prevent people's being poison'd: DE LA VEGA says, as he walk'd one evening by the water-side, he saw the ground cover'd with Rats that had been poison'd, and came thither to drink for above an hundred paces; and by this and some other means their numbers were considerably lessen'd for a time.

The Peruvians, according to DE LA VEGA, Fowls had no tame fowls or poultry 'till the Spaniards imported them, unless it were a fowl that something resembled a Duck, and was between the size of a Goose and a Duck: These the Indians called Nuuma, deriving the name from Nuna, to suck, because they drew in their meat as if they were sucking.
